Dr. Baerwald, of the Humboldt Academy in Berlin, tells of a sleep-walker who, without being hypnotized, was able to recite the words of a book which another person was reading (the letters being one two hundred and fiftieth of an inch high) although the latter sat facing the somnambulist, with the back of the book turned to him. The reader will doubtless jump to the plausible conclusion that this was a case of telepathy—mind-reading. Not so. Induced to close his eyes, the sleep-walker could no longer "recite the words of the book." The somnambulist had actually been reading the book from the reflected image of the type in

the pupils of the reader's eyes! Doubtless such acuteness of vision does not occur in the waking state.

In both hypnotic somnambulism (deep sleep) and sleep-walking, the essential characteristic is lack of remembrance of the events which have occurred. But in the case of the sleep-walker even the prick of a needle would cause him to awake; whereas in the deepest phase of hypnotic sleep marked anaesthesia occurs. In pre-chloroform days, Esdaile and others were enabled to carry out large numbers of major and minor surgical operations without pain to the patient. Even in recent times, painless tooth-extraction and painless childbirth have occurred with the aid of hypnotic sleep.

In the first phase of hypnosis, only sleepiness is induced. The influenced person, in this stage, can resist suggestion and open his eyes (Forel). With this degree of hypnosis alone, many cases of cure have been effected.

Dr. Hutchison states that adequate anaesthesia can also be induced by suggestion in the state of light sleep (second phase), when the patient is fully conscious, allowing painless tooth-extraction: "only the sight of the extracted tooth has carried conviction to the patient."

Cases of profound anaesthesia without loss of consciousness have been frequently noted on the battle-field, where soldiers have been severely wounded, even including severance of important parts of the body, without pain, and even without knowing for a time that the injury had been inflicted. It is probable that the sudden shock in such cases paralyzes the

nerves, hence there can be no sensation of pain registered in the cerebrum. On the other hand, it is quite possible that on the field of battle the condition is purely psychological, the victim being in a sort of trance, as a result of excitement.

Certain of the martyrs appear to have been in such a state at the time of their burning at the stake or similar torturing deaths—"a result of the state of intense exaltation into which they fell in anticipation of martyrdom," rendering them to a great extent oblivious to injuries which would otherwise result in unspeakable agony. It is said that Archimedes, the greatest mathematician of antiquity, was so deeply engrossed in some geometrical problem that he was unaware of the fact that Syracuse had been taken by the Romans, and that he had received a mortal wound, even though his life-blood was flowing away.

Concentration of thought is one aspect of hypnosis, rendering one unconscious of the external world and its doings. Thus, again, Archimedes having discovered how to determine the specific weight of bodies while he was taking a bath, the well-known story goes that he became so excited over the solution that he rushed to the street stark naked, shouting as he ran, "Eureka!, Eureka!" (I have found it! I have found it!) Had his thigh been pierced by an arrow as he ran, it is doubtful if he would, for the moment have felt any pain from the wound inflicted.

Everyone is familiar with the undisputed fact that the medicine-man (shaman) of certain

savage tribes is capable of producing—by auto-suggestion—anaesthesia which enables him to dance barefoot in the midst of a fire, or over red-hot boulders. Many savages, by means of rhythmical, long-protracted dances, produce a form of auto-hypnosis which enables them to inflict severe wounds in their flesh which do not bleed and quickly heal.

Hypnotists find it quite possible to render a person incapable (during the hypnotic state) of exercising his faculties of tasting, smelling, seeing or hearing, "except in so far as the operator allows him to do so." Told that a glass of water is bubbling champagne, the subject (unless deeply opposed on principle: see previously) smacks his lips with intense satisfaction; or he chews chalk for candy with equal gusto. He will, at the command of the operator, smell asafetida as a delicious violet odor, or pronounce strong ammonia an odorless liquid, inhaling it without discomfort. The subconscious mind is not endowed with an olfactory lobe or gustatory organs. Capacity for pain is an exclusive property of the conscious mind. Hence the anaesthesia of hypnotism.

An incident narrated by Dr. Wingfield shows at once the source of "automatic writing" and the power of subconscious mind to remember what the conscious mind knows nothing about.

Having hypnotized his patient, during somnambulism he made him imagine that he was (1) riding with the hounds, (2) rowing a race in his college boat, and (3) that next morning he would put a boot on one foot and a shoe on

the other. "On waking he knew none of these things. I then made him put his hand on a planchette, and asked 'What did he do first?' After a few meaningless scratches it wrote 'hunting.' 'When then?' I asked. 'Rowed in the races,' was the answer. 'Did I tell him to do anything?' 'Boot one, shoe one,' said the planchette."

Dr. Wingfield calls attention to the fact that the knowledge possessed by the planchette was exactly commensurate with that possessed by the subject during somnambulism. "It will thus be seen that any loss of memory after hypnosis is only apparent and not real."

This power of the subconscious to remember facts, names, the measurement of time, and even languages, wholly unknown to the conscious mind, has frequently aroused astonishment in the learned and superstitious awe in the uninstructed. The Countess deLaval, for example, talked the Breton language in her sleep, but could not understand a word of Breton when awake. (She had heard it spoken in early childhood.) An illiterate servant, in a state of trance, spoke Hebrew fluently, but knew nothing whatever of the language when awake. It was learned that she had years before been in service with a clergyman who had a habit of memorizing Hebrew aloud.

The ouija-board or planchette aids the subconscious in bringing to consciousness forgotten memories. But the subconscious mind is highly imaginative, and often a great liar—as the ouija-board attests!

In some cases, suggestions made to a person

under hypnotic treatment retain their hold on the subject after he has been awakened, and it then becomes necessary to re-hypnotize the subject, suggesting contrary ideas. A hypnotized person may be led to believe that a dear friend has done him a great injustice, or stolen his purse, or that he has seen Smith or Jones commit a grave crime. In such cases of *post-hypnotic hallucinations*—as they are called—the subject, after waking, if questioned will describe in full detail the circumstances of the injury done him, and would be fully capable of giving evidence to support his hallucination in a court of law. Some persons even develop similar hallucinations by auto-suggestion.

"It is familiar to us all," says Dr. Hutchison, "how readily some people can . . . fabricate the details of a scandal, can, so to speak, create for themselves the hallucination of a scandal, every incident of which they believe themselves to have seen. For this it suffices simply that some one person should rest under slight suspicion, that a slight rumor should be set afloat, and ere long idle onlookers create the details which are wanting, and which they implicitly believe they have founded on fact. Nowhere are more striking instances of this seen than in law courts, when an attempt is made to sift evidence. It is a well-known fact that a clever counsel may lead a witness into accepting and confirming most contradictory statements, by merely suggesting with an air of conviction that certain events had or had not been witnessed by him."

Very interesting is the phenomenon of post-

hypnotic suggestion. The suggestion is made during the hypnotic sleep that the subject perform certain acts after the lapse of a certain time, in the waking state. A young woman was told by Dr. Milne Bramwell to address a letter to him 12,500 minutes from the time at which she came out of the hypnotic sleep. Although she remembered nothing of the request on waking, at the exact second of expiration of the 12,500 minutes she wrote the letter, believing that the act was entirely voluntary. In this case, the woman was quite incapable of calculating the time consciously. In other cases Dr. Bramwell suggested to the hypnotized subjects that certain messages should be delivered at a fixed date, at a certain hour. Notwithstanding the fact that obstacles were purposely put in their path, the subjects faithfully carried out the commands at the appointed hour.

For the sake of the experiment, hypnotized subjects have been commanded to do rather absurd things at a specified time. Having carried out the suggestion, and asked why the act was performed, the subject will frequently attempt to give a good reason why he had done so and so, believing fully that he had done it of his own accord. "Even when delusions of the senses occur in the waking state," says Satow, "without hypnosis, we must assume that the persons affected are not, for the time being, for some reason or other, in a position to correct the creations of their imaginative faculties by reference to realities, and therefore regard them as real. So Luther, who was still deep in the superstitions of his day, regarded the devil

who appeared to him on the Wartburg as being so real that he hurled his inkstand after him."

Post-hypnotic results are often utilized to very good advantage by the psycho-therapist, since all psycho-physical processes can be influenced. For example, a person suffering from sleeplessness may be given very definite directions as to the hour at which he will become drowsy and the number of hours he will sleep. Such suggestions, however, may not always be responded to literally, but in some cases only a gradual improvement in sleeping occurs. Dr. Hutchison finds that "definite suggestions may be given in a case of obstinate constipation to act later in the form of a post-hypnotic suggestion, and so lead after a few treatments to the complete cure of the constipation. The various secretions may be influenced on the same lines, and so appetite and the ability to digest any food can be successfully suggested in a person suffering from loss of appetite and who may have refrained from solid foods for weeks or months."

According to Satow, all remedial hypnosis depends upon post-hypnotic effects. "The cure of all sorts of complaints—stammering, agoraphobia, insomnia, incontinence of urine, etc.—is complete only if it holds good *after* hypnosis. All post-hypnotic suggestions are much more easily realized if ordered to be carried out at a given time....To explain the effect of post-hypnotic suggestions it must be assumed that after hypnosis a condition of greater vigilance and increased nervous activity continues in the subconsciousness."

It has been observed that in arithmetical experiments many persons when hypnotized are able to add up 20% more figures than in the waking state. But no hypnotist can enable a subject to work out mathematical problems with which the subject is wholly unfamiliar in the waking state, since "no idea can ever be invoked which has not already consciously or unconsciously found its way into the mind" (Satow). In the same way, no hypnotist can enable anyone to play the piano who has not been accustomed to-play it.

It is quite true, however, that mathematicians have solved problems during sleep which baffled them when awake. And the story of how the great Paganini awoke one morning to find his famous "*Sonate du Diable*" written in score by his bedside has often been told. Knowing nothing of the marvelous workings of the subconscious mind, Paganini ascribed the composition to the devil. A friend of my own frequently sells stories and poems which are the products of dreams. Robert Louis Stevenson always declared that "the Brownies" gave him his stories in his sleep.

CHAPTER 4.

HYPNOTISM AND PSYCHO-ANALYSIS

While Dr. Albert E. Davis utilizes psycho-analysis as an adjunct to hypnosis and suggestion, most psycho-analysts are opposed to the employment of suggestive therapeutics in any case whatever. The late André Tridon, in particular, in his well-known treatise, "Psycho-Analysis and Behavior" (1920), points out that hypnotism and psycho-analysis "have nothing in common but are in fact the exact opposite of each other: hypnotism introduces something into the subject's mind, psycho-analysis takes something out of it."

The "something" that hypnotism introduces into the subject's mind is the suggestion that the cells and organs of the body perform their functions in a normal manner, thus eliminating diseased conditions, leading to restoration of the patient's health, and without the necessity for drugs. In many cases the same results can be achieved by psycho-analysis, by digging out the original causes and removing the complexes or obsessions. But this is not equivalent to saying that hypnotic suggestion is not in many cases a valuable therapeutic remedy. Since the ordinary custom, in the case of illness in a family, is to call in a physician, the question is whether suggestion can do the work usually thought to be produced only by the taking of medicine.

As a matter of fact, "suggestion can steady a palpitating heart equally as well as belladonna, or take the place of digitalis in heart disease by diminishing the number of beats and resting the heart muscles" (Davis). When a patient has a cold he is ordinarily put to bed and given drugs to induce perspiration. But he can also be put to bed and perspiration can be induced by hypnotic suggestion. By hypnotic suggestion, according to reputable psycho-therapists, constipation can be cured naturally, without recourse to drugs, by re-establishing healthy functional activity in the glands secreting the intestinal juices. By hypnosis a natural sleep can be made to supersede insomnia, followed by cheerfulness and capacity for hard work the morning following.

"The real value of hypnotism," says Dr. Davis, "lies in the fact that it provides us with an additional weapon, which is enormously important, in the fight against disease. Through it the subject is better able to control his organism in his own interest. He cannot realize too plainly that the force which is exerted comes not from the hypnotist, but from himself. It is from the inner self the change arises; the hypnotist simply awakens dormant protective instincts. The best results are achieved when the patient understands this, for he will employ in his waking moments the same agency as that resorted to by the operator under hypnosis."

What the hypnotist does is to stimulate the subconscious activities of body and mind. Very

interesting and instructive in this connection is the following statement by Dr. Davis: "The sense of smell is greatly developed. I have had several subjects who, under hypnotism, could identify by sense of smell alone the owners of purses, keys and other articles of personal use. In hearing, it is well known that the subject can distinguish the faintest whisper of the operator inaudible to bystanders. Other powers are equally strengthened . . . All of these instances enable one to realize the power of hypnotism to restore the proper working of bodily functions."

Granted that psycho-analysis will also cure these same ailments which are reached by hypnotism or suggestion—may cure some of them better; but must one spend weeks or months exploring the history of the subconscious life in order to relieve a toothache or an attack of constipation?

Tridon seemed to think he was making out a strong case against suggestive therapeutics by pointing out similarities between neurotic and hypnotic states. "Every neurose," he declared, "is a form of auto-suggestion." Well, what of it? The business of the hypnotist is to help the patient to help himself in throwing off the neurose. And in many cases he does. In some cases he may fail. But as much can be said also of the psycho-analyst.

"The neurotic who consults a hypnotist is, after all, seeking a quick escape from reality, from effort, from responsibilities," says Tridon (*Op. cit.*, Page 275). If the "reality" happens

to be neuralgia, or writer's cramp, or a desire for alcohol in excess, why not seek to "escape" from it as soon as possible, with or without "responsibilities"? Why not seek "the line of least effort"?

The hypnotist reaches the subconscious mind by *suggestion*, and through the *imagination*—not the will—stimulates its health-restoring activities.

Tridon triumphantly declares that many experimenters "have come to the conclusion that we cannot suggest anything to a subject unless he unconsciously craves to do that very thing. Suggestions of unpleasant actions are either rejected or very ephemeral. Suggesting murder or suicide proves effective mainly in the movies. Lombroso saw his subjects wake up every time he ordered them to perform humiliating tasks or to assume degrading rôles" (Page 277).

Very good. No psycho-therapist would complain of the foregoing impeachment. The subject, whether he knows it or not, "unconsciously craves" to get well, to become strong, to throw off any neurosis which happens to afflict or disable him. The hypnotist suggests to the subconscious mind that what the subject unconsciously craves can be obtained, that it *is being obtained*, through the creative power of imagination, of auto-suggestion, supplemented and strengthened, if need be, by the direct suggestions or "commands" of the hypnotist.

No doubt there are cases, especially of deep-

seated hysteria and neurosis, where analysis would be a more satisfactory method of treatment than hypnosis or suggestive therapeutics. Dr. Davis has tried both, and still employs either method, according to the diagnosis. Mr. Tridon was experienced only as an analyst. But he points out that Freud, who studied hypnotism under Charcot of Salpêtrière and Bernheim and Liébault of Nancy, finally discarded the hypnotic method entirely. "It was while studying a patient in hypnotic 'trance' that Freud suspected the possibility of a study of the unconscious in the waking state," says Tridon. I need merely remark in passing that the methods (and principles) of Charcot have also been "discarded"—by practically all modern hypnotists, and the methods of Bernheim and Liébault much improved upon by later students—some of them, like Freud, pupils of these pioneer psycho-therapists.

But did Freud "discard" suggestion?

As a matter of fact, the patient who applies for treatment at the clinic of a psycho-analyst is under suggestion before he arrives. He has been assured by someone that the analyst can relieve him of his ailment, or that under the analysis his complaint will disappear. He has *faith* in the psycho-analytic method; he *imagines* himself being cured of his obsessions or complexes. His *subconscious* is already at work—stimulated by auto-suggestion—before he has his first interview. He is already on the road to recovery. Tridon to the contrary notwithstanding, there is a relationship between suggestion and psycho-analysis.

Tridon says (Page 280): "Jung says very frankly somewhere that practitioners who manage to invest themselves with the halo of the medicine man are wise in every respect. Not only do they have a large practice but they also obtain the best results. Dealing with neurotics, the medical exorcist shows to his subjects his full valuation of the 'psychic' element when he gives them an opportunity to fasten their faith to his mysterious personality."

Realizing that the great psycho-analyst Jung has virtually (if unconsciously) returned to the basic principles of suggestive therapeutics, Tridon tells us that he disagrees with Jung "as to the final, not temporary, results of such cures." But why this gratuitous injection of the word "temporary"? If "such cures" were merely "temporary," as against proved permanent cures, would Dr. Jung, out of his wealth of experience, commend the "halo of the medicine man" as "wise in every respect"? I think not. Years of practical experience have taught Jung the great value of *faith*—and imagination—as a creative curative agency, acting by auto-suggestion on the subconscious personality; and he admits that the "medical exorcist" should show "to his subjects his full valuation of the 'psychic' element" when he gives them "an opportunity to *fasten their faith* to his mysterious personality."

At the base of all successful psycho-therapeutic treatment lies faith, a form of creative imagination. So long as the "fame" of Jesus reached the ears of the sick and "tormented"

"throughout all Syria," "he healed them" (Matt. ix, 23, 24). But when he returned to his native countryside, where his "fame" as a healer was either unknown or discredited in advance, where he found no faith, "he could do no mighty work" (Mark, VI).⁶

⁶The reader who desires full information—full data—on all the points merely touched upon in this little book, would do well to consult Louis Satow's "Hypnotism and Suggestion", previously referred to—by far the most scholarly work so far published in English on this important subject.

CHAPTER 5.

SUGGESTION AND THE MASSES

The important rôle of suggestion in relation to social, religious and political phenomena is only beginning to be generally recognized. Louis Satow has performed a very useful service in emphasizing this aspect of the subject. As he so well points out, "many of the ideas and conceptions which the individual believes himself to have adopted independently and without constraint are no more than the effect of the mass mind, which manifests itself in manners and customs and education. On the other hand, the individual mind, especially that of the leader, investigator or moralist, has a stimulating effect upon the mind of the crowd."

The mind of the crowd exercises, in certain directions, a beneficial effect upon the progress of civilization, while in many other cases the opinions of the crowd tend to obstruct the development of the more progressively-minded individuals. The modern national arrogance and national egoism, factional exclusiveness, religious bigotry, etc., "once more plainly demonstrate that it will be long indeed before the mass mentality corresponds with the highest humanity and its many-sided intellectual culture."

Altogether too many individuals, from whom one might reasonably expect better things, fall a prey to mass suggestion—or, less elegantly, "follow the band-wagon." The better-educated individual, as a member of the crowd, often

acts in direct opposition to what are normally his own feelings and opinions.

It is doubtful, however, if persons of real culture ever so far succumb to mob psychology as to join in tar-and-feather parties, assaults upon working-class gatherings, or lynchings and mass atrocities. The power of suggestion in such cases is, no doubt, very strong, especially in its influence upon persons whose moral foundations are not too sound, causing them to be carried away from their moorings by the more or less contagious mob psychology. Men who are, as individuals, naturally cowards, are apt to take advantage of the feeling of invincible power conferred upon them for the moment by the solidarity of the crowd, fused into a psychological unit. In many so-called "civilized" human beings the instincts of the brute lie not very far from the surface, only awaiting an opportunity when it will be safe to release impulses bordering upon the sadistic.

"Merely as a result of the imitative instinct," remarks Satow, "which is innate in man, and plays a great part even in the animal world, the crowd displays a much greater susceptibility to suggestion than the individual."

We must admit with Bechterow that, "without knowing it, until we reach a certain level we acquire for ourselves the emotions, superstitious ideas, opinions, tendencies, intentions and even singularities of character of the individuals with whom we most commonly associate."

The power of the press to produce a desired frame of public mind, merely by the endless repetition of certain carefully chosen phrases,

was well illustrated before and during the World War. The masses are inclined to believe anything which is suggested with sufficient force and continued repetition. The principle was well understood by the crafty old politician Cato, who, as is well known, concluded all his public speeches with the phrase, "*Delenda est Carthago*" (Carthage must be destroyed). Today we are quite familiar with equally effective slogans, endlessly repeated. The mere name of a candidate for political office on the wind-shield of countless automobiles is but a form of suggestion—and it works! It is the device alike of demagogue and plutogogue, of progressive and reactionary. Mass suggestion everywhere; whether in peace or in war; in politics or in religion!

Many phenomena—political, social or religious institutions—can be understood only in the light of suggestion—*suggestive compulsion*. But here let me quote an eloquent and instructive passage from Satow's chapter on hypnosis and suggestion in religion (which the reader would find it well worth while to consult):

"From the lowest forms of religion—from the belief in magic [its earliest phase], animism, fetichism, daemons and spirits, by way of polytheism, to monotheism, and even beyond; beneath the embittered spiritual and material conflict between the various religions, confessions, sects and philosophies, an eternally tedious and extremely involved development has taken place, which has often led to the most grievous errors and abuses. But without the omnipotent factors of hypnosis and suggestion

the psychological processes of this religious evolution will always be a riddle. But for an insight into the peculiar medley of the spiritual attributes of humanity, which, in addition to, and in spite of, its intelligence exhibits an almost morbid credulity and incapacity to form an independent opinion; but for the hysterical excitability of the nervous system; but for the phenomena of auto-hypnosis and auto-suggestion, mass susceptibility and mass hallucination, religious belief would remain utterly inexplicable. Whether we consider the Indian yogis, the Buddhist priests, the Egyptian, Chinese, or Persian sages, the pagan, or Jewish, or Christian hierarchies, and whether the events in question occurred in a hoary antiquity or only yesterday, the picture is always the same: the masses, by all possible means, are kept in bondage to superstition and ignorance, and then a net of suggestion is dropped over their heads, so that the power of priestcraft may be maintained . . . By most people the dangers of ecclesiastical suggestion are either underestimated or are simply not recognized at all."

Throughout the long history of man's inhumanity to man, we see in operation the forces of hypnotism and suggestion. Prof. Otto Stoll, while recognizing, for example, that the Crusades had their roots in economic and political, as well as religious, conditions, nevertheless contends that "all the attempts of the historians to point to movements of this character as the logical consequence of the motive forces issuing from the ephemeral but universal conditions of the age, are powerless to explain, in a

satisfactory manner, without the all-significant factor of suggestibility, either their extent or the direction which they assumed."

The direction which the piety of the Crusades at the first capture of Jerusalem took was to tear babes from the breasts of "infidel" mothers and dash their brains out against the walls; to ravish every woman seized; rip open the abdomens of men to see whether they had swallowed any money; drive the Jews into their synagogues and burn them to death; slaughter others even in the churches; and massacre in all 70,000 men, women and children—"for Christ's sake." An archbishop chronicles with evident satisfaction: "Surely have these things happened in accordance with the righteous judgment of God."⁷

Such are the fruits of mass suggestion! Nor need we go back to the Middle Ages for examples. Some of us still remember the Ludlow massacre, the Everett mass-murder, and other exhibitions of "idealism" and "patriotism" under suggestion.

Now comes Mr. William Jennings Bryan reiterating daily through the press and on the platform that the theory of evolution is based upon the "mere unsupported guesses of biologists and psychologists," and that only men and women who accept "the word of God"—as revealed in the Book of Genesis—are fit to teach in our schools and colleges. By the law of suggestion, acting on minds with as little knowledge of science as is possessed by "the great commoner" himself, a wave of re-

⁷Quoted by Satow, *Op. cit.*, Pages 191-92.

action is sweeping the country; and nine states have already made "Bible reading" compulsory in our public schools. The end in view is, of course, to *suggest* to the rising generation that the so-called Books of Moses are authoritative works of science, derived directly from Jehovah. Meanwhile, Mr. William Sunday has been appealing to a still lower order of intelligence with his assertion that "Charles Darwin is in hell," and *suggesting* that all who accept the doctrine of evolution in preference to the legends of the ancient Babylonians, Assyrians and Armenians are destined to join him in a hell quite unknown to these ancient poets and chroniclers.⁸

It has been alleged by many prominent writers of the day that a movement is on foot to arouse a spirit of militarism in the United States, in the interest of imperialist finance, which, it is pointed out, needs a strong army and navy. Can it be that we are being prepared—by *suggestion*—for the next "war to end war"? Let us hope that this fear is groundless, that "Defense Day" meant only what it was asserted to mean, and not—"Delenda est Carthago"! It would surely be deplorable if a war psychology were permitted to gain even the smallest momentum. Otherwise the few lessons learned from the recent World War would

⁸The writers of the Old Testament speak only of "Sheol" (Job X, 21)—a great pit under the earth, derived from the Babylonian "Arallu" and akin to the Greek "Hades", where the spirits of the dead—good, bad or indifferent—went. "Hell-fire" and "brimstone" are a much later invention.

soon be lost in a deluge of *suggestive* propaganda.

"Over and over again," truly remarks Satow, "has the question been asked: How was it that the war was so terribly widespread, the armies so enormous? Of course, numerous well-founded reasons have been found—historical, political and economic—but none of them suffices unless we take into account the great, the truly powerful factor: *Mass Suggestion!* . . . The partial and exaggerated sense of nationality, national arrogance and national covetousness, on which the mass suggestion thrives so exuberantly, furnish a fruitful soil for the war mentality."

CHAPTER 6.

HYPNOTISM AND PERSONALITY

Attention has already been directed to F. W. H. Myers' theory of a conscious and a subconscious intelligence—a duality of mind in each individual. Hypnotism and suggestion operates mostly—and in the final analysis only—on the subconscious mind.

We have seen how the Countess deLaval could speak fluently the language of Brittany when under hypnotic sleep, but knew nothing of Breton when awake—i. e., the language was known only to her subconscious mind, the seat of memory. Hansen, the Danish hypnotist, having hypnotized an English officer, was astonished to hear him break forth in a tongue unknown to him. Later it was learned that the language was Welsh, which the officer had heard spoken as a child, but which his conscious mind had long forgotten. The fact that old people often recall occurrences of many years ago, but forget forthwith an event of but yesterday, has often been commented upon. All of these phenomena are readily understood in the light of Myers' theory of dual intelligence—duality of mind.

The foregoing theory also makes explicable the frequently reported cases of amnesia, or of dissociation; i. e., the breaking up of consciousness into parts which lead separate (independent) existences, or what is commonly known as double, or multiple, personality. Dr.

Davis recalls the rather recent case of an elderly gentleman, of good position, who was accused of having sent offensive anonymous letters to a young lady, charging her with thieving, drunkenness, immorality, etc. So strong was the evidence against him that he was committed to jail, and was later admitted to bail only on the condition that he should not come within forty miles of the city. "At the eleventh hour it was discovered by the merest chance that the young woman had unconsciously written these most abusive letters to herself, and on receiving them in her normal state of mind knew absolutely nothing about their authorship."⁹

The reader may remember the case of Claire Beauclaire, of Brockton, Massachusetts—made public in 1922—who possessed two distinct personalities, one that of an apparently normal girl of eighteen years, the other that of a child of five. Better known, however, is the case of Bernice Redick, of Cleveland, Ohio, a high school graduate, with a decided love for music. In the midst of a conversation she suddenly nodded, fell into sleep for a moment, then awoke. But during this moment she had "slipped back" fifteen years, as far as her mind was concerned.

The girl was taken to Columbus, and placed under the care of Dr. Henry Herbert Goddard, alienist, head of the Ohio Bureau for Juvenile Research.

Asked her name, she told Dr. Goddard that

⁹Davis, "Hypnotism and Treatment by Suggestion", Page 41.

it was "Polly." "How old are you?" inquired the alienist. "I am four years old," she replied. Mentally, she was indeed but a child of four. She could neither read nor write, and knew nothing of music, of which she was formerly so apt a pupil. She could not even distinguish colors by name, merely exhibiting the childish desire for bright ones. She could not count above ten. Her chief diversion was sitting on the floor playing with dolls. But she did not remain "Polly" for long at a time. "During her first day," says Dr. Goddard, "she changed from Polly to Bernice and back eleven times. The reversion was just as sudden one way as the other, and just as inexplicable."

Psycho-analysts would explain the case by assuming that the girl had been unhappy at home, or had had an unfortunate love affair, and wished to escape from reality—to have an easier time by becoming someone else. If this were the real explanation, why change so frequently back to Bernice?

Dr. Goddard was at a loss to know how to proceed. There were at that time fewer than 25 such cases in the medical records of the world. Any competent hypnotist could have prescribed the appropriate remedy; but probably hypnotism was not in good repute among the physicians consulted. At any rate, Dr. Goddard adopted the plan of bringing Polly up to her normal age and previous intellectual status by educating her as he would any other four-year-old child—for the Binet test showed Polly to possess normal intelligence for a child of that age. "We thought," he explained, "that

by bringing Polly's mentality up to the age of Bernice the two personalities might automatically become one."

Eventually, as we shall see, he had to resort to hypnotism after all; but first he tried this educational plan. Polly was first taught to read, which she learned more readily than most four-year-old children. The usual kindergarten courses were included in the curriculum. The lessons, however, were frequently interrupted by the reappearance of Bernice, who knew nothing of any such person as Polly. The dissociation was complete.

As this case has never appeared in book form anywhere, let us quote Dr. Goddard's own words:

"One day, when Polly was engrossed in a conversation with an attendant, a pencil was placed in her hand, and she was told to write a letter to a nurse she liked. A magazine, held between her hand and her eyes, kept her from seeing the paper on which she wrote. The conversation continued and kept her attention from the letter, but her hand moved mechanically across the paper, and the letter was finished. It was a letter such as would be written by almost any girl of ten or twelve years.

"When it was finished we showed it to her, and then asked suddenly, 'How old are you, Polly?'

"**'I am eleven years old,'** she replied instantly.

"From then on she consistently admitted being eleven years old. Success seemed to have **crowned our efforts.**

"When she awoke as 'Polly,' she at first, each time, became the four-year-old 'Polly' we had originally known, but in a few minutes passed to the eleven-year-old stage. These transitions were frequent and irregular. One day as she was preparing to go for a walk she suddenly changed to 'Polly.' She remained thus for six days, babbling and p'aying as any child would. Bernice reasserted herself at about the same hour of the day, whereupon the girl began looking about for her coat to go for the walk, resuming her conversation with the words she was saying when 'Polly' drove her out.

"Having brought her to the age of eleven we continued the treatment until she admitted she was fourteen. Then we held a party, celebrating her fifteenth birthday, with candles and presents. A succession of birthdays followed within a few weeks, the girl apparently not realizing that she was being tricked. At last she became nineteen and admitted that was her age."

But the automatic fusion of the two personalities expected by Dr. Goddard did not occur. Bernice was quiet and modest, reserved, timid and ambitious. "Polly" was careless, boisterous, disobedient, and "hail fellow well met" with everyone.

"Just as Dr. Jekyll in the story gave way more and more readily to the encroachments of Mr. Hyde, so did Bernice give way more and more readily to the self-assertive 'Polly.' Even yet, when she awoke, she was often 'four years old,' and had to pass through the successive stages, which she now did very rapidly."

After months of educational work, without success in merging the two personalities into a unified Bernice, hypnotic treatment was introduced at last—a modified form of mesmerism—with a view to driving out “Polly.”

“Both personalities were told of the existence of the other, but each knew of it only as a normal person would know of someone he had heard of but never seen. ‘Polly’ in particular declared there was no such thing, and that if there was she had no room for her. Later she said Bernice was a friend that I had told her about, who was coming to see her some time.

“Hypnotism again came into play. I placed ‘Polly’ in a sleep, first telling her that she was going to meet Bernice. Somewhere the two minds met, in one of the strangest introductions I ever hope to make. It was, of course, impossible to observe any reaction that took place, as our only method of observation was of necessity through bodily actions, and for the time being there were none.

“Awakening, ‘Polly’ said she remembered Bernice, but that she lived in Cleveland, and would come down to see her some time. She resented the idea that she might be stealing Bernice’s body, but declared that this was her own, and she had always possessed it. Polly was banished by hypnotism and Bernice came into control. She, too, remembered the strange introduction. From that time, however, there was a conscious effort by each personality to drive out the other. ‘Polly’ was very strong. Even with the aid of hypnotic influence, which

I called upon to banish 'Polly' at every appearance, it has been difficult going for Bernice.

"The mental aspect of the case has been closely related to the physical. When the body was fatigued, 'Polly' nearly always came into power. After a night's sleep the girl nearly always awoke as Bernice.

"Now, although we have established Bernice permanently, it must be admitted 'Polly' may yet gain permanent control."

On January 12, 1923, Dr. Goddard announced through the daily press that "Polly has not appeared for nearly a month."

Later there seem to have been relapses, in which a third personality appeared, "living," Dr. Goddard was quoted in the press (March 7th) as saying, "only in the imagination of 'Polly.'" On this date it was announced that Miss Redick would be discharged from the Ohio State University Hospital a week later as permanently restored to her normal self.

This case bears many interesting likenesses to the famous case of "Miss Beauchamp," reported by Dr. Morton Prince in his "The Dissociation of a Personality." The intrusive personality, younger but not a child, was here known as "Sally." "Sally" hated "Miss Beauchamp," between whom and herself there existed the same differences of temperament as between "Polly" and Bernice. She would play tricks on her—walk miles into the country and wake up as "Miss Beauchamp," without carfare home ("Miss Beauchamp" disliked to walk); pile up the furniture, climb on top, and let "Miss Beauchamp" climb down; write abusive

letters for the other personality to find, tangle her embroidery silks, etc. "Sally," like "Polly," was finally "murdered" by being hypnotized out of existence. In this case, however, "Miss Beauchamp" herself was not the original, normal personality; but a final fusion into the normal woman was finally achieved.

From this brief study the power and scope of hypnotism and suggestion may be comprehended—their value in the hands of a skilled physician, their danger in the hands of a charlatan. As a herald of their use and a warning against their disuse, let me conclude by quoting the opening stanza of Browning's poem. "Mesmerism":

All I believed is true!
I am able yet
All I want, to get
By a method as strange as new:
Dare I trust the same to you?

Entrusted to the exploitation of a showman, the subconscious may avenge its abuse in a grievous manner; but entrusted to the understanding sympathy of a trained and experienced practitioner, there is no more efficacious alleviant for many of the ills to which the body is subject than the hypnotic or suggestive method of treatment.

A CYNIC LOOKS AT LIFE

CIVILIZATION

I

The question "Does civilization civilize?" is a fine example of *petitio principii*, and decides itself in the affirmative; for civilization must needs do that from the doing of which it has its name. But it is not necessary to suppose that he who propounds is either unconscious of his lapse in logic or desirous of digging a pit-fall for the feet of those who discuss; I take it he simply wishes to put the matter in an impressive way, and relies upon a certain degree of intelligence in the interpretation.

Concerning uncivilized peoples we know but little except what we are told by travelers—who, speaking generally, can know very little but the fact of uncivilization, as shown in externals and irrelevances, and are moreover, greatly given to lying. From the savages we hear very little. Judging them in all things by our own standards in default of a knowledge of theirs, we necessarily condemn, disparage and belittle. One thing that civilization certainly has not done is to make us intelligent enough to understand that the contrary of a virtue is not necessarily a vice. Because, as a rule, we have but one wife and several mistresses each it is not certain that polygamy is everywhere—nor, for that matter,

anywhere—either wrong or inexpedient. Because the brutality of the civilized slave owners and dealers created a conquering sentiment against slavery it is not intelligent to assume that slavery is a maleficent thing amongst Oriental peoples (for example) where the slave is not oppressed. Some of these same Orientals whom we are pleased to term half-civilized have no regard for truth. "Takest thou me for a Christian dog," said one of them, "that I should be the slave of my word?" So far as I can perceive, the "Christian dog" is no more the slave of his word than the True Believer, and I think the savage—allowing for the fact that his inveracity has dominion over fewer things—as great a liar as either of them. For my part, I do not know what, in all circumstances, is right or wrong; but I know that, if right, it is at least stupid, to judge an uncivilized people by the standards of morality and intelligence set up by civilized ones. Life in civilized countries is so complex that men there have more ways to be good than savages have, and more to be bad; more to be happy, and more to be miserable. And in each way to be good or bad, their generally superior knowledge—their knowledge of more things—enables them to commit greater excesses than the savage can. The civilized philanthropist wreaks upon his fellows a ranker philanthropy, the civilized rascal a sturdier rascality. And—splendid triumph of enlightenment!—the two characters are, in civilization, frequently combined in one person.

I know of no savage custom or habit of

thought which has not its mate in civilized countries. For every mischievous or absurd practice of the natural man I can name you one of ours that is essentially the same. And nearly every custom of our barbarian ancestors in historic times persists in some form today. We make ourselves look formidable in battle—for that matter, we fight. Our women paint their faces. We feel it obligatory to dress more or less alike, inventing the most ingenious reasons for doing so and actually despising and persecuting those who do not care to conform. Almost within the memory of living persons bearded men were stoned in the streets; and a clergyman in New York who wore his beard as Christ wore his, was put into jail and variously persecuted till he died.

Civilization does not, I think, make the race any better. It makes men know more: and if knowledge makes them happy it is useful and desirable. The one purpose of every sane human being is to be happy. No one can have any other motive than that. There is no such thing as unselfishness. We perform the most "generous" and "self-sacrificing" acts because we should be unhappy if we did not. We move on lines of least reluctance. Whatever tends to increase the beggarly sum of human happiness is worth having; nothing else has any value.

The cant of civilization fatigues. Civilization is a fine and beautiful structure. It is as picturesque as a Gothic cathedral, but it is built upon the bones and cemented with the blood of those whose part in all its pomp is that and nothing more. It cannot be reared in the un-

generous tropics, for there the people will not contribute their blood and bones. The proposition that the average American workingman or European peasant is "better off" than the South Sea islander, lolling under a palm and drunk with over-eating, will not bear a moment's examination. It is we scholars and gentlemen that are better off.

It is admitted that the South Sea islander in a state of nature is overmuch addicted to the practice of eating human flesh; but concerning that I submit: first, that he likes it; second, that those who supply it are mostly dead. It is upon his enemies that he feeds, and these he would kill anyhow, as we do ours. In civilized, enlightened and Christian countries, where cannibalism has not yet established itself, wars are as frequent and destructive as among the man-eaters. The untitled savage knows at least why he goes killing, whereas our private soldier is commonly in black ignorance of the apparent cause of quarrel—of the actual cause, always. Their shares in the fruits of victory are about equal, for the chief takes all the dead, the general all the glory.

II

Transplanted institutions grow slowly; civilization can not be put into a ship and carried across an ocean. The history of this country is a sequence of illustrations of these truths. It was settled by civilized men and women from civilized countries, yet after two and a half centuries, with unbroken communication with the mother systems, it is still imperfectly

civilized. In learning and letters, in art and the science of government, America is but a faint and stammering echo of Europe.

For nearly all that is good in our American civilization we are indebted to the Old World; the errors and mischiefs are of our own creation. We have originated little, because there is little to originate, but we have unconsciously reproduced many of the discredited systems of former ages and other countries — receiving them at second hand, but making them ours by the sheer strength and immobility of the national belief in their novelty. Novelty! Why, it is not possible to make an experiment in government, in art, in literature, in sociology, or in morals, that has not been made, over, and over, and over again.

The glories of England are our glories. She can achieve nothing that our fathers did not help to make possible to her. The learning, the power, the refinement of a great nation, are not the growth of a century, but of many centuries; each generation builds upon the work of the preceding. For untold ages our ancestors wrought to rear that "reverend pile," the civilization of England. And shall we now try to belittle the mighty structure because other though kindred hands are laying the top courses while we have elected to found a new tower in another land? The American eulogist of civilization who is not proud of his heritage in England's glory is unworthy to enjoy his lesser heritage in the lesser glory of his own country.

The English are undoubtedly our intellectual

superiors; and as the virtues are solely the product of intelligence and cultivation—a rogue being only a dunce considered from another point of view—they are our moral superiors likewise. Why should they not be? Theirs is a land, not of ugly schoolhouses grudgingly erected, containing schools supported by such niggardly tax levies as a sparse and hard-handed population will consent to pay, but of ancient institutions splendidly endowed by the state and by centuries of private benefaction. As a means of dispensing formulated ignorance our boasted public school-system is not without merit; it spreads out education sufficiently thin to give everyone enough to make him a more competent fool than he would have been without it; but to compare it with that which is not the creature of legislation acting with malice aforethought, but the unnoted outgrowth of ages, is to be ridiculous. It is like comparing the laid-out town of a western prairie, its right-angled streets, prim cottages, and wooden a-b-c shops, with the grand old town of Oxford, topped with the clustered domes and towers of its twenty-odd great colleges, the very names of many of whose founders have perished from human record, as have the chronicles of the times in which they lived.

It is not only that we have had to “subdue the wilderness”; our educational conditions are adverse otherwise. Our political system is unfavorable. Our fortunes, accumulated in one generation, are dispersed in the next. If it takes three generations to make a gentleman one will not make a thinker. Instruction is

acquired, but capacity for instruction is transmitted. The brain that is to contain a trained intellect is not the result of a haphazard marriage between a clown and a wench, nor does it get its tractable tissues from a hard-headed farmer and a soft-headed milliner. If you confess the importance of race and pedigree in a horse and a dog how dare you deny it in a man?

I do not hold that the political and social system that creates an aristocracy of leisure is the best possible kind of human organization; I perceive its disadvantages clearly enough. But I do hold that a system under which most important public trusts, political and professional, civil and military ecclesiastical and secular, are held by educated men—that is, men of trained faculties and disciplined judgment—is not an altogether faulty system.

It is a universal human weakness to disparage the knowledge that we do not ourselves possess, but it is only my own beloved country that can justly boast herself the last refuge and asylum of the impotents and incapables who deny the advantage of all knowledge whatsoever. It was an American senator who declared that he had devoted a couple of weeks to the study of finance, and found the accepted authorities all wrong. It was another American senator who, confronted with certain hostile facts in the history of another country, proposed "to brush away all facts, and argue the question on consideration of plain common sense."

Republican institutions have this disadvan-

tage: by incessant changes in the *personnel* of government—to say nothing of the manner of men that ignorant constituencies elect; and all constituencies are ignorant—we attain to no fixed principles and standards. There is no such thing here as a science of politics, because it is not to any one's interest to make politics the study of his life. Nothing is settled; no truth finds general acceptance. What we do one year we undo the next, and do over again the year following. Our energy is wasted in, and our prosperity suffers from, experiments endlessly repeated.

Every patriot believes his country better than any other country. Now, they cannot all be the best; indeed, only one can be the best, and it follows that the patriots of all the others have suffered themselves to be misled by a mere sentiment into blind unreason. In its active manifestation—it is fond of killing—patriotism would be well if it were simply defensive; but it is also aggressive, and the same feeling that prompts us to strike for our altars and our fires impels us over the border to quench the fires and overturn the altars of our neighbors. It is all very pretty and spirited, what the poets tell us about Thermopylæ, but there was as much patriotism at one end of that pass as there was at the other.

Patriotism deliberately and with folly aforethought subordinates the interests of a whole to the interests of a part. Worse still, the fraction so favored is determined by an accident of birth or residence. The Western hoodlum who cuts the tail from a Chinaman's nawl,

and would cut the nowl from the body if he dared, is simply a patriot with a logical mind, having the courage of his opinions. Patriotism is fierce as a fever, pitiless as the grave and blind as a stone.

III

There are two ways of clarifying liquids—ebullition and precipitation; one forces the impurities to the surface as scum, the other sends them to the bottom as dregs. The former is the more offensive, and that seems to be our way; but neither is useful if the impurities are merely separated but not removed. We are told with tiresome iteration that our social and political systems are clarifying; but when is the skimmer to appear? If the purpose of free institutions is good government where is the good government?—when may it be expected to begin?—how is it to come about? Systems of government have no sanctity; they are practical means to a simple end—the public welfare; worthy of no respect if they fail of its accomplishment. The tree is known by its fruit. Ours is bearing crab-apples. If the body politic is constitutionally diseased, as I verily believe; if the disorder inheres in the system; there is no remedy. The fever must burn itself out, and then Nature will do the rest. One does not prescribe what time alone can administer. We have put our criminals and dunces into power; do we suppose they will efface themselves? Will they restore to *us* the power of governing *them*? They must have their way and go their length. The natural and immemorial sequence is: tyranny, insurrection, com-

bat. In combat everything that wears a sword has a chance—even the right. History does not forbid us to hope. But it forbids us to rely upon numbers; they will be against us. If history teaches anything worth learning it teaches that the majority of mankind is neither good nor wise. When government is founded upon the public conscience and the public intelligence the stability of states is a dream.

In that moment of time that is covered by historical records we have abundant evidence that each generation has believed itself wiser and better than any of its predecessors; that each people has believed itself to have the secret of national perpetuity. In support of this universal delusion there is nothing to be said; the desolate places of the earth cry out against it. Vestiges of obliterated civilizations cover the earth; no savage but has camped upon the sites of proud and populous cities; no desert but has heard the statesman's boast of national stability. Our nation, our laws, our history—all shall go down to everlasting oblivion with the others, and by the same road. But I submit that we are traveling it with needless haste.

It can be spared—this Jonah's gourd civilization of ours. We have hardly the rudiments of a true one; compared with the splendors of which we catch dim glimpses in the fading past, ours are as an illumination of tallow candles. We know no more than the ancients; we only know other things, but nothing in which is an assurance of perpetuity, and little that is truly wisdom. Our vaunted *elixir vitae* is the art of

printing. What good will that do when posterity, struck by the inevitable intellectual blight, shall have ceased to read what is printed? Our libraries will become its stables, our books its fuel.

Ours is a civilization that might be heard from afar in space as a scolding and a riot; a civilization in which the race has so differentiated as to have no longer a community of interest and feeling; which shows as a ripe result of the principles underlying it a reasonless and rascally feud between rich and poor; in which one is offered a choice (if one have the means to take it) between American plutocracy and European militocracy, with an imminent chance of renouncing either for a stultocratic republic with a headsman in the presidential chair and every laundress in exile.

I have not a "solution" to the "labor problem." I have only a story. Many and many years ago lived a man who was so good and wise that none in all the world was so good and wise as he. He was one of those few whose goodness and wisdom are such that after some time has passed their foolish fellowmen begin to think them gods and treasure their words as divine law; and by millions they are worshiped through centuries of time. Amongst the utterances of this man was one command—not a new nor perfect one—which has seemed to his adorers so preeminently wise that they have given it a name by which it is known over half the world. One of the sovereign virtues of this famous law is its simplicity, which is such that all hearing must understand; and

obedience is so easy that any nation refusing is unfit to exist except in the turbulence and adversity that will surely come to it. When a people would avert want and strife, or, having them, would restore plenty and peace, this noble commandment offers the only means—all other plans for safety or relief are as vain as dreams, as empty as the crooning of hags. And behold, here is it: "All things whatsoever ye would that men should do to you, do ye even so to them."

What! you unappeasable rich, coining the sweat and blood of your workmen into drachmas, understanding the law of supply and demand as mandatory and justifying your cruel greed by the senseless dictum that "business is business"; you lazy workmen, railing at the capitalist by whose desertion, when you have frightened away his capital, you starve—rioting and shedding blood and torturing and poisoning by way of answer to exaction and by way of exaction; you foul anarchists, applauding with untidy palms when one of your coward kind hurls a bomb amongst powerless and helpless women and children; you imbecile politicians with a plague of remedial legislation for the irremediable; you writers and thinkers unread in history, with as many "solutions to the labor problem" as there are among you those who can not coherently define it—do you really think yourselves wiser than Jesus of Nazareth? Do you seriously suppose yourselves competent to amend his plan for dealing with evils besetting nations and souls? Have you the effrontery to believe that those who

spurn his Golden Rule you can bind to obedience of an act entitled an act to amend an act? Bah! you fatigue the spirit. Go get ye to your scoundrel lockouts, your villain strikes, your blacklisting, your boycotting, your speeching, marching and maundering; but if ye do not to others as ye would that they do to you it shall occur, and that right soon, that ye be drowned in your own blood and your pick-pocket civilization quenched as a star that falls into the sea.

THE GIFT O' GAB

A book entitled *Forensic Eloquence*, by Mr. John Goss, appears to have for purpose to teach the young idea how to spout, and that purpose, I dare say, it will accomplish if something is not done to prevent. I know nothing of the matter myself, a strong distaste for forensic eloquence, or eloquence of any kind implying a man mounted on his legs and doing all the talking, having averted me from its study. The training of the youth of this country to utterance of themselves after that fashion I should regard as a disaster of magnitude. So far as I know it, forensic eloquence is the art of saying things in such a way as to make them pass for more than they are worth. Employed in matters of importance (and for other employment it were hardly worth acquiring) it is mischievous because dishonest and misleading. In the public service Truth toils best when not clad in cloth-of-gold and bedaubed with fine lace. If eloquence does not beget action it is valueless; but action which results from the

passions, sentiments and emotions is less likely to be wise than that which comes of a persuaded judgment. For that reason I cannot help thinking that the influence of Bismarck in German politics was more wholesome than is that of Mr. John Temple Graves.

For eloquence *per se*—considered merely as an art of pleasing—I entertain something of the respect evoked by success; for it always pleases at least the speaker. It is to speech what an ornate style is to writing—good and pleasant enough in its time and place and, like pie-crust and the evening girl, destitute of any basis in common sense. Forensic eloquence, on the contrary, has an all too sufficient foundation in reason and the order of things: it promotes the ambition of tricksters and advances the fortunes of rogues. For I take it that the Ciceros, the Mirabeaus, the Burkes, the O'Connells, the Patrick Henrys and the rest of them—pets of the text-bookers and scourges of youth—belong in either the one category or the other, or in both. Anyhow I find it impossible to think of them as highminded men and right-forth statesmen—with their actors' tricks, their devices of the countenance, inventions of gesture and other cunning expedients having nothing to do with the matter in hand. Extinction of the orator, I hold to be the most beneficent possibility of evolution. If Mr. Goss has done anything to retard that blessed time when the Bourke Cockrans shall cease from troubling and the eary be at rest he is an enemy of his race.

"What!" exclaims the thoughtless reader—

I have but one—"are not the great forensic speeches by the world's famous orators good reading? Considering them merely as literature do you not derive a high and refining pleasure from them?" I do not: I find them turgid and tumid no end. They are bad reading, though they may have been good hearing. In order to enjoy them one must have in memory what, indeed, one is seldom permitted to forget: that they were addressed to the ear; and in imagination one must hold some shadowy simulacrum of the orator himself, uttering his work. These conditions being fulfilled there remains for application to the matter of the discourse too little attention to get much good of it, and the total effect is confusion. Literature by which the reader is compelled to bear in mind the producer and the circumstances under which it was produced can be spared.

NATURA BENIGNA

It is not always on remote islands peopled with pagans that great disasters occur, as memory witnesseth. Nor are the forces of nature inadequate to production of a fiercer throe than any that we have known. The situation is this: we are tied by the feet to a fragile shell imperfectly confining a force powerful enough under favoring conditions, to burst it asunder and set the fragments wallowing and grinding together in liquid flame, in the blind fury of a readjustment. Nay, it needs no such stupendous cataclysm to depeople this uneasy orb. Let but a square mile be blown

out of the bottom of the sea, or a great rift open there. Is it to be supposed that we would be unaffected in the altered conditions generated by a contest between the ocean and the earth's molten core? These fatalities are not only possible but in the highest degree probable. It is probable, indeed, that they have occurred over and over again, effacing all the more highly organized forms of life, and compelling the slow march of evolution to begin anew. Slow? On the stage of Eternity the passing of races—the entrances and exits of Life—are incidents in a brisk and lively drama, following one another with confusing rapidity.

Mankind has not found it practicable to abandon and avoid those places where the forces of nature have been most malign. The track of the Western tornado is speedily repopled. San Francisco is still populous, despite its earthquake, Galveston despite its storm, and even the courts of Lisbon are not kept by the lion and the lizard. In the Peruvian village straight downward into whose streets the crew of a United States warship once looked from the crest of a wave that stranded her a half mile inland are heard the tinkle of the guitar and the voices of children at play. There are people living at Herculaneum and Pompeii. On the slopes about Catania the goatherd endures with what courage he may the trembling of the ground beneath his feet as old Enceladus again turns over on his other side. As the Hoang-Ho goes back inside its banks after fertilizing its contiguity with hydrate of China-man the living agriculturist follows the reced-

ing wave, sets up his habitation beneath the broken embankment, and again the Valley of the Gone Away blossoms as the rose, its people diving with Death.

This matter can not be amended: the race exposes itself to peril because it can do no otherwise. In all the world there is no city of refuge—no temple in which to take sanctuary, clinging to the horns of the altar—no “place apart” where, like hunted deer, we can hope to elude the baying pack of Nature’s malevolences. The dead-line is drawn at the gate of life: Man crosses it at birth. His advent is a challenge to the entire pack—earthquake, storm, fire, flood, drought, heat, cold, wild beasts, venomous reptiles, noxious insects, bacilli, spectacular plague and velvet-footed household disease—all are fierce and tireless in pursuit. Dodge, turn and double how he can, there’s no eluding them; soon or late some of them have him by the throat and his spirit returns to the God who gave it—and gave them.

We are told that this earth was made for our inhabiting. Our dearly beloved brethren in the faith, our spiritual guides, philosophers and friends of the pulpit, never tire of pointing out the goodness of God in giving us so excellent a place to live in and commending the admirable adaptation of all things to our needs.

What a fine world it is, to be sure—a darling little world, “so suited to the needs of man.” A globe of liquid fire, straining within a shell relatively no thicker than that of an egg—a shell constantly cracking and in momentary danger of going all to pieces! Three-fourths

of this delectable field of human activity are covered with an element in which we can not breathe, and which swallows us by myriads:

With moldering bones the deep is white
From the frozen zones to the tropic bright.

Of the other one-fourth more than one-half is uninhabitable by reason of climate. On the remaining one-eighth we pass a comfortless and precarious existence in disputed occupancy with countless ministers of death and pain—pass it in fighting for it, tooth and nail, a hopeless battle in which we are foredoomed to defeat. Everywhere death, terror, lamentation and the laughter that is more terrible than tears—the fury and despair of a race hanging on to life by the tips of its fingers. And the prize for which we strive, “to have and to hold”—what is it? A thing that is neither enjoyed while had, or missed when lost. So worthless it is, so unsatisfying, so inadequate to purpose, so false to hope and at its best so brief, that for consolation and compensation we set up fantastic faiths of an aftertime in a better world from which no confirming whisper has ever reached us across the void. Heaven is a prophecy uttered by the lips of despair, but Hell is an inference from analogy.

THE DEATH PENALTY

I

“Down with the gallows!” is a cry not unfamiliar in America. There is always a movement afoot to make odious the just principle

of "a life for a life"—to represent it as "a relic of barbarism," "a usurpation of the divine authority," and the rest of it. The law making murder punishable by death is as purely a measure of self-defense as is the display of a pistol to one diligently endeavoring to kill without provocation. It is in precisely the same sense an admonition, a warning to abstain from crime. Society says by that law: "If you kill one of us you die," just as by display of the pistol the individual whose life is attacked says: "Desist or be shot." To be effective the warning in either case must be more than an idle threat. Even the most unearthly reasoner among the anti-hanging unfortunates would hardly expect to frighten away an assassin who knew the pistol to be unloaded. Of course these queer illogicians can not be made to understand that their position commits them to absolute non-resistance to any kind of aggression; and that is fortunate for the rest of us, for if as Christians they frankly and consistently took that ground we should be under the miserable necessity of respecting them.

We have good reason to hold that the horrible prevalence of murder in this country is due to the fact that we do not execute our laws—that the death penalty is threatened but not inflicted—that the pistol is not loaded. In civilized countries where there is enough respect for the laws to administer them, there is enough to obey them. While man still has as much of the ancestral brute as his skin can hold without cracking we shall have thieves and demagogues and anarchists and assassins

and persons with a private system of lexicography who define murder as disease and hanging as murder, but in all this welter of crime and stupidity are areas where human life is comparatively secure against the human hand. It is at least a significant coincidence that in these the death penalty for murder is fairly well enforced by judges who do not derive any part of their authority from those for whose restraint and punishment they hold it. Against the life of one guiltless person the lives of ten thousand murderers count for nothing; their hanging is a public good, without reference to the crimes that disclose their deserts. If we could discover them by other signs than their bloody deeds they should be hanged anyhow. Unfortunately we must have a death as evidence. The scientist who will tell us how to recognize the potential assassin, and persuade us to kill him, will be the greatest benefactor of his century.

What would these enemies of the gibbet have—these lineal descendants of the drunken mobs that hooted the hangman at Tyburn Tree; this progeny of criminals, which has so defiled with the mud of its animosity the noble office of public executioner that even "in this enlightened age" he shirks his high duty, entrusting it to a hidden or unnamed subordinate? If murder is unjust of what importance is it whether its punishment by death be just or not?—nobody needs to incur it. Men are not drafted for the death penalty; they volunteer. "Then it is not deterrent," mutters the gentleman whose rude forefather hooted the hang-

man. Well, as to that, the law which is to accomplish more than a part of its purpose must be awaited with great patience. Every murder proves that hanging is not altogether deterrent; every hanging, that it is somewhat deterrent—it deters the person hanged. A man's first murder is his crime, his second is ours.

The socialists, it seems, believe with Alphonse Karr, in the expediency of abolishing the death penalty; but apparently they do not hold, with him, that the assassins should begin. They want the state to begin, believing that the magnanimous example will effect a change of heart in those about to murder. This, I take it, is the meaning of their assertion that death penalties have not the deterring influence that imprisonment for life carries. In this they obviously err: death deters at least the person who suffers it—he commits no more murder; whereas the assassin who is imprisoned for life and immune from further punishment may with impunity kill his keeper or whomsoever he may be able to get at. Even as matters now are, incessant vigilance is required to prevent convicts in prison from murdering their attendants and one another. How would it be if the “life-termer” were assured against any additional inconvenience for braining a guard occasionally, or strangling a chaplain now and then? A penitentiary may be described as a place of punishment and reward; and under the system proposed, the difference in desirableness between a sentence and an appointment would be virtually effaced. To overcome this

objection a life sentence would have to mean solitary confinement, and that means insanity. Is that what these gentlemen propose to substitute for death?

The death penalty, say these amiables and futilitarians, creates blood-thirstiness in the unthinking masses and defeats its own ends—is itself a cause of murder, not a check. These gentlemen are themselves of “the unthinking masses”—they do not know how to think. Let them try to trace and lucidly expound the chain of motives lying between the knowledge that a murderer has been hanged and the wish to commit a murder. How, precisely, does the one beget the other? By what unearthly process of reasoning does a man turning away from the gallows persuade himself that it is expedient to incur the danger of hanging? Let us have pointed out to us the several steps in that remarkable mental progress. Obviously, the thing is absurd; one might as reasonably say that contemplation of a pitted face will make a man wish to go and catch smallpox, or the spectacle of an amputated limb on the scrap-heap of a hospital tempt him to cut off his arm or renounce his leg.

“An eye for an eye and a tooth for a tooth,” say the opponents of the death penalty, “is not justice; it is revenge and unworthy of a Christian civilization.” It is exact justice: nobody can think of anything more accurately just than such punishments would be, whatever the motive in awarding them. Unfortunately such a system is not practicable, but he who denies it: justice must deny also the justice of a bushel

of corn for a bushel of corn, a dollar for a dollar, service for service. We can not undertake by such clumsy means as laws and courts to do to the criminal exactly what he has done to his victim, but to demand a life for a life is simple, practicable, expedient and (therefore) right.

"Taking the life of a murderer does not restore the life he took, therefore it is a most illogical punishment. Two wrongs do not make a right."

Here's richness! Hanging an assassin is illogical because it does not restore the life of his victim; incarceration is logical; therefore, incarceration does—*quod erat demonstrandum*.

Two wrongs certainly do not make a right, but the veritable thing in dispute is whether taking the life of a life-taker is a wrong. So naked and unashamed an example of *petitio principii* would disgrace a debater in a pinafore. And these wonder-mongers have the effrontery to babble of "logic"! Why, if one of them were to meet a syllogism in a lonely road he would run away in a hundred and fifty directions as hard as ever he could hoof it. One is almost ashamed to dispute with such intellectual cloutlings.

Whatever an individual may rightly do to protect himself society may rightly do to protect him, for he is a part of itself. If he may rightly take life in defending himself society may rightly take life in defending him. If society may rightly take life in defending him

it may rightly threaten to take it. Having rightly and mercifully threatened to take it, it not only rightly may take it, but expediently must.

II

The law of a life for a life does not altogether prevent murder. No law can altogether prevent any form of crime, nor is it desirable that it should. Doubtless God could so have created us that our sense of right and justice could have existed without contemplation of injustice and wrong; as doubtless he could so have created us that we could have felt compassion without a knowledge of suffering; but he did not. Constituted as we are, we can know good only by contrast with evil. Our sense of sin is what our virtues feed upon; in the thin air of universal morality the altars of honor and the beacons of conscience could not be kept alight. A community without crime would be a community without warm and elevated sentiments—without the sense of justice, without generosity, without courage, without mercy, without magnanimity—a community of small, smug souls, uninteresting to God and uncoveted by the Devil. We can have, and do have, too much crime, no doubt; what the wholesome proportion is none can tell. Just now we are running a good deal to murder, but he who can gravely attribute that phenomenon, or any part of it, to infliction of the death penalty, instead of to virtual immunity from any penalty at all, is justly entitled to the innocent satisfaction that comes of being a simpleton.

III

The New Woman is against the death penalty, naturally, for she is hot and hardy in the conviction that whatever is is wrong. She has visited this world in order to straighten things about a bit, and is in distress lest the number of things be insufficient to her need. The matter is important variously; not least so in its relation to the new heaven and the new earth that are to be the outcome of woman suffrage. There can be no doubt that the vast majority of women have sentimental objections to the death penalty that quite outweigh such practical considerations in its favor as they can be persuaded to comprehend. Aided by the minority of men afflicted by the same mental malady, they will indubitably effect its abolition in the first lustrum of their political "equality." The New Woman will scarcely feel the seat of power warm beneath her before giving to the assassin's "unhand me, villain!" the authority of law. So we shall make again the old experiment, discredited by a thousand failures, of preventing crime by tenderness to caught criminals. And the criminal uncaught will treat us to a quantity and quality of crime notably augmented by the Christian spirit of the new regime.

IV

As to painless execution, the simple and practical way to make them both just and expedient is the adoption by murderers of a system of painless assassinations. Until this is done

there seems to be no call to renounce the wholesome discomfort of the style of executions endeared to us by memories and associations of the tenderest character. There is, I fancy, a shaping notion in the observant mind that the penologists and their allies have gone about as far as they can safely be permitted to go in the direction of a softer suasion of the criminal nature toward good behavior. The modern prison has become a rather more comfortable habitation than the dangerous classes are accustomed to at home. Modern prison life has in their eyes something of the charm and glamor of an ideal existence, like that in the Happy Valley from which Rasselas had the folly to escape. Whatever advantages to the public may be secured by abating the rigors of imprisonment and inconveniences incident to execution, there is this objection: it makes them less deterrent. Let the penologers and philanthropers have their way and even hanging might be made so pleasant and withal so interesting a social distinction that it would deter nobody but the person hanged. Adopt the euthanasian method of electricity, asphyxia by smothering in rose-leaves, or slow poisoning with rich food, and the death penalty may come to be regarded as the object of a noble ambition to the *bon vivant*, and the rising young suicide may go and kill somebody else instead of himself, in order to receive from the public executioner a happier dispatch than his own 'prentice hand can assure him.

But the advocates of agreeable pains and

penalties tell us that in the darker ages, when cruel and degrading punishment was the rule, and was freely inflicted for every light infraction of the law, crime was more common than it is now; and in this they appear to be right. But one and all, they overlook a fact equally obvious and vastly significant. that the intellectual, moral and social condition of the masses was very low. Crime was more common because ignorance was more common, poverty was more common, sins of authority, and therefore hatred of authority, were more common. The world of even a century ago was a different world from the world of today, and a vastly more uncomfortable one. The popular adage to the contrary notwithstanding, human nature was not by a long cut the same then that it is now. In the very ancient time of that early English king, George III, when women were burned at the stake in public for various offenses and men were hanged for "coining" and children for theft, and in the still remoter period (*circa* 1530), when prisoners were boiled in several waters, divers sorts of criminals were disemboweled and some are thought to have undergone the *peine forte et dure* of cold-pressing (an infliction which the pen of Hugo has since made popular—in literature)—in these wicked old days crime flourished, not because of the law's severity, but in spite of it. It is possible that our law-making ancestors understood the situation as it then was a trifle better than we can understand it on the hither side of this gulf of years, and that they were

not the reasonless barbarians that we think them to have been. And if they were, what must have been the unreason and barbarity of the criminal element with which they had to deal?

I am far from thinking that severity of punishment can have the same restraining effect as probability of some punishment being inflicted; but if mildness of penalty is to be superadded to difficulty of conviction, and both are to be mounted upon laxity in detection, the pile will be complete indeed. There is a peculiar fitness, perhaps, in the fact that all these pleas for comfortable punishment should be urged at a time when there appears to be a general disposition to inflict no punishment at all. There are, however, still a few old-fashioned persons who hold it obvious that one who is ambitious to break the laws of his country will not with so light a heart and so airy an indifference incur the peril of a harsh penalty as he will the chance of one more nearly resembling that which he would himself select.

V

After lying for more than a century dead I was revived, dowered with a new body, and restored to society. The first thing of interest that I observed was an enormous building, covering a square mile of ground. It was surrounded on all sides by a high, strong wall of hewn stone upon which armed sentinels paced to and fro. In one face of the wall was a single gate of massive iron, strongly guarded. While

admiring the cyclopean architecture of the "reverend pile" I was accosted by a man in uniform, evidently the warden, with a cheerful salutation.

"Colonel," I said, "pray tell me what is this building."

"This," said he, "is the new state penitentiary. It is one of twelve, all alike."

"You surprise me," I replied. "Surely the criminal element must have increased enormously."

"Yes, indeed," he assented; "under the Reform régime, which began in your day, crime became so powerful, bold and fierce that arrests were no longer possible and the prisons then in existence were soon overcrowded. The state was compelled to erect others of greater capacity."

"But, Colonel," I protested, "if the criminals were too bold and powerful to be taken into custody, of what use are the prisons? And how are they crowded?"

He fixed upon me a look that I could not fail to interpret as expressing a doubt of my sanity. "What!" he said, "is it possible that the modern penology is unknown to you? Do you suppose we practice the antiquated and ineffective method of shutting up the rascals? Sir, the growth of the criminal element has, as I said, compelled the erection of more and larger prisons. We have enough to hold comfortably all the honest men and women of the state. Within these protecting walls they carry on all the necessary vocations of life excepting

commerce. That is necessarily in the hands of the rogues, as before."

"Venerated representative of Reform," I exclaimed, wringing his hand with effusion, "you are Knowledge, you are History, you are the Higher Education! We must talk further. Come, let us enter this benign edifice; you shall show me your dominion and instruct me in the rules. You shall propose me as an inmate."

I walked rapidly to the gate. When challenged by the sentinel, I turned to summon my instructor. He was nowhere visible. I turned again to look at the prison. Nothing was there: desolate and forbidding, as about the broken statue of Ozymandias,

The lone and level sands stretched far away.

IMMORTALITY

The desire for life everlasting has commonly been affirmed to be universal—at least that is the view taken by those unacquainted with Oriental faiths and with Oriental character. Those of us whose knowledge is a trifle wider are not prepared to say that the desire is universal nor even general.

If the devout Buddhist, for example, wishes to "live always,"—he has not succeeded in very clearly formulating the desire. The sort of thing that he is pleased to hope for is not what we should call life, and not what many of us would care for.

When a man says that everybody has "a

horror of annihilation," we may be very sure that he has not many opportunities for observation, or that he has not availed himself of all that he has. Most persons go to sleep rather gladly, yet sleep is virtual annihilation while it lasts; and if it should last forever the sleeper would be no worse off after a million years of it than after an hour of it. There are minds sufficiently logical to think of it that way, and to them annihilation is not a disagreeable thing to contemplate and expect.

In this matter of immortality, people's beliefs appear to go along with their wishes. The man who is content with annihilation thinks he will get it; those that want immortality are pretty sure they are immortal; and that is a very comfortable allotment of faiths. The few of us that are left unprovided for are those who do not bother themselves much about the matter, one way or another.

The question of human immortality is the most momentous that the mind is capable of conceiving. If it is a fact that the dead live all other facts are in comparison trivial and without interest. The prospect of obtaining certain knowledge with regard to this stupendous matter is not encouraging. In all countries but those in barbarism the powers of the profoundest and most penetrating intelligences have been ceaselessly addressed to the task of glimpsing a life beyond this life; yet today no one can truly say that he knows. It is as much a matter of faith as ever it was.

Our modern Christian nations profess a pas-

sionate hope and belief in another world, yet the most popular writer and speaker of his time, the man whose lectures drew the largest audiences, the work of whose pen brought him the highest rewards, was he who most strenuously strove to destroy the ground of that hope and unsettle the foundations of that belief.

The famous and popular Frenchman, Professor of Spectacular Astronomy, Camille Flammarion, affirms immortality because he has talked with departed souls who said that it was true. Yes, monsieur, but surely you know the rule about hearsay evidence. We Anglo-Saxons are very particular about that.

M. Flammarion says:

"I don't repudiate the presumptive arguments of schoolmen. I merely supplement them with something positive. For instance, if you assumed the existence of God this argument of the scholastics is a good one. God has implanted in all men the desire of perfect happiness. This desire cannot be satisfied in our lives here. If there were not another life wherein to satisfy it then God would be a de-clever. *Voila tout.*"

There is more: the desire of perfect happiness does not imply immortality, even if there is a God, for

(1) God may not have implanted it, but merely suffers it to exist, as he suffers sin to exist, the desire of wealth, the desire to live longer than we do in this world. It is not held that God implanted all the desires of the human heart. Then why hold that he implanted that of perfect happiness?

(2) Even if he did—even if a divinely implanted desire entail its own gratification—even if it cannot be gratified in this life—that does not imply immortality. It implies *only* another life long enough for its gratification just once. An eternity of gratification is not a logical inference from it.

(3) Perhaps God is “a deceiver” who knows that he is not? Assumption of the existence of a God is one thing; assumption of the existence of a God who is honorable and candid according to our conception of honor and candor is another.

(4) There may be an honorable and candid God. He may have implanted in us the desire of perfect happiness. It may be—it is—impossible to gratify that desire in this life. Still, another life is not implied, for God may not have intended us to draw the inference that he is going to gratify it. If omniscient and omnipotent, God must be held to have intended whatever occurs, but no such God is assumed in M. Flammarion’s illustration, and it may be that God’s knowledge and power are limited, or that one of them is limited.

M. Flammarion is a learned, if somewhat theatrical, astronomer. He has a tremendous imagination, which naturally is more at home in the marvelous and catastrophic than in the orderly regions of familiar phenomena. To him the heavens are an immense pyrotechnicon and he is the master of the show and sets off the fireworks. But he knows nothing of logic, which is the science of straight think-

ing, and his views of things have therefore no value; they are nebulous.

Nothing is clearer than that our pre-existence is a dream, having absolutely no basis in anything that we know or can hope to know. Of after-existence there is said to be evidence, or rather testimony, in assurances of those who are in present enjoyment of it—if it is enjoyable. Whether this testimony has actually been given—and it is the only testimony worth a moment's consideration—is a disputed point. Many persons living this life profess to have received it. But nobody professes, or ever has professed, to have received a communication of any kind from one in actual experience of the fore-life. "The souls as yet ungarmented," if such there are, are dumb to question. The Land beyond the Grave has been, if not observed, yet often and variously described: if not explored and surveyed, yet carefully charted. From among so many accounts of it that we have, he must be fastidious indeed who cannot be suited. But of the Fatherland that spreads before the cradle—the great Heretofore, wherein we all dwelt if we are to dwell in the Hereafter, we have no account. Nobody professes knowledge of that. No testimony reaches our ears of flesh concerning its topographical or other features; no one has been so enterprising as to wrest from its actual inhabitants any particulars of their character and appearance. And among educated experts and professional proponents of worlds to be there is a general denial of its existence.

I am of their way of thinking about that. The fact that we have no recollection of a former life is entirely conclusive of the matter. To have lived an unrecollected life is impossible and unthinkable, for there would be nothing to connect the new life with the old—no thread of continuity—nothing that persisted from the one life to the other. The later birth would be that of another person, an altogether different being, unrelated to the first—a new John Smith succeeding to the late Tom Jones.

Let us not be misled here by a false analogy. Today I may get a thwack o' the mazzard which will give me an intervening season of unconsciousness between yesterday and tomorrow. Thereafter I may live to a green old age with no recollection of anything that I knew, or did, or was before the accident; yet I shall be the same person, for between the old life and the new there will be a *nexus*, a thread of continuity, something spanning the gulf from the one state to the other, and the same in both—namely, my body with its habits, capacities and powers. That is I; that identifies me to others as my former self—authenticates and credentials me as the person that incurred the cranial mischance, dislodging memory.

But when death occurs *all* is dislodged if memory is; for between two merely mental or spiritual existences memory is the only *nexus* conceivable; consciousness of identity is the only identity. To live again without memory

of having lived before is to live another. Re-existence without recollection is absurd. There is nothing to re-exist.

EMANCIPATED WOMAN

What I should like to know is, how "the enlargement of woman's sphere" by her entrance into various activities of commercial, professional and industrial life benefits the sex. It may please Helen Gougar and satisfy her sense of logical accuracy to say, as she does: "We women must work in order to fill the places left vacant by liquor-drinking men." But who filled these places before? Did they remain vacant, or were there then disappointed applicants, as now? If my memory serves, there has been no time in the period that it covers when the supply of workers—abstemious male workers—was not in excess of the demand. That it has always been so is sufficiently attested by the universally inadequate wage rate.

Employers seldom fail, and never for long, to get all the workmen they need. The field into which women have put their sickles was already overcrowded with reapers. Whatever employment women have obtained has been got by displacing men—who would otherwise be supporting women.; Where is the general advantage? We may shout "high tariff," "combination of capital," "demonetization of silver," and what not, but if searching for the cause of augmented poverty and crime, "industrial discontent" and the tramp evil, instead of dogmatically expounding it, we should take some

account of this enormous, sudden addition to the number of workers seeking work. If any one thinks that within the brief period of a generation the visible supply of labor can be enormously augmented without profoundly affecting the stability of things and disastrously touching the interests of wage-workers let no rude voice dispel his dream of such maleficent agencies as his slumbrous understanding may joy to affirm. And let our Widows of Ashur unlung themselves in advocacy of quack remedies for evils of which themselves are cause; it remains true that when the contention of two lions for one bone is exacerbated by the accession of a lioness the squabble is not composable by stirring up some bears in the cage adjacent.

Indubitably a woman is under no obligation to sacrifice herself to the good of her sex by foregoing needed employment in the hope that it may fall to a man gifted with dependent women. Nevertheless our congratulations are more intelligent when bestowed upon her individual head than when sifted into the hair of all Eve's daughters. This is a world of complexities, in which the lines of interest are so intertangled as frequently to transgress that of sex; and one ambitious to help but half the race may profitably know that every effort to that end provokes a counterbalancing mischief. The "enlargement of woman's opportunities" has benefited individual women. It has not benefited the sex as a whole, and has distinctly damaged the race. The mind that can not discern a score of great and irreparable general

evils distinctly traceable to "emancipation of woman" is as impregnable to the light as a toad in a rock.

A marked demerit of the new order of things—the *régime* of female commercial service—is that its main advantage accrues, not to the race, not to the sex, not to the class, not to the individual woman, but to the person of least need and worth—the male employer. (Female employers in any considerable number there will not be, but those that we have could give the male ones profitable instruction in grinding the faces of their employes.) This constant increase of the army of labor—always and everywhere too large for the work in sight—by accession of a new contingent of natural oppressibles makes the very teeth of old Munniglut thrill with a poignant delight. It brings in that situation known as two laborers seeking one job—and one of them a person whose bones he can easily grind to make his bread; and Munniglut is a miller of skill and experience, dusted all over with the evidence of his useful craft. When Heaven has assisted the Daughters of Hope to open to women a new "avenue of opportunities" the first to enter and walk therein, like God in the Garden of Eden, is the good Mr. Munniglut, contentedly smoothing the folds out of the superior slope of his paunch, exuding the peculiar aroma of his oleaginous personality and larding the new roadway with the overflow of a righteousness stimulated to action by relish of his own identity. And ever thereafter the subtle suggestion of a fat philistinism lingers along that path of

progress like an assertion of a possessory right.

It is God's own crystal truth that in dealing with women unfortunate enough to be compelled to earn their own living and fortunate enough to have wrested from Fate an opportunity to do so, men of business and affairs treat them with about the same delicate consideration that they show to dogs and horses of the inferior breeds. It does not commonly occur to the wealthy "professional man," or "prominent merchant," to be ashamed to add to his yearly thousands a part of the salary justly due to his female bookkeeper or typewriter, who sits before him all day with an empty belly in order to have an habilimented back. He has a vague, hazy notion that the law of supply and demand is mandatory, and that in submitting himself to it by paying her a half of what he would have to pay a man of inferior efficiency he is supplying the world with a noble example of obedience. I must take the liberty to remind him that the law of supply and demand is not imperative; it is not a statute but a phenomenon. He may reply: "It is imperative; the penalty for disobedience is failure. If I pay more in salaries and wages than I need to, my competitor will not; and with that advantage he will drive me from the field." If his margin of profit is so small that he must eke it out by coining the sweat of his workwomen into nickels I've nothing to say to him. Let him adopt in peace the motto, "I cheat to eat." I do not know why he should eat, but Nature, who has provided sustenance for the worming sparrow, the sparrowing owl

and the owling eagle, approves the needy man of prey and makes a place for him at table.

Human nature is pretty well balanced; for every lacking virtue there is a rough substitute that will serve at a pinch—as cunning is the wisdom of the unwise, and ferocity the courage of the coward. Nobody is altogether bad; the scoundrel who has grown rich by underpaying workmen in his factory will sometimes endow an asylum for indigent seamen. To oppress one's own workmen, and provide for the workmen of a neighbor—to skin those in charge of one's own interests while cottoning and oiling the residuary product of another's skinnery—that is not very good benevolence, nor very good sense, but it serves in place of both. The man who eats *pâté de fois gras* in the sweat of his girl cashier's face, or wears purple and fine linen in order that his typewriter may have an eocene gown and a pliocene hat, seems a tolerably satisfactory specimen of the genus thief; but let us not forget that in his own home—a fairly good one—he may enjoy and merit that highest and most honorable title on the scroll of woman's favor, “a good provider.” One having a claim to that glittering distinction should enjoy immunity from the coarse and troublesome question, “From whose backs and bellies do you provide?”

So much for the material results to the sex. What are the moral results? One does not like to speak of them, particularly to those who do not and can not know—to good women in whose innocent minds female immorality is inseparable from flashy gowning and the painted

face; to foolish, book-taught men who honestly believe in some protective sanctity that hedges womanhood. If men of the world with years enough to have lived out of the old *régime* into the new would testify in this matter there would ensue a great rattling of dry bones in bodices of reform-ladies. Nay, if the young man about town, knowing nothing of how things were in the "dark backward and abysm of time," but something of the moral distance between even so free-running a creature as the society girl and the average working girl of the factory, the shop and the office, would speak out (under assurance of immunity from prosecution) his testimony would be a surprise to the cartilaginous virgins, blowsy matrons, acrid relicts and hairy males of Emancipation. It would pain, too, some very worthy but unobservant persons not in sympathy with "the cause."

Certain significant facts are within the purview of all but the very young and the comfortably blind. To the woman of to-day the man of to-day is imperfectly polite. In place of reverence he gives her "deference;" to the language of compliment has succeeded the language of raillery. Men have almost forgotten how to bow. Doubtless the advanced female prefers the new manner, as may some of her less forward sisters, thinking it more sincere. It is not; our giddy grandfather talked high-flown nonsense because his heart had tangled his tongue. He treated his woman more civilly than we ours because he loved her better. He never had seen her on the "ros-

trum" and in the lobby, never had heard her in advocacy of herself, never had read her confessions of his sins, never had felt the stress of her competition, nor himself assisted by daily personal contact in rubbing the bloom off her. He did not know that her virtues were due to her secluded life, but thought, dear old boy, that they were a gift of God.

A MAD WORLD

Let us suppose that in tracing its cycloidal curves through the unthinkable reaches of space traversed by the solar system our planet should pass through a "belt" of attenuated matter having the property of dementing us! It is a conception easily enough entertained. That space is full of malignant conditions continuously distributed; that we are at one time traversing a zone comparatively innocuous and at another spinning through a region of infection; that away behind us in the wake of our swirling flight are fields of plague and pain still agitated by our passage through them,—all this is as good as known. It is almost as certain as it is that in our little annual circle round the sun are points at which we are stoned and brick-batted like a pig in a potato-patch—pelted with little nodules of meteoric metal flung like gravel, and bombarded with gigantic masses hurled by God knows what? What strange adventures await us in those yet untraveled regions toward which we speed?—into what malignant conditions may we not at any time plunge?—to the strength and stress of what frightful en-

vironment may we not at last succumb? The subject lends itself readily enough to a jest, but I am not jesting: it is really altogether probable that our solar system, racing through space with inconceivable velocity, will one day enter a region charged with something deleterious to the human brain, minding us all mad-wise.

By the way, dear reader, did you ever happen to consider the possibility that you are a lunatic, and perhaps confined in an asylum? It seems to you that you are not—that you go with freedom where you will, and use a sweet reasonableness in all your works and ways; but to many a lunatic it seems that he is Rameses II, or the Holkar of Indore. Many a plunging maniac, ironed to the floor of a cell, believes himself the Goddess of Liberty careering gaily through the Ten Commandments in a chariot of gold. Of your own sanity and identity you have no evidence that is any better than he has of his. More accurately, I have none of mine; for anything I know, you do not exist, nor any one of all the things with which I think myself familiarly conscious. All may be fictions of my disordered imagination. I really know of but one reason for doubting that I am an inmate of an asylum for the insane—namely, the probability that there is nowhere any such thing as an asylum for the insane.

This kind of speculation has charms that get a good neck-hold upon attention. For example, if I am really a lunatic, and the persons and things that I seem to see about me

have no objective existence, what an ingenious though disordered imagination I must have! What a clever *coup* it was to invent Mr. Rockefeller and clothe him with the attribute of permanence! With what amusing qualities I have endowed my laird of Skibo, philanthropist. What a masterpiece of creative humor is my Fatty Taft, statesman, taking himself seriously, even solemnly, and persuading others to do the same! And this city of Washington, with its motley population of silurians, parvenoodles and scamps pranking unashamed in the light of day, and its saving contingent of the forsaken righteous, their seed begging bread,—did Rabelais' exuberant fancy ever conceive so—but Rabelais is, perhaps, himself a conception.

Surely he is no common maniac who has wrought out of nothing the history, the philosophies, sciences, arts, laws, religions, politics and morals of this imaginary world. Nay, the world itself, tumbling uneasily through space like a beetle's ball, is no mean achievement, and I am proud of it. But the mental feat in which I take most satisfaction, and which I doubt not is most diverting to my keepers, is that of creating Mr. W. R. Hearst, pointing his eyes toward the White House and endowing him with a perilous Jacksonian ambition to defile it. The Hearst is distinctly a treasure.

On the whole, I have done, I think, tolerably well, and when I contemplate the fertility and originality of my inventions, the queer un-earthliness and grotesque actions of the char-

acters whom I have evolved, isolated and am cultivating, I cannot help thinking that if Heaven had not made me a lunatic my peculiar talent might have made me an entertaining writer.

EPIGRAMS OF A CYNIC

If every hypocrite in the United States were to break his leg to-day the country could be successfully invaded to-morrow by the warlike hypocrites of Canada.

To Dogmatism the Spirit of Inquiry is the same as the Spirit of Evil, and to pictures of the latter it appends a tail to represent the note of interrogation.

"Immoral" is the judgment of the stalled ox on the gamboling lamb.

In forgiving an injury be somewhat ceremonious, lest your magnanimity be construed as indifference.

True, man does not know woman. But neither does woman.

Age is provident because the less future we have the more we fear it.

Reason is fallible and virtue invincible; the winds vary and the needle forsakes the pole, but stupidity never errs and never intermits. Since it has been found that the axis of the earth wobbles, stupidity is indispensable as a standard of constancy.

In order that the list of able women may be memorized for use at meetings of the oppressed sex, Heaven has considerately made it brief.

Firmness is my persistency; obstinacy is yours.

A little heap of dust,
A little streak of rust,
A stone without a name—
Lo! hero, sword and fame.

Our vocabulary is defective; we give the same name to woman's lack of temptation and man's lack of opportunity.

"You scoundrel, you have wronged me," hissed the philosopher. "May you live forever!"

The man who thinks that a garnet can be made a ruby by setting it in brass is writing "dialect" for publication.

"Who art thou, stranger, and what dost thou seek?" "I am Generosity, and I seek a person named Gratitude." "Then thou dost not deserve to find her." "True. I will go about my business and think of her no more. But who art thou, to be so wise?" "I am Gratitude—farewell forever."

There was never a genius who was not thought a fool until he disclosed himself; whereas he is a fool then only.

The boundaries that Napoleon drew have been effaced; the kingdoms that he set up have disappeared. But all the armies and statecraft of Europe cannot unsay what you have said.

Strive not for singularity in dress;
Fools have the more and men of sense the less.
To look original is not worth while,
But be in mind a little out of style.

A conqueror arose from the dead. "Yesterday," he said, "I ruled half the world." "Please show me the half that you ruled," said an angel,

pointing out a wisp of glowing vapor floating in space. "That is the world."

"Who art thou, shivering in thy furs?" "My name is Avarice. What is thine?" "Unselfishness." "Where is thy clothing, placid one?" "Thou art wearing it."

To be comic is merely to be playful, but wit is a serious matter. To laugh at it is to confess that you do not understand.

If you would be accounted great by your contemporaries, be not too much greater than they.

To have something that he will not desire, nor know that he has—such is the hope of him who seeks the admiration of posterity. The character of his work does not matter; he is a humorist.

Women and foxes, being weak, are distinguished by superior tact.

To fatten pigs, confine and feed them; to fatten rogues, cultivate a generous disposition.

Every heart is the lair of a ferocious animal. The greatest wrong that you can put upon a man is to provoke him to let out his beast.

When two irreconcilable propositions are presented for assent the safest way is to thank Heaven that we are not as the unreasoning brutes, and believe both.

Truth is more deceptive than falsehood, for it is more frequently presented by those from whom we do not expect it, and so has against it a numerical presumption.

A bad marriage is like an electrical thrilling machine: it makes you dance, but you can't let go.

Meeting Merit on a street-crossing, Success stood still. Merit stepped off into the mud and went around him, bowing his apologies, which Success had the grace to accept.

"I think," says the philosopher divine, "Therefore I am." Sir, here's a surer sign: We know we live, for with our every breath we feel the fear and imminence of death.

The first man you meet is a fool. If you do not think so ask him and he will prove it.

He who would rather inflict injustice than suffer it will always have his choice, for no injustice can be done to him.

There are as many conceptions of a perfect happiness hereafter as there are minds that have marred their happiness here.

We yearn to be, not what we are, but what we are not. If we were immortal we should not crave immortality.

A rabbit's foot may bring good luck to you, but it brought none to the rabbit.

Before praising the wisdom of the man who knows how to hold his tongue ascertain if he knows how to hold his pen.

The most charming view in the world is obtained by introspection.

Love is unlike chess, in that the pieces are moved secretly and the player sees most of the game. But the looker-on has one incomparable advantage: he is not the stake.

It is not for nothing that tigers choose to hide in the jungle, for commerce and trade are carried on, mostly, in the open.

We say that we love, not whom we will, but

whom we must. Our judgment need not, therefore, go to confession.

Of two kinds of temporary insanity, one ends in suicide, the other in marriage.

If you give alms from compassion, why require the beneficiary to be "a deserving object?" No other adversity is so sharp as destitution of merit.

Bereavement is the name that selfishness gives to a particular privation.

O proud philanthropist, your hope is vain
To get by giving what you lost by gain.
With every gift you do but swell the cloud
Of witnesses against you, swift and loud—
Accomplices who turn and swear you split
Your life: half robber and half hypocrite.
You're least unsafe when most intact you hold
Your curst allotment of dishonest gold.

The highest and rarest form of contentment is aproval of the success of another.

If Inclination challenge, stand and fight—
From Opportunity the wise take flight.

What a woman most admires in a man is distinction among men. What a man most admires in a woman is devotion to himself.

Those who most loudly invite God's attention to themselves when in peril of death are those who should most fervently wish to escape his observation.

When you have made a catalogue of your friend's faults it is only fair to supply him with a duplicate, so that he may know yours.

How fascinating is Antiquity!—in what a golden haze the ancients lived their lives! We,

too, are ancients. Of our enchanting time Posterity's great poets will sing immortal songs, and its archaeologists will reverently uncover the foundations of our palaces and temples. Meantime we swap jack-knives.

Observe, my son, with how austere a virtue the man without a cent puts aside the temptation to manipulate the market or acquire a monopoly.

For study of the good and the bad in woman two women are a needless expense.

"There's no free will," says the philosopher;

"To hang is most unjust."

"There is no free will," assents the officer;

"We hang because we must."

Hope is an explorer who surveys the country ahead. That is why we know so much about the Hereafter and so little about the Herebefore.

Remembering that it was a woman who lost the world, we should accept the act of cackling geese in saving Rome as partial reparation.

There are two classes of women who may do as they please; those who are rich and those who are poor. The former can count on assent, the latter on inattention.

When into the house of the heart Curiosity is admitted as the guest of Love she turns her host out of doors.

Happiness has not to all the same name: to Youth she is known as the Future; Age knows her as the Dream.

"Who art thou, there in the mire?" "Intuition. I leaped all the way from where thou

standest in fear on the brink of the bog." "A great feat, madam; accept the admiration of Reason, sometimes known as Dryfoot."

In eradicating an evil, it makes a difference whether it is uprooted or rooted up. The difference is in the reformer.

The Audible Sisterhood rightly affirms the equality of the sexes: no man is so base but some woman is base enough to love him.

Having no eyes in the back of the head, we see ourselves on the verge of the outlook. Only he who has accomplished the notable feat of turning about knows himself the central figure in the universe.

Truth is so good a thing that falsehood can not afford to be without it.

If women did the writing of the world, instead of the talking, men would be regarded as the superior sex in beauty, grace and goodness.

Love is a delightful day's journey. At the farther end kiss your companion and say farewell.

Let him who would wish to duplicate his every experience prate of the value of life.

The game of discontent has its rules, and he who disregards them cheats. It is not permitted to you to wish to add another's advantages or possessions to your own; you are permitted only to wish to be another.

The creator and arbiter of beauty is the heart; to the male rattlesnake the female rattlesnake is the loveliest thing in nature.

Thought and emotion dwell apart. When the heart goes into the head there is no dissension; only an eviction.

If you want to read a perfect book there is only one way: write it.

"Where goest thou, Ignorance?" "To fortify the mind of a maiden against a peril." "I am going thy way. My name is Knowledge." "Scoundrel! Thou art the peril."

A prude is one who blushes modestly at the indelicacy of her thoughts and virtuously flies from the temptation of her desires.

The man who is always taking you by the hand is the same who if you were hungry would take you by the cafe.

When a certain sovereign wanted war he threw out a diplomatic intimation; when ready, a diplomat.

If public opinion were determined by a throw of the dice, it would in the long run be half the time right.

The gambling known as business looks with austere disfavor upon the business known as gambling.

A virtuous widow is the most loyal of mortals; she is faithful to that which is neither pleased nor profited by her fidelity.

Of one who was "foolish" the creators of our language said that he was "fond." That we have not definitely reversed the meanings of the words should be set down to the credit of our courtesy.

Rioting gains its end by the power of numbers. To a believer in the wisdom and goodness of majorities it is not permitted to denounce a successful mob.

Artistically set to grace
The wall of a dissecting-place,
A human pericardium
Was fastened with a bit of gum,
While, simply underrunning it,
The one word, "Charity," was writ
To show the student band that hovered
About it what it once had covered.

Virtue is not necessary to a good reputation,
but a good reputation is helpful to virtue.

When lost in a forest go always down hill.
When lost in a philosophy or doctrine go upward.

We submit to the majority because we have to. But we are not compelled to call our attitude of subjection a posture of respect.

Pascal says that an inch added to the length of Cleopatra's nose would have changed the fortunes of the world. But having said this, he has said nothing, for all the forces of nature and all the power of dynasties could not have added an inch to the length of Cleopatra's nose.

Our luxuries are always masquerading as necessities. Woman is the only necessary having the boldness and address to compel recognition as a luxury.

"I am the seat of the affections," said the heart. "Thank you," said the judgment, "you save my face."

"Who art thou that weepest?" "Man." "Nay, thou art Egotism. I am the Scheme of the Universe. Study me and learn that nothing matters." "Then how does it happen that I weep?"

A slight is less easily forgiven than an injury, because it implies something of contempt,

indifference, an overlooking of our importance; whereas an injury presupposes some degree of consideration. "The blackguards!" said a traveler whom Sicilian brigands had released without ransom; "did they think me a person of no consequence?"

The people's plaudits are unheard in hell.

Generosity to a fallen foe is a virtue that takes no chances.

If there was a world before this we must all have died impenitent.

We are what we laugh at. The stupid person is a poor joke, the clever, a good one.

If every man who resents being called a rogue resented being one this would be a world of wrath.

Force and charm are important elements of character, but it counts for little to be stronger than honey and sweeter than a lion.

Grief and discomfiture are coals that cool:
Why keep them glowing with thy sighs, poor
fool?

A popular author is one who writes what the people think. Genius invites them to think something else.

Asked to describe the Deity, a donkey would represent him with long ears and a tail. Man's conception is higher and truer: he thinks of him as somewhat resembling a man.

Christians and camels receive their burdens kneeling.

The sky is a concave mirror in which Man sees his own distorted image and seeks to propitiate it.

Honor thy father and thy mother that thy days may be long in the land, but do not hope that the life insurance companies will offer thee special rates.

Persons who are horrified by what they believe to be Darwin's theory of the descent of Man from the Ape may find comfort in the hope of his return.

A strong mind is more easily impressed than a weak; you shall not so readily convince a fool that you are a philosopher as a philosopher that you are a fool.

A cheap and easy cynicism rails at everything. The master of the art accomplishes the formidable task of discrimination.

When publicly censured our first instinct is to make everybody a codefendant.

O lady fine, fear not to lead
To Hymen's shrine a clown:
Love cannot level up, indeed,
But he can level down.

Men are polygamous by nature and monogamous for opportunity. It is a faithful man who is willing to be watched by a half-dozen wives.

The virtues chose Modesty to be their queen. "I did not know that I was a virtue," she said. "Why did you not choose Innocence?" "Because of her ignorance," they replied. "She knows nothing but that she is a virtue."

It is a wise "man's man" who knows what it is that he despises in a "ladies' man."

If the vices of women worshiped their creators men would boast of the adoration they inspire,

The only distinction that democracies reward is a high degree of conformity.

Slang is the speech of him who robs the literary garbage carts on their way to the dumps.

A woman died who had passed her life in affirming the superiority of her sex. "At last," she said, "I shall have rest and honors." "Enter," said Saint Peter; "thou shalt wash the faces of the dear little cherubim."

To woman a general truth has neither value nor interest unless she can make a particular application of it. And we say that women are not practical!

The ignorant know not the depth of their ignorance, but the learned know the shallowness of their learning.

He who relates his success in charming woman's heart may be assured of his failure to charm man's ear.

What poignant memories the shadows bring
What songs of triumph in the dawning ring!
By night a coward and by day a king.

When among the graves of thy fellows, walk with circumspection; thine own is open at thy feet.

As the physiognomist takes his own face as the highest type and standard, so the critic's theories are imposed by his own limitations.

"Heaven lies about us in our infancy," and our neighbors take up the tale as we mature.

"My laws," she said, "are of myself a part: I read them by examining my heart."

"True," he replied; "like those to Moses known, Thine also are engraven upon stone."

Love is a distracted attention: from contemplation of one's self one turns to consider one's dream.

"Halt!—who goes there?" "Death." "Advance, Death, and give the countersign." "How needless! I care not to enter thy camp to-night. Thou shalt enter mine." "What! I a deserter?" "Nay, a great soldier. Thou shalt overcome all the enemies of mankind." "Who are they?" "Life and the Fear of Death."

The palmist looks at the wrinkles made by closing the hand and says they signify character. The philosopher reads character by what the hand most loves to close upon.

Ah, woe is his, with length of living cursed,
Who, nearing second childhood, had no first.
Behind, no glimmer, and before no ray—
A night at either end of his dark day.

A noble enthusiasm in praise of Woman is not incompatible with a spirited zeal in defamation of women.

The money-getter who pleads his love of work has a lame defense, for love of work at money-getting is a lower taste than love of money.

He who thinks that praise of mediocrity atones for disparagement of genius is like one who should plead robbery in excuse of theft.

The most disagreeable form of masculine hypocrisy is that which finds expression in pretended remorse for impossible gallantries.

Any one can say that which is new; any one that which is true. For that which is both new and true we must go duly accredited to the gods and await their pleasure.

The test of truth is Reason, not Faith; for to the court of Reason must be submitted even the claims of Faith.

"Whither goest thou?" said the angel. "I know not." "And whence hast thou come?" "I know not." "But who art thou?" "I know not." "Then thou art Man. See that thou turn not back, but pass on to the place whence thou hast come."

If Expediency and Righteousness are not father and son they are the most harmonious brothers that ever were seen.

Train the head, and the heart will take care of itself; a rascal is one who knows not how to think.

Do you to others as you would
That others do to you;
But see that you no service good
Would have from others that they could
Not rightly do.

Taunts are allowable in the case of an obstinate husband: balky horses may best be made to go by having their ears bitten.

Adam probably regarded Eve as the woman of his choice, and exacted a certain gratitude for the distinction of his preference.

A man is the sum of his ancestors; to reform him you must begin with a dead ape and work downward through a million graves. He is like the lower end of a suspended chain; you can sway him slightly to the right or the left, but remove your hand and he falls into line with the other links.

He who thinks with difficulty believes with

alacrity. A fool is a natural proselyte, but he must be caught young, for his convictions, unlike those of the wise, harden with age.

These are the prerogatives of genius: To know without having learned; to draw just conclusions from unknown premises; to discern the soul of things.

Although one love a dozen times, yet will the latest love seem the first. He who says he has loved twice has not loved once.

Men who expect universal peace through invention of destructive weapons of war are no wiser than one who, noting the improvement of agricultural implements, should prophesy an end to the tilling of the soil.

To parents only, death brings an inconsolable sorrow. When the young die and the old live, nature's machinery is working with the friction that we name grief.

Empty wine bottles have a bad opinion of women.

Civilization is the child of human ignorance and conceit. If Man knew his insignificance in the scheme of things he would not think it worth while to rise from barbarity to enlightenment. But it is only through enlightenment that he can know.

Along the road of life are many pleasure resorts, but think not that by tarrying in them you will take more days to the journey. The day of your arrival is already recorded.

The most offensive egotist is he that fears to say "I" and "me." "It will probably rain"—that is dogmatic. "I think it will rain"—that is natural and modest. Montaigne is the most

delightful of essayists because so great is his humility that he does not think it important that we see not Montaigne. He so forgets himself that he employs no artifice to make us forget him.

On fair foundations Theocrats unwise
Rear superstructures that offend the skies.
"Behold," they cry, "this pile so fair and tall!
Come dwell within it and be happy all."
But they alone inhabit it, and find,
Poor fools, 'tis but a prison for the mind.

If thou wilt not laugh at a rich man's wit
thou art an anarchist, and if thou take not his
word thou shalt take nothing that he hath.
Make haste, therefore, to be civil to thy betters,
and so prosper, for prosperity is the founda-
tion of the state.

Death is not the end; there remains the lit-
igation over the estate.

When God makes a beautiful woman, the
devil opens a new register.

When Eve first saw her reflection in a pool,
she sought Adam and accused him of infidelity.

"Why dost thou weep?" "For the death of
my wife. Alas! I shall never again see her!"
"Thy wife will never again see thee, yet she
does not weep."

What theology is to religion and jurispru-
dence to justice, etiquette is to civility.

"Who art thou that despite the piercing cold
and thy robe's raggedness seemest to enjoy thy-
self?" "Naught else is enjoyable—I am Con-
tentment." "Ha! thine must be a magic shirt.

Off with it! I shiver in my fine attire." "I have no shirt. Pass on, Success."

Ignorance when inevitable is excusable. It may be harmless, even beneficial; but it is charming only to the unwise. To affect a spurious ignorance is to disclose a genuine.

Because you will not take by theft what you can have by cheating, think not yours is the only conscience in the world. Even he who permits you to cheat his neighbor will shrink from permitting you to cheat himself.

"God keep thee, stranger; what is thy name?" "Wisdom. And thine?" "Knowledge. How does it happen that we meet?" "This is an intersection of our paths." "Will it ever be decreed that we travel always the same road?" "We were well named if we knew."

Nothing is more logical than persecution. Religious tolerance is a kind of infidelity.

Convictions are variable; to be always consistent is to be sometimes dishonest.

The philosopher's profoundest conviction is that which he is most reluctant to express, lest he mislead.

When exchange of identities is possible, be careful; you may choose a person who is willing.

The most intolerant advocate is he who is trying to convince himself.

In the Parliament of Otumwee the Chancellor of the Exchequer proposed a tax on fools. "The right honorable and generous gentleman,"

said a member, "forgets that we already have it in the poll tax."

"Whose dead body is that?" "Credulity's." "By whom was he slain?" "Credulity." "Ah, suicide." "No, surfeit. He dined at the table of Science, and swallowed all that was set before him."

Don't board with the devil if you wish to be fat.

Pray do not despise your delinquent debtor; his default is no proof of poverty.

Courage is the acceptance of the gambler's chance: a brave man bets against the game of the gods.

"Who art thou?" "A philanthropist. And thou?" "A pauper." "Away! you have nothing to relieve my needs."

Youth looks forward, for nothing is behind; Age backward, for nothing is before.

CHARACTERS

Chorus of Theban elders

CREON: Sovereign at Thebes

HAEMON: Son to Creon, in love with Antigone

TEIRESIAS: A blind seer

GUARD: In command at the burial ground

MESSENGER: A youth from the country

ANTIGONE: Daughter of the late King Oedipus

ISMENE: Sister to Antigone

EURYDICE: Wife to Creon

Soldiers, maids in attendance upon Eurydice,
escort of Creon, citizens of Thebes

Scene: Before the palace of the Kings at
Thebes

Time: Shortly before the Trojan War

The division into acts and episodes follows the precedents established by the great performance of this play at the Second Theatre-Francais (Paris) in 1844.

The Greek text employed in the translation is that of Wolff.

ANTIGONE

ACT I.

The portico of the palace of Creon at Thebes is conspicuous in the back ground for the time is the break of day.

Well forward on the stage is seen the place for sacrifice, known technically as the thymele. It is in reality an altar-shaped platform in the middle of the space left free for dancing and similar exercises. On the thymele is built the altar of Bacchus, now adorned with wreaths and garlands.

The pillared portico of the palace in the background is reached by a double flight of steps at the sides. On the right of the portico is the altar of Apollo. Three doors afford entrance into the palace—one for the women at the right, one for the slaves at the left and one in the middle for the king. A gate on the extreme right of the garden affords access to the open country while a gate at the extreme left gives on Thebes.

At the beginning of the tragedy Antigone is discovered, a vase on her shoulder, beside the altar to Apollo. She rests the vase lightly upon the altar and, clasping her hands, looks woefully upon the image of the god.

Antigone is in the flush of a vigorous and beautiful young womanhood. Her robe clings loosely to her figure in white folds, leaving the arms bare. A purple cloak hangs from her right shoulder. Her sandals are threaded with gold.

After a moment of silent contemplation,

Antigone quits the scene by the gate on the extreme right only to return in a moment leading her sister by the hand. This sister, Ismene, is a delicate, timid girl, somewhat shrinking in manner and aspect. Ismene is dressed in white, and is somewhat muffled up as if she feared to be recognized.

Antigone. Oh, my very own sister, Ismene dear, you surely know which of all the woes of Oedipus has not come to pass, is not fulfilled by Jove in the lives of the two of us! (*The sisters are the surviving children of Oedipus, late King of Thebes.*) Nothing painful or disgraceful or distressing or dishonoring that I have not seen in your woes and my own! And now what is this they also say throughout the whole city about a proclamation just issued by the commander of the troops? (*Creon thus referred to is not yet officially King.*) Have you heard anything of it? Or are the evils coming to our friends from our foes unknown to you yet?

Ismene. (*Her timid accents contrast with the bold tones of her sister.*) To me no word from friends, pleasant or painful, Antigone, has come since we were deprived of our two brothers dying on the same day each by the other's hand. (*The brothers thus referred to were also children of the late Oedipus. One of these brothers was Polynices and the other was Eteocles. After Oedipus had left Thebes, Eteocles and Polynices ruled by turns there. Disputes arose between the brothers. Polynices fled to the court of Adrastus who organized for him the famous expedition of the seven against Thebes. After much slaughter in the*

attack upon the city, the brothers resolved to decide the issue by single combat. Each slew the other. The tragedy opens on the morning after, the foe having fled in a rout.) Since the forces of the Argives fled this very night I know nothing more whether it be of happy fortune or of grief.

Antigone. I knew it well and for that reason I brought you outside the palace doors so that you might hear alone.

Ismene. What is it? You are revealing some deep plan.

Antigone. Has not Creon honored one of our brothers with a tomb and held one in dishonor unburied? Eteocles indeed, as they say, now treated with justice in obedience to the law, was hidden under the ground, honored with the dead below. But the dishonored dead body of Polynices—they say this has been heralded to the citizens—is not to be hidden in a tomb, not to be wept over. It is to be left unmourned, unburied, a sweet prize for the birds in the shape of a free gift of food when they see it. Such things they say the worthy Creon has heralded to you and to me—especially to me, I say—and he is coming here to proclaim these things effectively to those who do not know them. He does not deem the thing a trifling matter. Whoever offends in these details has death by stoning in store for him here in the city. Thus stand these things—such is the state of affairs for you and soon you will show whether you are trueborn or are but the degenerate child of noble sires.

Ismene. And what, oh, wretched girl, if these

things are so, could I do more either to bind or to loose?

Antigone. See whether you will aid with labor or by running risks.

Ismene. What kind of risk? What is your idea?

Antigone. Will you lift the body with this hand? (*Antigone touches Ismene's hand. Some versions suggest that Antigone raises her own hand significantly.*)

Ismene. Then you mean to bury him—a thing forbidden in the city?

Antigone. He is my brother and yours too even if you do not acknowledge it. (*Some versions make Antigone say here: "I shall at any rate bury my brother and yours, if you don't wish to."*) I will not be caught betraying him.

Ismene. Oh, reckless girl—for Creon has spoken against it!

Antigone. But he has no power to prevent me from serving my own.

Ismene. Woe upon me! Think, oh sister, how our father died hated and disgraced when on account of misdeeds exposed by himself he tore out his two eyes with his own hand. Then his mother and his wife, two names for the same woman, ended her days disgracefully with a noosed rope. Then our two brothers by self slaughter on the same day, the unfortunates, worked the same doom for each other with deadly hands! And now we two left alone seek how we shall die too most wretchedly if, violating the law, we so defy the kingly might and order. It behooves us to bear in mind that we are women and that it is not for us to war with men. Since we are governed by those

more powerful than ourselves we must heed these considerations, take these things into account and even things more humiliating. I therefore implore those who have power below to pardon me since I am under duress and will yield to those in authority. To go beyond this is to have no sense at all.

Antigone. Let me not command you. Even if you were yet to wish to do this thing with me you would not be satisfactory to me. Understand whatever seems good to you. I will bury him myself. I would gladly die for doing it. Dear to him, I will lie beside him who was dear to me, doing holy things in sacrilege. I shall have more time to please those below than those on earth for there I shall be forever. If it seems well to you, dishonor what the gods revere.

Ismene. I do no one dishonor. I was born incapable of violence against the city's laws.

Antigone. Let that be your excuse. I will go now to cover the grave of the brother so dear to me.

Ismene. Wretched girl—how I tremble for you!

Antigone. Fear not on my account. Look to your own fate.

Ismene. At least confide this scheme to nobody. Keep it to yourself and I will keep my own counsel.

Antigone. Oh, proclaim it! You will be far more hateful by your silence if you don't publish all this to everybody.

Ismene. You have a warm heart for a cold task.

Antigone. I know that I am doing my duty to those I ought to honor.

Ismene (as the dialogue attains its climax she has gradually laid aside her original timidity and is now talking in louder tones with flashing eyes). You will do it if you can but you talk of what you are helpless to do.

Antigone. When my strength gives out, I'll stop.

Ismene. One should not undertake the impossible.

Antigone. (She, too, is now fully aroused.) If you talk like that, I'll hate you and you will be justly hateful to the dead. Let me and my lack of wisdom suffer all this woe! I shall endure nothing so dire as an unlovely death.

Ismene. If it seems good to you, go! Know this, though you go foolishly, you are justly precious to those who love you. (*Ismene may mean: "You are really filled with love for your dear ones"—that is, the dead brother she means to bury.*)

Antigone now lifts the vase she had deposited on the altar of Apollo, places it on her head and quits the scene by way of the flight of steps on the right. *Ismene* returns within the palace by way of the door for women.

Fifteen or sixteen elderly gentlemen, belonging to the best families of Thebes, now make their appearance. They comprise what might be called the city council and are in special session. They group themselves in the available space left free at a little distance from the palace.

They comprise the so-called "chorus."

As this tragedy is performed in our theatres,

in accordance with the religious grand opera theory of a Greek play, eight of the old men enter first by emerging around the "thymele" singing what is called a "strophe" and making a tour of the altar of Bacchus. Next eight (or seven) more of the aged gentlemen come upon the scene to sing what is called the "antistrophe." The whole fifteen or sixteen, each with a staff in his hand, then arrange themselves in a semi-circle and sing what is called the "ode" while they dance.

All this is in accordance with an idea in the mind of Doctor Dryasdust and the pedants of his type. It is a perversion of the spirit of the scene. What really happens is that the old gentlemen come in not all at once and not all saying the same thing and doing a song and dance together, but each making a remark and thus joining in the general discussion of the previous night's tremendous battle and the defeat of the foe. There is singing and there may be dancing for that was the Greek way of expressing sentiment. In order to convey an idea of what the elders really debated, each sentence begins a new paragraph. It is a discussion, not an ode, even if there was music in the air at the time and in the Athens of Pericles there was always music in the air.

Chorus. A ray of the sun—the most beautiful light of all that ever yet shone over seven-gated Thebes! (One of the elders indicates it with a gesture, for it is still but a little after sunrise.)

You are shining at last, oh, eye of golden day, appearing above Dirce's tides! (Dirce was the great Theban river.)

The white-shielded fighter from Argos, coming in his armor with all the weapons, has been urged to swift rout in a wild rush away.

He was lured to our land by the wordy quarrel of Polynices — (*the speaker is interrupted by another*)—he flew over our land like a shrieking eagle spreading a snow white pinion (*an allusion to the Argive shields*)—

—with many weapons and with crests of horses' plumes.

(*There is a pause.*)

He halted by our homes.

He arrived encircling our seven gated roads with bloody spears.

He went before he filled his jaws with our flesh and blood (*or before our blood stained his cheek*) or Vulcan's torch could attain our lofty towers.

Such was the din of Mars behind his back, a dire thing to the foe of the dragon (*the allusion is a little obscure, but the dragon is evidently meant*).

(*A pause.*)

(*We must infer that some of the old gentlemen sang a patriotic song and a few of them may have danced to help pass away the time until the meeting was called to order. We may rest assured that, being Thebans, the old gentlemen did none of the preposterous and impossible things attributed to them by Doctor Dryasdust.*)

Jove loathes the boasts of a big mouth.

And seeing them coming on in a great tide, over-armed in rattling metal, he struck with a flash of flame him whom he saw rushing to shout victory from our walls.

Upon the hard earth he descended with his flashing bolt and then with maddened rush he breathed out fiery flames with blows. (*The text is obscure here.*)

Things took an unexpected turn.

Mighty Mars struck them one after another with the force of a race horse.

Seven leaders of their spearsmen at seven gates, equally matched, devoted to Jove their brazen spoils of battle, save only the two hateful ones who had one mother and one father and yet matched against each other their sure spears receiving the same death as the lot of both. (*The single combat of Polynices and Eteocles is referred to. These two brothers hated one another so much that, one legend says, their flames refused to mingle when the two corpses were burned on the same funeral pyre.*)

But great and famous Victory has come to rejoice with Thebes of the many cars.

Let us now be forgetful of battles and in the temples of the gods let us all dance the whole night together.

Let Bacchus, who dances everywhere in Thebes, lead us.

(*One of the elderly gentlemen announces a new arrival on the scene.*)

But here is the ruler of the country, Creon, the son of Menoeceus—(*he is interrupted by another*)

—he is the new sovereign by the recent turn of affairs divine.

What plan is he meditating? For he called this special meeting of the elders by public proclamation.

Preceded by a guard of four warriors fully armed, Creon enters. He is a man of about fifty whose gray hair is conspicuous beneath his plumed helmet. His limbs are encased to the knees in armored boots and a breastplate covers him from the waist to the neck. As he stalks down from the central door of the palace, his troops emerge and pause while he proceeds towards the elders grouped well in front of the scene.

Creon. Gentlemen, the affairs of the city, buffeted by many a sea of trouble, are again righted by the gods. I have sent for you to come here apart from everybody, knowing as I do that you were loyal to the authority and throne of Laius (*King of Thebes before Oedipus*). Moreover, when Oedipus ruled the city and later perished you stood by his children with favoring counsels. Since they now by a double doom perished on one day (*the brothers Polynices and Eteocles*) each struck by the other's fell hand, I hold here all power and authority through nearest relationship with the dead. There is no way of ascertaining the character and capacity and mentality of any man until he gains experience and shows it in administration and in the law. To me it seems that he who directing the whole administration of the city fails to seek the best advice but from timidity holds his tongue is the worst of ancient or of modern men. And he who prefers his friend above his country—I hold him as nothing. (*A slur on Antigone for holding her brother dearer than the city authority.*) I, in truth, would never remain silent if I beheld ruin stalking towards the city in

prejudice to its safety—of this be Jove my witness, who sees all things. Nor would I hold a person as a friend of mine who was hostile to the land, knowing as I do that our country is our salvation and that only while she goes forward in safety do we make real friends. (*The idea of a ship of state is implied here and Creon means that only when that ship sails serenely are its passengers safe.*) With such counsels, do I promote the welfare of the city. I have proclaimed accordingly to all the citizens what I decided regarding the sons of Oedipus. Eteocles—who died fighting for this city, excelling all in the spear—is to be placed within a tomb and to be blessed with all holy things appropriate to the best of men who go to the shades below. His brother—I mean Polynices—who sought to destroy his native land and his native gods by burning down their towers, who sought to ruin those of his own blood and lead them off as slaves, I have proclaimed to the whole body of citizens as one not to be placed within any tomb nor to be even mourned. Let him be unburied and may his body be a shameful sight for birds to devour and dogs as well. Those are my sentiments. Never with my consent shall the evil be honored above the good. He only who is a friend to this city shall be honored by me in his life as in his death.

Chorus. (*One of the Theban elders speaking for the rest.*) Since such is your wish, Creon, son of Menoeceus, regarding the enemy to this town and regarding its champion, very well. You have authority to do what you decide not only affecting the dead but as regards us who are still alive.

Creon. Look well to what has been decreed by proclamation.

Chorus. Let this responsibility be borne by the younger generation.

Creon. Sentinels are alert already beside the dead body.

Chorus. What else have you to command?

Creon. Have nothing to do with those who fail in obedience.

Chorus. There is no one so foolish as to seek death.

Creon. That is, indeed, the penalty. Yet many a time have men been destroyed by hopes of gain.

The Guard enters with slow steps. He is a rural type of the sort known in the United States as a "village sport." He must not be deemed stupid but he has the ancient Greek duplex mind and in his vanity and his eagerness to show how clever he can be, he becomes something of a bore from overdoing his part. He is a stalwart youth, belonging to the forces of Creon but not enrolled in the army although he bears a sword. His dark tunic comes to the knees and a helmet surmounts his head but it is not crested, showing his humble rank as a sort of town constable.

Guard. King, I will not say that I am come so quickly as to be breathless or that I used my feet lightly. I had many matters to reflect upon, making me turn around and around in the road as if I might go back again. My soul had many a thing to argue with me. "Wretch, where are you going to get punished?"—"Oh fool! Stop where you are."—"Yet if Creon learns of this from another

man, won't you suffer?" Meditating such things, I toiled slowly on, feeling heavy and thus a short path was made a long one. At last I prevailed with myself to come here to you. If I say not too much, yet I will at least say something. I have come in the expectation of one thing—I can have to endure only what is fated for me. (*The guard salutes with the humility born of a consciousness that he is a very superior talker.*)

Creon. What can it be that causes you such uneasiness?

Guard. I should like to talk first to you about myself. I did not do the thing. I did not see who did it. I should not be justly involved in difficulty for it all.

Creon. You build a fortification around yourself with skill and you fence the affair off well. You show that you have big news to tell.

Guard. Bad news certainly plunges one into hesitancy.

Creon. Won't you speak once for all and then go away as a relief from this ordeal?

Guard. Yet I will tell it to you. Someone has just buried the corpse and gone—having heaped dry dust over the skin and bones and done what else is meet.

Creon. (*He is agitated.*) What do you say? What man has dared do such a thing?

Guard. I don't know. There was neither blow of pick there nor clod from a spade. The earth about was firm and unbroken and showed no trace of wheels. It was a workman who is trackless. When the first sentinel of the morning showed it to us the wonder of all

was an unpleasant one, our amazement was painful too. He (*the dead*) was gone out of our sight, not entombed but thinly covered with earth as if by one who would evade the woe of leaving the dead unburied. No sign either of beast or of dog was there and the dead did not seem to have been lacerated. Evil words passed from one to another of us, sentinel challenging sentinel. It might have come to blows at last nor was anyone there to prevent it. Each of us might have been the doer of this thing and no one was found guilty. All repudiated it, denied knowing anything of it. We were ready to raise lumps of red hot metal in our hands (*a mode of taking oath to a thing*) and to go through fire, to vow to the gods that we had neither done it nor knew anything about the matter nor advised anyone who did. Finally, when nothing was to be searched out further, someone said something that caused us all to bow our heads in fear to the earth (*a gesture of propitiation*). We had nothing to say against him and yet we did not seem to be doing wisely if we acted on his suggestion. (*The original here is highly idiomatic.*) His advice was that this deed be reported to you and must by no means be hidden from you. This prevailed. Upon me, poor wretch, fell the lot of having to do this good thing. (*Or, winning the chance to seize the advantage afforded by doing it.*) I am here unwillingly and unwelcome, that I know. No one loves the messenger whose tidings are evil.

Chorus. Oh, king, to me it has seemed for some moments of meditation as if this deed might be inspired by the gods.

Creon. Stop speaking before you fill me with rage completely and are revealed as senseless as well as senile. You utter what is unendurable when you say that the gods have had consideration for this dead body. Did they glorify him as a benefactor when they hid him by burial who arrived here to set the temples aflame and their relics and their land and break their laws? Do you ever see the gods honoring the wicked? It is not so! Such things are said against me for a long time now by men who shake their heads in secret and bowed not their heads duly to the yoke of authority as those who love me do. I know perfectly well that from their number some have been led by lucre to do this. Nothing ever flourished among men so evil as money. This works havoc in the cities. It drives men from home. It bends and turns the honest mind of mortals to shameful things. It shows men how to do evil and to know every wicked work. All who were bribed into conniving at this have simply done what will effect their punishment at last. (*He turns from the elders of Thebes and talks to the guard who has been prinking himself preposterously and grinning at the confusion of the old men.*) Now as Jove is powerful and by my reverence for his might, understand this well, for I say it as a man under oath: if you don't find the very hand that did this burying and bring him into my sight, Hell itself will not be punishment enough for you before you are hanged up alive (*he turns to the elders as if to embrace them in one comprehensive gesture of fury*) to make this scandal public.

Thus may you know from what source gain is to be had rightly and for the future learn and understand that ye must not love profit from everything and anything. You will find that more men are cursed than are saved by shameless filchings.

Creon pauses from sheer loss of breath in the vehemence of his fury. The old men cower in their corner. At last the Guard, evidently daunted, summons up a little courage. He has turned his back as if he meant to be off.

Guard. Do you allow me to speak or being thus turned, am I to go?

Creon. Don't you know even now that your speech is offensive?

Guard. Does it bite your ears or your soul?

Creon. Why do you seek the source of my sorrow?

Guard. The doer of this thing offends your mind and I only your ears.

Creon. Ha! It is evident that you were begotten to beguile. (*Some versions have it: you are a born babbler.*)

Guard. Yet never the man to do this deed.

Creon. Yes—you'd even betray a soul for silver.

Guard. Alas—it's hard that to him the thing that seems should seem false!

Creon. Babble what seems to yourself. If you fail to have before me the doers of these deeds you will find that ill gotten gains work ill. (*He strides off with his escort.*)

The old men of the chorus of Thebans seem to be excited by the going of Creon. They

make vain signals to indicate that he return. At last they retire to their customary station with many vehement gestures. The Guard, recovering from his consternation, finds a voice.

Guard. He'll certainly be found. (Vigorous shakings of the head among the Thebans.) But if he were caught or not, luck will decide that, you won't see me coming back here. (Distress among the Chorus.) Saved in spite of what I looked for, beyond my expectation indeed, I owe the gods much gratitude. (He hurries from the scene as if he were fearful of the old men of the Chorus, who seem bent upon holding him back. They rush together in a group and stare up the road leading to the open country. Loud voices are heard and the marching of feet.)

ACT II.

The brightness of day now floods the palace at Thebes. The scene is the same but some two hours or more have elapsed. The old men of Thebes are discovered in a more composed frame of mind. They are talking together serenely. Music is heard. What they say must not be deemed an "ode" but a series of remarks, a conversation, among the members of the so-called Chorus.

Chorus. Many things are terrible, but nothing is more terrible than man.

He goes beyond the sea on the wintry wave through the drenching tides.

Immortal and unwearied Earth, that loftiest of divinities, he furrows year after year with

the plows turning with the equine breed of young mules.

He leads captive the lightly swaying and lightly singing breed of birds and the race of wild beasts and the ocean brood out of the teeming sea he takes with strings twisted into nets—all-knowing man!

He holds in his snares the wild beast that roams the mountains, he subdues the hairy horse of uncombed neck with harness and he yokes the mountain bull. (*A correct translation is rendered difficult first by the state of the text and next by the theory that we have to do with an ode instead of a dialogue, set to music.*)

And discourse of speech, and ethereal meditation and the passion for local government by law has he learned——

—and to escape the dart of fierce frost in the open air as well as the pelting rain.

All inventive!

He confronts the future never at a loss regarding the issue. (*A highly idiomatic phrase in the original and very perplexing to Doctor Dryasdust. A word for word rendering might be: Resourceless regarding nothing he comes or goes to what things are to be.*)

From death alone he shall plot no refuge.

Yet he has contrived to escape from hopeless diseases.

Shrewd in contrivance, having arts beyond fathoming, he glides to evil now, or again to good.

When he stands by the laws of the land and

of the gods and abides by the justice he has sworn, high rises the city.

(Music and the humming of some at intervals.)

No city is his who associates with what is not worthy—such is the reward of his rashness.

Never may he be a guest at my hearth, never let him deem himself my associate, who does such deeds!

An agitated movement is heard off the scene, accompanied by cries. The old men start up from their discourse and stare in the direction that leads to the open country. Some rural characters enter hastily, followed by the Guard, who has Antigone in custody. The old men forming the Chorus burst into exclamations.

I see here a divine marvel!

How, seeing what I see, could I declare that this maiden is not Antigone!

(She lifts up her head.)

Oh, wretched child of a wretched father—Oedipus!

What is the matter?

Surely, it cannot be you!

You, led prisoner for breaking the sovereign's laws!

And taken in disgrace!

Guard. Here she is who did this deed. We caught her in the act of burial. But where is Creon? *(At that moment Creon emerges from the central door of the palace.)*

Chorus. Here he comes forth just when he is needed.

Creon. What is it? By what chance have I come out just at the right time?

Guard. King, mortals should not swear that anything is impossible. A reconsideration falsifies a sound judgment. I had sworn that it would be a long time before I came back here to face your threats by which I had been daunted already. But the joy that comes despite and beyond all expectation exceeds all other delight in magnitude. I come, although in the face of an oath sworn, leading this maiden who was caught honoring the burial place, adorning the tomb. No lots were cast to decide this time—this is pure luck for me. And now, oh King, take her yourself, if you wish, in hand and question her searchingly. It is but right that I go free of these difficulties.

Creon. You led her here—and in what way, then, did you take her?

Guard. She buried the man herself. Now you understand everything.

Creon. Do you understand and speak duly what you are saying?

Guard. I saw this girl burying the corpse you banned. Do I speak plainly and intelligibly?

Creon. And how was she detected and was she surrounded and seized?

Guard. The affair passed off like this. When we arrived, those dire menaces of yours still fresh, we scraped all the soil off the dead body, completely baring it. We sat on the tops of some mounds out of the breeze so that the odor from the fellow might not strike us who fled from it. Moving in lively fashion, man stirring man with insulting words lest he shirk this trouble, so much time elapsed that the

sun's flame was standing midway in the sky and the fire of it burned us. Then all at once a fierce wind raised a storm of dust, a pest in the air, and the plain was filled, withering all the leaves of the trees and even the open air was suffocating with it. We covered and bore the divine scourge. After a considerable time, all was changed. The maiden was then seen. She cried aloud the bitter notes of a bird's shrill utterance when it sees the nest bereft of a young brood. Thus was she when she saw the bare body. (*Pointing to Antigone, now hanging her head.*) She wailed with many a cry and invoked dire curses upon those who had done this work. With her hands she at once carried dried soil. From a wrought brass jug held high she sprinkled the corpse thrice with libations. Seeing this, we rushed pellmell and caught her at once, she not at all frightened. We accused her of having done before what she did then. She did not take her stand upon any denial whatever. It was both a pleasant and a painful thing to me, this. Nothing is so agreeable as to get out of trouble oneself but it is painful to get one's friends into trouble. But these things are all less important to myself than is my own escape from them.

Creon. And you—you, whose head is bowed to the ground—speak—do you deny these things?

Antigone. (*without raising her head.*) I acknowledge having done it all and I deny nothing.

Creon (*to the Guard*). You may take yourself off to wherever you like—freed of a grave

charge. (*To Antigone.*) And you, speak not roundabout but to the point—were you aware of the proclamations forbidding these acts?

Antigone (In a low voice). I knew of them. How was I to avoid it? It was made conspicuous.

Creon (mastering his rage with an effort). Then you dared to violate the laws?

Antigone (she lifts her head and slowly rises to her full height and faces Creon). It was not Jove himself who proclaimed these edicts to me nor did Justice, dwelling with the divinities below, frame such laws for men. Nor did I consider that your proclamations were of such force and effect as to supersede the unwritten and immovable edicts of the gods themselves, since you are mortal. These live not for today nor for yesterday but forever and no one knows whence they derive. Not for violation of these would I have to pay a penalty to the gods through fear of any man's judgment. I knew well that I must die. If I must die before my time, that too I call gain. He who lives, as I do, in the midst of many evils, will—how could he otherwise?—endure death as a blessing. Hence to me there is nothing in the least painful in this doom. But if I had left one born of my own mother to remain unburied in death, then would I suffer anguish. I am not in sorrows through all this. (*She makes a gesture embracing the scene.*) And if I seem to you now to have been caught in imbecilities, I have almost incurred the censure of an imbecile for that imbecility. (*She turns away from Creon with a show of scorn and mockery.*)

Chorus. It is manifest that the impetuous temperament of an impulsive father is that of the daughter. She does not know how to yield to adversities.

Creon. Yet understand plainly that stubborn wills are most surely felled and the hardest iron, tempered into durability by the heat, you may see most frequently snapped and broken short. By means of a tiny bit the hottest horses, as I know, are dominated. It does not behoove him who must serve his fellow mortal to think too largely of himself. (*He indicates Antigone who has walked off towards the palace steps and is regarding him with scornful looks.*) She was already accustomed to be haughty when she violated the plainest laws. Her insolence, once accomplished, became two-fold when she boasted of these things she had done and laughed at them. I would be no man, and she would be the man here if such power is to be wielded by her with impunity. Though she be my own sister's daughter or nearer by kin than all who kneel at our domestic altar of Jove (*the family chapel or altar of Jove was in the garden of a Greek home*) she and those of her blood shall not evade the worst of fates. For I hold the other one (*Ismene*) no less guilty in conspiring to effect this burial. (*He turns to the servants on the palace steps.*) Call her out! I saw her just now inside in hysterics, not in control of herself. The conscience of those who are devising evil is apt to be caught beforehand in the falsehood they devise! Yet when anyone is taken in an act of wickedness, I hate to see her try to glory in it!

Antigone (who stands scornfully regarding him). Do you want to do more than kill me, having caught me?

Creon. Not I, indeed. Having this, I have everything. (He indicates her with equal scorn.)

Antigone. What, then, do you intend to do? Just as to me your words are pleasing in nothing—and may they never please me!—so mine must likewise be no less displeasing to you. And from what source could glory be more glorious than that derived from the placing of a brother in the grave? All these people here (indicating the old men of the Chorus) would say they were pleased if fear did not tie their tongues. But sovereign power rejoices in many things besides the possibility of doing and saying what seems best to it.

Creon. You alone of the Thebans see this.

Antigone. Even they see it (She indicates the old men). On your account they hold their tongues.

Creon. And you are not ashamed to think you can do differently from them?

Antigone. There is nothing disgraceful in honoring one's own flesh and blood.

Creon. Was not he a brother who died on the other side?

Antigone. A brother by the same mother and the same father.

Creon. How, then, being irreverent to him, do you pay him honor?

Antigone. The dead body will not bear witness to such things. (She means that the dead will not find fault.)

Creon. But if you place him on a level with the godless?

Antigone. Not a slave, but a brother, died.

Creon. Ravaging this land! He stood forth in its defense. (*He means the other brother.*)

Antigone. Nevertheless, Hades^o demands these laws be obeyed. (*She means that the gods below require the observance of the last rites to the dead.*)

Creon. But the good must not be treated on a level with the bad.

Antigone. Who knows but this may seem good down there?

Creon. An enemy, even when he dies, is no friend.

Antigone. I was not born to share in hate but in love.

Creon. Then going below, if you are to love, love them down there. I will never be swayed by a woman while I live.

The door leading into the women's portion of the palace is thrown open and Ismene emerges in a swooning state. She is dishevelled, her long hair flowing about her form. She is supported by several female attendants. Her appearance causes fresh agitation among the old men of the chorus.

Chorus. There before the doors is Ismene!

She lets fall the tears of a loving sister! (*The text is involved in unnecessary dispute owing to misconceptions of the real organization of a chorus in a Greek tragedy.*)

The cloud upon her brow is bloody—her face is ashamed—her lovely cheek is wet!

Creon. (*He is angered by the aspect of*

Ismene.) You, too, crouching at home like a spider stealthily sapping my strength—I did not know I was feeding a pair of accursed conspirators against my throne. Here! Tell me—do you admit being involved in this burial or do you declare you know nothing about it?

Ismene. I did the deed, even if she shared in it, and I was a participant and bear the guilt.

Antigone. But fairness does not justify you in this, since you did not want to do it and I did not let you play a part in it.

Ismene. But in your trials I am not ashamed to travel with you, having caused part of the woe myself. (*Some versions make Ismene say that she does not shrink from voyaging herself upon this tide of trials.*)

Antigone. Whose the work was Hades and those below record together. I love no friend who is a friend in words.

Ismene. Do you despise **me**, sister, by not letting me die with you and thus consecrating the dead.

Antigone. You shall not die together with me—and do not claim for yourself what you had no hand in. I am enough to die.

Ismene. What life would be dear to me, deprived of, you?

Antigone. Find favor with Creon—of that you must be judge. (*Or, as some translate, look to Creon—you are his kin.*)

Ismene. Why hurl these things at me—it does not help.

Antigone. I am the sufferer—if I rejoice at all it is on your account I rejoice.

Ismene. And how can I still help you in any other way?

Antigone. Look out for yourself. I do not envy you your escape.

Ismene. Oh, wretched girl—am I not involved in your fate?

Antigone. You at any rate have life left—I am to die, (*or, you chose life and I death*).

Ismene. But not because I left my words unspoken.

Antigone. To some you seem to speak well, to others I appeared the one who understood best.

Ismene. The guilt of this error is the same for both of us.

Antigone. Have courage! You will live. My soul has long been dead, since I had to serve the dead.

Creon. I declare, one of these girls seemed witless just now and the other has been so from her birth.

Ismene. The mind, oh king, of those who suffer evils, does not remain healthy as it was when it was first in bloom but loses its poise.

Creon. So it was with you when you preferred to do evil with the evil.

Ismene. What life was worth while to me when I was deprived of her?

Creon. Don't speak of her (*indicating Antigone*). She is no longer in being.

Ismene. But are you not killing the bride of your own son?

Creon. The furrows of other fields are arable. (*He can plow other fields*).

Ismene. Not as she was attached to him.

Creon. I hate vile women for my sons.

Antigone. Oh, dearest Haemon, how your father dishonors you!

Creon. You are an affliction—you and your love!

Ismene. And you will deprive your son of her?

Creon. It is Hades that impedes this marriage for me.

Chorus. It is decided, apparently, that this girl must die.

Creon. Both for you and for me. (*He speaks to the escort*). Wait no longer but take her inside, take them within, menials! Henceforth, these women must not be running loose in this style. Even the bravest take flight when they see Hades yawning for their lives. (*The attendants and the escort go off, escorting Antigone and Ismene*).

Chorus. Happy are they whose lot is not spiced with evil.

Those whose home has been shaken by the gods lack no curse creeping upon generation after generation, in fulfillment. (*A rather free version. The reader may regard these words as forming an "ode" if he likes but they are in reality the philosophical reflections of a lot of old gentlemen discussing the latest sensation in Thebes.*)

When a tide forced by raging winds on the deep dashes through the gloom in the bosom of the sea, how the waves lift their lofty crests and the black sand rolls upward from below while the beaten shores resound with the buffeting winds! (*A very discreet re-*

mark of general tenor in view of the fact that Creon is there to hear it.)

The ancient woes of the family of Labdacus (*the Theban dynastic line*) are piled high upon the griefs of the dying, I see.

One generation does not free the next for some god is always smiting them and there is no release for any.

Now, indeed, the last roots of the family tree of Oedipus are deprived of the light of life and are become as dust with the gods below—(*speaker interrupted, apparently, by the next*).

Such is senselessness in speech and fury of mind!

Who among men can withstand the power you wield, oh Jove?

Sleep, that leads us all in due time to old age, impotent sleep, has no power over you, oh Jove, and time can not touch you. (*The text is in dispute here*).

You are the sovereign to whom Time can not allot an old age and you are forever in the flashing brilliance of Olympus. (*As some gossip, others pray*).

What has been and what will be is ordained.

No bliss enters into the earthly lot of men without its curse as well.

Many-thrilled hope is a benefit to many men.

To many it is a false promise of light loves.

No man is experienced until he has thrust his foot into the hot fire.

Speech is made glorious by wisdom.

Yet there are times when the evil seems good—if some god be luring us into disaster.

There is very little time without its woe.

Here comes Haemon, the last born of your sons. (*As this is said, the Theban elders address Creon more directly.*)

He comes in distress on account of the doom of his future bride, Antigone, he is overwhelmed with anguish because of his blighted marriage.

Haemon, now a vigorous youth approaching the age of twenty-eight, rushes upon the scene breathless. He is quite tall and his attire and his weapons denote a soldier. His aspect is that of a man worn out by loss of sleep. He gives a hurried look around and seems eager to speak but must pause for breath.

Creon. Soon we shall know more than the seers. Oh, my son, have you not heard the fixed sentence of your intended bride since you come here raving against your father? Or am I still dear to you whatever I do?

Haemon. Father, I am yours. You having good principles, direct the ways in which I am to follow. No marriage shall be deemed by me preferable to being well guided by you.

Creon. Thus, indeed, my son, would you have your heart, esteeming everything subordinate to your father's judgment. On this account men pray that they may have good children growing up at home, so that they may be defended from the evils intended for them by foes and that the father's friend may be honored as the father is. He who begets useless offspring—what else shall be said of him than that he has made woes for himself and delight for his foes? So, my son, do not for the sake of a woman's pleasure discredit

your mind, knowing that such an embrace grows cold when a wicked woman is your mate at home. What plague is worse than an evil friend? Cast her from you as if she were loathsome to wed with someone in Hades. For since I caught her openly standing alone in defiance out of the entire town I will not prove myself false to the city, but will kill her. On this account let her invoke again and again a goddess akin to herself. If I will bring my family up as a source of disedification, then I must do precisely the same with strangers.

Creon pauses as if he would hear what the others have to say. There is silence and he resumes.

He who is a worthy man at home seems just to the whole city. He who goes to excess or who does violence to the laws or who thinks of over-awing the rulers is not going to gain my praise. But he whom the city appoints, him must we hear and heed in little things and great, in just cases and in unjust. Such a man I would venture to call competent to rule and to be worthy when subjected to authority too. Were he stood in the line of spearmen he would stand firm and straight and true. There is no worse evil than anarchy. That is the ruin of cities. It sets homes in rebellion. It breaks the allied line of spears. Obedience, submission to authority, saves the most bodies among the well drilled. (*This is an obscure illustration because it is borrowed from the military tactics of the ancient battle field.*) Thus must we become a bulwark to the well disposed and not be found inferior to any woman. It is better, if we must, to fall by

the blow of a man and not be rated as inferior to women.

Chours. To us, indeed, if we be not led astray by our own age, you seem to be saying sanely the things you have apparently pondered. (*That is, what you say, you say well, you seem to know what you are talking about.*)

Haemon. Father, the gods put minds into men, of all possessions the supreme one. I, however you may not wisely say these things, would not be able to controvert them with other words, although some other man might be able to do it well. I was born to look out for all that concerns you whatever anyone may say or do or censure. Your look is a dread thing to the man of the people and he reveals it in words that you would not like to hear. My part has been to listen to these things—some said privately—and I know what grief on this girl's account fills the city. They say she is the worthiest of women and that it is most wicked for her to have to die because she did what was glorious. She it was who when her own brother fell slaughtered unburied would not leave him to the mongrel curs to be devoured nor to birds of prey. Is she not worthy of the golden medal of honor? Such is the gossip that goes about in secret. To me, father, your well being is a boon. There is no possession more precious. What can be a brighter diadem for the children than a flourishing father or what for a father is more precious than his sons? Do not, then, have one manner for yourself alone, as if you were saying that you and nobody else could

be right. He who deems that he alone can think sanely and that in tongue or in soul he and nobody else has an advantage, he is seen when bared to be empty, when exposed to be nothing. For a man, even if he be a wise one, is not disgraced by having to learn many things and to yield much. You see how in the wintry streams many a tree gives way so that it may save its branches while those which withstand the force are utterly destroyed. Thus he too who keeps the mast of his vessel unyieldingly up, causes it to turn upside down and voyages under the seats for the rowers at last. So yield your anger and give way. If I who am younger may venture an opinion, I would declare that it were best for a man to be born wise than to have to acquire wisdom by experience. The balance does not always incline that way but still it is well to learn something from those who speak with wisdom. (*The speech is somewhat obscure because Haemon is trying to convince the old men in the chorus as well as his father without at the same time offending Creon.*)

Chorus. Oh, king, it would become you, if it be timely to say it, to learn from what he says. You, too, (*to Haemon*) might learn from him. Both sides have spoken well.

Creon. (*To the Chorus*) Are those of my age to be taught to think by a man of his age and experience?

Haemon. In what is unjust—by no means! If I am young, you should consider not my years but my capacity.

Creon. Is it our business to regard the reprobate?

Haemon. I would never bid anyone honor the evil.

Creon. Is she not smitten with this pest?

Haemon. The whole people of Thebes say no.

Creon. Is the whole city to order me and is it incumbent upon me to heed its orders?

Haemon. Do you not realize that what you say is spoken by a mere youth? It is he now (*indicating his father to the chorus*) who talks like a lad.

Creon. Am I to rule this land otherwise than on my own responsibility?

Haemon. But that is no city which is under the sway of one man.

Creon. Is not a city rated according to the ruler of it?

Haemon. You would be fortunate as the sole ruler of a desert isle.

Creon. (*To the Chorus*). He's fighting, it seems, with the woman.

Haemon. If you are that woman! I am anxious on your account.

Creon. Oh, vilest of men, going to do battle against your father!

Haemon. Do I not see you transgressing the laws of right?

Creon. Do I transgress when observing my own laws?

Haemon. You do not observe them when you disregard what is due to the gods.

Creon. Oh, base spirit, lower than a woman's!

Haemon. You will never catch me yielding to the base.

Creon. Yet your whole speech is for her sake.

Haemon. And for your sake and my own and for the sake of the gods below.

Creon. You'll never marry her while she lives!

Haemon. Then she must die and in dying destroy someone—else!

Creon. You go to an extreme of boldness in thus threatening.

Haemon. What threat is there in talking against empty judgments?

Creon. You'll regret your own judgments, for it is yours that are empty.

Haemon. If you were not my own father, I would say you were not in your right mind.

Creon. Being a woman's slave, don't trifle with me!

Haemon. You want to talk and yet listen to no speech in reply?

Creon. Really? But, no, by Olympus! you'll pay up for these taunts. (*To the escort*) Lead in that wretch so that in his sight she may die in the presence of the bridegroom!

Haemon. Not beside me—never think it!—shall she perish nor shall you ever again see my face. Rant henceforth among the friends who can put up with you! (*He rushes out by the road leading to the open country.*)

Chorus. Oh, king, the man has gone upon the impulse of his anger. A young mind when upset is dire in its impulses.

Creon. Let him do or plan more than man

can do. He shall not change the doom of those two girls.

Chorus. Do you intend to put them both to death?

Creon. Not the one who did not touch the body—you speak in season.

Chorus. And by what death will you slay her?

Creon. Leading her where mortal footstep has not yet trod, I will hide her yet alive in a rocky grotto with so much food as the rites of propitiation make fitting so that there need be no curse upon the city. And there, imploring Hades, the only god she reveres, (*Hades was a deity as well as a place and the dead were the great concern of Hades*) perhaps she will escape death, it will happen that she shall not die, perhaps, or else she will know however tardily that it is a waste of effort to revere Hades.

Creon, accompanied by his escort, marches gloomily up the palace steps and retires within the main portal, paying no attention to the frenzied gestures of the old men of the chorus, who have some words to offer. There seems to be some agitation within the palace and the old men, exchanging looks, express the greatest agitation. Music is heard.

ACT III

Before the palace of Creon at Thebes, groups of people have gathered, evidently in expectation of something to happen.

It is early afternoon of the same day.

The old gentlemen of Thebes who form the

local council and who are always referred to in the text as Chorus, are grouped in their accustomed place. Now and then a group of the gathering people will pause to listen to the deliberations or the prayers or other proceedings of these Theban elders. Nevertheless, general interest centers in the palace itself, which has no sign of life beyond the pacing to and fro on the steps of some armed sentinels.

Chorus. Love is never worsted in battle. Love overwhelms all possessions and he spends his nights on the soft cheeks of virgins.

Thou (*the speaker is addressing Love as a deity*) thou dost wander over the wide sea and into the abodes of the rustics too.

Not even one among the immortals finds refuge from thee to say nothing of mere men.

He raves who has thee (*in his heart*).

Thou canst deflect the just mind itself into prejudice to its destruction.

Thou hast worked up this family quarrel.

Triumph is in the bright longing of the eyes of the bride finely arrayed.

The power of the mighty is in the sanctity of old laws.

The goddess of Love wins without battles.

(*The gathering crowd grows more agitated as signs of activity multiply about the palace portals.*)

(*One of the Theban elders announces an event.*)

Even I am excited beyond the limits of the law—seeing what I see.

(*The palace portal appropriated to the women is thrown open and Antigone, bound, is led*

forth by the attendants. The surging crowd is held back by the sentinels.)

I can not stop the flowing of my tears as I behold Antigone thus attended to the bridal bed of death that awaits us all.

(Before descending the palace steps in custody, Antigone looks around her at the crowd. Her remarks are not necessarily addressed exclusively to the Theban elders although the things she says are for their benefit too.)

Antigone. Citizens of my native land, look upon me as I go my last way, seeing my last of the light of the sun! Hades, the attendant of us all, leads me yet living to the banks of Acheron (*a river in the pagan hell*) not fated to be wed, for I shall not be celebrated in any marriage hymn, being already doomed to espousals below. I shall wed with Acheron.

Chorus. Then gloriously and with song you depart for the hidden places of the dead.

Neither by wasting illness are you stricken nor have you received the lot of the sword, but of your own free decision, living free and solitary, you will go down unique among mortals to your place in hell. (*The Hades or hell of the ancients was no such place of fire and brimstone as some modern theologians have described for the edification of Christians.*)

Antigone. I have heard that the Phrygian stranger perished miserably on the summits of Sipylus, she, the child of Tantalus. (*Niobe is referred to. She boasted of her many children, thus vexing the mother of Apollo and Diana, who had borne but those two. Niobe found her children all slain by Apollo and*

Diana and she wept herself into a stone or into a fountain under a stone on Mount Sipylus.) She was subdued like the pendent ivy over the budding stone. Now she wastes away into rain, according to the legends of men, and the snows never leave her while her bosom is wet with the tears falling from her grieving eyes. My destiny, most like hers, sings me to her sleep.

Chorus. But she was a goddess and goddess-born and we are mortals of an earthly breed. Yet is it high renown to have it said of a dying woman that she was on a level with the divine while she lived and even when she died.

Antigone. Oh—they make sport of me! (*This remark is not necessarily a reply to the last words from the Chorus but is Antigone's comment upon the deportment of some of the crowd.*) Gods of our fathers, why do you insult me thus before I am gone and out of sight, oh, my city, and ye men of money in my city! Oh, ye fountains of Dirce (*source of Theban waters*) and soil of many-charioted Thebes you will attest how I am stricken down unwept of friends and by what edicts I depart for the stony grotto in my new-cut tomb. Miserable girl that I am! Neither among men nor with the dead below have I any home—neither with the living nor with the dead shall I be!

Chorus. Rushing to the extreme of boldness, before the lofty throne of Justice herself, you have fallen far indeed, my child.

You are paying a penalty for a father's fault.

Antigone. You have freshened a sore wound,

my pity for my father and my grief for all the woes in the doom upon the glorious family of Labdacus. Oh, my mother's marriages! (*Jocasta, mother of Antigone, married a monarch who was slain unwittingly by his own son, whereupon that son — Oedipus — married his own mother — Jocasta — all the parties being unaware of their family relationship.*) Curses were upon her slumber—ill-fated mother!—by the side of her son, my father! From what doomed beings I took my birth! With them thus cursed I go now unwed to dwell. (*A pause.*) Oh, my unfortunate brother, wofully wed, you have destroyed me living with your dying! (*She means Polynices, who made a marriage that led to his expedition against Thebes.*)

Chorus. To respect is to be respected. (*They mean that if she had respected the law she would not be in this ignominy.*)

Authority, wherever authority itself is involved, will tolerate no usurpation.

Your own deliberate wilfulness ruined you.

(*Antigone has by this time been borne down the steps of the palace towards the gate leading into the open country. The discussion among the elders has been turned into a debate which is having a marked effect in keeping the crowd passive. Creon makes a quick entrance with his escort through the main door of the palace and stands looking down upon the scene from his station at the top of the flight of steps.*)

Antigone. Unmourned, friendless and unsung in bridal bloom, I am led along this way

prepared for me. No more will it be allowed me to see the holy eye of the flashing sun. My doom is a tearless one—no friend bewails me.

Creon. Rest assured that songs and wails before death would not cease for a moment were it any good to sound them. (*He addresses the custodians of Antigone whose progress is now impeded by the throng.*) Won't you get her away as quickly as possible? And when you have her well roofed into the tomb as I ordered you, leave her alone in it to decide whether she is to die or whether she is to go on living under the roof of such a grave. (*He addresses the crowd.*) As regards this girl, our hands are clean. She will be deprived of the companionship of those above ground.

Antigone. Oh, tomb, oh bridal bower, oh, everlasting cell within the bosom of the guarded rock, to you I go to join my own people, the great number of them among the dead as guests of Persephone (*Queen in Hades*)! The last of these am I and the worst by far to go down, perished by a dire doom before my time. Yet do I hold the hope that my coming will be welcome to my father and a delight to you, dear mother, and precious to yourself, oh dear brother mine! When you were dead, I, with this hand of mine adorned you for the tomb and poured out your libations. Now, oh Polynices, I pay this penalty for having honored your dead body!

(*Now comes a portion of Antigone's famous speech on her way to the tomb which has provoked one of the most vehement and most*

voluminous controversies in the history of classical literature. Let the paragraph be read attentively first and comment will come next.)

Even though I did you honor, to the well disposed this will seem proper. Had I been the mother of children or had a husband of mine been stretched out dead, never would I have assumed this task in defiance of the city's law. With reference to what law do I speak? (*Antigone is conscious of being carefully heeded as she speaks.*) Had my husband been dead, it would have been different. There might have been a child by another, had I lost the one. With father and mother both below in Hades, there could be no brother to be born for me ever again. In deference to that law, I placed you first, dear brother, and to Creon I seemed to sin and to dare wrongly. And now a prisoner in their hands, am I led seized helpless, unwed, receiving no share of the joy of marriage nor of the rearing of children but thus without friends, ill-fated, I wend my way alive to the tombs of the dead!

* (*Some of the most eminent men in literature, including Goethe, have declared that this passage must be spurious. Sophocles could not have written it, they say, because it is inconsistent with the motive professed all along by Antigone. She has been hitherto glorified as a conscientious objector. Now we have her saying that had she been a wife and mother, things might have been different. Yet she said not so long before that she honored her brother's dead body because no human edict could supersede the code of heaven. Yet we*

must remember two things that explain whatever Antigone says here that seems at first blush inconsistent. She is appealing for sympathy to the people, well knowing that she has that sympathy but hoping that there may yet be a popular intervention in her favor. In the next place she is in love with Haemon, and the desolation of having to go to the tomb without even becoming his bride for an hour may excuse the weakness of her womanly mood. The dispute over this famous passage arises from that misconception of the function of the Chorus in Greek tragedy to which attention has been called already. Antigone is not pleading with the Chorus. She is pleading with the people of Thebes, addressing the crowd.)

What code of justice emanating from the gods have I violated? Why must I, the unfortunate, look to the gods any more? For what champions am I to call? Am I not called irreverent for my display of reverence? But if these men are the sinners, may they suffer no more woes than they have unjustly done to me. (*The agitation of the spectators grows so great that the elders of Thebes in session—the "Chorus"—say a word to quiet the crowd.*)

Chorus. Still the same furies dominate her in storms of soul,

Creon. Those who lead her captive shall yet grieve for their tardiness. (*Her guards urge her.*)

Antigone. Oh! That speech goes nearest to a sentence of death. (*The meaning is obscure unless Antigone is exclaiming to the crowd*

that Creon has sealed her doom with his harsh words to her gaolers.)

Chorus. I can not encourage you with the idea that you are not to endure such a fate. *(Some editors think Creon says this.)*

Antigone *(feeling herself urged along further.)* Oh, Theban fatherland and gods who begot our race! They lead me off and I am not to live! Behold me, ye rulers of Thebes! *(Antigone makes desperate gestures to the elders.)* The last left of your line of leaders—see what I suffer and at the hands of what men! I who worshipped what was worshipful! *(She is dragged off through the gate.)*

Chorus. Danae herself dared to exchange the light of heaven for brazen halls. *(Danae was the daughter of a king who feared she might have a child who would slay him. He locked her up in a chamber where she was visited by Jove in the form of a shower of golden rain.)*

Hidden in that tomb chamber, she was a prisoner.

Nevertheless, by birth she was renowned, oh my daughter and honored with the golden seed of Jove, flowing about her.

Dire is the night of doom and destiny!

Neither wealth nor war nor the strong tower nor the wave-beating black ships afford flight from it.

The son of Dryas, swift to anger, he, the king of the Edonians, was in bondage for his wrathful mockeries, for at the bidding of Bacchus he was immured in a stony cell. *(This was Lycurgus — not the great Spartan law*

maker—who opposed the worship of Bacchus or Dionysos and was blinded by the power of Love and subjected to various ordeals.)

Thus the dire frenzy was nipped in the bud.

In his frenzies he knew the god he affected with his mocking tongue.

He interfered with the inspired women and the divine fire and he enraged the flute-loving Muses.

Beside the dark blue clashing rocks in the tide of the twin seas are the shores of the Bosphorus and Salmydessus where the Thracians come. There Mars beheld the accursed wound which the wild wife of Phineus inflicted upon his two sons—the doom of darkness on those eyes that raved in their encircling glance ere she with gory fingers and her knitting needles tore them from their sockets. (*Cleopatra—not to be confused with the famous queen of Egypt—was the wife of Phineus, king of Salmydessus. He became infatuated with another woman who put Cleopatra into a rocky prison and gouged out the eyes of the sons of Phineus by Cleopatra.*) Other versions render these lines: Mars living near the town beheld a cursed blow—a blinding wound inflicted on the pair of the sons of Phineus by a relentless spouse—extinguishing their eyes that called for revenge by smiting the youths with bloody hands and the edge of the shuttles. (*The text is uncertain.*)

Wasting away, they lamented their woes, having a mother unwed, a birth unhonored by a marriage (*their mother being repudiated*).

Yet she, in her line of descent, attained the time-honored stem of the Erechtheidae. (*The mother of this luckless woman was a daughter of Erechtheus, glorious from the foundation of Athens.*)

In caverns afar she was reared among her father's tempests, a child of Boreas, the north wind, swift as a steed over the high hill, child of the gods in her erectness, stepping high.

Yet upon her, my child, the inevitable fates were hard.

The members of the Chorus, thus apostrophizing Antigone as she is borne off down the highway, have their minds diverted by the entrance of Teiresias, a famous blind seer. The blind man is led by a boy. At sight of the blind man, Creon is visibly disconcerted.

Teiresias. Theban lords, I come by the common road—two seeing with one pair of eyes. For the blind man his path must be made clear by means of a guide.

Teiresias sighs from weariness and leans heavily upon his staff as with one hand he puts the heavy locks of hair away from his cheek.

Creon. Old man Teiresias, what's new?

Teiresias. I will tell you and do you heed the seer.

Creon. I have never yet disregarded your judgment.

Teiresias. Thus did you guide the ship of state safely.

Creon. I know and can attest your services.

Teiresias. And rest assured that now again you stand on the edge of fortune's abyss (*or the fine edge of doom.*)

Creon. What's this? How I tremble at your words!

Teiresias. You'll learn when you hear the portents of my science. Sitting on my ancient seat of divination where every bird to me is a seeker of its haven I heard an unfamiliar note of feathered songsters, a crying in dreadful anguish and in clamorous chorus, unintelligible, barbarous. They were tearing one another in dire slaughter with their claws, I knew. The rush of wings was not meaningless to me. Fearful, I at once prepared a sacrifice on an altar all aflame. From the sacrifice, Vulcan shone with no flame (*an evil omen, for the fire was low*). A dew exhaled from the thighs and ran upon the ashes and gave forth clouds of vapor while the gall was scattered to the winds and the flesh of the thighs bared the encasing fat. Thus from this boy I found out the vainness of the auguries I sought, for he is a guide to me as I am to others. And the city is sick with these things through your sway. Our altars and all our sanctities in home and earth are cursed through the hounds and the birds that have sated themselves on the luckless corpse of the son of Oedipus. For this reason the divinities will not henceforth favor our entreaty and our offering or the fire of fleshly sacrifice. No bird emits an intelligible cry fed as all birds now are on the fatness of a dead man's slaughter. Consider these things, my son. To all men it is customary and common to fall into error. When he is in error, he is neither a foolish man nor an impoverished one when

he retrieves the evil into which he has fallen and shows himself amenable to argument. Obstinacy renders one liable to the imputation of dark ignorance. Now yield to the dead. Deal no blow to the defeated. What glory is there in any slaying of the dead? Wishing you well, I speak well. It is most agreeable to learn from him who is well spoken if he speaks to your advantage.

Creon. Oh, aged seer, all aim their shafts at this man (*strikes his breast*) as if they were archers trying at targets and to you I must also seem no man unversed in divination seeing that I have long been sold to seers and shipped off like goods in their trade. Profit! Make money! Drive bargains in the white gold of Sardis (*gold alloyed with silver*) and in Indian gold if you like. In the tomb, for all that, you shall not hide that fellow. Not even if the eagles of Jove were to snatch him up to the very throne of the deity will I, for fear of any such pollution by carrion, permit his burial. I know perfectly well that no man can bring pollution upon the gods. They fall—oh aged Teiresias, they among mortals who shape disgraceful suggestions with beautiful language for the sake of profit to themselves, fall with the direst of descents!

Teiresias. Did any man ever know or hear tell—?

Creon. What? What hackneyed thing are you saying?

Teiresias. How much the greatest of all possessions is wisdom!

Creon. Just as lack of foresight, it seems to me, is the worst of evils.

Teiresias. That is the very affliction with which you are cursed.

Creon. I do not deem it becoming to retort upon a seer uncivilly.

Teiresias. And yet you speak just so when you say I prophesy falsely.

Creon. Well, the breed of prophets was ever fond of money.

Teiresias. And the breed of kings loves a mean advantage.

Creon. You know you are speaking to your sovereign.

Teiresias. I know. Through me you hold this town securely.

Creon. You are a wise seer yet you love injustice.

Teiresias. You provoke me to speak from the depths of my soul, to reveal all!

Creon. Go on—only don't speak for the sake of your own gain.

Teiresias. I shall be considering your own advantage.

Creon. You shall not trade on my credulity. (*Or, my understanding is not to be trafficked in.*)

Teiresias. Now understand this well—not many more courses of the sun's chariot of day will you follow before you will see the child of your loins given in exchange, dead for dead, to death. You have despatched those above down below and set a soul dishonored in its living tomb while retaining here above one whose lot is with the divinities of the shades,

being a dead body, unburied, unsepulchred, un-honored. These doings are not for you nor for the gods above and yet you dare do violence yourself to them, for which the instruments of full revenge lurk in hell, the Furies (*the Erinyes, a sisterhood who slept in Hades until some wickedness aroused them to come up to earth and pursue the evil doer*) so that you may be caught in the working of your wickedness and damned for it. Such are the things I am impelled to tell you for what you call the love of gain. In no long time the lamentations of men and women will rouse your house. The city is torn by all manner of hatreds in those whose mutilated sons were polluted by dogs and wild beasts or by the winged bird bearing its unholy odor to the hearthstone of the slain. Such are the shafts which like a bowman I aimed at your heart, bearing their venom surely to their aim and from the sting of which you shall write. You, boy, lead me to my home again and let this man smite the young with his wrath and learn also to train his tongue into silence and to bear in his bosom a heart more swayed by reason than now he keeps there. (*Teiresias is led out quickly by the boy.*)

Chorus. That man, oh king, has gone prophesying dreadful things. Ever since I had locks of hair to shake around (*my cheek*) and turn white instead of black I know he has not foretold what was false to our city.

Creon. I know that also and my mind is uneasy. It is not well to give in. To hold out

and crush my soul with a curse is awful likewise.

Chorus. Oh, son of Menoeceus, you should take good advice!

Creon. Then what should I do? Speak! I will be advised.

Chorus. Go and bring the maiden up from the stony roof and build a tomb for the one lying exposed and prone.

Creon. That is your view—and I must yield?

Chorus. As quickly as possible, oh king! Quick retribution from the divinities hastens to catch up with the evil of those who plan mischief. (*Or, swift vengeance from the gods overtakes the evil in design.*)

Creon. Ah! I relent in my resolve to do this deed. Grim necessity is not to be resisted. (*Or, we must not war with necessity.*)

Chorus. Go now and do it—let it not be left to others.

Creon. I shall go just as I am. (*He turns to his suite.*) Go, comrades, every one, those here and those there (*inside*) with spears in your hands rush to the place which is in plain sight from here. I will myself, since my mind has been thus turned, seeing that I shut her up, I will be on hand to free her. I am much afraid it is best to obey the established laws than to live in mere safety to the end of one's life. (*Creon means that the laws established by the gods—which required the burial of the dead—ought to be obeyed even if one thus failed to round out one's life in peace and safety.*)

Creon, attended by his escort, rushes off.

The old gentlemen of Thebes, the senators, that is to say, in council, are now served with liquid refreshments. As each old man takes his cup of wine he makes some appropriate observation on the subject of Dionysos or Bacchus, god of the grape juice. Doctor Dryasdust, that is, the pedantic scholar, tells us that the members of the Chorus are really singing an ode or "worshipping," but this is a view of the subject that rests upon a religious and operatic conception of Greek tragedy, a theory that does no harm if we do not accept it as established historical fact.

Chorus. Oh, many named! Delight of the Theban bride (that is, drink served at weddings) and offspring of loud roaring Jove, you who invest bright Italy (the vine grew everywhere there) and mingle in the Eleusinian throngs, welcome! (Drinks.)

Oh, Bacchus, dwelling in your mother city Thebes, and by Ismene's waters (a famous stream) on ground in which the dread dragon's teeth burst into bloom! (Drinks.)

Above the pair of hills whereon the fires of the torch-bearers go, Bacchus has been seen amid the nymphs of Corycia, Bacchantes themselves along the banks of the Castalian springs. (Drinks.)

From the Nysan slopes (mount in Euboea) you come to us, from where the ivy creeps and from the lands where many grapes cluster as they are hymned in words that shall be heavenly while you scan the Theban furrows. (Drinks.)

This is the town honored by thee above all

others for the sake of your thunder-smitten mother. (*An allusion to the mother of Bacchus, who bore him amid the lightnings to Jove, she being a Theban maid.*)

And now, when all the city languishes in the clutches of a dread disease, come with benign feet over the slopes of Parnassus and across the resounding waters. (*They drink.*)

Oh, breathing fire as you lead the dance of the stars, listening for the nightly songs, (*Or, Oh, leader of the fire-breathing stars and master of the voices of the night, you child of Jove, appear!* (*This allusion to the revels of the Bacchantes under the moon is followed by a dance in which all do not join.*)

Come, oh sovereign, with your attendant Bacchantes, they who dance wildly all the night, give honor to those who cry aloud the name of Iacchus! (*The allusion to the Bacchic cry is rounded out with a dance and drinks.*)

The revels of the old gentlemen are interrupted by the hurried arrival of a messenger. He is obviously a country-bred youth, yet cultured and refined in aspect and clad in bright scarlet tunic over which he has a white folding cloak. His feet are sandalled. He carries his helmet in his hand.

Messenger. Citizens of Thebes, and dwellers in the house of Amphion (*he built a wall around Thebes*) there is no stage of a man's life that ever I would deem praiseworthy or censurable. Luck it is that sets him up and luck throws down not only the fortunate but the unfortunate as well. There is no foretelling what in the life of men is fixed and de-

terminated. Creon was enviable, or so it seemed to me once for he had saved this Theban land from its foes and he had received the sole sovereignty and well he swayed it, flourishing as the well born father of a princely line. Now all is in ruin. When their delights betray men I no longer think of them as living but rather as a corpse that goes on breathing. Let there be riches in your home, great riches, if you like, and live on as the ruler of the scheme of things below. Yet if there be no cause of delight in it all, I would not esteem that state more than the shadow of a vapor so far as yielding satisfaction goes.

Chorus. And what news of the woes of our princess have you come here to tell us?

Messenger. They die. The living are guilty of their death.

Chorus. Who were the slayers? Who were victims? Tell us.

Messenger. Haemon is dead. He was slain by his own hand.

Chorus (*incredulous, they ask for confirmation.*) Do you mean by his own hand or by his father's?

Messenger. He slew himself, enraged against his father for a murder.

Chorus. Oh, seer! how well you prophesied!

Messenger. The thing passed off like this—for you must consider the rest. (*His words are broken off by agitation within the palace.*)

Chorus. But I behold the unfortunate Eurydice, wife of Creon, and she comes out of the palace door either because she has heard of her son's fate or for some cause.

The doors of the women's wing of the palace have by this time opened and three maids appear in the folds of their brown cloaks and with arms bared. Next appears Eurydice, a beautiful middle-aged woman with hair turning gray. She wears a bright yellow robe, reaching to her feet, and gold-threaded sandals. Her head is bare. She carries a vessel from which pours a cloud of incense. A young girl carries a lighted taper at the side of Eurydice. Eurydice herself advances to the edge of the steps leading down to the garden level.

Eurydice. Citizens all, I overheard words as I was walking to the outer door to get to the altar of Pallas and there offer her my prayers. Just as I was lifting the bars of the unbolted gate, my ears were assailed by the voice of homely grief. I was overcome with anxiety and I fell back into the arms of my maids for I was sore stricken by the sounds. But whatever the words were, tell them to me at once. I can listen, not being without my knowledge of sorrow and evils.

Messenger. I, dear madam, for I was an eye witness, will leave no word of all the truth untold. Why should I extenuate anything when in the end all that is falsified will become plain? Let the truth only be told always. I was walking with your husband as his guide across the lofty plain where lay the remains of Polynices, mutilated by the dogs, with none to take compassion. And we pacified Pluto and the sepulchral hands of the triple goddess we rendered propitious with our entreaties. (*Hecate haunted cross roads and was supposed*

to make trouble for those who ignored her presence.) We performed the sacred ablutions of the corpse, bathing what was left of it with lustral waters and with the branches we tore from the trees by the side of the road we made a pyre funereal. Next we reared a mound of the native soil. At last we sought the stony bridal bed of the maid, entering that hollowed nuptial chamber of the bride of Hades. All at once someone from afar heard a shriek issuing from the weird tomb and signalled the fact to his master Creon, who was approaching. A dire presentiment at the sound of that cry overwhelmed him as he drew nearer and nearer and with a wail of woe he spoke his anguish. "Wretch that I am!" he cried. "Am I a seer indeed? Do I now travel the direst of all the ways I ever went. The voice of my son reaches me. Go! my grooms, hurry up and when you are beside the tomb force your way through the entrance, assure yourselves whether it is the voice of my son Haemon issuing through the gap in the stones or whether I am deluded by the gods." Moved by his entreaties and the cries of his grief, we went and searched.

Eurydice listens transfixed and her maidens support her on all sides as the Messenger proceeds with his narrative.

In the last corner of the tomb we came to we saw her hanging by the neck, pendent from a hempen cord finely woven. He with his arms around her waist was bewailing the marriage that was frustrated by the deed of a father and mourning his own wretched passion. When he (*Creon*) saw him (*Haemon*) he groaned and

rushed forward and called aloud in anguish once again. "What are you doing here, my son? Oh, wretched youth, what deed is yours? What is your plan? Are you mad in your grief? Come out, my son, I implore you." But with wild looks in his eyes the youth glared and spat in the face of his father and saying nothing, drew forth his two-edged sword. His father rushed in panic and the weapon missed its mark. Then the miserable youth in fury against himself, fell upon his sword and drove it half through his ribs. Then, while yet he breathed and had his senses, he strained the maiden to his heart. Even while he breathed his last, he tinged her white cheek with the dripping of his own blood stream. He lies now a corpse beside a corpse and he has received his bridal bliss in the abodes of Hades. He has shown men that lack of judgment is the greatest evil that befalls a mortal. (*In complete silence, Eurydice is borne within by her attendants.*)

Chorus. What does that suggest to you? The lady has turned back before she has spoken a word, good or bad.

Messenger. I am overwhelmed myself. I comfort myself with hopes that she will not deem it proper to afford her grief for her son an echo in the city but within her own home and beneath her own roof she will bewail her sorrow with her maidens alone. She is not without experience to such an extent as to go wrong.

Chorus. I don't know. To me this unnatural silence seems suggestive no less than would loud lament in vain.

Messenger. Well, I will go inside lest she keep within the secrecy of her soul some purpose that is hidden. You advise well. An extreme silence is ominous. (*He enters the palace by the servant's door.*)

There is a sudden disturbance along the road that leads forth into the country. A motley procession is seen and the body of Haemon is borne in on a stretcher.

Chorus. And here comes the king himself (*Creon is seen winding up the procession*) bringing a gloomy trophy with his own hands, if one may be permitted to say so, not the curse hurled by another but the dread deed of himself.

Creon. Ah! (*He drops on his knees beside the corpse.*) The woes of men are born of madness—sins that ever lead to doom and death. You see before you the one who slew and the one who perished—both of a breed. Oh, for my own vain counsels! Oh, my son! In youth you went the way of destiny to destruction. You have perished not through your own folly but by mine.

Chorus. You seem to see the right when it is too late.

Creon. Oh, I have dreadful things to learn. Some god put it into my head to do what I did. Some deity struck me mad and lured me into ways of woe and wickedness. My joy is trampled under foot—oh! The vain toils and troubles of men!

The Messenger emerges from the palace.

Messenger. Oh, sir, you have your hands full already with the woes you bring here and

yet soon within this palace will you come to behold evils no less terrible.

Creon. And what evil is to be worse than the evil we know now?

Messenger. Your wife is dead too, the mother of this dead boy, unfortunate one that she is! She died from blows she dealt herself just now.

Creon. Oh, too accessible port of Hades, why do you yawn for me? Oh, you bringer of evil tidings, what a message is yours! Ah! I was a man done to death already and yet see what you have done besides! What do you say, oh son? Have you no new message for me? Alas! Slaughter is heaped upon doom and the death of a wife is added to the woes I have.

Chorus. The spectacle is here for you to behold. It is no longer hidden.

The doors of the palace are opened and the body of Eurydice is seen on a bier covered with flowers, while her maidens stand about and weep. Music within.

Creon. Ha! Now I see a second grief, wretched man! What curse, what doom will yet be heaped upon me? I have just embraced my son and here I have another dead body to look at. Oh, unhappy mother and unhappy son!

Messenger. It was upon the altar there within that, in her grief and desolation, with one blow, she pierced her heart, stabbing herself by means of a keen blade and then shut her eyes so dark in death. A little while before she wept for the hapless taking off of

Megareus (*a Theban warrior who died heroically at one of the city's famous seven gates*) and next her tears flowed for that other son (*Megareus and Haemon were brothers*) whom we see here and last of all she breathed her imprecations upon you, the slayer of the children.

Creon. Ah! I am filled with horror. Who will slay me with his double-edged sword? I am under a doom and overwhelmed by its direness.

Messenger. More than once in her agony she whose dead body lies there scored you as the slayer of this son and that other one.

Creon. In what way did she do violence to herself?

Messenger. She struck herself to the vitals with her own hand the moment she heard of the terrible torment of her son.

Creon. Upon no other mortal can this train of cause and consequence be fastened. I, I, did the murder, man of woe am I! Let me confess it. Ye servants, lead me away as quickly as you can, lead me away for I am as good as done for.

Chorus. You advise to advantage—if there be any advantage in evils. The woes before our feet are worst when they are swiftest.

Creon. Let it come—let it come—it appears as a boon amid my woes, that last day I have to live will be my best! Let it come—let it come—that never may I behold another morning!

Chorus. Those are things to come. What

lies at hand must now be done. Take care of what you must take care of.

Creon. But I am praying for what I love most of all.

Chorus. Pray for nothing now. The thing that is inevitable—to this woe there is no alternative for mortals.

Creon. Take the helpless man away! I, oh my son, slew you, but not by design, and her, too—oh, what a wretch am I! I have nothing to look to more nor a place in which to find rest. All is evil that my hands have wrought and there (*he points to the dead*) upon my head a doom is heaped that is not to be borne. (*He is led within.*)

Chorus. First in well-being comes good judgment. The things that pertain to the gods must not be polluted ever. Mighty words bring mighty woes upon those who boast and teach the experienced what to think. (*Or, instruct the aged in wisdom.*)

THE TRAGIC STORY OF OSCAR WILDE'S LIFE.

FOREWORD.

To that valiant knight, Stewart Duckworth Headlam, this little book should be dedicated, because, when the storm broke, when those who had been recipients of Wilde's favor and generosity turned from him and denied him, reviled him and spat upon him at the first breath of suspicion, Headlam almost alone stepped forward and placed his talents and his resources at the luckless man's feet. For Stewart D. Headlam was a man bigger than the church he adorned, and one who deemed it far from wise to break the loom because there were black threads as well as gold in the tapestry. If, he held, Wilde had done things unseemly, had indeed bartered lust for glory, it were unwise and unseemly for those whose sins of self-indulgence were uncloaked, to launch him into a sea of torment, his punishment being involved in his conduct. Headlam's point of view may have been right and may have been wrong. At any rate, right or wrong, he was certainly on safe ground when he declared with Nietzsche that men were most to be feared when the word "justice" was in their mouths.

I.

CALIBAN OR ARIEL?

*And even the light of the sun will fade at the
last,
And the leaves will fall, and the birds will
hasten away,
And I will be left in the snow of a flowerless
day
To think on the glories of Spring, and the joys
of a youth long past.*

—Magdalen Walks.

Investigation is laborious and unexciting, and it requires no great stretch of imagination to picture a group of painstaking and solemn men some hundreds of years hence, vainly trying to reconstruct the Wilde figure. Indeed, it is not an altogether fanciful notion that there may, in far time to come, be those who, seeing the strangeness of the story, will set down the whole Wilde legend as a myth, a kind of sun myth perhaps, with the man in his glory and surrounded by his admiring satellites, conceived to be the sun at its zenith; the swift darkness that enfolded him in later life may appear as an eclipse; his brilliant conversation may be taken to typify the solar activity on sullen soil. Certainly, theories have been based on far less attractive foundations.

At any rate, looking through the bulky literature that has grown up about Oscar Wilde, reading and noting him here deified,

there denounced and blackened, his writings praised by this one as the *ne plus ultra* and treated as quite negligible by that; the widely differing estimates placed upon his art by Robert Ross on the one hand and by James Gibbons Huneker on the other, to take but two examples: the variance in the word pictures of him and the biographies that are poles apart—Ransome, Sherard, Douglas, Harris, Ingledy, Andre Gide: more than all, the startling differences in the pictorial representations of the man, for that item must certainly be considered—taking into consideration all these things, the students of some hundreds of years hence may well be imagined as standing puzzled and finding their work of investigation as I have said, both laborious and unexciting. Nor are the various estimates and images mutually exclusive and all may be to some extent true. None of them is complete. They are all aspects partly true and partly false, yet, as conceived by any individual, true as far as they go.

Take the pictorial representations, the photographs and engravings first. They are numerous, especially in the ten years of his heyday, for Wilde was a persistent self-advertiser. There is the well-known picture of Wilde the exquisite and dandy, the man in silk-lined frock coat and waved hair, with face of great beauty; the etching made by J. E. Kelley during Wilde's American tour, showing him with long, curling hair, shoulder length, and a profile like a Greek god; the Sphinx face as on the tomb with heavy lidded eyes and sensual

mouth; the comparatively rare picture of Wilde as a child of striking feminine aspect; Wilde as a youth, rather goggle eyed and certainly asymmetrical about the upper part of the face, the eyes especially; Wilde glorious in the Ellis and Wallery picture, a man beautiful as Apollo and full of spirituality; Wilde at the age of twenty-seven all becloaked like a brigand in an Italian opera; Wilde with Lord Alfred Douglas taken when the moral fibre of the man had grown weak, Wilde fat, and posing with foot on chair, cigarette in hand and hand on hip, bowler hat well displayed, with Douglas in white trousers, a youth with a most decidedly effeminate cast of countenance. But most startling in its truth, it seems to me, is the sketch of Oscar Wilde as made by Aubrey Beardsley. It is very like the recorded impression as given by that outspoken diarist, Wilfred Scawen Blunt: "physically he (Wilde) was repellant, though with a certain sort of fat good looks. There was a kind of freckled coarseness in his coloring."

In the Beardsley sketch there is both cruelty and truth, and of all the pictures it best brings to mind the man as I saw him. It was at the opening of an Arts and Crafts exhibition in 1889, a notable gathering where were many of brilliant wit, and many of national fame. There was William Morris in his plain blue serge suit looking like some grand sea captain in fine spirit; George Bernard Shaw swift and direct, his companion on the occasion being E. Belfort Bax; Walter Crane active and slim as a harrier; John Burns

black-bearded and swarthy, swaggering a little, his speech harsh and nasal; Prince Kropotkin quietly observant; Arthur Balfour, all amiability. That king of men was there too, R. B. Cunninghame Grahame, tall and athletic, and Hyndman and Frederic Harrison. As I remember, the subject of conversation most in men's mouths at the time was Wilfred Scawen Blunt's new book of poems, *In Vinculis*. Mr. Blunt had suffered imprisonment for his activities on behalf of Irish independence and the book was a result. Oscar Wilde reviewed it for W. T. Stead in the *Pall Mall Gazette*, and, looking back, it seems a little curious that he somewhat dwelt upon the effect of imprisonment upon the high spirited Englishman, quoting this: "Imprisonment is a reality of discipline most useful to the modern soul, lapped as it is in physical sloth and self indulgence. Like a sickness or a spiritual retreat it purifies and ennobles; and the soul emerges from it stronger and more self contained." The words were Blunt's, but in the quotation of them by Wilde, there seems a certain foreshadowing of something to be found later in *De Profundis*.

My companion, Henry Somerfield, artist and student, pointed out Oscar Wilde to me, and, catching sight of him as he came through a low doorway, he loomed almost gigantic. He was with two men, one of them Halliday Sparling, but stopped suddenly when he noticed, hanging on the wall to his right, a piece of embroidered silk. To that he turned and fell to stroking it as a woman might a child's

hair. There may have been a prejudice in me, for my *beau ideal* was a man of the physical type of Morris, rugged and strong, but it struck me that the pictures I had seen of Wilde grossly flattered him. His mouth seemed large and loose and his teeth too prominent, and there was indubitably an air of self-assertion about him. His cheeks were flabby and his eyes heavy lidded, and tired looking, too bagged for health. And, certainly, there was a marked suspicion of a double chin.

So, it seems to me, that so far as my recollection goes, a composite picture made from the caricatures of Aubrey Beardsley and of Max Beerbohm would give a portrait more accurate by far than any to be gathered from the touched up photographs. He was neither Caliban nor Ariel. That he, in some sort, created a kind of ideal Wilde, for public consumption, is not to be wondered at. He was a public character connected with the theatre and in that capacity the public, the American and English public at any rate, looks for a something not as it is, but as the public imagines it should be. "Nature must follow Art," Wilde once said.

But the appearance of Oscar Wilde did not strike me as forcibly as did that woman-like caress of the silken fabric. It was decidedly a fondling touch, that careful down stroking of the silk with extreme finger tips, and, because of that, I have been convinced that Sherard was right when he wrote that Wilde possessed the feminine soul. And it is, I should think, quite indisputable that being possessed of the

feminine soul, his whole character was influenced. That would account for much—for his neurotic restiveness and all that hung thereon. But read the Sherard passage carefully. It is worth the reading, Sherard being not only a careful observer but, in addition, a close friend of Wilde's:

"Oscar Wilde possessed the feminine soul. This was the ghost that haunted his house of life, that sat beside him at the feast and sustained him in the day of famine; the secret influence that weighed down his manhood and enervated his hope; the knowledge that he possessed the feminine soul; that he was a slave to the capricious, critical, feminine temperament, the feminine vanity and feminine weakness to temptation; the feminine instinct of adaptability; the feminine impulse of the wanton's soul, gave him the lust for strange, forbidden pleasures, and imparted to his final repentance the sublime abnegation of the Magdalene. And yet that feminine soul endowed him with the supreme love and appreciation of beauty in every form, the music of words, the subtle harmonies of color, imagery in language, the coquetry of thought that veiled itself in paradoxes and the fine and delicate vision that created in him the instinct of the poet; the keen sense of feminine intuition in the analysis of character that made him the wit and dramatist of his day, and the feminine quality of vanity and appetite for flattery and praise that made him the first dandy of his day." And, seeking an example

of that "feminine . . . repentance," read what follows, marking the closing lines:

TÆDIUM VITÆ.

To stab my youth with desperate knives, to wear
 This paltry age's gaudy livery,
 To let each base hand filch my treasury,
 To mesh my soul within a woman's hair,
 And by mere Fortune's lackeyed groom—I swear
 I love it not! these things are less to me
 Than the thin foam that frets upon the sea,
 Less than the thistledown of summer air
 Which hath no seed: better to stand aloof
 Far from these slanderous fools who mock my
 life
 Knowing me not, better the lowliest roof
 Fit for the meanest kind to sojourn in,
 Than to go back to that hoarse cave of strife
 Where my white soul first kissed the mouth of
 sin.

Again, leaving for the present *Dorian Gray*, which I will write of later, consider the femininity of this, a speech he puts into the mouth of Vivian, in *Intentions*: "Nature is so uncomfortable. Grass is hard and lumpy and damp, and full of dreadful black insects." Obviously that is the language of what you and I would call a "sissy," and of a sort not to be used by the man masculine.

Another similar instance follows which I take from *The Critic as Artist*:

Ernest. No; I don't want music just at present . . . No; Gilbert, don't play any more. Turn round and talk to me. Talk to me till the white horned day comes into the room. There is something in your voice that is wonderful.

Gilbert (rising from the piano). I am not in a mood for talking tonight. How horrid of you

to smile? I really am not. Where are the cigarettes? Thanks. How exquisite these single daffodils are! They seem to be made of amber and cool ivory . . . After playing Chopin, I feel as if I had been weeping over sins I had never committed. . . .

It is a legitimate deduction that the writer who puts that kind of language into his puppets' mouths delighted in the femininization of character, had, indeed, himself a feminine streak in his composition. If you change the names of the characters supposed to be talking to read Alice and Louise, instead of Ernest and Gilbert, the passage reads convincingly. For men talking, it does not ring true. I could not imagine William Morris telling Wilfred Scawen Blunt that it was horrid of him to smile, nor can I imagine Cunninghame Grahame complaining that the grass was hard and lumpy and damp and full of dreadful black insects. But Wilde's fictional men are, all of them, tame house animals; none are as men should be, fond of adventures, thrilling experiences, striving for mastery over themselves and over circumstances.

That feminine soul of Wilde's was a something for which he was not responsible, a something that became part of him when he was yet in his mother's womb, doubtless. Nature had set a mark upon him. So, thinking of Wilde, I remember the words of old Burton, the anatomist of melancholy: "So many several ways are we plagued and punished for our father's defaults."

II.

GOLDEN DAYS.

His full name was Oscar Fingall O'Flahertie Wills Wilde, and, like a wise man, finding that his parents had christened him unsatisfactorily, he retained but the head and tail of the name. He was born in Dublin, Ireland, on October 14th, 1854, and, later, objecting to the ruthless march of the years, shifted his age a little with a kind of feminine capriciousness. His mother had desired a daughter, her first child having been a boy, and kept the young Oscar in girl's clothes as long as was decently possible. At the age of nine he entered the Portora Royal School at Enniskillen where he stayed until the year 1871, when he went to Trinity College, Dublin. As a school boy he was ordinary, taking no interests in sports and showing no particular brilliancy. That means nothing, for, like many others, he had not found the path of his genius. It was so with Goldsmith, Balzac, Dumas *pere*, Humboldt, Walter Scott. In his arithmetic he was positively backward, a trait not uncommon among literary men.

At Dublin he won the Berkeley Gold Medal for Greek, went to Oxford, taking a scholarship and matriculating at Magdalen. He had found his path happily, took a First Class in Classical Moderations in 1876, and, two years later, a First Class in Literae Humaniores. There was a year's travel in Italy and Greece

with Professor Mahaffy and returning to England he read the Newdigate Prize Poem in the Sheldonian Theatre in 1878. That completes the tale of his scholastic education. The remainder of his public life up to the time of his cloud of trouble may be succinctly summed up in his own words spoken in answer to a question put by Sir Edward Clarke, when Wilde was in the witness box as prosecutor against Queensberry: "From 1878 I have devoted myself to literature and art. In 1881 I published a volume of poems and afterwards lectured in England and America. In 1884 I married Miss Lloyd. I have two sons, the elder of whom will be ten in June and the second nine in November."

Wilde's training then for the battle of life was in some respects a bad, and in some an excellent one. Bad because he grew up pampered, treated like a flower in a hot house, learning neither to obey nor to command, viewing life not as a serious adventure but rather as an aesthetic spectacle; excellent in that he had all bookish culture that the world could give, but bad again because it was that culture which lures to a world in which one has but to dream, or listen to dreams. Bad again was his training because it enabled him to shirk the responsibilities of life and left him ignorant of duty and discipline.

If little things about his ordinary life are set down, there is nothing to distinguish him from any one of a million. He lived joyously and drank too much on occasion, he joined the order of Freemasons and he had an affair *or*

two of gallantry. As a boy he was what Roosevelt would have called a mollicoddle, though Roosevelt's boyhood life reveals no especial tendency to strenuousness. But the boy Wilde never played games, never climbed a tree, never had any boyish adventure. The truth of it is that his unfortunate physical characteristics were against that. He was too big, too unwieldy, too bulky, and "used to flop about ponderously."

Naturally, such a youth would be thrown in on himself. He would, if intellectually alert, become an observer and a critic of life. Without a sense of cosmic humor such a one would be apt to become a pessimist like Schopenhauer. But Wilde had the saving sense of humor and the habit of framing his observations in words. Hence the "Oscariana." You can imagine him as a youth, or a young man in society, the lion-worshipping women flocking about him because he had written his first book of poems. There would be silly requests for this and for that, for autographs and verses for albums and all the rest of the nonsense. Out comes Wilde then with a truth straight from the shoulder. Carlyle could not have bettered it. "Being adored is a nuisance. Women treat us just as Humanity treats its gods. They worship us, and are always bothering us to do something for them."

Here is another, a something most men have thought, but few had the wit to say: "A woman will flirt with anybody in the world as long as other people are looking on."

Or this: "Pleasure is nature's test, her sign

of approval. When we are happy we are always good; but when we are good we are not always happy."

Nor was Oscar Wilde blind to the follies of Main Street. Indeed, those who mistakenly believe that there is something new and strange in the latter day novel with its portrayal of American life, might go with advantage to the pages of Wilde. You will search far before you get a cameo like this: "The subjects discussed were mainly such as form the ordinary conversation of cultured Americans of the better class, such as the immense superiority of Miss Fanny Davenport over Sarah Bernhardt as an actress; the difficulty of obtaining green corn, buckwheat cakes and hominy, even in the best English houses; the importance of Boston in the development of the world soul; the advantages of the baggage check system in railway traveling; and the sweetness of the New York accent as compared to the London drawl."

A few more rapier thrusts of the same kind each of which pricks sorely:

"There are three kinds of despots. There is the despot who tyrannizes over the body. There is the despot who tyrannizes over the soul. There is the despot who tyrannizes over the soul and body alike. The first is called the Prince. The second is called the Pope. The third is called the People."

"In America the President reigns for four years, and Journalism governs forever and ever. Fortunately, in America, Journalism has carried its authority to the grossest and most

brutal extreme. It is no longer seriously treated."

"Only the shallow know themselves."

"We are all in the gutter, but some of us are looking at the stars."

"A sentimentalist is a man who sees an absurd value in everything and doesn't know the market price of a single thing."

There is more than verbal cleverness in each of those, and the man who said, or penned them, was one who walked the world with open eyes. In every case, packed in a few words is a world of thought. Consider, for instance, the four lines given to a criticism of American journalism and how Wilde has packed in three dozen words material for an essay. There is the thought for you and if you fail to find infinite merit in it, the loss is yours. In the final half dozen words is the observation that the once considerable influence of the press has so waned that its boasts of power excite only the derision of the well informed, and no one any longer places reliance in the editorial's pretended statements of fact.

We have, then, a young man of education and some travel, a keen observer not to be deceived with outward glitter and show, who, partly because of a certain isolation in youth, has a trick of words. Brought up in comfort, if not in moderate luxury, he finds himself thrown on his own resources, compelled to make his own living, his father having died. So to London he went, where his brother was already engaged in journalistic work.

Frank Harris holds that Oscar Wilde had well assimilated Bacon's advice that a man, to be successful, must sound his own trumpet. At any rate, there was a great deal of vast self advertising. To a bored society he was a god-send with his gift of conversation, his impudence and subtle flattery. He was a latter day Beau Brummel, his mother was the well known "Speranza" and his brother was a writer for a fashionable journal. "A thaumaturg," Ernest La Jeunesse calls him, who deliberately set himself to fool the public, choosing his material where he found it, making his way so that he might not fall into a pit of poverty, by a thousand inventions, tricks, words, and touches of heaven and of hell. He invented a fad and his name was on every lip. Some derided him and he marched the swifter to victory because of the derision. He became the leader of the Aesthetes and foolish dowagers and giddy girls were at his feet. He walked the streets carrying a sunflower, and thousands followed his example. Soon there were Wilde collars and Wilde ties, and Wilde hats in the shop windows, and photographs of Wilde elbowed photographs of such notabilities as Lillie Langtry, Ellen Terry, Lord Salisbury and W. E. Gladstone. Greatly daring, he played the clown, essayed the part of a public fool indeed, and, strangely enough, made the public his dupe. In cap and bells and motley he was accepted as serious. In a way, he became a very liar of liars, and as a liar, charmed and delighted, thus running true to form. "Lying," said he, "the telling of beautiful untrue

things, is the proper aim of Art." And, "The aim of the liar is simply to charm, to delight, to give pleasure. He is the very basis of civilized pleasure."

All was grist that came to his mill. Satirists, critics, solemn and pompous editors, caricaturists—the pages of *Punch*, Gilbert and Sullivan, makers of common street songs, all helped to furnish the wind to speed his bark to harbor. The doors of society were open to him and the charm of his conversation did the rest. When he talked, others were silent and if he could not shine alone, Gide tells us, he withdrew into the shadow. He was, too, a true dandy, that is, an artist whose material was his own body.

Looking at him across the gulf of time, we see him as a young man assuming a vast air of superiority, of infallibility, one most decidedly insolent. His doctrine that art is independent of morality seemed at the time to have meant one thing, and, in the view of later developments in his own life, to have meant something altogether different. If, by it, he meant that art should go its way independent of moral purpose, then, of course, he was saying something by no means new or strange, but yet something that it is well should be said with frequency. To put it plainly, a work of art need carry no lesson—a picture may have no ethical tag to it—it is not necessary, nor is it desirable that a book or a story should have a moral. But to say that art must be independent of morality may also have another and occult meaning, in

which case the doctrine is a monstrosity. For art must bear a relation to ethical values if it is not to become a refined cult for those of specialized sensitiveness.

There was another side to Oscar Wilde; he had another string to his bow. He made of himself a kind of John the Baptist for Baudelaire. In England Charles Baudelaire then was almost unknown, his poetry neglected, Swinburne alone having recognized him. The Miltonic, the Biblical sonority of his music had never delighted the English ear. Wilde proclaimed himself the herald of the French poet, then, and there was a new and fascinating toy for the public. Such a role was delightful for a young man of Wilde's temperament. The Baudelairean teaching that "*Le Dandy doit aspirer à être sublime sans interruption. Il doit vivre et dormir devant un miroir*" was meat and drink for the nineteenth century Brummel. None was more eager to be a hero to himself than Wilde: none more willing to live before a mirror. As for impassiveness before a society he despised, that pose certainly suited Wilde to a T.

Then there was the strange Baudelairean gesture, the "*On n'est jamais excusable d'être méchant, mais il y a quelque mérite de s'avoir qu' on l'est; et le plus irréparable des vices est de faire le mal par bêtise.*" For Wilde was quite ready to play with the dangerous idea that a man should be thoroughly sincere in his wickedness—sincere and deliberate, and that knowingly. What strange use Wilde made of that idea may be seen in his essay on Thomas

Griffith Wainwright the poisoner. There are odd passages in that literary gem. "He sought to find expression by pen and poison:" "His crimes seem to have had an important effect upon his art:" "There is no sin except stupidity." There are other similar passages, similar because dangerous, or at least capable of bearing a dangerous construction, in *Dorian Gray*. I say dangerous, but I might as well say delightful, for they are delightful in their truth. Consider this: "Young men want to be faithful and are not, old men want to be faithless and cannot." Here again: "One should never make one's debut with a scandal, one should reserve that to give interest to one's old age." And this: "People who love once in their lives are really shallow people. What they call their loyalty and their fidelity is either the lethargy of custom or lack of imagination. Faithlessness is to the emotional life what constancy is to the intellectual life, simply a confession of failure." "Anybody can be good in the country. There are no temptations there. That is the reason why people who live out of town are so uncivilized. There are only two ways of becoming civilized. One is by being cultured, the other is by being corrupt. Country people have no opportunity of being either, so they stagnate." "The one charm of marriage is that it makes a life of deception necessary for both parties." "Nothing makes one so vain as being told that one is a sinner." "Good resolutions are a useless attempt to interfere with scientific laws; their origin pure vanity, their results absolutely

nil." "The costume of the nineteenth century is detestable. Sin is the only real color-element left in modern life." "One can never pay too high a price for one's sensations." "The only difference between a caprice and a life-long passion is that caprice lasts a little longer."

Much of that which I have quoted, and more, returned to plague him, as we shall see later. All and sundry went as evidence against him, much of it being little more than poetic gesture; some, fantastic naughtiness. Baudelaire, like many another romantic intellectual, held himself to be one of the greatest of sinners, and, therefore, marked out for special and extraordinary forgiveness. That kind of thing is a childish trait, I think, for every thoughtful man can remember when, under the influence of religious emotion, he believed himself to be too black of soul for salvation. But, in spite of all sensationalism, most men and women lead comparatively spotless lives.

However, just as your sudden convert at a revivalist meeting will be moved to confess to wild sins of which he is guiltless, hiding those that are mean and despicable, so with poetic exaggeration did Baudelaire ecstatically sing of his *ame damnee*—sing of himself as one who had sold his soul to a puissant though affable kind of devil. That kind of thing is poetic ecstasy, a kind of a game of intellectual entanglement, and names spring to mind of other players—Sainte-Beuve with his novel *Volupté* and his altar to sexual pleasure, Cat-

ulle Mendes, Verlaine, Theophile Gautier. And it would be hypocritical to deny that there is, in most of us, a marked disposition to be vastly interested in crime and evil and the underworld.

Wilde, then, became the forerunner of Baudelaire in England and, quite naturally, mirrored his master. What wonder then that there was a flourish and a Baudelairean-Verlaine gesture? an aspect of fantastic naughtiness? That would seem to account for the poem *Helas* which introduced his book of poetry to the English public. Any discerning reader may crudely analyze it for himself.

HELAS!

To drift with every passion till my soul
Is a stringed lute on which all winds can play.
Is it for this that I have given away
Mine ancient wisdom, and austere control?
Methinks my life is a twice-written scroll
Scrawled over on some boyish holiday
With idle songs for pipe and virelay,
Which do but mar the secret of the whole.
Surely there was a time I might have trod
The sunlit heights, and from life's dissonance
Struck one clear chord to reach the ears of God:
Is that time dead? lo! with a little rod
I did but touch the honey of romance—
And must I lose a soul's inheritance?

It was his first book and appeared in June, 1881, 250 copies being used for the first edition and 500 equally divided between the third and second editions. Now mark the business man in Wilde, the man with an eye to the main chance. Not by any means would he let the book fall flat from the press. There were reviews, to be sure, in the leading society jour-

nals, in the *Athenaeum*, the *Academy* and in the *Saturday Review*, with a highly laudatory one in the *World* by his brother, but that was not enough. Wilde ever marched with banners and music and the greatest must be called upon to herald him. So there was a letter to Robert Browning, poet whose songs were never echoes of other songs, man of subtle and nimble intellect.

Keats House,
Tite Street, Chelsea.

My Dear Browning:

If you get the opportunity, and would care for it, I wish you would review my first volume of poems just about to appear; books so often fall into stupid and illiterate hands that I am anxious to be really criticised; ignorant praise or ignorant blame is so insulting.

Truly yours,

OSCAR WILDE.

We know according to the agreement between publisher and poet, that all charges in relation to the work were paid by Wilde, in three installments. He had ventured, and would not let his venture die. Punch's Almanack for 1882 helped to make it a success with a clever parody of the poem *Les Silhouettes* called

MORE IMPRESSIONS,
(By Oscuro Wildgoose.)
Des Sornettes.

My little fancy's clogged with gush,
My little lyre is false in tone,
And when I lyrically moan,
I hear the impatient critic's "Tush!"

But I've "Impressions!" These are grand!
Mere dabs of words, mere blobs of tint,

Displayed on canvas or in print,
Men laud and think they understand.
A smudge of brown, a smear of yellow,
No tale, no subject—there you are!
Impressions!—and the strangest far
Is that the bard's a clever fellow.

I quote that by way of showing that at the time of the appearance of the book there was no apparent suspicion of shameful conduct—of amusing eccentricity, yes, but the other, no. Those were the days when Wilde was a busy pilot heading his craft into the wind, and the gesture of confession of fantastic sins is but a gesture and nothing more. Like all of us, in his time Wilde had to play many parts, and his role just then was business man, performer, and impresario, and very well he played his triple part. As an instance, we see him as his own advertiser, inspiring a society note in his brother's paper to the effect that the success of his book of poems had resulted in an invitation to visit the United States. So he sailed for New York and here, his first *bon mot*, a statement to the custom house men that he had "nothing to declare but his genius," tickled the public fancy.

His subject was, in the main, an advocacy of beautiful furniture but the tour was only a moderate success. What is of real value lies in his witty observations and salutary criticism of American ways and manners. Many a rap over the knuckles he gave to those over zealous advocates of a "new" literature, of an art literally emancipated from old world tyrannies, and all that kind of nonsense. Nor would he be backward in saying what he

thought to be true anent the sham aristocracies of wealth and social position won by smartness, nor the spirit of sensationalism that leads to the exploitation of every sort of mental vagary that covers itself with the lamb's skin of "science," nor to the incredible inanities of puritanical editors, nor the pinch-beck orators whose flamboyant boastings of national superiority were heard in every corner of the land. So there came of the tour brilliant flashes of criticism. I choose one or two examples.

"The youth of America is their oldest tradition. It has been going on now for three hundred years. To hear them talk one would imagine they were in their first childhood. As far as civilization goes they are in their second."

"America is a paradise for women—that is why, like Eve, the American women are extremely anxious to get out of it."

"All Americans dress well—they get their clothes in Paris."

"It is absurd to say that there are neither ruins nor curiosities in America when they have their mothers and their manners."

Of course Wilde did not say those things while on tour. So quick an observer as he could not fail to see that the American public is an ass that loves to be tickled, that delights in flattery; expects to be told that America stands on star crowned heights, that it is the hope of the world and heir of the ages. Wilde knew, quite as well as Victor Hugo knew, that the mob is an old Narcissus. He

knew that to win an American audience there had to be the appearance of a stout hearted conviction that democracy is the only rational form of government and that art could flourish under no "effete monarchy." Every man knows how the Chautauquan lecturer gets away with his ineptitudes. Hear Oscar Wilde then, when he talked to American audiences. I copy an extract:

"It is rather, perhaps, to you that we would turn to complete and perfect this great movement of ours, for there is something Hellenic in your air and world, something that has a quicker breath of the joy and power of Elizabeth's England about it than our ancient civilization can give us. For you, at least, are young; no hungry generations tread you down, and the past does not mock you with the ruins of a beauty the secret of whose creation you have lost. That very absence of tradition which Ruskin thought would rob your rivers of their laughter and your flowers of their light may be rather the source of your freedom and strength. To speak in literature with the perfect rectitude of the movement of animals, and the unimpeachableness of the sentiment of trees and the grass by the wayside, has been defined by one of your poets as the flawless triumph of art; it is a triumph which you above all other nations may be destined to achieve. For the voices that have their dwelling in sea and mountain are not the chosen music of liberty only. Other messages are there, if you will but listen to them—may yield you the splendor of some new imagination, the marvel of some new liberty."

Wilde, as I have said, was a good business man and knew his market. The passage as given will pay the re-reading, and, by way of seeing the man with his tongue in his cheek, remember that he also wrote this: "Good

Americans when they die go to Paris: bad Americans when they die go to America."

America disposed of, Oscar Wilde flung aside his shirts with laced sleeves, his velveteen knickerbockers with buckles, his black silk stockings and his biretta. Both lily and sunflower went to the scrap heap and he had his hair cut. His name was world known, he had the public ear and he could afford to change his manner of advertisement. He was back in England in April, 1883. There was a lively passage of arms between Whistler and Wilde which makes mighty good reading in Whistler's *Gentle Art of Making Enemies*, and Wilde was accused of building a reputation on borrowed *bons mots*. An idea may be gained of the liveliness of the argument from a passage or two, quoting salencies on both sides.

Whistler: "Costume is not dress. And the wearers of wardrobes may not be doctors of taste. . . ." And further: "What has Oscar in common with Art except that he dines at our tables and picks from our platters the plums for the pudding that he peddles in the provinces? Oscar—the amiable, irresponsible, escurient Oscar—with no more sense of a picture than he has of the fit of a coat—has the courage of the opinions—of others!"

Wilde: ". . . with our James vulgarity begins at home and should be allowed to stay there."

Both men, be it observed, were persistent and clever advertisers, and both men had the gift of instant repartee. The quarrel was highly enjoyed by, and profitable to, both men. Indeed, it was more of a game of conversational entanglements than a disagreement, a kind of

"joshing" on a high plane. Moreover, it was good advertising, and Wilde was lecturing in English towns on "Personal Impressions of America." Reports of the Wilde-Whistler affair reached New York too where they were seized upon as publicity, for his play *Vera* was billed for production at the Union Square Theatre. Wilde crossed the Atlantic to be on hand at the first performance but it was a failure and he returned to England, September, 1883, and resumed lecturing. That, indeed, seemed to be the shortest cut to gain ready money which he needed, to give him time in which to write. The rose dawn of his literary activity tinged his world.

III.

FAME, AND GOLD, AND PLEASURE.

There were ten years in which Oscar Wilde was Lord of Life, to use his own phrase. On his return from New York, he went to Paris, worked hard, wrote his *The Duchess of Padua* and commenced *The Sphinx*. Discussion of his literary work must be reserved for another place. Andre Gide, his French friend, tells us that the name of Wilde traveled from lip to lip and the most absurd anecdotes were told about him. "Wilde was pictured as everlastingly smoking gold-tipped cigarettes and strolling about with a sunflower in his hand. For Wilde had always the gift of playing up to those who nowadays fashion fame, and he made for himself an amusing mask that covered his actual countenance."

His immediate task ended, he returned to England and in 1884 married Constance Lloyd and they made their home at 16 Tite Street, Chelsea. For two years he edited the *Woman's World*, and, also, did much work for periodicals, reviewing for the *Pall Mall Gazette*, the *Queen*, the *Speaker* and other leading journals. There is some excellent stuff buried in those reviews. His literary output was great and accounts for the golden stream that poured in upon him, unhappily, to overcome him. The man was full of vitality and the rising sap overflowed. The list of his works follows.

- 1885. Shakespeare and Stage Costume, (XIX Century Magazine).
 - 1887. Lord Arthur Savile's Crime.
The Canterville Ghost.
The Sphinx without a Secret.
The Model Millionaire.
 - 1888. The Happy Prince and Other Tales.
 - 1889. The Portrait of Mr. W. H.
Pen, Pencil and Poison.
Decay of the Art of Lying.
 - 1890. The Critic as Artist.
 - 1891. A House of Pomegranates.
Intentions.
The Soul of Man under Socialism.
The Picture of Dorian Gray.
Salome.
 - 1892. Lady Windermere's Fan.
 - 1893. A Woman of No Importance.
 - 1895. An Ideal Husband.
The Importance of Being Earnest.
- (Then came the crash, and in prison he wrote or planned the following:)
- De Profundis.
 - The Ballad of Reading Gaol.
 - Two letters on Prison abuses which were published in the *Daily Chronicle* of May 28th, 1897, and March, 24th, 1898.

He fell into the hands of Circe the enchantress in 1886. That seems to have been established at the trial, for, certainly there were no loose gestures or foul talk about the man in society, nor is there evidence in his literary work of anything untoward. If there was defilement in the inward parts, to use a Miltonism, the world did not know it. Somehow, he got into a wrong environment, something went wrong within him and the sorcery of habit completed the work. Even affection drew him down, down to a secret hell vast and vague as the hell of Milton, a hall of torture darker than Dante's. It sickens one to read the record of the trial and to think of the effect of the hereditary curse upon the scholar; to read of the lads with whom he consorted; of secret voluptuous rooms; of shameless kissing of waiters and stable boys; of expensive gifts flying about,—gold cigarette cases, cameo rings, purses of gold, gorgeous walking canes. And, on the other side of the scene, Wilde entertained by the proud and dignified, friend of fine and simple ladies and maidens, welcomed in heroic company. It is all a maddening mystery. One thinks of the fatal potency of demoniac powers—of men changed to stone by the glance of Medusa, of the tress of Lilith, the cup of Circe. It ill serves to dwell on it all.

There is a fine picture of another side of the man—Sherard's picture, where he tells of the home in Tite Street. "It was a very temple of lettered ease, exquisitely decorated and appointed with solid comfort. A study had been fitted up for him at the top of the house, but I

do not believe that he ever wrote a line there and what writing he did do in Tite Street was done on Carlyle's writing table, in the little room on the right of the entrance passage. It was in reference to his idleness, in spite of all the inducements that his abode held out to industry, that he said to me, 'I am not doing what I ought to do; I ought to be putting black on white—black on white.'"

His income, just before the storm broke was more than \$40,000 a year and he had lived up to the money. What that means may be guessed. There came a time when he feasted too liberally and drank too much. "I would have backed him to eat the head off a brewer's drayman three times a day, and his capacity for whiskey and soda knew no bounds," records Lord Alfred Douglas in his *Oscar Wilde and Myself*. Robert Ross too has something to say about his tremendous appetite. "He lived *en prince*," writes Sherard, "and was so reckoned by the hotel servants and restaurant waiters." Imagine all that kind of thing then and the coming of the day when whispering tongues began to wag, when there were polite intimations at this hotel and at that to the effect that the presence of Oscar Wilde as a guest was not welcomed, when tales were told behind raised hands of strange circumstances, when Wilde entering this semi-public place, and that, found backs turned on him. Then came *The Green Carnation*, in which Wilde was sketchily portrayed and strange forbidden indulgences hinted at. And so the storm broke and then darkness, deep and profound.

IV.

WILDE'S STRENGTH.

In that period of ten golden years, Wilde and Nietzsche came very close together in spirit. Both teachers were given to the worship of Dionysus and Aphrodite, were opponents of asceticism, were standing with faces turned towards worldly power, worldly success. Both men were self-assertive and both violently attacked established morality. At heart, Wilde was an anarchist as was Nietzsche. In some ways, Wilde lived the life that Nietzsche advocated, living full and abundantly, feeling every thrill and ecstasy, aiming at fullness and intensity of life. It is none of our business to stand with an eye at a peep hole looking into his inner self, and I am not writing now of his psychological life. Doubtless when he reflected, he was very sorry for parts of his life and wished that things had been better, just as you do, and as I do, and as all of us do, or should, if there is any health in us.

You see, one can imagine Oscar Wilde being taken to pieces as it were, dismantled as workmen in a railroad shop dismantle a locomotive to find this part in excellent order, that doubtful, another overworked, another unsafe to the point of rejection, and yet another part fit for nothing but the scrap heap. And yet, with all the imperfections, the locomotive gave excellent service and with certain repairs and renewals would, for years, give more and better

service still. But a man cannot be dismantled and repaired as a machine can—perhaps it would be most excellent if such were possible. Still, we are not fools to condemn or to overlook the performances of a locomotive simply because the flues were caked with sediment or the firebox found with leaky staybolts. It is only in regard to men that we act thus idiotically.

As far as the world is concerned, Wilde functioned, not normally, but splendidly, during those ten years. It is not possible in this essay to say the interesting and exciting things that could, and should, be said about his writings, that must be left for another place. And, be it said, there remains much to say and to discover, for Wilde has been written of by many men who were articulate, shown to be much better than he was by this one, much blacker than he was by that. But this is certain. He was a keen observer and wrote of English society with great accuracy; he was a satirist of the petty side of human nature; he wrote in an admirably lucid, unpretentious style and was always interesting; he cultivated notoriety with assiduity; his humor was always subtle and delicate and odd—though some have declared it unoriginal. As a critic his rank is high.

But what is possible to show in limited compass, I think, is that like Thoreau, he spoke truths with bullet-like directness, embodying much wisdom in few words. He took time to pick and choose, arrange and rearrange—took time to eliminate the unnecessary. Obviously,

it is far easier to write a two column editorial than it is to write an epigram of the length of a couple of dozen words. I have picked out a few specimen gems—a book or two could be filled with others equally witty—and the reader will be hard set to it to show that Wilde's theoretical morality was other than excellent. Indeed, nine out of ten will find themselves saying: "That is very true: I, myself, have felt it to be so, but could not express it." Here then:

"There is always a certain amount of danger in any attempt to cultivate impossible virtues." (In other words, don't try to wind yourself too high for mortal man beneath the sky, as the poet put it. Or Thoreau, you may recall, spoke of those men who gathered their material to build a bridge to the moon, and wound up by making a wood shed of the material.)

"Lounging in the open air is not a bad school for poets, but it largely depends on the lounge."

"There seems to be some curious connection between piety and poor rhymes."

"It is always a pleasure to come across an American poet who is not national, and who tries to give expression to the literature that he loves rather than to the land in which he lives. The Muses care so little for geography!"

"Most modern novels are more remarkable for their crime than for their culture."

"In art, as in life, the law of heredity holds good. On est toujours fils de quelqu'un." (One is always the son of someone.)

"No one survives being over-estimated."

"With an evening coat and a white tie, even a stock broker can gain a reputation for being civilized."

"The fatality of good resolution is that they are always too late."

"In modern life nothing produces such an effect as a good platitude. It makes the whole world kin."

"Society is entirely composed of beautiful idiots and brilliant lunatics."

"No man is rich enough to buy back his past."

"Fashion is what one wears oneself. What is unfashionable is what other people wear."

"Modern women understand everything except their husbands."

"Fathers should be neither seen nor heard. That is the only proper basis for family life."

"We are all of us so hard up nowadays that the only pleasant things to pay are compliments. They're the only things we can pay."

"Women only call each other sister after they have called each other a lot of other things first."

"To get into the best society nowadays, one has either to feed people, amuse people, or shock people."

"Discontent is the first step in the progress of a man or a nation."

A smiling Swift was Oscar Wilde, a smiling Swift and a gentle Hogarth, very authentic, very precise. There is delicacy, as you see, in the way in which he tells us about ourselves, shows us our own deceits, fooleries, vulgarities. It is easy to imagine him in society keeping up the conversation with a wealth of stories and sparkling brilliancies drawn from memory and imagination, the fascination of the freedom of his opinions. No abstract verbiage, no pitiless sarcasm, nothing coarse or vicious—in the years of his strength he might have walked with the charming Sir Philip Sidney, most gracious of scholars and gentlemen.

V.

WILDE'S WEAKNESS.

Without pandering to idle, or prurient curiosity, it is, I think, eminently desirable that something very plain should be said regarding the misdemeanor of which Wilde was found guilty and sentenced to imprisonment. Frank Harris, in his *Oscar Wilde; His Life and Confessions*, (New York, 1918), has a stirring passage in which he says that Wilde was "punished for his popularity and pre-eminence, for the superiority of his mind and wit; he was punished by the envy of journalists, and by the malignant pedantry of half civilized judges." That, of course, cannot be taken seriously. England and the English had, on the contrary, accepted Wilde, had loaded him with honors, had placed him on a pedestal, and all this while Wilde was young. In fact, many greater artists than Wilde had found their path to recognition far more thorny than he. The Frank Harris flourish does but obfuscate the issue in part.

In a word, Wilde's crime was that of the homo-sexualist and he was punished according to the laws of England as a sexual pervert, and not persecuted because he was an artist. His chief partner in his land of purple pleasure was his friend, Lord Alfred Douglas, also a poet.

The blunt speaking Mencken sweeps Wilde into the gutter with a single sweep of the arm.

"Wilde was a bounder and a swine," he writes, somewhere, and many are equally condemnatory with him. So, on one end of the scale there is the Harris viewpoint, on the other, the Mencken, and truth and fairness is in neither. Wilde suffers as much from the one as from the other. I will show you why I think so.

While to me, homo-sexuality is a something to be regarded with a shudder, I being of the lucky ones with a normal constitution, so also do I shudder at other unpleasant things—tuberculosis, for instance, or insanity, or gross ignorance, or sordid poverty. But while shuddering, I realize that there are underlying causes for each and every one of these ills, and feel that those who suffer from any one of them are subjects for pity and not for condemnation. Mumble as I will words about being a master of my fate and captain of my soul, I cannot dismiss from my mind the remembrance of the Jukes family for instance, and that drunkard Max Jukes from whom descended in seventy-five years 200 thieves and murderers, 280 who were idiots, or blind, or tubercular, 90 who were prostitutes and 300 children who, fortunately we must think, died prematurely. I cannot set aside what I know to be true, that even habitually sober parents who, at the moment of conception, are in a temporary state of drunkenness, may beget children who are epileptic, or paralytic, or idiotic, or insane, or microcephalic.

Now in the case of Oscar Wilde there is cause to believe that he sprang from a defec-

tive line of ancestors. That he was a man of intellect, a poet and a critic of high achievement by no means prevents him from being also a moral degenerate, and that I hold him to have been. As Dr. Talbot has shown in his study of Degeneracy, a degenerate may be a scientist, an able lawyer, a great artist, a poet, a mathematician and for all that present, from a moral standpoint, profound defects, strange peculiarities and surprising lapses of conduct. Remember Paul Verlaine, ignoring all received codes of morality, a social outcast, yet writer of verses of a penetrating beauty. Or there is Francois Villon, accomplice of thieves and rogues and prostitutes whose poetry was of the highest order. There is Baudelaire, too, certainly one who takes his place, without effort, among the lesser of the world's great poets, yet experiencing morbid passions in love, craving ugly and horrible women, negresses, dwarfs.

When the fathers have eaten sour grapes, says the old proverb, the teeth of the children are set on edge, which is only another way of stating the fact that the sins of the parents are visited upon the children unto the third and fourth generation. The writers of the old Mosaic books seem to have known a great deal of what we call latter day results of scientific research. The difference between us and them comes in that while we say much with our lips, we are too stupid or bull headed to confess in our hearts. Certainly in the veins of Oscar Wilde flowed a tainted stream. His mother suffered from a modified form of giant-

ism and Bernard Shaw has told us of her great hands and the half darkness in which she lived. Her son Oscar was a great bodied fellow who gave no impression of muscularity or of strength. "A great, flabby fellow," said my friend to me when first we saw him at the Arts and Crafts exhibition. And flabby he was, with heavy, flabby cheeks, which looked as if they belonged to a much bigger man.

Wilde's father, Dr. Sir William Wilde, had a reputation for gallantries and was defendant in a charge of rape, later changed to one of the seduction of a patient in his charge. A certain ape-like characteristic about him was noted by one who knew him well. "A pithecoïd person of extreme sensuality," said Professor R. T. Tyrrell. So, Oscar Wilde had a bad start. Hereditary influence must have very strongly disposed him. There was a taint in him just as there were taints in the case of Beethoven with his drunken father; Byron with his half-mad mother; Schopenhauer with his morbid father; Renan, with his insane grandfather. And the taints had their evidences so that Beethoven had his melancholia and his syphilitic disease, Byron his half mad passionate rage, Schopenhauer his deep despondencies, and Renan his neurosis. It all helps to throw light on the ugly part of the Wilde life, that part which yahoos delight to mull over.

Worse, as like seeks like, Wilde came into close contact with one in whose veins ran streams equally tainted. For his friend, Lord Alfred Douglas, came from no clean stock. His father, the Marquis of Queensberry, was a

fellow who, in theaters and public places, on occasion acted more like an hysterical virago in liquor than as a rational civilized being. There were scenes in which he knocked down and sometimes was knocked down by men in altercations, in which he stood up in theater boxes and pitched carrots at the actors, or hissed plays when he did not like the sentiment, and all that kind of thing. His sister, Lady Florence Dixie, was no less erratic. In Ireland, at the time of the Fenian trouble when Parnell was wrongly accused of complicity in murder, she came out with a wonderful tale of having been attacked by masked men. Investigation showed the whole to be without foundation. I remember the time when she touched Patagonia, her companion being Prince somebody of Battenburg, and the tales that she afterwards told of her adventures bespoke a lively imagination very averse to letting a story die for the sake of local coloring. So the family had its skeleton and the scion of the house was no safe friend for Wilde.

It must not be supposed that Wilde leaped into the whirlpool of wilfulness with Lord Alfred Douglas and his friends as a man leaps into business or matrimony. There was a time when Wilde and Douglas were as David and Jonathan, as Orestes and Pylades—a pair between whom there existed a peerless friendship. But along the downward path the black poison in their veins urged them, slowly at first but ever increasing in speed, and as they went, weaker grew their wills, coarser their

moral fiber until both became the slaves of the genii they had unbottled.

Oscar Wilde, like Walter Pater and many others, had thoroughly assimilated the Platonic idea of Love as the safeguard of states, meaning by the word love, not by any means the love between the sexes, but what we might call romantic friendship, for the love of women, in the Platonic viewpoint, is mere sensuality. In our occidental civilization where the dollar and the dollar only counts, romantic friendship between men is almost unknown, and, indeed, it would be no untruth to say that man no longer has friends, but merely chance acquaintances. So very true is that in England, when Tennyson's *In Memoriam* appeared, a poem giving superb expression to the poet's love for his lost friend, Arthur Hallam, the Times newspaper solemnly rebuked the poet's language as unfitted for any but amatory tenderness. Tennyson himself made mention of the number of shameful letters of abuse he had received about it. (see Memoir by his son, page 800) Walt Whitman, too, has been accused of morbidity because of a passage or two from his *Leaves of Grass* which extolled "threads of manly friendship, fond and loving, pure and sweet, strong and lifelong." I quote from the edition of 1890, on page 102:

Whose happiest days were far away through
fields, in woods, on hills, he and another
wandering hand in hand, they twain apart
from other men.

Who oft as he saunter'd the streets, curv'd with
his arm the shoulder of his friend, while
the arm of his friend rested upon him also.

And another passage:

That night while all was still I heard the waters
roll slowly continuously up the shores,
I heard the hissing rustle of the liquid and
sands as directed to me whispering to con-
gratulate me,
For the one I love most lay sleeping by me
under the same cover in the cool night,
In the stillness in the autumn moonbeams his
face was inclined toward me,
And his arm lay lightly around my breast—and
that night I was happy.

Clearly there is something of great beauty in both passages and certainly nothing to offend. But there are people who would have lascivious notions if they saw a six-months-old baby in its bath, people who see filth because it hangs forever like a film before their eyes. To such, friendship as is here pictured, or as it is extolled by Tennyson in his *In Memoriam*, is quite inconceivable. They hunt for indecencies, for debaucheries, for lewdnesses and they clothe cleanness in filthy rags. And yet there are indubitable evidences of such friendships. One remembers Sir Philip Sidney and Hubert Languey, Queen Anne and the Duchess of Churchill, Richard Wagner and the king of Bavaria, Sir Thomas Browne of the *Religio Medici* whose devotion to his man friend altogether replaced the love of the opposite sex.

Still, these are exceptional cases, and it is a fact that men who form romantic attachments are not to be considered altogether normal. Such as do so may almost be considered as a race apart, and as a race apart we must consider them. An Austrian writer, K. H. Ul-

richs, has given to them the name of Urnings, the word being taken from Uranos, heaven; the contention of such people being that their love and affection was of a higher order than the ordinary attachment. Neuropathic physicians have made estimates that are startling as to the frequency with which such subnormal people are to be found, Dr. Grabowsky quoting as high as one man in every twenty-two, and Dr. Moll (*Die Contrare Sexual-empfindung*, chap. 3,) estimating from one in fifty to as low as one in every five hundred men, the ratio varying in different countries and in different classes in the same country. At any rate, there are, apparently, enough affected to make it clear that to draw a veil of silence over the subject is crassly stupid, while to pretend that it is an undiscussable thing is stuper still.

Edward Carpenter, with no reference to the sexual aspect of the phenomenon, has held that the presence of so strangely disposed a people in human society is a necessity from a psychic point of view, in that it brings about a kind of *rapprochement* between the sexes. "The sexes do not, or should not normally form two groups hopelessly isolated in habit and feeling from each other, but rather represent the two poles of one group—which is the human race; so while certainly the extreme specimens at either pole are vastly divergent, there are great numbers in the middle region who (though differing corporeally as men and women) are by emotion and temperament very near to each other....Nature, it might ap-

pear, in mixing the elements which go to compose each individual, does not always keep her two groups of ingredients—which represent the two sexes—properly apart, but often throws them crosswise in a somewhat baffling manner, now this way and now that; yet wisely, we must think—for if the normal distinction of elements were obdurately maintained, the two sexes would drift into far latitudes and absolutely cease to understand each other. As it is, there are some remarkable and (we think) indispensable types of character, in whom there is such a union or balance of the feminine and masculine qualities that these people become to a great extent the interpreters of men and women to each other."

Examining the salient characteristics of men of the Wilde type, referring of course to their abnormal side, Otto de Joux sketches them as an ornithologist would sketch a bird. The passage follows, and, while he certainly did not have Wilde in mind, it will be seen that the description fits as a glove fits the hand. "They are enthusiastic for poetry and music, are often eminently skilful in the fine arts, and are overcome with emotion and sympathy at the least sad occurrence. Their sensitiveness, their endless tenderness for children, their love of flowers, their great pity for beggars and crippled folk are truly womanly." That fits, not only Wilde, but equally well others with a strong suspicion of a similar temperament: Shakespeare for instance, and Paul Verlaine, and Kit Marlowe, and Michelangelo.

In similar connection hear also what Edward Carpenter has said (An Unknown People, The Reformer, Lond., 1897.):

"Emotionally they are extremely complex, tender, sensitive, pitiful and loving, full of storm and stress, of ferment and fluctuation of the heart; the logical faculty may or may not, in their case, be well developed, but intuition is always strong. . . . Such an one is often a dreamer, of brooding, reserved habits, often a musician, or a man of culture, courted in society, which nevertheless does not understand him—though sometimes a child of the people, without any culture, but almost always with a peculiar inborn refinement."

But enough. Putting two and two together, the man physical and the man psychical and temperamental, taking into account his ancestry, my position is that Oscar Wilde could no more help being what he was than I can help being what I am, a quarrelsome, obstinate, muscular fellow obsessed with a love for things literary, irritable under restraint, passionately fond of horses and of birds, a yearner for the open air and the sea, and an instinctive hater of all men in authority. That he held the Greek view of friendship and love was well, but it was by no means well that he did not adopt other Greek virtues. Had he done so, had he been a true Greek pagan as he wished to be thought, there would have been more of sturdy self-discipline and less of gluttony and of sloth and self indulgence. There would have been a rigid insistence upon the Greek virtues of moderation and of temperance and of reverence. But the springs of his own self-

control were impotent and that which might have been a man, turned instead into a pale ghost.

VI.

THE STORM AND NIGHT.

I repeat, the springs of his own self control were impotent. To put the matter in simple language, something went wrong in his brain just as something may go wrong in my brain or in yours. A tiny bubble of air no larger than a pin head blocks the way in some capillary, we will say, and the gentle mother becomes on an instant a murderess. Sanity hangs on a hair. We style ourselves civilized Christians, but are we more than pagans under a veneer? We pride ourselves on our self possession, our philosophic calm, and, as by the touch of a magician's wand, something happens, and we become vandals, barbarians, worse than swine rooting among skulls. Nor is this a mere figure of speech. Medical records abound with such cases. Read Trelat, (*Recherches historiques sur la folie*, page 81) and ponder on the case of a woman who after an accident sang Latin hymns and poems utterly unknown to her. There were, in her case, unsuspected childish memories and with a jolt, the flood gates were opened. In the same book there is recorded another case, that of a child who, wounded in the head, constructed syllogisms in German though, when again in health, she was no longer able to utter a single sentence in that language. Forbes Winslow the alienist tells of a gentleman of his ac-

quaintance who, incapable of doing an ordinary multiplication sum, yet became an excellent mathematician during an attack of mania. Something went suddenly wrong and the gifted Casanova stained his life and became a swindler; Muret the humanist was condemned by a French court for sodomy; Bulwer Lytton beat and bit his wife on their honeymoon and his brutishness grew so marked that the courier who accompanied them refused to continue the journey; Benvenuto Cellini passed from the highest idealism to apeish rage, beating his models, slashing to pieces the bed linen of an inn keeper because pay was asked in advance, leaving his work to stab a man who had annoyed him; fits of insanity came upon Swift, Southey, Cowper, Gounod, Poe, Collins, MacDowell, Verdi, and many are those who have forced open the gates of death for themselves. The catalogue is both wearisome and saddening. But mark this, nor deem it exaggeration. Just as the merest fraction of a change in the plane of a cone changes an ellipse to a path that cannot be charted because it sweeps into infinity, so in the mind of man an imperceptible change in a tissue causes a veering from sanity to insanity. We see how dread the outlook when applied to ourselves, but we are prone to condemn others. We forget that tranquil moderation and chastened calm may not always be ours, and well it is that we should forget, for else we would be as frightened children gazing at an unfathomable abyss.

So there came a day when, for Oscar Wilde,

the sky was blotted out and the light became darkness. Constance Wilde, his beautiful wife, realized that for some years before the storm broke he had been far from normal. Others knew it too. His very indifference to the comfort of others told a tale. There was the strange incident when he arrived very late at a luncheon party and the gentle hostess mildly bade him look at the clock. "Oh madam," he answered, "what can that little clock know of what the great golden sun is doing?" Some have suggested that his tardiness was due to the fact that he wished to make his *bon mot*. If so, that alone would be suspicious. Then there were eccentricities of dress, the modelling and dressing of his hair after the fashion of Nero, and certain imitations of Heliogabalus. You must imagine the pain that all that kind of thing undoubtedly caused his wife and his two young sons, and his friends, and you must picture his unnatural callousness if he realized that pain and his singular inhuman detachment if he did not. In either case there is subnormality. I think that it is not necessary to be an alienist to suspect his partial insanity, result, doubtless, of that black drop of blood coursing his veins inherited from a failing stock. But you get the pain to others, I think, as the salient feature. That is the real tragedy. The letter from his wife when the crash came carries a note of real terror. Judge for yourself:

My Dear Mr. Sherard:

It was indeed awful, more so than I had any conception it could be. I could not see him, and I could not touch him, and I scarcely spoke.

Come and see me before you go to him on Monday. At any time after two I can see you. When I go again, I am to get at the Home Secretary through Mr. ——— and try and get a room to see him in and touch him again. He has been mad the last three years, and he says that if he saw ——— he would kill him. So he had better keep away, and be satisfied with having marred a fine life. Few people can boast of so much.

I thank you for your kindness to a fallen friend; you are so kind and gentle to him, and you are, I think, the only person he can bear to see.

Yours most truly,

CONSTANCE WILDE.

The bare record of the trials runs as follows, as set down for posterity in the Dictionary of Dates:

The Marquis of Queensberry charged with publishing a libel against Mr. Oscar Wilde, author; acquitted, the case being withdrawn. 3-5 April, 1895. Mr. Oscar Wilde and Alfred Taylor tried for misdemeanours, 19 April; partial acquittal; jury disagree; new trial ordered, 1 May; Mr. Wilde bailed, 7 May; Alfred Taylor convicted, 21 May, and Oscar Wilde, 25 May; both sentenced to 2 years imprisonment with hard labour, 25 May, 1895.

The full report of the trial (Three Times Tried, Famous Old Bailey Trials of the XIX Century) is painful reading with its misinterpretation of high idealism and its dragging into prominence suggestions of bestiality. One imagines a mighty net swept across the city of London, catching all kinds of things clean and unclean. Blackmailers, panderers, poets, detectives, fast sporting characters were there as interested persons. There were grooms, valets, servants male and female, and morons and de-

generates who had figured in court in a vice raid the year before. A most unsavory business indeed and a festival of libidinosity. But, assuming that Wilde was actually guilty of the bestiality charged to him, and that justice made no mistake, the daring of the man astounds. Astounds, for it was not the daring of the world-wise man. Reading of that act of folly in instituting proceedings against the Marquis of Queensberry, of that other folly in making a superb gesture when the blackmailer was at his door with the incriminating letter; the intense egotism of the man in his extravagant attitude is more like the bravado of a highwayman on the scaffold than anything else.

Consider the matter a moment assuming that Wilde was quite cognizant that at the first flash of publicity dangerous and damaging incidents would point at him like sharp swords. There was Queensberry, a man about town well enough known for his disregard of conventionalities and his habit of brawling, a fellow with none of the finer instincts, who wrote on a visiting card an accusation against Wilde and handed it to the doorkeeper of a well known club, the Albermarle, with instructions that it be given to Wilde. Now mark what follows. Wilde's actions have all the appearance of outraged virtue and none of discovered vice. As soon as the law could move, the Marquis of Queensberry was arrested on a warrant charging him with publishing a libel concerning Wilde. Wilde drove to the court of justice in a carriage with a couple

of dashing horses, his companion being Lord Alfred Douglas, son of the Marquis of Queensberry, suspected partner in guilt with Wilde, according to the general supposition. Indeed, the documents in the first trial were letters which Wilde had written to Douglas, of which more later. So the first trial went on, and took a strange turn, the writings of Wilde being introduced in the endeavor to show that they were immoral and obscene.

It is a picture to visualize, that court of law with its eminent articulate men, the solicitors Carson and Sir Edward Clarke, brilliant men both; Wilde in the witness box leaning over the rail in confident manner, toying with his gloves as he answers the questions, dressed like a dandy in tight fitting frock coat, white collar and black flowing tie; Queensberry, short of stature, rugged, defiant, wearing his blue hunting stock instead of collar and tie, frowning, muttering, sometimes threatening. For a time things went very well, but letters were introduced, letters for which Wilde had been blackmailed, and, later, names were mentioned, names of doubtful characters not at all in the Wilde social world and presently Wilde's calm fell from him at a question and "raising his voice, and bringing down his hand on the rail of the witness box, Wilde declared that what had been said was an infamous lie." A little later the seriousness of the situation seems to have suddenly dawned on the man and to another question "with livid face and glaring eyes, he shouted 'No!'" Other letters were read and hideous things were dragged

from the slime, Wilde's frequent association with characters whose reputations were unsavory, certain ugly entertainments, odd presents given here and there, letters from the old Marquis to his son that were strange tangles of pathos and passion, and the upshot of it was that the Marquis was released and Oscar Wilde retired from the case, his mass attack a failure. But the sequel came swiftly. At the Cadogan Hotel, where Wilde was staying, the arrest was made, and Oscar Wilde was taken a prisoner to Bow Street charged with acts of gross indecency and on Saturday, April 6th, 1895, the poet, the playwright, the critic, the friend of the most fashionable and learned stood in the criminal dock. A youth named Alfred Taylor was charged with him and the magistrate committed both for trial, the Grand Jury finding true bills against both.

Like a flower wilting under the desert wind, Wilde had drooped. The court record speaks of his dejected air, his pallor, his dishevelled hair and his continual sighing. But there was one flash of the better Wilde, the Wilde whose faith was once pure and high. A poem, "Two Loves" was read, a poem by Lord Alfred Douglas.

"SWEET YOUTH,

Tell me why, sad and sighing, dost thou rove
These pleasant realms? I pray thee tell me,
sooth,
What is thy name?" He said, "My name is
Love."

Thus straight the first did turn himself to me,
And cried, "He lieth, for his name is Shame.
But I am Love, and I was wont to be

Alone in this fair garden, till he came
Unasked by night; I am true Love. I fill
The hearts of boy and girl with mutual flame."
Then sighing said the other, "Have thy will,
I am the Love that dare not speak its name."

And the question was put by Mr. Gill, the Counsel to Wilde, "What is the Love that dare not speak its name?"

Then the better Wilde arose and said: "The 'Love that dare not speak its name' in this century is such a great affection of an elder for a younger man as there was between David and Jonathan, such as Plato made the very basis of his philosophy, and such as you find in the sonnets of Michelangelo and Shakespeare. It is that deep, spiritual affection that is as pure as it is perfect. It dictates and pervades great works of art like those of Shakespeare and Michelangelo, and those two letters of mine such as they are. It is in this century misunderstood, so much misunderstood that it may be described as the 'Love that dares not speak its name,' and on account of it I am placed where I am now. It is beautiful, it is fine, it is the noblest form of affection. There is nothing unnatural about it, and it repeatedly exists between an elder and a younger man, when the elder man has intellect, and the younger man has all the joy, hope and glamor of life before him. That it should be so the world does not understand. The world mocks at it and sometimes puts one in the pillory for it."

That was the high note of the trial, I think. I see at that moment the man in the wither-

ing atmosphere, the man with his vital powers depressed and enfeebled, gazing up to the heights where he once knew pure air and golden sunshine. I see the man thrust from paradise looking back through the open gates, fixing his eye for a last look on the delectable land knowing that henceforth he was to know naught of happiness, his sunset years to be spent with dark demoniac powers. Henceforth for him the sky was blotted out and the light had become darkness.

But hear the cry of the man himself. You may find the passage in *De Profundis*, the book he wrote when in prison:

"We are the zanies of sorrow. We are clowns whose hearts are broken. We are specially designed to appeal to the sense of humour. On November thirteenth, 1895, I was brought down here from London. From two o'clock till half past two on that day I had to stand on the center platform of Clapham Junction in convict dress, and handcuffed for the world to look at. I had been taken out of the hospital ward without a moment's notice being given me. Of all possible objects I was the most grotesque. When people saw me they laughed. Each train as it came up swelled the audience. Nothing could exceed their amusement. That was, of course, before they knew who I was. As soon as they had been informed they laughed still more. For half an hour I stood there in the grey November rain surrounded by a jeering mob.

"For a year after that was done to me I wept every day at the same hour and for the same space of time. That is not such a tragic thing as possibly it sounds to you. To those who are in prison tears are a part of every day's experience. A day in prison on which one does not weep is a day on which one's heart is hard, not a day on which one's heart is happy."

And again, the closing words in the same book run:

"All trials are trials for one's life, just as all sentences are sentences of death; and three times have I been tried. The first time I left the box to be arrested, the second time to be led back to the house of detention, the third time to pass into prison for two years. Society, as we have constituted it, will have no place for me, has none to offer; but Nature, whose sweet rains fall on unjust and just alike, will have clefts in the rocks where I may hide, and secret valleys in whose silence I may weep undisturbed. She will hang the night with stars; so that I may walk abroad in the darkness without stumbling, and send the wind over my footprints so that none may track me to my hurt; she will cleanse me in great waters, and with bitter herbs make me whole."

That last was the hope of the man, a hope to be soon cruelly torn from him. For the springs of his own self were impotent and his was a strange incongruity between faith and conduct. Vainly he struggled with the spell coiling fatally around him for the fatal potency and weight of that inherited black drop of blood cruelly debased both heart and mind. For him there was to be no liberation but the liberation of death, and until that liberation came, between him and his fellows were set stone walls of separation, mountain barriers, chasms. Nor was there one to defy these and come near enough to deliver his soul from the depths of its own loneliness.

VII.

"SEBASTIAN MELMOTH."

The real Oscar Wilde died, I think, in the storm. It was but 'a pale ghost that was in prison and the ghost became Sebastian Melmoth, an exile in France. For that was the name he took to himself when he left England after his imprisonment. All that Nietzschean self-assertion of which we spoke vanished into thin air. The life he had once known seemed quite without solidity—a thing that suddenly vanished. It was as if he had been a creature living on a thin surface over a hollow void. He who had been King of Life, surrounded by applauding crowds, had become but as a dreaming beggar. I do not think that he wished to dream again.

In France, Ernest La Jeunesse met him and has left a picture of the changed man with his face furrowed by tears, his eyes hollow caverns, his heavy lips all compact of sobs and sometimes oozing blood. "An unwieldly ghost," he says, "an enormous caricature, he cowered over a cocktail, always improvising for the curious, for the known, and for the unknown—for anyone—his tired and tainted paradoxes. But mostly it was for himself he improvised; he must assure himself that he still could, still would, still knew." "He could talk as a strip-ling talks, smiling sometimes his smile that was of purgatory, and laughing—laughing at nothing, shaking his paunch, his jewels, and the gold in his poor teeth. . . . Slowly, word

for word, he would invent in his feverish, stumbling agony of art, curious, fleeting parables. . . . Words fail to paint properly the chaos of hope, of words and laughter, the mad sequence of half concluded sentences, into which this poet plunged, proving to himself his still inextinguished fancy, his battling against surrender, his smiling at fate; or to suggest the grim dark into which he always must turn, daily fearing death, in the narrow chamber of a sordid inn."

Like Napoleon, like Cola di Rienzi, like a hundred others with whom the Fates played. Wilde had drank a deep draft from the cup of glory, had known the intoxication of world admiration and, the debauch ended, had fallen into a mood of gloomy despair. Whoso warms himself at a conflagration must weep alone amid the ashes in the cold of night.

Andre Gide met him first in France, the friend to whom Wilde had once said that his error was that he had given his genius to his life, to his work only his talent. The place of meeting was a village near Dieppe. When Gide arrived, Wilde was absent, was not expected to arrive until midnight.

"Night came, and I went to the hotel, the only one in the place, where Melmoth, too, lodged. It was eleven, and I had begun to despair of my waiting, when I heard wheels. Sebastian Melmoth had returned.

"He was numb with cold. On the way he had lost his overcoat. A peacock's feather that his servant had brought him the day before may have given him a foreboding of ill-luck; he expresses himself as fortunate to have got off with only the loss of his overcoat. He shakes

with the cold and the whole hotel is astir to make him a hot grog. He scarcely has a greeting for me. He does not wish to show his emotion before the others. And my own excited expectation quiets down as I find in Sebastian Melmoth so completely the Oscar Wilde—not the hard, strained, forceful Wilde of Algiers, but the soft pliable Wilde of before the crisis. . . . We sat at table by lamplight, and Wilde sipped his grog. Now, in the better light, I note how the skin of his face has roughened and coarsened, and his hands still more, those hands with their fingers still covered with the same rings, even the lapis lazuli in its pendant setting, to which he was so much attached. His teeth are horribly decayed. . . . ”

Of course, Melmoth drifted to Paris and to what Blunt called his “dog’s vomit.” He had the intention to finish a play commenced, a play of Pharaoh, but there was no longer will in him. His laughter had become funereal, his wit mere painful grotesqueness. He was a blasted thing much as Swift became a blasted thing, a tree not only dead at the top, but rotted throughout. He lived alone, gloomy, often drunk, with occasional flashes of the old Wilde that made his situation the more terrible. Gide tells how he met him in Paris:

“I heard myself called by name. It was Wilde. How changed he was! ‘If I should reappear before I have written my play, the world will see in me only the convict,’ he had said. He had returned without his play, and when some doors closed against him he sought entry nowhere else; he turned vagabond. Friends often tried to save him; one tried to think what was to be done for him; one took him to Italy. Wilde soon escaped, slipped back. Of those who had remained longest faithful to him, some had several times told me that Wilde had disappeared. Hence I was

I admit, a trifle embarrassed to see him again like that, in that place. Wilde was sitting on the terrace of a cafe. He ordered cocktails. I sat down facing him, so that my back was to those passing. Wilde noticed that and ascribed it to an absurd shame on my part, and not altogether, I regret to say, with injustice. 'Oh!' said he, 'sit down here, next to me,' and pointed to a chair by his side. 'I am utterly alone now.'

"... A few days later I saw him again for the last time. Let me mention but one thing of those we talked of; he bewailed his inability to undertake his art once more. I reminded him of his promise, that he had made to himself, not to return to Paris without a completed play.

"He interrupted me, laid his hand on mine, and looked at me quite sadly: 'One must ask nothing of one who has failed.'"

And there the salient part of the Gide tale ends except for a few words about the funeral and the only floral piece laid on the coffin which bore an inscription, one from his landlord which read: "A mon locataire." It is not pleasant to think of the Lord of Life in that mad menagerie of the Paris underworld where are gross debaucheries, brutalities, hatreds, diseases and deformities. At the last, Sebastian Melmoth moved where the vile poison of the vilest human passions distilled and it is not well to think of it.

VIII.

THE SPITE OF THE GODS.

There was nothing at all silver gray and placid about Oscar Wilde's end although sentimentalists have tried to make it appear otherwise, talking about his submission to the yoke and his acceptance of the consolations of re-

ligion. Such talk is but chaff. There would be more truth in the saying that Wilde, in the days of sunshine, like Tantalus shared in the banquets of Olympus and wasted the ambrosia and nectar; could not endure his great prosperity and was swept by the gods to the everlasting shadow of the overhanging rock of sorrow; from the day of his release from prison he was wrapped in darkness and sat among the husks. True, his intentions were otherwise, his hopes doubtless were, for there is a ring of truth in that passage quoted from *De Profundis* voicing a yearning for some cleft in a rock in which he might hide, some secret valley in which to weep undisturbed. Free again, for him there was no windy, out-of-door life where brotherhood might be natural. He was the victim of the wrath of the gods. "If he had then begun a decent life," writes Wilfred Scawen Blunt in his diary, "people would have forgiven him, but he returned to Paris and to his dog's vomit." Harsh words, but truth is always harsh and Wilfred Blunt always truthful.

Sherard has a picture of the last days as told of by the landlord of the house in which Wilde lived. The man who had known the sunshine and honey of life, who had spent his days as a pampered pet of brilliant London society lived alone in his leaden sunset, his room a mean one, giving on a damp courtyard, his horizon a dank and dripping wall. A rickety table and a shabby couch and furniture faded and thread-bare were his all. "There he lay," said the landlord, "with ice on his

head, and in his delirium he swore at the pain. He kept raising his hands to his head to try and ease the torture. The doctors said that they ought to cut into the head but there was no sign to guide them where to cut, and so no operation could be tried. He must have suffered greatly for he swore and swore. And there he died—in my arms. It was two o'clock in the afternoon."

There were other things that the landlord told, as how Wilde, towards the end, used to work all night, beginning at one o'clock in the morning. "I have earned a hundred francs," he quoted Wilde as having said, but much of the money went for cognac and little for food. As for exercise, he took none, sleeping until noon, then breakfasting, to throw himself on the bed and sleep again until five or six in the evening. As I have said, the man had become a pale ghost.

So came the end and that final scene when he was received into the Catholic Church. In spite of the sentimentalists, there is no evidence that there was, for Oscar Wilde, any moment of that blessedness which is the supreme degree of happiness, any chimerical something better than happiness, any of that "perfect gladness" which Francis of Assissi calls the quintessence of happiness. Robert Ross, Oscar Wilde's most faithful friend, knew most of that last scene, so let him speak. The tale has been recorded by Blunt in his diary, an entry made on November 16th, 1905. Here it is:

"Yesterday I saw Ross, Oscar Wilde's friend, who was with him in his last hours. I was curious to know about these, and he told me everything. Ross is a good, honest fellow as far as I can judge, and stood by Oscar when all had abandoned him. He used to go to him in prison, being admitted on an excuse of legal business, for Ross managed some of Mrs. Wilde's affairs while her husband was shut up. He told me Oscar was very hardly treated during his first year, as he was a man of prodigious appetite and required more food than the prison allowance gave him, also he suffered from an outbreak of old symptoms and was treated as a malingerer when he complained of it. Ross's representation got attention paid to these things, and in the last eight months of his imprisonment Wilde had books and writing materials in abundance and so was able to write his *De Profundis*. I asked him how much of this was sincere. He said, 'As much as possible in a man of Oscar's artificial temperament. While he was writing, he was probably sincere, but his "style" was always in his mind. It was difficult to be sure about him. Sometimes when I called he was hysterical, at other times laughing.' When Oscar came out of prison he had the idea of becoming a Catholic, and he consulted me about it, for you know I am a Catholic. I did not believe in his sincerity and told him if he really meant it, to go to a priest, and I discouraged him from anything hasty in the matter. As a fact, he had forgotten all about it in a week, only from time to time he used to chaff me as one standing in the way of his salvation. I would willingly have helped him if I had thought him in earnest, but I did not fancy religion being made ridiculous by him. I used to say that if it came to his dying, I would bring a priest to him, not before. I am not at all a moral man, but I had my feeling on this point and so the matter remained between us. After he had been nearly a year out of prison he took altogether to drink, and the last two years of his life were sad to witness. I was at Rome when

I heard that he was dying and returned at once to Paris and found him in the last stages of meningitis. It is a terrible disease for the bystanders, though they say the sufferer himself is unconscious. He had only a short time to live, and I remembered my promise and got a priest to come to him. I asked him if he would consent to see him, and he held up his hand, for he could not speak. When the priest, an Englishman, Cuthbert Dunn, came to him, he asked him whether he wished to be received and put the usual questions, and again Oscar held up his hand, but he was in no condition to make a confession nor could he say a word. On this sign, however, Dunn, allowing him the benefit of the doubt gave him conditional baptism, and afterwards extreme unction but not communion. He was never able to speak and we do not know whether he was altogether conscious. I did this for the sake of my own conscience and the promise I had made."

There is another entry of interest:

"Wilde's wife died a year after he left prison. She would have gone to see him at Paris but he had already taken to drink and Ross did not encourage her to do so. Ross made 800 pounds by the *De Profundis*. He had intended to pay off Oscar's Paris debts with 400 pounds of it and devote the rest to the use of the boys, but just as he was going to do this the whole sum was claimed by the bankruptcy court."

I think you see in this last scene something like the paroxysms and wild graspings of a man who, in dim moments of consciousness sees the billows that go over him; you see in that upraised hand a reaching from the depths for a grasp to rescue him from his distress, from the quick closing darkness that filled his heaven and his earth. Seeing that, you will realize the strange haunting cry in that stanza of poem to L. L.:

But strange that I was not told
That the brain can hold
In a tiny ivory cell
God's heaven and hell.

BIBLIOGRAPHY.

The books listed below are in cloth binding and can be secured from Haldeman-Julius Company, Clothbound Book Department, Girard, Kansas. The prices quoted include carriage charges.

The Works of Oscar Wilde, Ravenna Edition. 15 vols. bound in semi-flexible cloth, library size. Our price per volume \$1.60 postpaid. ,

1. The Picture of Dorian Gray.
2. Lord Arthur Saviles Crime, and the Portrait of Mr. W. H.

HERODIAS, *Wife of the Tetrarch.*

SALOME, *Daughter of Herodias.*

The Slaves of Salome.

SALOME

SCENE.—*A great terrace in the Palace of Herod, set above the banqueting-hall. Some soldiers are leaning over the balcony. To the right there is a gigantic staircase, to the left, at the back, an old cistern surrounded by a wall of green bronze. The moon is shining very brightly.*

THE YOUNG SYRIAN. How beautiful is the Princess Salome tonight!

THE PAGE OF HERODIAS. Look at the moon. How strange the moon seems! She is like a woman rising from a tomb. She is like a dead woman. One might fancy she was looking for dead things.

THE YOUNG SYRIAN. She has a strange look. She is like a little princess who wears a yellow veil, and whose feet are of silver. She is like a princess who has little white doves for feet. One might fancy she was dancing.

THE PAGE OF HERODIAS. She is like a woman who is dead. She moves very slowly. (*Noise in the banqueting-hall.*)

FIRST SOLDIER. What an uproar! Who are those wild beasts howling?

SECOND SOLDIER. The Jews. They are al-

ways like that. They are disputing about their religion.

FIRST SOLDIER. Why do they dispute about their religion?

SECOND SOLDIER. I cannot tell. They are always doing it. The Pharisees, for instance, say that there are angels, and the Sadduces declare that angels do not exist.

FIRST SOLDIER. I think it is ridiculous to dispute about such things.

THE YOUNG SYRIAN. How beautiful is the Princess Salome to-night!

THE PAGE OF HERODIAS. You are always looking at her. You look at her too much. It is dangerous to look at people in such fashion. Something terrible may happen.

THE YOUNG SYRIAN. She is very beautiful to-night.

FIRST SOLDIER. The Tetrarch has a sombre aspect.

SECOND SOLDIER. Yes; he has a sombre aspect.

FIRST SOLDIER. He is looking at something.

SECOND SOLDIER. He is looking at some one.

FIRST SOLDIER. At whom is he looking?

SECOND SOLDIER. I cannot tell.

THE YOUNG SYRIAN. How pale the Prin-

cess is! Never have I seen her so pale. She is like the shadow of a white rose in a mirror of silver.

THE PAGE OF HERODIAS. You must not look at her. You look too much at her.

FIRST SOLDIER. Herodias has filled the cup of the Tetrarch.

THE CAPPADOCIAN. Is that the Queen Herodias, she who wears a black mitre sewed with pearls, and whose hair is powdered with blue dust?

FIRST SOLDIER. Yes; that is Herodias, the Tetrarch's wife.

SECOND SOLDIER. The Tetrarch is very fond of wine. He has wine of three sorts. One which is brought from the Island of Samothrace, and is pure like the cloak of Cæsar.

THE CAPPADOCIAN. I have never seen Cæsar.

SECOND SOLDIER. Another that comes from a town called Cyprus, and is as yellow as gold.

THE CAPPADOCIAN. I love gold.

SECOND SOLDIER. And the third is a wine of Sicily. That wine is as red as blood.

THE NUBIAN. The gods of my country are very fond of blood. Twice in the year we sacrifice to them young men and maidens; fifty young men and a hundred maidens.

But I am afraid that we never give them quite enough, for they are very harsh to us.

THE CAPPADOCIAN. In my country there are no gods left. The Romans have driven them out. There are some who say that they have hidden themselves in the mountains, but I do not believe it. Three nights I have been on the mountains seeking them everywhere. I did not find them, and at last I called them by their names, and they did not come. I think they are dead.

FIRST SOLDIER. The Jews worship a God that one cannot see.

THE CAPPADOCIAN. I cannot understand that.

FIRST SOLDIER. In fact they only believe in things that one cannot see.

THE CAPPADOCIAN. That seems to me altogether ridiculous.

THE VOICE OF IOKANAAN. After me shall come another mightier than I. I 'am not worthy so much as to unloose the latchet of his shoes. When he cometh the solitary places shall be glad. They shall blossom like the rose. The eyes of the blind shall see the day, and the ears of the deaf shall be opened. The sucking child shall lead the lions by their manes.

SECOND SOLDIER. Make him be silent. He is always saying ridiculous things.

FIRST SOLDIER. No, no. He is a holy man. He is very gentle, too. Every day when I give him to eat he thanks me.

THE CAPPADOCIAN. Who is he?

FIRST SOLDIER. A prophet.

THE CAPPADOCIAN. What is his name?

FIRST SOLDIER. Iokanaan.

THE CAPPADOCIAN. Whence comes he?

FIRST SOLDIER. From the desert, where he fed on locusts and wild honey. He was clothed in camel's hair, and round his loins he had a leathern belt. He was very terrible to look upon. A great multitude used to follow him. He even had disciples.

THE CAPPADOCIAN. What is he talking of?

FIRST SOLDIER. We can never tell. Sometimes he says things that affright one, but it is impossible to understand what he says.

THE CAPPADOCIAN. May one see him?

FIRST SOLDIER. No. The Tetrarch has forbidden it.

THE YOUNG SYRIAN. The Princess has hidden her face behind her fan! Her little white hands are fluttering like doves that fly to their dove-cots. They are like white butterflies. They are just like white butterflies.

THE PAGE OF HERODIAS. What is that to you? Why do you look at her? You must not look at her. Something terrible may happen.

THE CAPPADOCIAN (*pointing to the cistern*). What a strange prison!

SECOND SOLDIER. It is an old cistern.

THE CAPPADOCIAN. An old cistern! That must be a poisonous place in which to dwell!

SECOND SOLDIER. Oh, no! For instance, the Tetrarch's brother, his elder brother, the first husband of Herodias, the Queen, was imprisoned there for twelve years. It did not kill him. At the end of the twelve years he had to be strangled.

THE CAPPADOCIAN. Strangled? Who dared to do that?

SECOND SOLDIER (*pointing to the executioner, a huge negro*). That man yonder, Naaman.

THE CAPPADOCIAN. He was not afraid?

SECOND SOLDIER. Oh, no! The Tetrarch sent him the ring.

THE CAPPADOCIAN. What ring?

SECOND SOLDIER. The death ring. So he was not afraid.

THE CAPPADOCIAN. Yet it is a terrible thing to strangle a king.

FIRST SOLDIER. Why? Kings have but one neck, like other folk.

THE CAPPADOCIAN. I think it terrible.

THE YOUNG SYRIAN. The Princess is getting up! She is leaving the table! She looks very troubled. Ah, she is coming this way. Yes, she is coming towards us. How pale she is! Never have I seen her so pale.

THE PAGE OF HERODIAS. Do not look at her. I pray you not to look at her.

THE YOUNG SYRIAN. She is like a dove that has strayed. She is like a narcissus trembling in the wind. She is like a silver flower. (*Enters Salome.*)

SALOME. I will not stay. I cannot stay. Why does the Tetrarch look at me all the while with his mole's eyes under his shaking eyelids? It is strange that the husband of my mother looks at me like that. I know what it means. Of a truth, I know it too well.

THE YOUNG SYRIAN. You have left the feast, Princess?

SALOME. How sweet is the air here! I can breathe here! Within there are Jews from Jerusalem who are tearing each other in pieces over their foolish ceremonies, and barbarians who drink and drink, and spill their wine on the pavement, and Greeks from Smyrna with painted eyes and painted cheeks, and frizzled hair curled in columns, and

Egyptians silent and subtle, with long nails of jade and russet cloaks, and Romans brutal and coarse, with their uncouth jargon. Ah! how I loathe the Romans! They are rough and common, and they give themselves the airs of noble lords.

THE YOUNG SYRIAN. Will you be seated, Princess?

THE PAGE OF HERODIAS. Why do you speak to her? Oh! something terrible will happen. Why do you look at her?

SALOME. How good to see the moon! She is like a little piece of money, a little silver flower. She is cold and chaste. I am sure she is a virgin. She has the beauty of a virgin. Yes, she is a virgin. She has never defiled herself. She has never abandoned herself to men, like the other goddesses.

THE VOICE OF IOKANAAN. Behold! the Lord hath come. The Son of Man is at hand. The centaurs have hidden themselves in the rivers, and the nymphs have left the rivers, and are lying beneath the leaves in the forests.

SALOME. Who was that who cried out?

SECOND SOLDIER. The prophet, Princess.

SALOME. Ah, the prophet! He of whom the Tetrarch is afraid?

SECOND SOLDIER. We know nothing of

that, Princess. It was the prophet Iokanaan who cried out.

THE YOUNG SYRIAN. Is it your pleasure that I bid them bring your litter, Princess? The night is fair in the garden.

SALOME. He says terrible things about my mother, does he not?

SECOND SOLDIER. We never understand what he says, Princess.

SALOME. Yes; he says terrible things about her. (*Enter a slave.*)

THE SLAVE. Princess, the Tetrarch prays you to return to the feast.

SALOME. I will not return.

THE YOUNG SYRIAN. Pardon me, Princess, but if you return not some misfortune may happen.

SALOME. Is he an old man, this prophet?

THE YOUNG SYRIAN. Princess, it were better to return. Suffer me to lead you in.

SALOME. This prophet, is he an old man?

FIRST SOLDIER. No, Princess, he is quite young.

SECOND SOLDIER. One cannot be sure. There are those who say he is Elias.

SALOME. Who is Elias?

SECOND SOLDIER. A prophet of this country in bygone days, Princess.

THE SLAVE. What answer may I give the Tetrarch from the Princess?

THE VOICE OF IOKANAAN. Rejoice not, O land of Palestine, because the rod of him who smote thee is broken. For from the seed of the serpent shall come a basilisk, and that which is born of it shall devour the birds.

SALOME. What a strange voice! I would speak with him.

FIRST SOLDIER. I fear it may not be, Princess. The Tetrarch does not suffer any one to speak with him. He has even forbidden the high priest to speak with him.

SALOME. I desire to speak with him.

FIRST SOLDIER. It is impossible, Princess.

SALOME. I will speak with him.

THE YOUNG SYRIAN. Would it not be better to return to the banquet?

SALOME. Bring forth this prophet. (*Exit the slave.*)

FIRST SOLDIER. We dare not, Princess.

SALOME (*approaching the cistern and looking down into it*). How black it is down there! It must be terrible to be in so black a hole! It is like a tomb. (*To the soldiers.*) Did you not hear me? Bring out the prophet. I would look on him.

SECOND SOLDIER. Princess, I beg of you, do not require this of us.

SALOME. You are making me wait upon your pleasure.

FIRST SOLDIER. Princess, our lives belong to you, but we cannot do what you have asked of us. And indeed, it is not of us that you should ask this thing.

SALOME (*looking at the young Syrian*). Ah!

THE PAGE OF HERODIAS. Oh, what is going to happen? I am sure that something terrible will happen.

SALOME (*going up to the young Syrian*). Thou wilt do this thing for me, wilt thou not, Narraboth? Thou wilt do this thing for me. I have ever been kind towards thee. Thou wilt do it for me. I would but look at him, this strange prophet. Men have talked so much of him. Often I have heard the Tetrarch talk of him. I think he is afraid of him, the Tetrarch. Art thou, even thou, also afraid of him, Narraboth?

THE YOUNG SYRIAN. I fear him not, Princess; there is no man I fear. But the Tetrarch has formally forbidden that any man should raise the cover of this well.

SALOME. Thou wilt do this thing for me,

Narraboth, and tomorrow when I pass in my litter beneath the gateway of the idol-sellers I will let fall for thee a little flower, a little green flower.

THE YOUNG SYRIAN. Princess, I cannot, I cannot.

SALOME (*smiling*). Thou wilt do this thing for me, Narraboth. Thou knowest that thou wilt do this thing for me. And on the morrow when I shall pass in my litter by the bridge of the idol-buyers, I will look at thee through the muslin veils; I will look at thee, Narraboth; it may be I will smile at thee. Look at me, Narraboth; look at me. Ah! thou knowest that thou wilt do what I ask thee. Thou knowest it. I know that thou wilt do this thing.

THE YOUNG SYRIAN (*signing to the third soldier*). Let the prophet come forth. The Princess Salome desires to see him.

SALOME. Ah!

THE PAGE OF HERODIAS. Oh! How strange the moon looks! Like the hand of a dead woman who is seeking to cover herself with a shroud.

THE YOUNG SYRIAN. She has a strange aspect! She is like a little Princess, whose eyes are eyes of amber. Through the clouds of

muslin she is smiling like a little Princess.
(*The prophet comes out of the cistern. Salome looks at him and steps slowly back.*)

IOKANAAN. Where is he whose cup of abominations is now full? Where is he, who in a robe of silver shall one day die in the face of all the people? Bid him come forth, that he may hear the voice of him who hath cried in the waste places and in the houses of kings.

SALOME. Of whom is he speaking?

THE YOUNG SYRIAN. No one can tell, Princess.

IOKANAAN. Where is she who saw the images of men painted on the walls, even the images of the Chaldæns painted with colors, and gave herself up unto the lust of her eyes, and sent ambassadors into the land of the Chaldæa?

SALOME. It is of my mother that he is speaking.

THE YOUNG SYRIAN. Oh, no, Princess.

SALOME. Yes; it is of my mother that he is speaking.

IOKANAAN. Where is she who gave herself unto the Captains of Assyria, who have baldricks on their loins, and crowns of many colors on their heads? Where is she who hath

given herself to the young men of the Egyptians, who are clothed in fine linen and hyacinth, whose shields are of gold, whose helmets are of silver, whose bodies are mighty? Go, bid her to rise up from the bed of her abominations, from the bed of her incestuousness, that she may hear the words of him who prepareth the way of the Lord, that she may repent of her iniquities. Though she will not repent, but will stick fast in her abominations, go bid her come, for the far of the Lord is in His hand.

SALOME. Ah, but he is terrible, he is terrible!

THE YOUNG SYRIAN. Do not stay here Princess, I beseech you.

SALOME. It is his eyes above all that are terrible. They are like black holes burned by torches in the tapestry of Tyre. They are like the black cavern where the dragons live, the black caverns of Egypt, in which the dragons make their lairs. They are like black lakes troubled by fantastic moons. Do you think he will speak again?

THE YOUNG SYRIAN. Do not stay here Princess. I pray you do not stay here.

SALOME. How wasted he is! He is like a thin ivory statue. He is like an image of sil

ver. I am sure he is chaste, as the moon is. He is like a moonbeam, like a shaft of silver. His flesh must be very cold, cold as ivory. I would look closer at him.

THE YOUNG SYRIAN. No, no, Princess!

SALOME. I must look at him closer.

THE YOUNG SYRIAN. Princess! Princess!

IOKANAAN. Who is this woman who is looking at me? I will not have her look at me. Wherefore doth she look at me with her golden eyes under her gilded eyelids? I know not who she is. I do not desire to know who she is. Bid her begone. It is not to her that I would speak.

SALOME. I am Salome, daughter of Herodias, Princess of Judæa.

IOKANAAN. Back! daughter of Babylon! Come not near the chosen of the Lord. Thy mother hath filled the earth with the wine of her iniquities, and the cry of her sinning hath come up even to the ears of God.

SALOME. Speak again, Iokanaan. Thy voice is as music to mine ear.

THE YOUNG SYRIAN. Princess! Princess! Princess!

SALOME. Speak again! Speak again, Iokanaan, and tell me what I must do.

IOKANAAN. Daughter of Sodom, come not

near me! But cover thy face with a veil, a scatter ashes upon thine head, and get thee the desert, and seek out the Son of Man.

SALOME. Who is he, the Son of Man? he as beautiful as thou art, Iokanaan?

IOKANAAN. Get thee behind me! I hear the palace the beating of the wings of the angel of death.

THE YOUNG SYRIAN. Princess, I beseech thee to go within.

IOKANAAN. Angel of the Lord God, w dost thou here with thy sword? Whom seest thou in the palace? The day of him who shall die in a robe of silver has not yet come.

SALOME. Iokanaan!

IOKANAAN. Who speaketh?

SALOME. I am amorous of thy body, Iokanaan! Thy body is white, like the lilies of the field that the mower hath never mowed. Thy body is white like the snows that lie on the mountains of Judæa, and come down into the valleys. The roses in the gardens of the Queen of Arabia are not so white as thy body. Neither the roses in the garden of the Queen of Arabia, the garden of spices of the Queen of Arabia, nor the feet of the dawn when they light on the leaves, nor the breast of the moon when she lies on the breast of the

There is nothing in this world so white as thy body. Suffer me to touch thy body.

IOKANAAN. Back! Daughter of Babylon! By woman came evil into the world. Speak not to me. I will not listen to thee: I listen but to the voice of the Lord God.

SALOME. Thy body is hideous. It is like the body of a leper. It is like a plastered wall, where vipers have crawled; like a plastered wall where the scorpions have made their nest. It is like a whited sepulchre, full of loathsome things. It is horrible; thy body is horrible. It is of thy hair I am enamoured, Iokanaan. Thy hair is like clusters of grapes, like the clusters of black grapes that hang from the vine-trees of Edom in the land of the Edomites. Thy hair is like the cedars of Lebanon, like the great cedars of Lebanon that give their shade to the lions and to the robbers who would hide them by day. The long black nights, when the moon hides her face, when the stars are afraid, are not so black as thy hair. The silence that dwells in the forest is not so black. There is nothing in the world that is so black as thy hair. Suffer me to touch thy hair.

IOKANAAN. Back, daughter of Sodom!

Touch me not. Profane not the temple of the Lord God.

SALOME. Thy hair is horrible. It is covered with mire and dust. It is like a crown of thorns placed on thy head. It is like a knot of serpents coiled round thy neck. I love not thy hair. It is thy mouth that I desire, Iokanaan. Thy mouth is like a band of scarlet on a tower of ivory. It is like a pomegranate cut in twain with a knife of ivory. The pomegranate flowers that blossom in the gardens of Tyre, and are redder than roses, are not so red. The red blasts of trumpets that herald the approach of kings, and make afraid the enemy, are not so red. Thy mouth is redder than the feet of those who tread the wine in the wine-press. It is redder than the feet of the doves who inhabit the temples and are fed by the priests. It is redder than the feet of him who cometh from a forest where he hath slain a lion, and seen gilded tigers. Thy mouth is like a branch of coral that fishers have found in the twilight of the sea, the coral that they keep for the kings! It is like the vermilion that the Moabites find in the mines of Moab, the vermilion that the kings take from them. It is like the bow of the King of the Persians, that is tinted with ver-

million, and is tipped with coral. There is nothing in the world so red as thy mouth. Suffer me to kiss thy mouth!

IOKANAAN. Never! daughter of Babylon! Daughter of Sodom! never!

SALOME. I will kiss thy mouth Iokanaan. I will kiss thy mouth.

THE YOUNG SYRIAN. Princess, Princess, thou who art like a garden of myrrh, thou who art the dove of all doves, look not at this man, look not at him! Do not speak such words to him. I cannot endure it. Princess, do not speak these things.

SALOME. I will kiss thy mouth, Iokanaan.

THE YOUNG SYRIAN. Ah! (*He kills himself, and falls between Salome and Iokanaan.*)

THE PAGE OF HERODIAS. The young Syrian has slain himself! The young captain has slain himself! He has slain himself who was my friend! I gave him a little box of perfumes and ear-rings wrought in silver, and now he has killed himself! Ah, did he not say that some misfortune would happen? I, too, said it, and it has come to pass. Well I knew that the moon was seeking a dead thing, but I knew not that it was he whom she sought. Ah! why did I not hide him from

the moon? If I had hidden him in a cavern she would not have seen him.

FIRST SOLDIER. Princess, the young captain has just slain himself.

SALOME. Suffer me to kiss thy mouth, Iokanaan.

IOKANAAN. Art thou not afraid, daughter of Herodias? Did I not tell thee that I heard in the palace the beating of the wings of the angel of death, and hath he not come, the angel of death?

SALOME. Suffer me to kiss thy mouth.

IOKANAAN. Daughter of adultery, there is but one who can save thee. It is He of whom I spake. Go seek Him. He is in a boat on the sea of Galilee, and He talketh with His disciples. Kneel down on the shore of the sea, and call unto Him by His name. When He cometh to thee, and to all who call on Him He cometh, bow thyself at His feet and ask of Him the remission of thy sins.

SALOME. Suffer me to kiss thy mouth.

IOKANAAN. Cursed be thou! Daughter of an incestuous mother, be thou accursed!

SALOME. I will kiss thy mouth, Iokanaan.

IOKANAAN. I will not look at thee. Thou art accursed, Salome; thou art accursed. (*He goes down into the cistern.*)

SALOME. I will kiss thy mouth, Iokanaan.
I will kiss thy mouth.

FIRST SOLDIER. We must bear away the body to another place. The Tetrarch does not care to see dead bodies, save the bodies of those whom he himself has slain.

THE PAGE OF HERODIAS. He was my brother, and nearer to me than a brother. I gave him a little box of perfumes, and a ring of agate that he wore always on his hand. In the evening we were wont to walk by the river, and among the almond-trees, and he used to tell me of the things of his country. He spake ever very low. The sound of his voice was like the sound of the flute, of one who playeth upon the flute. Also he had much joy to gaze at himself in the river. I used to reproach him for that.

SECOND SOLDIER. You are right; we must hide the body. The Tetrarch must not see it.

FIRST SOLDIER. The Tetrarch will not come to this place. He never comes on the terrace. He is too much afraid of the prophet. (*Enter Herod, Herodias, and all the Court.*)

HEROD. Where is Salome? Where is the Princess? Why did she not return to the banquet as I commanded her? Ah! there she is!

HERODIAS. You must not look at her! You are always looking at her!

HEROD. The moon has a strange look to-night. Has she not a strange look? She is like a mad woman, and a mad woman who is seeking everywhere for lovers. She is naked, too. She is quite naked. The clouds are seeking to clothe her nakedness, but she will not let them. She shows herself naked in the sky. She reels through the clouds like a drunken woman. I am sure she is looking for lovers. Does she not reel like a drunken woman? She is like a mad woman, is she not?

HERODIAS. No; the moon is like the moon, that is all. Let us go within. We have nothing to do here.

HEROD. I will stay here! Manasseh, lay carpets there. Light torches. Bring forth the ivory tables, and the tables of jasper. The air here is sweet. I will drink more wine with my guests. We must show all honor to the ambassadors of Cæsar.

HERODIAS. It is not because of them that you remain.

HEROD. Yes; the air is very sweet. Come, Herodias, our guests await us. Ah! I have slipped! I have slipped in blood! It is an ill

omen. It is a very ill omen. Wherefore is there blood here? And this body, what does this body here? Think you I am like the King of Egypt, who gives no feast to his guests but that he shows them a corpse? Whose is it? I will not look on it.

FIRST SOLDIER. It is our captain, sire. It is the young Syrian whom you made captain of the guard but three days gone.

HEROD. I issued no order that he should be slain.

SECOND SOLDIER. He slew himself, sire.

HEROD. For what reason? I had made him captain of my guard!

SECOND SOLDIER. We do not know, sire. But with his own hand he slew himself.

HEROD. That seems strange to me. I had thought it was but the Roman philosophers who slew themselves. Is it not true, Tigellinus, that the philosophers at Rome slay themselves?

TIGELLINUS. There be some who slay themselves, sire. They are the Stoics. The Stoics are people of no cultivation. They are ridiculous people. I myself regard them as being perfectly ridiculous.

HEROD. I also. It is ridiculous to kill one's self.

TIGELLINUS. Everybody at Rome laughs at them. The Emperor has written a satire against them. It is recited everywhere.

HEROD. Ah! he has written a satire against them? Cæsar is wonderful. He can do everything. It is strange that the young Syrian has slain himself. I am sorry he has slain himself. I am very sorry. For he was fair to look upon. He was even very fair. He had very languorous eyes. I remember that I saw that he looked languorously at Salome. Truly, I thought he looked too much at her.

HERODIAS. There are others who look too much at her.

HEROD. His father was a king. I drove him from his kingdom. And his mother, who was a queen, you made a slave, Herodias. So he was here as my guest, as it were, and for that reason I made him my captain. I am sorry he is dead. Ho! why have you left the body here? It must be taken to some other place. I will not look at it—away with it! (*They take away the body*). It is cold here. There is a wind blowing. Is there not a wind blowing?

HERODIAS. No; there is no wind.

HEROD. I tell you there is a wind that blows. And I hear in the air something that

is like the beating of wings, like the beating

HERODIAS. I hear nothing.
of vast wings. Do you not hear it?

HEROD. I hear it no longer. But I heard it.
It was the blowing of the wind. It has passed
away. But no, I hear it again. Do you not
hear it? It is just like a beating of wings.

HERODIAS. I tell you there is nothing. You
are ill. Let us go within.

HEROD. I am not ill. It is your daughter
who is sick to death. Never have I seen her
so pale.

HERODIAS. I have told you not to look at
her.

HEROD. Pour me forth wine. (*Wine is
brought*). Salome, come drink a little wine
with me. I have here a wine that is exquisite.
Cæsar himself sent it me. Dip into it thy
red lips, that I may drain the cup.

SALOME. I am not thirsty, Tetrarch.

HEROD. You hear how she answers me, this
daughter of yours?

HERODIAS. She does right. Why are you
always gazing at her?

HEROD. Bring me ripe fruits. (*Fruits are
brought*). Salome, come and eat fruits with
me. I love to see in a fruit the mark of thy

little teeth. Bite but a little of this fruit, that I may eat what is left.

SALOME. I am not hungry, Tetrarch.

HEROD. (*to Herodias*). You see how you have brought up this daughter of yours.

HERODIAS. My daughter and I come of a royal race. As for thee, thy father was a camel driver! He was a thief and a robber to boot!

HEROD. Thou liest!

HERODIAS. Thou knowest well that it is true.

HEROD. Salome, come and sit next to me. I will give thee the throne of thy mother.

SALOME. I am not tired, Tetrarch.

HERODIAS. You see in what regard she holds you.

HEROD. Bring me—What is it that I desire? I forget. Ah! ah! I remember.

THE VOICE OF IOKANAAN. Behold, the time is come! That which I foretold has come to pass. The day I spake of is at hand.

HERODIAS. Bid him be silent. I will not listen to his voice. This man is forever hurling insults against me.

HEROD. He has said nothing against you. Besides, he is a very great prophet.

HERODIAS. I do not believe in prophets.

Can a man tell what will come to pass? No man knows it. Also, he is forever insulting me. But I think you are afraid of him. I know well that you are afraid of him.

HEROD. I am not afraid of him. I am afraid of no man.

HERODIAS. I tell you you are afraid of him. If you are not afraid of him, why do you not deliver him to the Jews, who for these six months past have been clamoring for him?

A JEW. Truly, my lord, it were better to deliver him into our hands.

HEROD. Enough on this subject. I have already given you my answer. I will not deliver him into your hands. He is a holy man. He is a man who has seen God.

A JEW. That cannot be. There is no man who hath seen God since the prophet Elias. He is the last man who saw God face to face. In these days God doth not show Himself. God hideth Himself. Therefore great evils have come upon the land.

ANOTHER JEW. Verily, no man knoweth if Elias the prophet did indeed see God. Peradventure it was but the shadow of God that he saw.

A THIRD JEW. God is at no time hidden. He showeth Himself at all times and in all

places. God is in what is evil even as He is in what is good.

A FOURTH JEW. Thou shouldst not say that. It is a very dangerous doctrine. It is a doctrine that cometh from Alexandria, where men teach the philosophy of the Greeks. And the Greeks are Gentiles. They are not even circumcised.

A FIFTH JEW. No man can tell how God worketh. His ways are very dark. It may be that the things which we call evil are good, and the things which we call good are evil. There is no knowledge of anything. We can but bow our heads to His will, for God is very strong. He breaketh in pieces the strong together with the weak, for He regardeth not any man.

FIRST JEW. Thou speakest truly. Verily, God is terrible. He breaketh in pieces the strong and the weak as men break corn in a mortar. But as for this man, he hath never seen God. No man hath seen God since the prophet Elias.

HERODIAS. Make them be silent. They worry me.

HEROD. But I have heard it said that Iokanaan is in very truth your prophet Elias.

THE JEW. That cannot be. It is more than

three hundred years since the days of the prophet Elias.

HEROD. There are some who say that this man is Elias the prophet.

A NAZARENE. I am sure that he is Elias the prophet.

THE JEW. Nay, but he is not Elias the prophet.

THE VOICE OF IOKANAAN. Behold the day is at hand, the day of the Lord, and I hear upon the mountains the feet of Him who shall be the Saviour of the world.

HEROD. What does that mean? The Saviour of the world?

TIGELLINUS. It is a title that Cæsar adopts.

HEROD. But Cæsar is not coming into Judæa. Only yesterday I received letters from Rome. They contained nothing concerning this matter. And you, Tigellinus, who were at Rome during the winter, you heard nothing concerning this matter, did you?

TIGELLINUS. Sire, I heard nothing concerning the matter. I was but explaining the title. It is one of Cæsar's titles.

HEROD. But Cæsar cannot come. He is too gouty. They say that his feet are like the feet of an elephant. Also there are reasons of state. He who leaves Rome loses Rome.

He will not come. Howbeit, Cæsar is lord, he will come if such be his pleasure. Nevertheless, I think he will not come.

FIRST NAZARENE. It was not concerning Cæsar that the prophet spake these words, sire.

HEROD. How?—it was not concerning Cæsar?

FIRST NAZARENE. No, my lord.

HEROD. Concerning whom then did he speak?

FIRST NAZARENE. Concerning Messias, who hath come.

A JEW. Messias hath not come.

FIRST NAZARENE. He hath come, and everywhere He worketh miracles!

HERODIAS. Ho! ho! miracles! I do not believe in miracles. I have seen too many. (*To the Page*). My fan.

FIRST NAZARENE. This Man worketh true miracles. Thus, at a marriage which took place in a little town of Galilee, a town of some importance, He changed water into wine. Certain persons who were present related it to me. Also He healed two lepers that were seated before the Gate of Capernaum simply by touching them.

SECOND NAZARENE. Nay; it was two blind men that He healed at Capernaum.

FIRST NAZARENE. Nay; they were lepers. But He hath healed blind people also, and He was seen on a mountain talking with angels.

A SADDUCEE. Angels do not exist.

A PHARISEE. Angels exist, but I do not believe that this Man talked with them.

FIRST NAZARENE. He was seen by a great multitude of people talking with angels.

HERODIAS. How these men worry me! They are ridiculous! They are altogether ridiculous! (*To the Page*). Well! my fan? (*The Page gives her the fan*). You have a dreamer's look. You must not dream. It is only sick people who dream. (*She strikes the Page with her fan*).

SECOND NAZARENE. There is also the miracle of the daughter of Jairus.

FIRST NAZARENE. Yea, that is sure. No man can gainsay it.

HERODIAS. These men are mad. They have looked too long on the moon. Command them to be silent.

HEROD. What is this miracle of the daughter of Jairus?

FIRST NAZARENE. The daughter of ~~Jairus~~

was dead. This Man raised her from the dead.

HEROD. How! He raises people from the dead?

FIRST NAZARENE. Yea, sire; He raiseth the dead.

HEROD. I do not wish Him to do that. I forbid Him to do that. I suffer no man to raise the dead. This Man must be found and told that I forbid Him to raise the dead. Where is this Man at present?

SECOND NAZARENE. He is in every place, my lord, but it is hard to find Him.

FIRST NAZARENE. It is said that He is now in Samaria.

A JEW. It is easy to see that this is not Messiah, if He is in Samaria. It is not to the Samaritans that Messiah shall come. The Samaritans are accursed. They bring no offerings to the Temple.

SECOND NAZARENE. He left Samaria a few days since. I think that at the present moment He is in the neighborhood of Jerusalem.

FIRST NAZARENE. No; He is not there. I have just come from Jerusalem. For two months they have had no tidings of Him.

HEROD. No matter! But let them find Him,

and tell Him, thus saith Herod the King, "I will not suffer Thee to raise the dead." To change water into wine, to heal the lepers and the blind. He may do these things if He will. I say nothing against these things. In truth I hold it a kindly deed to heal a leper. But no man shall raise the dead. It would be terrible if the dead came back.

THE VOICE OF IOKANAAN. Ah! The wanton one! The harlot! Ah! the daughter of Babylon with her golden eyes and her gilded eyelids! Thus saith the Lord God, Let there come up against her a multitude of men. Let the people take stones and stone her.

HERODIAS. Command him to be silent.

THE VOICE OF IOKANAAN. Let the captains of the hosts pierce her with their swords, let them crush her beneath their shields.

HERODIAS. Nay, but it is infamous.

THE VOICE OF IOKANAAN. It is thus that I will wipe out all wickedness from the earth, and that all women shall learn not to imitate her abominations.

HERODIAS. You hear what he says against me? You suffer him to revile her who is your wife!

HEROD. He did not speak your name.

HERODIAS. What does that matter? You

know well that it is I whom he seeks to revile. And I am your wife, am I not?

HEROD. Of a truth, dear and noble Herodias, you are my wife, and before that you were the wife of my brother.

HERODIAS. It was thou didst snatch me from his arms.

HEROD. Of a truth I was stronger than he was. But let us not talk of that matter. I do not desire to talk of it. It is the cause of the terrible words that the prophet has spoken. Peradventure on account of it a misfortune will come. Let us not speak of this matter. Noble Herodias, we are not mindful of our guests. Fill thou my cup, my well-beloved. Ho! fill with wine the great goblets of silver, and the great goblets of glass. I will drink to Cæsar. There are Romans here, we must drink to Cæsar.

ALL. Cæsar! Cæsar!

HEROD. Do you not see your daughter, how pale she is?

HERODIAS. What is it to you if she be pale or not?

HEROD. Never have I seen her so pale.

HERODIAS. You must not look at her.

THE VOICE OF IOKANAAN. In that day the sun shall become black like sackcloth of hair,

and the moon shall become like blood, and the stars of the heaven shall fall upon the earth like unripe figs that fall from the fig-tree, and the kings of the earth shall be afraid.

HERODIAS. Ah! ah! I should like to see that day of which he speaks, when the moon shall become like blood, and when the stars shall fall on earth like unripe figs. This prophet talks like a drunken man, but I cannot suffer the sound of his voice. I hate his voice. Command him to be silent.

HEROD. I will not. I cannot understand what it is that he saith, but it may be an omen.

HERODIAS. I do not believe in omens. He speaks like a drunken man.

HEROD. It may be he is drunk with the wine of God.

HERODIAS. What wine is that, the wine of God? From what vineyard is it gathered? In what winepress may one find it?

HEROD. (*From this point he looks all the while at Salome*). Tigellinus, when you were at Rome of late, did the Emperor speak with you on the subject of—?

TIGELLINUS. On what subject, my lord?

HEROD. On what subject? Ah! I asked you

a question, did I not? I have forgotten what I would have asked you.

HERODIAS. You are looking again at my daughter. You must not look at her. I have already said so.

HEROD. You say nothing else.

HERODIAS. I say it again.

HEROD. And that restoration of the Temple about which they have talked so much, will anything be done? They say that the veil of the Sanctuary has disappeared, do they not?

HERODIAS. It was thyself didst steal it. Thou speakest at random and without wit. I will not stay here. Let us go within.

HEROD. Dance for me, Salome.

HERODIAS. I will not have her dance.

SALOME. I have no desire to dance, Tetrarch.

HEROD. Salome, daughter of Herodias, dance for me.

HERODIAS. Peace. Let her alone.

HEROD. I command thee to dance, Salome.

SALOME. I will not dance, Tetrarch.

HERODIAS (*laughing*). You see how she obeys you.

HEROD. What is it to me whether she dance or not? It is nought to me. Tonight I am

happy. I am exceeding happy. Never have I been so happy.

FIRST SOLDIER. The Tetrarch has a sombre look. Has he not a sombre look?

SECOND SOLDIER. Yes, he has a sombre look.

HEROD. Wherefore should I not be happy? Cæsar, who is lord of the world, Cæsar, who is lord of all things, loves me well. He has just sent me most precious gifts. Also, he has promised me to summon to Rome the King of Cappadocia, who is mine enemy. It may be that at Rome he will crucify him, for he is able to do all things that he has a mind to do. Verily Cæsar is lord. Therefore I do well to be happy. I am very happy; never have I been so happy. There is nothing in the world that can mar my happiness.

THE VOICE OF IOKANAAN. He shall be seated on his throne. He shall be clothed in scarlet and purple. In his hand he shall bear a golden cup full of his blasphemies. And the angel of the Lord shall smite him. He shall be eaten of worms.

HERODIAS. You hear what he says about you. He says that you shall be eaten of worms.

HEROD. It is not of me that he speaks. He

speaks never against me. It is of the King of Cappadocia that he speaks; the King of Cappadocia, who is mine enemy. It is he who shall be eaten of worms. It is not I. Never has he spoken word against me, this prophet, save that I sinned in taking to wife the wife of my brother. It may be he is right. For, of truth, you are sterile.

HERODIAS. I am sterile, I? You say that, you that are ever looking at my daughter, you that would have her dance for your pleasure? You speak as a fool. I have borne a child. You have gotten no child, no, not on one of your slaves. It is you who are sterile, not I.

HEROD. Peace! woman! I say that you are sterile. You have borne me no child, and the prophet says that our marriage is not a true marriage. He says that it is a marriage of incest, a marriage that will bring evils. I fear he is right. I am sure that he is right. But it is not the hour to speak of these things. I would be happy at this moment. Of a truth, I am happy. There is nothing I lack.

HERODIAS. I am glad you are of so fair a humor tonight. It is not your custom. But it is late. Let us go within. Do not forget that we hunt at sunrise. All honors must be

shown to Cæsar's ambassadors, must they not?

SECOND SOLDIER. The Tetrarch has a sombre look.

FIRST SOLDIER. Yes, he has a sombre look.

HEROD. Salome, Salome, dance for me. I pray thee dance for me. I am sad tonight. Yes, I am passing sad tonight. When I came hither I slipped in blood, which is an ill omen; also I heard in the air a beating of wings, a beating of giant wings. I cannot tell what that may mean. I am sad tonight. Therefore dance for me. Dance for me, Salome, I beseech thee. If thou dancest for me thou mayest ask of me what thou wilt, and I will give it thee. Yes, dance for me, Salome, and whatsoever thou shalt ask of me I will give it thee, even unto the half of my kingdom.

SALOME (*rising*). Will you indeed give me whatsoever I shall ask of you, Tetrarch?

HERODIAS. Do not dance, daughter.

HEROD. Whatsoever thou shalt ask of me, even unto the half of my kingdom.

SALOME. You swear it, Tetrarch?

HEROD. I swear it, Salome.

HERODIAS. Do not dance, my daughter.

SALOME. By what will you swear this thing, Tetrarch?

HEROD. By my life, by my crown, by my gods. Whatsoever thou shalt desire I will give it thee, even to the half of my kingdom, if thou wilt but dance for me. O Salome, Salome, dance for me!

SALOME. You have sworn an oath, Tetrarch.

HEROD. I have sworn an oath.

HERODIAS. My daughter, do not dance.

HEROD. Even to the half of my kingdom. Thou wilt be passing fair as a queen, Salome, if it please thee to ask for the half of my kingdom. Will she not be fair as a queen? Ah! it is cold here! There is an icy wind, and I hear—wherefore do I hear in the air this beating of wings? Ah! one might fancy a huge black bird that hovers over the terrace. Why can I not see it, this bird? The beat of its wings are terrible. It is a chill wind. Nay, but it is not cold, it is hot. I am choking. Pour water on my hands. Give me snow to eat. Loosen my mantle. Quick! quick! loosen my mantle. Nay, but leave it. It is my garland that hurts me, my garland of roses. The flowers are like fire. They have burned my forehead. (*He tears the wreath from his*

head, and throws it on the table). Ah! I can breathe now. How red those petals are! They are like stains of blood on the cloth. That does not matter. It is not wise to find symbol in everything that one sees. It makes life too full of terrors. It were better to say that the stains of blood are as lovely as rose-petals. It were better far to say that—But we will not speak of this. Now I am happy; I am passing happy. Have I not the right to be happy? Your daughter is going to dance for me. Willst thou not dance for me, Salome? Thou hast promised to dance for me.

HERODIAS. I will not have her dance.

SALOME. I will dance for you, Tetrarch.

HEROD. You hear what your daughter says. She is going to dance for me. Thou dost wilt to dance for me, Salome. And when thou hast danced for me, forget not to ask of me whatsoever thou hast a mind to ask. Whatever thou shalt desire I will give it thee, even to the half of my kingdom. I have sworn, have I not?

SALOME. Thou hast sworn it, Tetrarch.

HEROD. And I have never failed of my word. I am not of those who break their oaths. I know not how to lie. I am the slave of my word, and my word is the word of

king. The King of Cappadocia has ever a lying tongue, but he is no true king. He is a coward. Also he owes me money that he will not repay. He has even insulted my ambassadors. He has spoken words that are wounding. But Cæsar will crucify him when he comes to Rome. I know that Cæsar will crucify him. And if he crucify him not, yet will he die, being eaten of worms. The prophet has prophesied it. Well! Wherefore dost thou tarry, Salome?

SALOME. I am waiting until my slaves bring perfumes to me and the seven veils, and take from off my feet my sandals. (*Slaves bring perfumes and the seven veils, and take off the sandals of Salome*).

HEROD. Ah, thou art to dance with naked feet! 'Tis well! 'Tis well! Thy little feet will be like white doves. They will be little white flowers that dance upon the trees. No, no, she is going to dance on blood! There is blood spilt on the ground. She must not dance on blood. It were an evil omen.

HERODIAS. What is it to thee if she dance on blood? Thou hast waded deep enough in it.

HEROD. What is it to me? Ah! look at the moon! She has become red. She has become

red as blood. Ah! the prophet prophesied truly. He prophesied that the moon would become as blood. Did he not prophesy it? All of ye heard him prophesying it. And now the moon has become as blood. Do ye not see it?

HERODIAS. Oh, yes, I see it well, and the stars are falling like unripe figs, are they not? And the sun is becoming black like sackcloth of hair, and the kings of the earth are afraid. That, at least, one can see. The prophet is justified of his words in that at least, for truly the kings of the earth are afraid. Let us go within. You are sick. They will say at Rome that you are mad. Let us go within, I tell you.

THE VOICE OF IOKANAAN. Who is this who cometh from Edom, who is this who cometh from Bozra, whose raiment is dyed with purple, who shineth in the beauty of his garments, who walketh mighty in his greatness? Wherefore is thy raiment stained with scarlet?

HERODIAS. Let us go within. The voice of that man maddens me. I will not have my daughter dance while he is continually crying out. I will not have her dance while you look at her in this fashion. In a word, I will not have her dance.

HEROD. Do not rise, my wife, my queen; it will avail thee nothing. I will not go within till she hath danced. Dance, Salome, dance for me.

HERODIAS. Do not dance, my daughter.

SALOME. I am ready, Tetrarch. (*Salome dances the dance of the seven veils*).

HEROD. Ah! wonderful! wonderful! You see that she has danced for me, your daughter. Come near, Salome, come near, that I may give thee thy fee. Ah! I pay a royal price to those who dance for my pleasure. I will pay thee royally. I will give thee whatsoever thy soul desireth. What wouldst thou have? Speak.

SALOME (*kneeling*). I would that they presently bring me in a silver charger—

HEROD (*laughing*). In a silver charger? Surely yes, in a silver charger. She is charming, is she not? What is it that thou wouldst have in a silver charger, O sweet and fair Salome, thou that art fairer than all the daughters of Judæa? What wouldst thou have them bring thee in a silver charger? Tell me. Whatsoever it may be, thou shalt receive it. My treasures belong to thee. What is that thou wouldst have, Salome?

SALOME (*rising*). The head of Iokanaan.

HERODIAS. Ah! that is well said, my daughter.

HEROD. No, no!

HERODIAS. That is well said, my daughter.

HEROD. No, no, Salome. It is not that thou desirest. Do not listen to thy mother's voice. She is ever giving thee evil counsel. Do not heed her.

SALOME. It is not my mother's voice that I heed. It is for mine own pleasure that I ask the head of Iokanaan in a silver charger. You have sworn an oath, Herod. Forget not that you have sworn an oath.

HEROD. I know it. I have sworn an oath by my gods. I know it well. But I pray thee, Salome, ask for something else. Ask of me the half of my kingdom, and I will give it thee. But ask not of me what thy lips have asked.

SALOME. I ask of you the head of Iokanaan.

HEROD. No, no; I will not give it thee.

SALOME. You have sworn an oath, Herod.

HERODIAS. Yes, you have sworn an oath. Everybody heard you. You swore it before everybody.

HEROD. Peace, woman! It is not to you I speak.

HERODIAS. My daughter has done well to ask the head of Iokanaan. He has covered me with insults. He has said unspeakable things against me. One can see that she loves her mother well. Do not yield, my daughter. He has sworn an oath; he has sworn an oath.

HEROD. Peace! Speak not to me! Salome; I pray thee be not stubborn. I have ever been kind toward thee. I have ever loved thee. It may be that I have loved thee too much. Therefore ask not this thing of me. This is a terrible thing, an awful thing to ask of me. Surely, I think thou art jesting. The head of a man that is cut from his body is ill to look upon, is it not? It is not meet that the eyes of a virgin should look upon such a thing. What pleasure couldst thou have in it? There is no pleasure that thou couldst have in it. No, no! it is not that thou desirest. Harken to me. I have an emerald, a great emerald and round, that the minion of Cæsar has sent unto me. When thou lookest through this emerald thou canst see that which passeth afar off. Cæsar himself carries such an emerald when he goes to the circus. But my emerald is the larger. I know well that it is the larger. It is the largest emerald in the whole world. Thou wilt take that, wilt thou

not? Ask it of me and I will give it thee.

SALOME. I demand the head of Iokanaan.

HEROD. Thou art not listening. Thou art not listening. Suffer me to speak, Salome.

SALOME. The head of Iokanaan!

HEROD. No, no, thou wouldst not have that. Thou sayest that but to trouble me, because that I have looked at thee and ceased not this night. It is true, I have looked at thee and ceased not this night. Thy beauty has troubled me. Thy beauty has grievously troubled me, and I have looked at thee overmuch. Nay, but I will look at thee no more. One should not look at anything. Neither at things, nor at people should one look. Only in mirrors is it well to look, for mirrors do but show us masks. Oh! oh! bring wine! I thirst! Salome, Salome, let us be friends. Bethink thee—— Ah! what would I say? What was't? Ah! I remember it! Salome—nay, but come nearer to me; I fear thou wilt not hear my words—Salome, thou knowest my white peacocks, my beautiful white peacocks that walk in the garden between the myrtles and the tall cypress-trees. Their beaks are golden with gold, and the-grains that they eat are smeared with gold, and their feet are stained with purple. When they cry out the

rain comes, and the moon shows herself in the heavens when they spread their tails. Two by two, they walk between the cypress-trees and the black myrtles, and each has a slave to tend it. Sometimes they fly across the trees, and anon they couch in the grass, and around the pools of the water. There are not in all the world birds so wonderful. I know that Cæsar himself has no birds so fair as my birds. I will give thee fifty of my peacocks. They will follow thee whithersoever thou goest, and in the midst of them thou wilt be like unto the moon in the midst of a great white cloud. I will give them to thee, all. I have but a hundred, and in the whole world there is no king who has peacocks like unto my peacocks. But I will give them all to thee. Only thou must loose me from my oath, and must not ask of me that which thy lips have asked of me. (*He empties the cup of wine*).

SALOME. Give me the head of Iokanaan.

HERODIAS. Well said, my daughter. As for you, you are ridiculous with your peacocks.

HEROD. Peace! you are always crying out. You cry out like a beast of prey. You must not cry in such fashion. Your voice wearies me. Peace, I tell you! Salome, think on what thou art doing. It may be that this man comes

from God. He is a holy man. The finger of God has touched him. God has put terrible words into his mouth. In the palace, as in the desert, God is ever with him. It may be that He is, at least. One cannot tell, but it is possible that God is with him and for him. If he die also, peradventure some evil may befall me. Verily, he has said that evil will befall someone on the day whereon he dies. On whom should it fall if it fall not on me? Remember, I slipped in blood when I came hither. Also did I not hear the beating of wings in the air, a beating of vast wings? These are ill omens. And there were other things. I am sure there were other things, though I saw them not. Thou wouldst not that some evil should befall me, Salome? Listen to me again.

SALOME. Give me the head of Iokanaan!

HEROD. Ah! thou art not listening to me. Be calm. As for me, am I not calm? I am altogether calm. Listen. I have jewels hidden in this place—jewels that thy mother even has not seen; jewels that are marvelous to look at. I have a collar of pearls, set in four rows. They are like unto moons chained with rays of silver. They are even as half a hundred moons caught in a golden net. On

the ivory breast of a queen they have rested. Thou shalt be as fair as a queen when thou wearest them. I have amethysts of two kinds; one that is black like wine, and one that is red like wine that one has colored with water. I have topazes that are pink as the eyes of a wood pigeon, and green topazes that are as the eyes of cats. I have opals that burn always, with a flame that is cold as ice, opals that make sad men's minds, and are afraid of the shadows. I have onyxes like the eyeballs of a dead woman. I have moonstones that change when the moon changes, and are wan when they see the sun. I have sapphires big like eggs, and as blue as blue flowers. The sea wanders within them, and the moon comes never to trouble the blue of their waves. I have chrysolites and beryls, and chrysoprases and rubies; I have sardonyx and hyacinth stones, and stones of chalcedony, and I will give them all unto thee, all, and other things will I add to them. The king of the Indies has but even now sent me four fans fashioned from the feathers of parrots, and the King of Numidia a garment of ostrich feathers. I have a crystal, into which it is not lawful for a woman to look, nor may men behold it until they have been beaten with rods. In a coffer

of nacre I have three wondrous turquoises. He who wears them on his forehead can imagine things which are not, and he who carries them in his hand can turn the fruitful woman into a woman that is barren. These are great treasures. They are treasures above all price. But this is not all. In an ebony coffer I have two cups of amber that are like apples of pure gold. If an enemy pour poison into these cups they become like apples of silver. In a coffer incrustated with amber I have sandles incrustated with glass. I have mantles that have been brought from the land of the Seres, and bracelets flecked about with carbuncles and with jade that come from the city of Euphrates. What desirest thou more than this, Salome? Tell me the thing that thou desirest, and I will give it thee. All that thou askest I will give thee, save one thing only. I will give thee all that is mine, save only the life of one man. I will give thee the mantle of the high priest. I will give thee the veil of the sanctuary.

THE JEWS. Oh! oh!

SALOME. Give me the head of Iokanaan!

HEROD (*sinking back in his chair*). Let her be given what she asks! Of a truth she is her mother's child! (*The first soldier ap-*

proaches. Herodias draws from the hand of the Tetrarch the ring of death, and gives it to the soldier, who straightway bears it to the executioner. The executioner looks scared). Who has taken my ring? There was a ring on my right hand. Who has drunk my wine? There was wine in my cup. It was full of wine. Some one has drunk it! Oh! surely some evil will befall some one. (*The executioner goes down into the cistern*). Ah! wherefore did I give my oath? Hereafter let no king swear an oath. If he keep it not, it is terrible, and if he keep it, it is terrible also.

HERODIAS. My daughter has done well.

HEROD. I am sure that some misfortune will happen.

SALOME (*she leans over the cistern and listens*). There is no sound. I hear nothing. Why does he not cry out, this man? Ah! if any man sought to kill me, I would cry out, I would struggle, I would not suffer. Strike, strike, Naaman, strike, I tell you! No, I hear nothing. There is a silence, a terrible silence. Ah! something has fallen upon the ground. I heard something fall. It was the sword of the executioner. He is afraid, this slave. He has dropped his sword. He dares not kill

him. He is a coward, this slave! Let soldiers be sent. (*She sees the page of Herodias and addresses him*). Come hither. Thou wert the friend of him who is dead, wert thou not? Well, I tell thee, there are not dead men enough. Go to the soldiers and bid them go down and bring me the thing I ask, the thing the Tetrarch has promised me, the thing that is mine. (*The page recoils. She turns to the soldiers*).

Hither, ye soldiers. Get ye down into this cistern and bring me the head of this man. Tetrarch, Tetrarch, command your soldiers that they bring me the head of Iokanaan. (*A huge black arm, the arm of the executioner, comes forth from the cistern, bearing on a silver shield the head of Iokanaan. Salome seizes it. Herod hides his face with his cloak. Herodias smiles and fans herself. The Nazarenes fall on their knees and begin to pray*). Ah; thou wouldst not suffer me to kiss thy mouth, Iokanaan. Well! I will kiss it now. I will bite it with my teeth as one bites a ripe fruit. Yes, I will kiss thy mouth Iokanaan. I said it; did I not say it? I said it. Ah; I will kiss it now. But wherefore dost thou not look at me, Iokanaan? Thine eyes that were so terrible, so full of rage and scorn, are

shut now. Wherefore are they shut? Open thine eyes! Lift up thine eyelids, Iokanaan! Wherefore dost thou not look at me? Art thou afraid of me, Iokanaan, that thou wilt not look at me? And thy tongue, that was like a red snake darting poison, it moves no more, it speaks no words, Iokanaan, that scarlet viper that spat its venom upon me. It is strange, is it not? How is it that the red viper stirs no longer? Thou wouldst have none of me, Iokanaan. Thou rejectedest me. Thou didst speak evil words against me. Thou didst bear thyself toward me as to a harlot, as to a woman that is a wanton, to me, Salome, daughter of Herodias, Princess of Judæa! Well, I still live, but thou art dead, and thy head belongs to me. I can do with it what I will. I can throw it to the dogs and to the birds of the air. That which the dogs leave, the birds of the air shall devour. Ah, Iokanaan, Iokanaan, thou wert the man that I loved alone among men! All other men were hateful to me. But thou wert beautiful! Thy body was a column of ivory set upon feet of silver. It was a tower of silver decked with shields of ivory. There was nothing in the world so white as thy body. There was nothing in the world so black as

thy hair. In the whole world there was nothing so red as thy mouth. Thy voice was a censer that scattered strange perfumes, and when I looked on thee I heard a strange music. Ah! wherefore didst thou not look at me, Iokanaan? With the cloak of thine hands, and with the cloak of thy blasphemies thou didst hide thy face. Thou didst put upon thine eyes the covering of him who would see God. Well, thou hast seen thy God, Iokanaan, but me, me, thou didst never see. If thou hadst seen me thou hadst loved me. I saw thee, and I loved thee. Oh, how I loved thee! I love thee yet, Iokanaan. I love only thee. I am thirsty for thy beauty; I am hungry for thy body; and neither wine nor apples can appease my desire. What shall I do now, Iokanaan? Neither the floods nor the great waters can quench my passion. I was a princess, and thou didst scorn me. I was a virgin, and thou didst take my virginity from me. I was chaste, and thou didst fill my veins with fire. Ah! ah! wherefore didst thou not look at me? If thou hadst looked at me thou hadst loved me. Well I know that thou wouldst have loved me, and the mystery of Love is greater than the mystery of Death.

HEROD. She is monstrous, thy daughter;

I tell thee she is monstrous. In truth, what she has done is a great crime. I am sure that it is a crime against some unknown God.

HERODIAS. I am well pleased with my daughter. She has done well. And I would stay here now.

HEROD (rising). Ah! There speaks my brother's wife! Come! I will not stay in this place. Come, I tell thee. Surely some terrible thing will befall. Manasseh, Is-sachar, Ozias, put out the torches. I will not look at things, I will not suffer things to look at me. Put out the torches! Hide the moon! Hide the stars! Let us hide ourselves in our palace, Herodias. I begin to be afraid. *(The slaves put out the torches. The stars disappear. A great cloud crosses the moon and conceals it completely. The stage becomes quite dark. The Tetrarch begins to climb the staircase).*

THE VOICE OF SALOME. Ah! I have kissed thy mouth, Iokanaan, I have kissed thy mouth. There was a bitter taste on thy lips. Was it the taste of blood? Nay; but perchance it was the taste of love. They say that love hath a bitter taste. But what matter? what matter? I have kissed thy mouth, Iokanaan, I have kissed thy mouth. *(A ray of moon-*

light falls on Salome and illumines her).

HEROD (*turning round and seeing Salome*).
Kill that woman! (*The soldiers rush forward and crush beneath their shields, Salome, daughter of Herodias, Princess of Judaea*).

CURTAIN.

THE MYTH OF THE SOUL

**IS THE BELIEF IN IMMORTALITY NECESSARY OR
EVEN DESIRABLE?**

THE MYTH OF THE SOUL

IS THE BELIEF IN IMMORTALITY NECESSARY OR EVEN DESIRABLE?

There is, perhaps, no more striking example of the credulity of man than the wide-spread belief in immortality. This idea includes not only the belief that death is not the end of what we call life, but that personal identity involving memory persists beyond the grave. So determined is the ordinary individual to hold fast to this belief that, as a rule, he refuses to read or to think upon the subject lest it cast doubt upon his cherished dream. Of those who may chance to look at this contribution, many will do so with the determination not to be convinced, and will refuse even to consider the manifold reasons that might weaken their faith. I know that this is true, for I know the reluctance with which I long approached the subject and my firm determination not to give up my hope. Thus the myth will stand in the way of a sensible adjustment to facts.

Even many of those who claim to believe in immortality still tell themselves and others that neither side of the question is susceptible of proof. Just what can these hopeful ones believe that the word "proof" involves? The evi-

dence against the persistence of personal consciousness is as strong as the evidence of gravitation, and much more obvious. It is as convincing and unassailable as the proof of the destruction of wood or coal by fire. If it is not certain that death ends personal identity and memory, then almost nothing that man accepts as true is susceptible of proof.

The beliefs of the race and its individuals are relics of the past. Without careful examination no one can begin to understand how many of man's cherished opinions have no foundation in fact. The common experience of all men should teach them how easy it is to believe what they wish to accept. Experienced psychologists know perfectly well that if they desire to convince a man of some idea, they must first make him want to believe it. There are so many hopes, so many strong yearnings and desires attached to the doctrine of immortality that it is practically impossible to create in any mind the wish to be mortal. Still, in spite of strong desires, millions of people are filled with doubts and fears that will not down. After all, is it not better to look the question squarely in the face and find out whether we are harboring a delusion?

It is customary to speak of a "belief in im-

mortality." First, then, let us see what is meant by the word "belief." If I take a train in Chicago at noon, bound for New York, I believe I will reach that city the next morning. I believe it because I have been to New York. I have read about the city, I have known many other people who have been there, and their stories are not inconsistent with any known facts in my own experience. I have even examined the time tables and I know just how I will go and how long the trip will take. In other words, when I board the train for New York, I believe I will reach that city because I have reason to believe it.

If, instead, I wanted to see Timbuktu or some other point on the globe where I had never been, or of which I had only heard, I still know something about geography, and if I did not I could find out about the place I wished to visit. Through the encyclopedia and other means of information, I could get a fair idea of the location and character of the country or city, the kind of people who lived there and almost anything I wished to know, including the means of transportation and the time it would take to go and return. I already am satisfied that the earth is round. I know about its size. I know the extent of its land

and water. I know the names of its countries; I know perfectly well that there are many places on its surface that I have never seen. I can easily satisfy myself as to whether there is any such place and how to get there, and what I shall do when I arrive.

But if I am told that next week I shall start on a trip to Goofville; that I shall not take my body with me; that I shall stay for all eternity: can I find a single fact connected with my journey—the way I shall go, the time of the journey, the country I shall reach, its location in space, the way I shall live there—or anything that would lead to a rational belief that I shall really make the trip? Have I ever known anyone who has made the journey and returned? If I am really to believe, I must try to get some information about all these important facts.

But people hesitate to ask questions about life after death. They do not ask, for they know that only silence comes out of the eternal darkness of endless space. If people really believed in a beautiful, happy, glorious land waiting to receive them when they died; if they believed that their friends would be waiting to meet them; if they believed that all pain and suffering would be left behind: why should

they live through weeks, months, and even years of pain and torture while a cancer eats its way to the vital parts of the body? Why should one fight off death? Because he does *not* believe in any real sense: he only hopes. Everyone knows that there is no real evidence of any such state of bliss; so we are told not to search for proof. We are to accept through faith alone. But every thinking person knows that faith can only come through belief. Belief implies a condition of mind that accepts a certain idea. This condition can be brought about only by evidence. True, the evidence may be simply the unsupported statement of your grandmother; it may be wholly insufficient for reasoning men; but, good or bad, it must be enough for the believer or he could not believe.

Upon what evidence, then, are we asked to believe in immortality? There is no evidence. One is told to rely on faith, and no doubt this serves the purpose so long as one can believe blindly whatever he is told. But if there is no evidence upon which to build a positive belief in immortality, let us examine the other side of the question. Perhaps evidence can be found to support a positive conviction that immortality is a delusion.

The belief in immortality expresses itself in two different forms. On the one hand, there is a belief in the immortality of the "soul." This is sometimes interpreted to mean simply that the identity, the consciousness, the memory of the individual persists after death. On the other hand, many religious creeds formulated a belief in "the resurrection of the body"—which is something else again. It will be necessary to examine both forms of this belief in turn.

The idea of continued life after death is very old. It doubtless had its roots back in the childhood of the race. In view of the limited knowledge of primitive man, it was not unreasonable. His dead friends and relatives visited him in dreams and visions and were present in his feeling and imagination until they were forgotten. Therefore the lifeless body did not raise the question of dissolution, but rather of duality. It was thought that man was a dual being possessing a body and a soul as separate entities, and that when a man died, his soul was released from his body to continue its life apart. Consequently, food and drink were placed upon the graves of the dead to be used in the long journey into the unknown. In modified forms, this belief in the

duality of man persists to the present day. But primitive man had no conception of life as having a beginning and an end. In this he was like the rest of the animals. Today, everyone of ordinary intelligence knows how life begins, and to examine the beginnings of life leads to inevitable conclusions about the way life ends. If man has a soul, it must creep in somewhere during the period of gestation and growth.

All the higher forms of animal life grow from a single cell. Before the individual life can begin its development, it must be fertilized by union with another cell; then the cell divides and multiplies until it takes the form and pattern of its kind. At a certain regular time the being emerges into the world. During its term of life millions of cells in its body are born, die, and are replaced until, through age, disease, or some catastrophe, the cells fall apart and the individual life is ended.

It is obvious that but for the fertilization of the cell under right conditions, the being would not have lived. It is idle to say that the initial cell has a soul. In one sense it has life; but even that is precarious and depends for its continued life upon union with another cell of the proper kind. The human mother is the bearer of probably ten thousand of one kind of cell,

and the human father of countless billions of the other kind. Only a very small fraction of these result in human life. If the unfertilized cells of the female and the unused cells of the male are human beings possessed of souls, then the population of the world is infinitely greater than has ever been dreamed. Of course no such idea as belief in the immortality of the germ cells could satisfy the yearnings of the individual for a survival of life after death.

If that which is called a "soul" is a separate entity apart from the body, when, then, and where and how was this soul placed in the human structure? The individual began with the union of two cells, neither of which had a soul. How could these two soulless cells produce a soul? I must leave this search to the metaphysicians. When they have found the answer, I hope they will tell me, for I should really like to know.

We know that a baby may live and fully develop in its mother's womb and then, through some shock at birth, may be born without life. In the past, these babies were promptly buried. But now we know that in many such cases, where the bodily structure is complete, the machine may be set to work by artificial respiration or electricity. Then it will run like

any other human body through its allotted term of years. We also know that in many cases of drowning, or when some mishap virtually destroys life without hopelessly impairing the body, artificial means may set it in motion once more, so that it will complete its term of existence until the final catastrophe comes. Are we to believe that somewhere around the stillborn child and somewhere in the vicinity of the drowned man there hovers a detached soul waiting to be summoned back into the body by a pulmotor? This, too, must be left to the metaphysicians.

The beginnings of life yield no evidence of the beginnings of a soul. It is idle to say that the something in the human being which we call "life" is the soul itself, for the soul is generally taken to distinguish human beings from other forms of life. There is life in all animals and plants, and at least potential life in inorganic matter. This potential life is simply unreleased force and matter—the great storehouse from which all forms of life emerge and are constantly replenished. It is impossible to draw the line between inorganic matter and the simpler forms of plant life, and equally impossible to draw the line between plant life and animal life, or between other forms of animal life and what we human beings are pleased

to call the highest form. If the thing which we call "life" is itself the soul, then cows have souls; and, in the very nature of things, we must allow souls to all forms of life and to inorganic matter as well.

Life itself is something very real, as distinguished from the soul. Every man knows that his life had a beginning. Can one imagine an organism that has a beginning and no end? If I did not exist in the infinite past, why should I, or could I, exist in the infinite future? "But," say some, "your consciousness, your memory may exist even after you are dead." This is what we mean by the soul." Let us examine this point a little.

I have no remembrance of the months that I lay in my mother's womb. I cannot recall the day of my birth nor the time when I first opened my eyes to the light of the sun. I cannot remember when I was an infant, or when I began to creep on the floor, or when I was taught to walk, or anything before I was five or six years old. Still, all of these events were important, wonderful, and strange in a new life. What I call my "consciousness," for lack of a better word and a better understanding, developed with my growth and the crowding experiences I met at every turn. I have a hazy recollection of the burial of a boy soldier who

was shot toward the end of the Civil War. He was buried near the schoolhouse when I was seven years old. But I have no remembrance of the assassination of Abraham Lincoln, although I must then have been eight years old. I must have known about it at the time, for my family and my community idolized Lincoln, and all America was in mourning at his death. Why do I remember the dead boy soldier who was buried a year before? Perhaps because I knew him well. Perhaps because his family was close to my childish life. Possibly because it came to me as my first knowledge of death. At all events, it made so deep an impression that I recall it now.

"Ah, yes," say the believers in the soul, "what you say confirms our own belief. You certainly existed when these early experiences took place. You were conscious of them at the time, even though you are not aware of it now. In the same way, may not your consciousness persist after you die, even though you are not aware of the fact?"

On the contrary, my fading memory of the events that filled the early years of my life leads me to the opposite conclusion. So far as these incidents are concerned, the mind and consciousness of the boy are already dead. Even now, am I fully alive? I am seventy-one

years old. I often fail to recollect the names of some of those I knew full well. Many events do not make the lasting impression that they once did. I know that it will be only a few years, even if my body still survives decay, when few important matters will even register in my mind. I know how it is with the old. I know that physical life can persist beyond the time when the mind can fully function. I know that if I live to an extreme old age, my mind will fail. I shall eat and drink and go to my bed in an automatic way. Memory—which is all that binds me to the past—will already be dead. All that will remain will be a vegetative existence; I shall sit and doze in the chimney corner, and my body will function in a measure even though the ego will already be practically dead. I am sure that if I die of what is called “old age,” my consciousness will gradually slip away with my failing emotions! I shall no more be aware of the near approach of final dissolution than is the dying tree.

I am aware that now and then at long intervals there is a man who preserves his faculties until a late period of his life. I know that these cases are very, very rare. No superstition needs to be called into service to account for the unusual things that are incident to life. There may be those who retain,

In a measurable degree, consciousness and mental activity beyond the time of the ordinary mortal. Still, everyone with the least information knows that it is almost a universal rule that the body declines with age, and that those who live a long life gradually yield their intellectual activity until they reach the period of senility and unconsciousness.

In primitive times, before men knew anything about the human body or the universe of which it is a part, it was not unreasonable to believe in spirits, ghosts, and the duality of man. For one thing, celestial geography was much simpler then. Just above the earth was a firmament in which the stars were set, and above the firmament was heaven. The place was easy of access and in dreams the angels were seen going up and coming down on a ladder. But now we have a slightly more adequate conception of space and the infinite universe of which we are so small a part. Our great telescopes reveal countless worlds and planetary systems which make our own sink into utter insignificance in comparison. We have every reason to think that beyond our sight there is endless space filled with still more planets, so infinite in size and number that no brain has the smallest conception of their extent. Is there any reason to think that in this universe,

with its myriads of worlds, there is no other life so important as our own? Is it possible that the inhabitants of the earth have been signaled out for special favor and endowed with souls and immortal life? Is it at all reasonable to suppose that any special account is taken of the human atoms that forever come and go upon this planet?

If man has a soul that persists after death, that goes to a heaven of the blessed or to a hell of the damned, where are these places? It is not so easily imagined as it once was. How does the soul make its journey? What does immortal man find when he gets there, and how will he live after he reaches the end of endless space? We know that the atmosphere will be absent; that there will be no light, no heat—only the infinite reaches of darkness and frigidity.

If there is a future place for the abode of the spirits of the dead, where is this place? Trusting people have made pictures and mental images of this abode of the dead. The revelation of St. John treats rather specifically of this far-off land, but it is evident that St. John was a psychopath and his case would be plainly recognized today. True, this picture of St. John's is not very alluring to intelligent men.

Still, trusting and confiding mortals have visioned in words, at least, a land where families would be re-united and neighbors and friends come together once more. In this smug little place, fashioned upon experiences of life upon this mundane sphere husbands and wives, long parted, will be united. Parents and children, and grandparents and grandchildren, too, will assemble in families in that land of the blessed and the dead.

These conceptions were formed early in the history of man, in fact, it has only been in recent years that we have had any knowledge or vision of the immensity of space and of the impossibility of any such place as is visioned by the credulous and trusting. We know now that the earth revolves upon its axis at a terrific speed. This motion makes a complete revolution in twenty-four hours. We know down to the second of time that no spot bears the same relation to space as it did before. If one who dies at midnight has a soul and starts on his trip to Heaven, he goes in an opposite direction from one who dies at noon, and the chances to meet under any circumstances which can be conceived would grow less as they traveled on. Besides this revolution on its axis, the earth is traveling at an inconceivable speed around the sun, which, at all times, is

about ninety-three million miles away. This complete journey is made once a year. In its orbit around the sun it travels more than a thousand miles a minute. This constant appalling speed would evidently add to the confusion of two mortals locating themselves in the same spot in space, even though they had souls. The atmosphere, even in its most attenuated form, does not reach over five hundred miles away from the earth, and for only a small fraction of that space could life as we conceive it exist. And when the earth leaves a given spot in space the atmosphere is carried along with it. In addition to the motion of the earth on its axis and its unthinkable speed in its circuit around the sun, the whole solar system is traveling around the pole star, accompanied no doubt by many other systems like our own; no one can tell how fast it goes or how far it goes, in what seems endless space. And these systems travel in turn around some other central point in the far-off Milky Way, and no one knows how many other apparently central points somewhere off amongst the stars and worlds and suns furnish foci around which the earth and all the systems constantly revolve. What possible means of locomotion could be furnished for mortals to find a place of rest, and what possible unimaginable guide

could pilot individuals going in different directions at all times of the day and night and all portions of the year and century, and other greater periods of time, to this haven of the blessed? All of these conceptions beggar any sort of imagination and make and substitute the wildest unthinkable dreams in place of real beliefs.

There are those who base their hope of a future life upon the resurrection of the body. This is a purely religious doctrine. It is safe to say that few intelligent men who are willing to look obvious facts in the face hold any such belief. Yet we are seriously told that Elijah was carried bodily to heaven in a chariot of fire, and that Jesus arose from the dead and ascended into heaven. The New Testament abounds in passages that support this doctrine. St. Paul states the tenet over and over again. In the fifteenth chapter of first Corinthians he says: "If Christ be preached that he rose from the dead, how say some among you that there is no resurrection of the dead? . . . And if Christ be not risen, then is our preaching vain . . . For if the dead rise not, then is not Christ raised." The Apostles' Creed says: "I believe in the resurrection of the body." This has been carried into substantially all the orthodox creeds; and while it is more or less

minimized by neglect and omission, it is still a cardinal doctrine of the orthodox churches.

Two thousand years ago, in Palestine, little was known of man, of the earth, or of the universe. It was then currently believed that the earth was only four thousand years old, that life had begun anew after the deluge about two thousand years before, and that the entire earth was soon to be destroyed. Today it is fairly well established that man has been upon the earth for a million years. During that long stretch of time the world has changed many times; it is changing every moment. At least three or four ice ages have swept across continents, driving death before them, carrying human beings into the sea or burying them deep in the earth. Animals have fed on man and on each other. Every dead body, no matter whether consumed by fire or buried in the earth, has been resolved into its elements, so that the matter and energy that once formed human beings has fed animals and plants and other men. As the great naturalist, Fabre, has said: "At the banquet of life each is in turn a guest and a dish." Thus the body of every man now living is in part made from the bodies of those who have been dead for ages.

Yet we are still asked to believe in the resurrection of the body. By what alchemy, then,

are the individual bodies that have successfully fed the generations of men to be separated and restored to their former identities? And if I am to be resurrected, what particular *I* shall be called from the grave, from the animals and plants and the bodies of other men who shall inherit this body I now call my own? My body has been made over and over, piece by piece, as the days went by, and will continue to be so made until the end. It has changed so slowly that each new cell is fitted into the living part, and will go on changing until the final crisis comes. Is it the child in the mother's womb or the tottering frame of the old man that shall be brought back? The mere thought of such a resurrection beggars reason, ignores facts, and enthrones blind faith, wild dreams, hopeless hopes, and cowardly fears as sovereign of the human mind.

Some of those who profess to believe in the immortality of man—whether it be of his soul or his body—have drawn what comfort they could from the modern scientific doctrine of the indestructibility of matter and force. This doctrine, they say, only confirms in scientific language what they have always believed. This, however, is pure sophistry. It is probably true that no matter or force has ever been or ever

can be destroyed. But it is likewise true that there is no connection whatever between the notion that personal consciousness and memory persist after death and the scientific theory that matter and force are indestructible. For the scientific theory carries with it a corollary, that the forms of matter and energy are constantly changing through an endless cycle of new combinations. Of what possible use would it be, then, to have a consciousness that was immortal, but which, from the moment of death, was dispersed into new combinations, so that no two parts of the original identity could ever be reunited again?

These natural processes of change, which in the human being take the forms of growth, disease, senility, death, and decay, are essentially the same as the processes by which a lump of coal is disintegrated in burning. One may watch the lump of coal burning in the grate until nothing but ashes remains. Part of the coal goes up the chimney in the form of smoke; part of it radiates through the house as heat; the residue lies in the ashes on the hearth. So it is with human life. In all forms of life nature is engaged in combining, breaking down, and recombining her store of energy and matter into new forms. The thing we call

"life" is nothing other than a state of equilibrium which endures for a short span of years between the two opposing tendencies of nature—the one that builds up, and the one that tears down. In old age, the tearing-down process has already gained the ascendancy, and when death intervenes, the equilibrium is finally upset by the complete stoppage of the building-up process, so that nothing remains but complete disintegration. The energy thus released may be converted into grass or trees or animal life; or it may lie dormant until caught up again in the crucible of nature's laboratory. But whatever happens, the man—the *You* and the *I*—like the lump of coal that has been burned, is gone—irrevocably dispersed. All the King's horses and all the King's men cannot restore it to its former unity.

The idea that man is a being set apart, distinct from all the rest of nature, is born of man's emotions, of his loves and hates, of his hopes and fears, and of the primitive conceptions of undeveloped minds. The *You* and the *I* which is known to our friends does not consist of an immaterial something called a "soul" which cannot be conceived. We know perfectly well what we mean when talk about this *You* and this *Me*: and it is equally plain that

the whole fabric that makes up our separate personalities is destroyed, dispersed, disintegrated beyond repair by what we call "death."

As a matter of fact, does *anyone* really believe in a future life? The faith does not simply involve the persistence of activity, but it has been stretched and magnified to mean a future world infinitely better than the earth. In this far-off land no troubles will harass the body or the soul. Eternity will be an eternity of bliss. Heaven, a land made much more delightful because of the union with those who have gone before. This doctrine has been taught so persistently through the years that men and women of strong faith in their dying moments have seen relatives and friends, long since dead, who have come to lead them to their heavenly home.

Does the conduct of the intense disciple show that he really believes that death is a glad deliverance? Why do men and women who are suffering torture on earth seek to prolong their days of agony? Why do victims of cancer being slowly eaten alive for months and years prefer enduring such pain rather than going to a land of bliss? Why will the afflicted travel all over the world and be cut to pieces by inches that they may stay a few weeks longer, in agony

and torture? The one answer that is made to this query is that the afflicted struggle to live because it is their duty to hang fast to mortal life, no matter what the pain or the expected joy in heaven. The answer is not true. The afflicted cling to life because they doubt their faith, and do not wish to let go of what they have, terrible as it is.

Those who refuse to give up the idea of immortality declare that nature never creates a desire without providing the means for its satisfaction. They likewise insist that all people, from the rudest to the most civilized yearn for another life. As a matter of fact, nature creates many desires which she does not satisfy; most of the wishes of men meet no fruition. But nature does not create any emotion demanding a future life. The only yearning that the individual has is to keep on living—which is a very different thing. This urge is found in every animal, in every plant. It is simply the momentum of a living structure: or, as Schopenhauer put it, "the will to live." What we long for is a continuation of our present state of existence, not an uncertain reincarnation in a mysterious world of which we know nothing. The idea of another life is created after men are convinced that this life ends.

I am not unmindful of those who base their hope of a future life on what they claim are the evidences furnished by the investigation of spiritualism. So far as having any prejudice against this doctrine, I have no more desire to disbelieve than I have as to any other theories of a future life. In fact, for many years, I have searched here for evidence that man still lives after all our senses show that he is dead. For more than fifty years until almost ten years past, I have given some attention to Spiritualism. I have read most of the important books of scientists: Alfred Russel Wallace, Crooks, Oliver Lodge, and the books of many other men of ability and integrity who believed that they had found their dead friends who had come back to them. Likewise, I have for years investigated what are called spiritual phenomena. I am satisfied that if any intelligent man, in possession of his senses, thoroughly investigates Spiritualism, he will find that there is no evidence to support his faith. At least nine-tenths of the phenomena can be set down as pure fraud and imposition. The evidence comes in the main from mediums who are ignorant, and whose tricks are clumsy in the extreme. Perhaps one-tenth of the manifestations are not the result of fraud but the evidence is entirely inadequate to prove the cause of the phenomena.

It is possible that there are phenomena which no one can explain. I have many times seen what are called manifestations of spirit-return that I could not explain, but all of these failed utterly to convince me of the communication of disembodied spirits. It does not follow that because the manifestations are strange and weird, and for the present unexplainable, that those phenomena show that life persists after death. In the realm of these manifestations, the evidence of scientists is worth no more than the evidence of other men. Most likely it is worth much less. The truth is that real scientists, outside of their special field, are more helpless than other men in detecting frauds and tricks. It is likewise true that most of the men of science, like Sir Oliver Lodge, have come to their conviction late in life, and under some great stress, which is calculated to unsettle the mind, in the particular field to which they appeal.

Sir Oliver Lodge lost his son in the great war. This was a sore bereavement to this eminent scientist. When one considers the greatness of Lodge, the clearness with which he discusses every scientific theory with which he deals, and then reads his book called "Raymond," in which he tells of his meetings with his beloved son, it is not difficult to see that

as to this bereavement his mind was unsettled and he is reaching out in the darkness to find what he so strongly wants.

Is it possible that any sort of proof could prove the existence of an individual after his decay? Suppose that some good fairy, distressed at my unbelief, should come to me with the offer to produce any evidence that I desired to satisfy me that I would see my loved ones after death; suppose I should tell this fairy that my father had been dead for twenty years; that I followed his lifeless body to the crematory where he was converted into ashes; that I desired to have him brought back to me as a living entity, and to stay in my house for a year, that I might not be deceived. Assume that when the year had passed I should go out and tell my neighbors and friends that my father had been living in my house, although he died two score years ago; suppose that they believed implicitly in my integrity and my judgment; even then, could I convince one person that my statement was true? Would they be right in doubting my word? After all, which is the more reasonable, that the dead have come back to life, or that I have become insane? All of my friends would say: "Poor fellow, I am sorry he has lost his mind." Against the universal experience of mankind

and nature, the dementia or the insanity of one man, or a thousand men, could count as nothing. The insane asylums of the world are filled with men who have these dreams and visions which are realities to them, but which no one else believes, because they are entirely at variance with well-known facts.

All men recognize the hopelessness of finding any evidence that the individual will persist beyond the grave. As a last resort, we are told that it is better that the doctrine be believed even if it is not true. We are assured that without this faith, life is only desolation and despair. However that may be, it remains that many of the conclusions of logic are not pleasant to contemplate; still, so long as men think and feel, at least some of them will use their faculties as best they can. For if we are to believe things that are not true, who is to write our creed? Is it safe to leave it to any man or organization to pick out the errors that we must accept? The whole history of the world has answered this question in a way that cannot be mistaken.

And after all, is the belief in immortality necessary or even desirable for man? Millions of men and women have no such faith; they go on with their daily tasks and feel joy and sorrow without the lure of immortal life. The

things that really affect the happiness of the individual are the matters of daily living. They are the companionship of friends, the games and contemplations. They are misunderstandings and cruel judgments, false friends and debts, poverty and disease. They are our joys in our living companions and our sorrows over those who die. Whatever our faith, we mainly live in the present—in the here and now. Those who hold the view that man is mortal are never troubled by metaphysical problems. At the end of the day's labor we are glad to lose our consciousness in sleep; and intellectually, at least, we look forward to the long rest from the stresses and storms that are always incidental to existence.

When we fully understand the brevity of life, its fleeting joys and unavoidable pains; when we accept the facts that all men and women are approaching an inevitable doom: the consciousness of it should make us more kindly and considerate of each other. This feeling should make men and women use their best efforts to help their fellow travelers on the road, to make the path brighter and easier as we journey on. It should bring a closer kinship, a better understanding, and a deeper sympathy for the wayfarers who must live a common life and die a common death.

ICONOCLASTIC MEMORIES
OF THE CIVIL WAR

ON A MOUNTAIN

They say that the lumberman has looked upon the Cheat Mountain country and seen that it is good, and I hear that some wealthy gentlemen have been there and made a game preserve. There must be lumber and, I suppose, sport, but some things one could wish were ordered otherwise. Looking back upon it through the haze of near half a century, I see that region as a veritable realm of enchantment; the Alleghanies as the Delectable Mountains. I note again their dim, blue billows, ridge after ridge interminable, beyond purple valleys full of sleep, "in which it seemed always afternoon." Miles and miles away, where the lift of earth meets the stoop of sky, I discern an imperfection in the tint, a faint graying of the blue above the main range—the smoke of an enemy's camp.

It was in the autumn of that "most immemorial year," the 1861st of our Lord, and of our Heroic Age the first, that a small brigade of raw troops—troops were all raw in those days—had been pushed in across the Ohio border and after various vicissitudes of fortune and mismanagement found itself, greatly to its own surprise, at Cheat Mountain Pass, holding a road that ran from Nowhere to the southeast. Some of us had served through the summer in the "three-months' regiments," which responded to the President's first call for troops.

We were regarded by the others with profound respect as "old soldiers." (Our ages, if equalized, would, I fancy, have given about twenty years to each man.) We gave ourselves, this aristocracy of service, no end of military airs; some of us even going to the extreme of keeping our jackets buttoned and our hair combed. We had been in action, too; had shot off a Confederate leg at Philippi, "the first battle of the war," and had lost as many as a dozen men at Laurel Hill and Carrick's Ford, whither the enemy had fled in trying, Heaven knows why, to get away from us. We now "brought to the task" of subduing the Rebellion a patriotism which never for a moment doubted that a rebel was a fiend accursed of God and the angels—one for whose extirpation by force and arms each youth of us considered himself specially "raised up."

It was a strange country. Nine in ten of us had never seen a mountain, nor a hill as high as a church spire, until we had crossed the Ohio River. In power upon the emotions nothing, I think, is comparable to a first sight of mountains. To a member of a plains-tribe, born and reared on the flats of Ohio or Indiana, a mountain region was a perpetual miracle. Space seemed to have taken on a new dimension; areas to have not only length and breadth, but thickness.

Modern literature is full of evidence that our great grandfathers looked upon mountains with aversion and horror. The poets of even the seventeenth century never tire of damning them in good, set terms. If they had had the unhap-

piness to read the opening lines of "The Pleasures of Hope," they would assuredly have thought Master Campbell had gone funny and should be shut up lest he do himself an injury.

The flatlanders who invaded the Cheat Mountain country had been suckled in another creed, and to them western Virginia—there was, as yet, no West Virginia—was an enchanted land. How we reveled in its savage beauties! With what pure delight we inhaled its fragrances of spruce and pine! How we stared with something like awe at its clumps of laurel!—real laurel, as we understood the matter, whose foliage had been once accounted excellent for the heads of illustrious Romans and such—mayhap to reduce the swelling. We carved its roots into finger-rings and pipes. We gathered spruce-gum and sent it to our sweethearts in letters. We ascended every hill within our picket-lines and called it a "peak."

And, by the way, during those halcyon days (the halcyon was there, too, chattering above every creek, as he is all over the world) we fought another battle. It has not got into history, but it had a real objective existence, although by a felicitous afterthought called by us who were defeated a "reconnaissance in force." Its short and simple annals are that we marched a long way and lay down before a fortified camp of the enemy at the farther edge of the valley. Our commander had the forethought to see that we lay well out of range of the small-arms of the period. A disadvantage of this arrangement was that the enemy was out of reach of us as well, for our

rifles were no better than his. Unfortunately—one might almost say unfairly—he had a few pieces of artillery very well protected, and with those he mauled us to the eminent satisfaction of his mind and heart. So we parted from him in anger and returned to our own place, leaving our dead—not many.

Among them was a chap belonging to my company, named Abbott; it is not odd that I recollect it, for there was something unusual in the manner of Abbott's taking off. He was lying flat upon his stomach and was killed by being struck in the side by a nearly spent cannon-shot that came rolling in among us. The shot remained in him until removed. It was a solid round-shot, evidently cast in some private foundry, whose proprietor, setting the laws of thrift above those of ballistics, had put his "imprint" upon it: it bore, in slightly sunken letters, the name "Abbott." That is what I was told—I was not present.

It was after this, when the nights had acquired a trick of biting and the morning sun appeared to shiver with cold, that we moved up to the summit of Cheat Mountain to guard the pass through, which nobody wanted to go. Here we slew the forest and builded us giant habitations (astride the road from Nowhere to the southeast) commodious to lodge an army and fitly loopholed for discomfiture of the adversary. The long logs that it was our pride to cut and carry! The accuracy with which we laid them one upon another, hewn to the line and bullet-proof! The Cyclopean doors that we hung, with sliding bolts fit to

be "the mast of some great admiral!" And when we had "made the pile complete" some marplot of the Regular Army came that way and chatted a few moments with our commander, and we made an earthwork away off on one side of the road (leaving the other side to take care of itself) and camped outside it in tents! But the Regular Army fellow had not the heart to suggest the demolition of our Towers of Babel, and the foundations remain to this day to attest the genius of the American volunteer soldiery.

We were the original game-preservers of the Cheat Mountain region, for although we hunted in season and out of season over as wide an area as we dared to cover we took less game, probably, than would have been taken by a certain single hunter of disloyal views whom we scared away. There were bear galore and deer in quantity, and many a winter day, in snow up to his knees, did the writer of this pass in tracking bruin to his den, where, I am bound to say, I commonly left him. I agreed with my lamented friend, the late Robert Weeks, poet:

Pursuit may be, it seems to me,
Perfect without possession.

There can be no doubt that the wealthy sportsmen who have made a preserve of the Cheat Mountain region will find plenty of game if it has not died since 1861. We left it there.

Yet hunting and idling were not the whole of life's programme up there on that wild ridge

with its shaggy pelt of spruce and firs, and in the riparian lowlands that it parted. We had a bit of war now and again. There was an occasional "affair of outposts"; sometimes a hazardous scout into the enemy's country, ordered, I fear, more to keep up the appearance of doing something than with a hope of accomplishing a military result. But one day it was bruited about that a movement in force was to be made on the enemy's position miles away, at the summit of the main ridge of the Alleghanies—the camp whose faint blue smoke we had watched for weary days. The movement was made, as was the fashion in those 'prentice days of warfare, in two columns, which were to pounce upon the foeman from opposite sides at the same moment. Led over unknown roads by untrusty guides, encountering obstacles not foreseen—miles apart and without communication, the two columns invariably failed to execute the movement with requisite secrecy and precision. The enemy, in enjoyment of that inestimable military advantage known in civilian speech as being "surrounded," always beat the attacking columns one at a time or, turning red-handed from the wreck of the first, frightened the other away.

All one bright wintry day we marched down from our eyrie; all one bright wintry night we climbed the great wooded ridge opposite. How romantic it all was; the sunset valleys full of visible sleep; the glades suffused and interpenetrated with moonlight; the long valley of the Greenbrier stretching away to we knew not what silent cities; the river itself unseen

under its "astral body" of mist! Then there was the "spice of danger."

Once we heard shots in front; then there was a long wait. As we trudged on we passed something—some things—lying by the wayside. During another wait we examined them, curiously lifting the blankets from their yellow-clay faces. How repulsive they looked with their blood-smears, their blank, staring eyes, their teeth uncovered by contraction of the lips! The frost had begun already to whiten their deranged clothing. We were as patriotic as ever, but we did not wish to be that way. For an hour afterward the injunction of silence in the ranks was needless.

.

Repassing the spot the next day, a beaten, dispirited and exhausted force, feeble from fatigue and savage from defeat, some of us had life enough left, such as it was, to observe that these bodies had altered their positions. They appeared also to have thrown off some of their clothing, which lay near by, in disorder. Their expression, too, had an added blankness—they had no faces.

As soon as the head of our straggling column had reached the spot a desultory firing had begun. One might have thought the living paid honors to the dead. No; the firing was a military execution; the condemned, a herd of galloping swine. They had eaten our fallen, but—touching magnanimity!—we did not eat theirs.

The shooting of several kinds was very good in the Cheat Mountain country, even in 1861.

A LITTLE OF CHICKAMAUGA

The history of that awful struggle is well known—I have not the intention to record it here, but only to relate some part of what I saw of it; my purpose not instruction, but entertainment.

I was an officer of the staff of a Federal brigade. Chickamauga was not my first battle by many, for although hardly more than a boy in years, I had served at the front from the beginning of the trouble, and had seen enough of war to give me a fair understanding of it. We knew well enough that there was to be a fight: the fact that we did not want one would have told us that, for Bragg always retired when we wanted to fight and fought when we most desired peace. We had maneuvered him out of Chattanooga, but had not maneuvered our entire army into it, and he fell back so sullenly that those of us who followed, keeping him actually in sight, were a good deal more concerned about effecting a junction with the rest of our army than to push the pursuit. By the time that Rosecrans had got his three scattered corps together we were a long way from Chattanooga, with our line of communication with it so exposed that Bragg turned to seize it. Chickamauga was a fight for possession of a road.

Back along this road raced Crittenden's corps, with those of Thomas and McCook, which had not before traversed it. The whole army was moving by its left.

There was sharp fighting all along and all day, for the forest was so dense that the hostile lines came almost into contact before fighting was possible. One instance was particularly horrible. After some hours of close engagement my brigade, with foul pieces and exhausted cartridge boxes, was relieved and withdrawn to the road to protect several batteries of artillery—probably two dozen pieces—which commanded an open field in the rear of our line. Before our weary and virtually disarmed men had actually reached the guns the line in front gave way, fell back behind the guns and went on, the Lord knows whither. A moment later the field was gray with Confederates in pursuit. Then the guns opened fire with grape and canister and for perhaps five minutes—it seemed an hour—nothing could be heard but the infernal din of their discharge and nothing seen through the smoke but a great ascension of dust from the smitten soil. When all was over, and the dust cloud had lifted, the spectacle was too dreadful to describe. The Confederates were still there—all of them, it seemed—some almost under the muzzles of the guns. But not a man of all these brave fellows was on his feet, and so thickly were all covered with dust that they looked as if they had been reclothed in yellow.

"We bury our dead," said a gunner, grimly, though doubtless all were afterward dug out, for some were partly alive.

To a "day of danger" succeeded a "night of waking." The enemy, everywhere held back from the road, continued to stretch his line

northward in the hope to overlap us and put himself between us and Chattanooga. We neither saw nor heard his movement, but any man with half a head would have known that he was making it, and we met by a parallel movement to our left. By morning we had edged along a good way and thrown up rude intrenchments at a little distance from the road, on the threatened side. The day was not very far advanced when we were attacked furiously all along the line, beginning at the left. When repulsed, the enemy came again and again—his persistence was dispiriting. He seemed to be using against us the law of probabilities: for so many efforts one would eventually succeed.

One did, and it was my luck to see it win. I had been sent by my chief, General Hazen, to order up some artillery ammunition and rode away to the right and rear in search of it. Finding an ordnance train I obtained from the officer in charge a few wagons loaded with what I wanted, but he seemed in doubt as to our occupancy of the region across which I proposed to guide them. Although assured that I had just traversed it, and that it lay immediately behind Wood's division, he insisted on riding to the top of the ridge behind which his train lay and overlooking the ground. We did so, when to my astonishment I saw the entire country in front swarming with Confederates: the very earth seemed to be moving toward us! They came on in thousands, and so rapidly that we had barely time to turn tail and gallop down the hill and away, leaving them

in possession of the train, many of the wagons being upset by frantic efforts to put them about. By what miracle that officer had sensed the situation I did not learn, for we parted company then and there and I never again saw him.

By a misunderstanding Wood's division had been withdrawn from our line of battle just as the enemy was making an assault. Through the gap of half a mile the Confederates charged without opposition, cutting our army clean in two. The right divisions were broken up and with General Rosecrans in their midst fled how they could across the country, eventually bringing up in Chattanooga, whence Rosecrans telegraphed to Washington the destruction of the rest of his army. The rest of his army was standing its ground.

A good deal of nonsense used to be talked about the heroism of General Garfield, who, caught in the rout of the right, nevertheless went back and joined the undefeated left under General Thomas. There was no great heroism in it; that is what every man should have done, including the commander of the army. We could hear Thomas's guns going—those of us who had ears for them—and all that was needful was to make a sufficiently wide detour and then move toward the sound. I did so myself, and have never felt that it ought to make me President. Moreover, on my way I met General Negley, and my duties as topographical engineer having given me some knowledge of the lay of the land offered to pilot him back to glory or the grave. I am

sorry to say my good offices were rejected a little uncivilly, which I charitably attributed to the general's obvious absence of mind. His mind, I think, was in Nashville, behind a breastwork.

Unable to find my brigade, I reported to General Thomas, who directed me to remain with him. He had assumed command of all the forces still intact and was pretty closely beset. The battle was fierce and continuous, the enemy extending his lines farther and farther around our right, toward our line of retreat. We could not meet the extension otherwise than by "refusing" our right flank and letting him inclose us; which but for gallant Gordon Granger he would inevitably have done.

This was the way of it. Looking across the fields in our rear (rather longingly) I had the happy distinction of a discoverer. What I saw was the shimmer of sunlight on metal: lines of troops were coming in behind us! The distance was too great, the atmosphere too hazy to distinguish the color of their uniform, even with a glass. Reporting my momentous "find" I was directed by the general to go and see who they were. Galloping toward them until near enough to see that they were of our kidney I hastened back with the glad tidings and was sent again, to guide them to the general's position.

It was General Granger with two strong brigades of the reserve, moving soldier-like toward the sound of heavy firing. Meeting him and his staff I directed him to Thomas, and unable to think of anything better to do

decided to go visiting. I knew I had a brother in that gang—an officer of an Ohio battery. I soon found him near the head of a column, and as we moved forward we had a comfortable chat amongst such of the enemy's bullets as had inconsiderately been fired too high. The incident was a trifle marred by one of them unhorsing another officer of the battery, whom we propped against a tree and left. A few moments later Granger's force was put in on the right and the fighting was terrific!

By accident I now found Hazen's brigade—or what remained of it—which had made a half-mile march to add itself to the unrouted at the memorable Snodgrass Hill. Hazen's first remark to me was an inquiry about that artillery ammunition that he had sent me for.

It was needed badly enough, as were other kinds: for the last hour or two of that interminable day Granger's were the only men that had enough ammunition to make a five minutes' fight. Had the Confederates made one more general attack we should have had to meet them with the bayonet alone. I don't know why they did not; probably they were short of ammunition. I know, though, that while the sun was taking its own time to set we lived through the agony of at least one death each, waiting for them to come on.

At last it grew too dark to fight. Then away to our left and rear some of Bragg's people set up "the rebel yell." It was taken up successively and passed round to our front, along our right and in behind us again, until it seemed almost to have got to the point whence it started. It

was the ugliest sound that any mortal ever heard—even a mortal exhausted and unnerved by two days of hard fighting, without sleep, without rest, without food and without hope. There was, however, a space somewhere at the back of us across which that horrible yell did not prolong itself; and through that we finally retired in profound silence and dejection, unmolested.

To those of us who have survived the attacks of both Bragg and Time, and who keep in memory the dear dead comrades whom we left upon that fateful field, the place means much. May it mean something less to the younger men whose tents are now pitched where, with bended heads and clasped hands, God's great angels stood invisible among the heroes in blue and the heroes in gray, sleeping their last sleep in the woods of Chickamauga.

A CRIME AT PICKETT'S MILL

There is a class of events which by their very nature, and despite any intrinsic interest that they may possess, are foredoomed to oblivion. They are merged in the general story of those greater events of which they were a part, as the thunder of a billow breaking on a distant beach is unnoted in the continuous roar. To how many having knowledge of the battles of our Civil War does the name Pickett's Mill suggest acts of heroism and devotion performed in scenes of awful carnage to accomplish the impossible? Buried in the official reports of the victors there are indeed imperfect accounts of the engagement: the vanquished have not thought it expedient to relate it. It is ignored by General Sherman in his memoirs, yet Sherman ordered it. General Howard wrote an account of the campaign of which it was an incident, and dismissed it in a single sentence; yet General Howard planned it, and it was fought as an isolated and independent action under his eye. Whether it was so trifling an affair as to justify this inattention let the reader judge.

The fight occurred on the 27th of May, 1864, while the armies of Generals Sherman and Johnston confronted each other near Dallas, Georgia, during the memorable "Atlanta campaign." For three weeks we had been pushing the Confederates southward, partly by manoeuvring, partly by fighting, out of Dalton,

out of Resaca, through Adairsville, Kingston and Cassville. Each army offered battle everywhere, but would accept it only on its own terms. At Dallas Johnston made another stand and Sherman, facing the hostile line, began his customary manoeuvring for an advantage. General Wood's division of Howard's corps occupied a position opposite the Confederate right. Johnston finding himself on the 26th overlapped by Schofield, still farther to Wood's left, retired his right (Polk) across a creek, whither we followed him into the woods with a deal of desultory bickering, and at nightfall had established the new lines at nearly a right angle with the old—Schofield reaching well around and threatening the Confederate rear.

The civilian reader must not suppose when he reads accounts of military operations in which relative position of the forces are defined, as in the foregoing passages, that these were matters of general knowledge to those engaged. Such statements are commonly made, even by those high in command, in the light of later disclosures, such as the enemy's official reports. It is seldom, indeed, that a subordinate officer knows anything about the disposition of the enemy's forces—except that it is unamiable—or precisely whom he is fighting. As to the rank and file, they can know nothing more of the matter than the arms they carry. They hardly know what troops are upon their own right or left the length of a regiment away. If it is a cloudy day they are ignorant even of the points of the compass. It may be said, generally, that a soldier's knowledge of what

is going on about him is coterminous with his official relation to it and his personal connection with it; what is going on in front of him he does not know at all until he learns it afterward.

At nine o'clock on the morning of the 27th Wood's division was withdrawn and replaced by Stanley's. Supported by Johnson's division, it moved at ten o'clock to the left, in the rear of Schofield, a distance of four miles through a forest, and at two o'clock in the afternoon had reached a position where General Howard believed himself free to move in behind the enemy's forces and attack them in the rear, or at least, striking them in the flank, crush his way along their line in the direction of its length, throw them into confusion and prepare an easy victory for a supporting attack in front. In selecting General Howard for this bold adventure General Sherman was doubtless not unmindful of Chancellorsville, where Stonewall Jackson had executed a similar manoeuvre for Howard's instruction. Experience is a normal school: it teaches how to teach.

There are some differences to be noted. At Chancellorsville it was Jackson who attacked; at Pickett's Mill, Howard. At Chancellorsville it was Howard who was assailed; at Pickett's Mill, Hood. The significance of the first distinction is doubled by that of the second.

The attack, it was understood, was to be made in column of brigades, Hazen's brigade of Wood's division leading. That such was at least Hazen's understanding I learned from his own lips during the movement, as I was an

officer of his staff. But after a march of less than a mile an hour and a further delay of three hours at the end of it to acquaint the enemy of our intention to surprise him, our single shrunken brigade of fifteen hundred men was sent forward without support to double up the army of General Johnston. "We will put in Hazen and see what success he has." In these words of General Wood to General Howard we were first apprised of the true nature of the distinction about to be conferred upon us.

General W. B. Hazen, a born fighter, an educated soldier, after the war Chief Signal Officer of the Army and now long dead, was the best hated man that I ever knew, and his very memory is a terror to every unworthy soul in the service. His was a stormy life: he was in trouble all around. Grant, Sherman, Sheridan and a countless multitude of the less eminent luckless had the misfortune, at one time and another, to incur his disfavor, and he tried to punish them all. He was always—after the war—the central figure of a court martial or a Congressional inquiry, was accused of everything, from stealing to cowardice, was banished to obscure posts, "jumped on" by the press, traduced in public and in private, and always emerged triumphant. While Signal Officer, he went up against the Secretary of War and put him to the controversial sword. He convicted Sheridan of falsehood, Sherman of barbarism, Grant of inefficiency. He was aggressive, arrogant, tyrannical, honorable, truthful, courageous—a skillful soldier, a faithful friend and one of the most exasperating of men. Duty was

his religion, and like the Moslem he proselyted with the sword. His missionary efforts were directed chiefly against the spiritual darkness of his superiors in rank, though he would turn aside from pursuit of his erring commander to set a chicken-thieving orderly astride a wooden horse, with a heavy stone attached to each foot. "Hazen," said a brother brigadier, "is a synonym of insubordination." For my commander and my friend, my master in the art of war, now unable to answer for himself, let this fact answer: when he heard Wood say they would put him in and see what success he would have in defeating an army—when he saw Howard assent—he uttered never a word, rode to the head of his feeble brigade and patiently awaited the command to go. Only by a look which I knew how to read did he betray his sense of the criminal blunder.

The enemy had now had seven hours in which to learn of the movement and prepare to meet it. General Johnston says:

"The Federal troops extended their intrenched line [we did not intrench] so rapidly to their left that it was found necessary to transfer Cleburne's division to Hardee's corps to our right, where it was formed on the prolongation of Polk's line."

General Hood, commanding the enemy's right corps, says:

"On the morning of the 27th the enemy were known to be rapidly extending their left, attempting to turn my right as they extended. Cleburne was deployed to meet them, and at half-past five p. m., a very stubborn attack was

made on this division, extending to the right, where Major-General Wheeler with his cavalry division was engaging them. The assault was continued with great determination upon both Cleburne and Wheeler."

That, then, was the situation: a weak brigade of fifteen hundred men, with masses of idle troops behind in the character of audience, waiting for the word to march a quarter-mile uphill through impassable tangles of underwood, along and across precipitous ravines, and attack breastworks constructed at leisure and manned with two divisions of troops as good as themselves. True, we did not know all this, but if any man on that ground besides Wood and Howard expected a "walkover" his must have been a singularly hopeful disposition. As topographical engineer it had been my duty to make a hasty examination of the ground in front. In doing so I had pushed far enough forward through the forest to hear distinctly the murmur of the enemy awaiting us, and this had been duly reported; but from our lines nothing could be heard but the wind among the trees and the songs of birds. Some one said it was a pity to frighten them, but there would necessarily be more or less noise. We laughed at that: men awaiting death on the battlefield laugh easily, though not infectiously.

The brigade was formed in four battalions, two in front and two in rear. This gave us a front of about two hundred yards. The right front battalion was commanded by Colonel R. L. Kimberly of the 41st Ohio, the left by Colonel O. H. Payne of the 124th Ohio, the rear bat-

talions by Colonel J. C. Foy, 23d Kentucky, and Colonel W. W. Berry, 5th Kentucky—all brave and skillful officers, tested by experience on many fields. The whole command (known as the Second Brigade, Third Division, Fourth Corps) consisted of no fewer than nine regiments, reduced by long service to an average of less than two hundred men each. With full ranks and only the necessary details for special duty we should have had some eight thousand rifles in line.

We moved forward. In less than one minute the trim battalions had become simply a swarm of men struggling through the undergrowth of the forest, pushing and crowding. The front was irregularly serrated, the strongest and bravest in advance, the others following in fan-like formations, variable and inconstant, ever defining themselves anew. For the first two hundred yards our course lay along the left bank of a small creek in a deep ravine, our left battalions sweeping along its steep slope. Then we came to the fork of the ravine. A part of us crossed below, the rest above, passing over both branches, the regiments inextricably intermingled, rendering all military formation impossible. The color-bearers kept well to the front with their flags, closely furled, aslant backward over their shoulders. Displayed, they would have been torn to rags by the boughs of the trees. Horses were all sent to the rear; the general and staff and all the field officers toiled along on foot as best they could. "We shall halt and form when we get out of this," said an aide-de-camp.

Suddenly there came a ringing rattle of musketry, the familiar hissing of bullets, and before us the interspaces of the forest were all blue with smoke. Hoarse, fierce yells broke out of a thousand throats. The forward fringe of brave and hardy assailants was arrested in its mutable extensions; the edge of our swarm grew dense and clearly defined as the foremost halted, and the rest pressed forward to align themselves beside them, all firing. The uproar was deafening; the air was sibilant with streams and sheets of missiles. In the steady, unvarying roar of small-arms the frequent shock of the cannon was rather felt than heard, but the gusts of grape which they blew into that populous wood were audible enough, screaming among the trees and cracking their stems and branches. We had, of course, no artillery to reply.

Our brave color-bearers were now all in the forefront of battle in the open, for the enemy had cleared a space in front of his breastworks. They held the colors erect, shook out their glories, waved them forward and back to keep them spread, for there was no wind. From where I stood, at the right of the line—we had “halted and formed,” indeed—I could see six of our flags at one time. Occasionally one would go down, only to be instantly lifted by other hands.

I must here quote again from General Johnston's account of this engagement, for nothing could more truly indicate the resolute nature of the attack than the Confederate belief .

that it was made by the whole Fourth Corps, instead of one weak brigade:

"The Fourth Corps came on in deep order and assailed the Texans with great vigor, receiving their close and accurate fire with the fortitude always exhibited by General Sherman's troops in the actions of this campaign. . . . The Federal troops approached within a few yards of the Confederates, but at last were forced to give way by their storm of well-directed bullets, and fell back to the shelter of a hollow near and behind them. They left hundreds of corpses within twenty paces of the Confederate line. When the United States troops paused in their advance within fifteen paces of the Texan front rank one of their color-bearers planted his colors eight or ten feet in front of his regiment, and was instantly shot dead. A soldier sprang forward to his place and fell also as he grasped the color-staff. A second and third followed successively, and each received death as speedily as his predecessors. A fourth, however, seized and bore back the object of soldierly devotion."

Such incidents have occurred in battle from time to time since men began to venerate the symbols of their cause, but they are not commonly related by the enemy. If General Johnston had known that his veteran divisions were throwing their successive lines against fewer than fifteen hundred men his glowing tribute to his enemy's valor could hardly have been more generously expressed. I can attest the truth of his soldierly praise: I saw the occurrence that he relates and regret that I am un-

able to recall even the name of the regiment whose colors were so gallantly saved.

Early in my military experience I used to ask myself how it was that brave troops could retreat while still their courage was high. As long as a man is not disabled he can go forward; can it be anything but fear that makes him stop and finally retire? Are there signs by which he can infallibly know the struggle to be hopeless? In this engagement, as in others, my doubts were answered as to the fact; the explanation is still obscure. In many instances which have come under my observation, when hostile lines of infantry engage at close range and the assailants afterward retire, there was a "dead-line" beyond which no man advanced but to fall. Not a soul of them ever reached the enemy's front to be bayoneted or captured. It was a matter of the difference of three or four paces—too small a distance to affect the accuracy of aim. In these affairs no aim is taken at individual antagonists; the soldier delivers his fire at the thickest mass in his front. The fire is, of course, as deadly at twenty paces as at fifteen; at fifteen as at ten. Nevertheless, there is the "dead-line," with its well-defined edge of corpses—those of the bravest. Where both lines are fighting without cover—as in a charge met by a counter-charge—each has its "dead-line," and between the two is a clear space—neutral ground, devoid of dead, for the living cannot reach it to fall there.

I observed this phenomenon at Pickett's Mill. Standing at the right of the line I had an unobstructed view of the narrow, open space

across which the two lines fought. It was dim with smoke, but not greatly obscured: the smoke rose and spread in sheets among the branches of the trees. Most of our men fought kneeling as they fired, many of them behind trees, stones and whatever cover they could get, but there were considerable groups that stood. Occasionally one of these groups, which had endured the storm of missiles for moments without perceptible reduction, would push forward, moved by a common despair, and wholly detach itself from the line. In a second every man of the group would be down. There had been no visible movement of the enemy, no audible change in the awful, even roar of the firing—yet all were down. Frequently the dim figure of an individual soldier would be seen to spring away from his comrades, advancing alone toward that fateful interspace, with leveled bayonet. He got no farther than the farthest of his predecessors. Of the “hundreds of corpses within twenty paces of the Confederate line,” I venture to say that a third were within fifteen paces, and not one within ten.

It is the perception—perhaps unconscious—of this inexplicable phenomenon that causes the still unharmed, still vigorous and still courageous soldier to retire without having come into actual contact with his foe. He sees, or feels, that he *cannot*. His bayonet is a useless weapon for slaughter; its purpose is a moral one. Its mandate exhausted, he sheathes it and trusts to the bullet. That failing, he re

treats. He has done all that he could do with such appliances as he has.

No command to fall back was given, none could have been heard. Man by man, the survivors withdrew at will, sifting through the trees into the cover of the ravines, among the wounded who could draw themselves back; among the skulkers whom nothing could have dragged forward. The left of our short line had fought at the corner of a cornfield, the fence along the right side of which was parallel to the direction of our retreat. As the disorganized groups fell back along this fence on the wooded side, they were attacked by a flanking force of the enemy moving through the field in a direction nearly parallel with what had been our front. This force, I infer from General Johnston's account, consisted of the brigade of General Lowry, or two Arkansas regiments under Colonel Baucum. I had been sent by General Hazen to that point and arrived in time to witness this formidable movement. But already our retreating men, in obedience to their officers, their courage and their instinct of self-preservation, had formed along the fence and opened fire. The apparently slight advantage of the imperfect cover and the open range worked its customary miracle: the assault, a singularly spiritless one, considering the advantages it promised and that it was made by an organized and victorious force against a broken and retreating one, was checked. The assailants actually retired, and if they afterward renewed the movement they encountered none but our dead and wounded.

The battle, as a battle, was at an end, but there was still some slaughtering that it was possible to incur before nightfall; and as the wreck of our brigade drifted back through the forest we met the brigade (Gibson's) which, had the attack been made in column, as it should have been, would have been but five minutes behind our heels, with another five minutes behind its own. As it was, just forty-five minutes had elapsed, during which the enemy had destroyed us and was now ready to perform the same kindly office for our successors. Neither Gibson nor the brigade which was sent to his "relief" as tardily as he to ours accomplished, or could have hoped to accomplish, anything whatever. I did not note their movements, having other duties, but Hazen in his "Narrative of Military Service" says:

"I witnessed the attack of the two brigades following my own, and none of these (troops) advanced nearer than one hundred yards of the enemy's works. They went in at a run, and as organizations were broken in less than a minute."

Nevertheless their losses were considerable, including several hundred prisoners taken from a sheltered place whence they did not care to rise and run. The entire loss was about fourteen hundred men, of whom nearly one-half fell killed and wounded in Hazen's brigade in less than thirty minutes of actual fighting.

General Johnston says:

"The Federal dead lying near our line were counted by many persons, officers and soldiers.

According to these counts there were seven hundred of them."

This is obviously erroneous, though I have not the means at hand to ascertain the true number. I remember that we were all astonished at the uncommonly large proportion of dead to wounded—a consequence of the uncommonly close range at which most of the fighting was done.

The action took its name from a water-power mill near by. This was on a branch of a stream having, I am sorry to say, the prosaic name of Pumpkin Vine Creek. I have my own reasons for suggesting that the name of that water-course be altered to Sunday-School Run.

WHAT I SAW OF SHILOH

It was plain that the enemy had retreated to Corinth. The arrival of our fresh troops and their successful passage of the river had disheartened him. Three or four of his gray cavalry videttes moving amongst the trees on the crest of a hill in our front, and galloping out of sight at the crack of our skirmishers' rifles, confirmed us in the belief; an army face to face with its enemy does not employ cavalry to watch its front. True, they might be a general and his staff. Crowning this rise we found a level field, a quarter of a mile in width; beyond it a gentle acclivity, covered with an undergrowth of young oaks, impervious to sight. We pushed on into the open, but the division halted at the edge. Having orders to conform to its movements, we halted too; but that did not suit; we received an intimation to proceed. I had performed this sort of service before, and in the exercise of my discretion deployed my platoon, pushing it forward at a run, with trailed arms, to strengthen the skirmish line, which I overtook some thirty or forty yards from the wood. Then—I can't describe it—the forest seemed all at once to flame up and disappear with a crash like that of a great wave upon the beach—a crash that expired in hot hissings, and the sickening "spat" of lead against flesh. A dozen of my brave fellows tumbled over like ten-pins. Some struggled to their feet, only to go down again, and yet again. Those

who stood fired into the smoking brush and doggedly retired. We had expected to find, at most, a line of skirmishers similar to our own; it was with a view to overcoming them by a sudden *coup* at the moment of collision that I had thrown forward my little reserve. What we had found was a line of battle, coolly holding its fire till it could count our teeth. There was no more to be done but get back across the open ground, every superficial yard of which was throwing up its little jet of mud provoked by an impinging bullet. We got back, most of us, and I shall never forget the ludicrous incident of a young officer who had taken part in the affair walking up to his colonel, who had been a calm and apparently impartial spectator, and gravely reporting: "The enemy is in force just beyond this field, sir."

II

In subordination to the design of this narrative, as defined by its title, the incidents related necessarily group themselves about my own personality as a center; and, as this center, during the few terrible hours of the engagement, maintained a variably constant relation to the open field already mentioned, it is important that the reader should bear in mind the topographical and tactical features of the local situation. The hither side of the field was occupied by the front of my brigade—a length of two regiments in line, with proper intervals for field batteries. During the entire fight the enemy held the slight wooded acclivity beyond. The debatable

ground to the right and left of the open was broken and thickly wooded for miles, in some places quite inaccessible to artillery and at very few points offering opportunities for its successful employment. As a consequence of this the two sides of the field were soon studded thickly with confronting guns, which flamed away at one another with amazing zeal and rather startling effect. Of course, an infantry attack delivered from either side was not to be thought of when the covered flanks offered inducements so unquestionably superior; and I believe the riddled bodies of my poor skirmishers were the only ones left on this "neutral ground" that day. But there was a very pretty line of dead continually growing in our rear, and doubtless the enemy had at his back a similar encouragement.

The configuration of the ground offered us no protection. By lying flat on our faces between the guns we were screened from view by a straggling row of brambles, which marked the course of an obsolete fence; but the enemy's grape was sharper than his eyes, and it was poor consolation to know that his gunners could not see what they were doing, so long as they did it. The shock of our own pieces nearly deafened us, but in the brief intervals we could hear the battle roaring and stammering in the dark reaches of the forest to the right and left, where our other divisions were dashing themselves again and again into the smoking jungle. What would we not have given to join them in their brave, hopeless task! But to lie inglorious beneath

showers of shrapnel darting divergent from the unassailable sky—meekly to be blown out of life by level gusts of grape—to clench our teeth and shrink helpless before big shot pushing noisily through the consenting air—this was horrible! “Lie down, there!” a captain would shout, and then get up himself to see that his order was obeyed. “Captain, take cover, sir!” the lieutenant-colonel would shriek, pacing up and down in the most exposed position that he could find.

O those cursed guns—not the enemy’s, but our own. Had it not been for them, we might have died like men. They must be supported, forsooth, the feeble, boasting bullies! It was impossible to conceive that these pieces were doing the enemy as excellent a mischief as his were doing us; they seemed to raise their “cloud by day” solely to direct aright the streaming procession of Confederate missiles. They no longer inspired confidence, but begot apprehension; and it was with grim satisfaction that I saw the carriage of one and another smashed into matchwood by a whooping shot and bundled out of the line,

III

The dense forests wholly or partly in which were fought so many battles of the Civil War, lay upon the earth in each autumn a thick deposit of dead leaves and stems, the decay of which forms a soil of surprising depth and richness. In dry weather the upper stratum is as inflammable as tinder. A fire once kin-

dled in it will spread with a slow, persistent advance as far as local conditions permit, leaving a bed of light ashes beneath which the less combustible accretions of previous years will smolder until extinguished by rains. In many of the engagements of the war the fallen leaves took fire and roasted the fallen men. At Shiloh, during the first day's fighting, wide tracts of woodland were burned over in this way and scores of wounded who might have recovered perished in slow torture. I remember a deep ravine a little to the left and rear of the field I have described, in which, by some mad freak of heroic incompetence, a part of an Illinois regiment had been surrounded, and refusing to surrender was destroyed, as it very well deserved. My regiment having at last been relieved at the guns and moved over to the heights above this ravine for no obvious purpose. I obtained leave to go down into the valley of death and gratify a reprehensible curiosity.

Forbidding enough it was in every way. The fire had swept every superficial foot of it, and at every step I sank into ashes to the ankle. It had contained a thick undergrowth of young saplings, every one of which had been severed by a bullet, the foliage of the prostrate tops being afterward burnt and the stumps charred. Death had put his sickle into this thicket and fire had gleaned the field. Along a line which was not that of extreme depression, but was at every point significantly equidistant from the heights on either hand, lay the bodies, half buried in ashes; some in the unlovely loose-

ness of attitude denoting sudden death by the bullet, but by far the greater number in postures of agony that told of the tormenting flame. Their clothing was half burnt away—their hair and beard entirely; the rain had come too late to save their nails. Some were swollen to double girth; others shriveled to manikins. According to degree of exposure, their faces were bloated and black or yellow and shrunken. The contraction of muscles which had given them claws for hands had cursed each countenance with a hideous grin. Faugh! I cannot catalogue the charms of these gallant gentlemen who had got what they enlisted for.

IV

It was now three o'clock in the afternoon, and raining. For fifteen hours we had been wet to the skin. Chilled, sleepy, hungry and disappointed—profoundly disgusted with the inglorious part to which they had been condemned—the men of my regiment did everything doggedly. The spirit had gone quite out of them. Blue sheets of powder smoke, drifting amongst the trees, settling against the hillsides and beaten into nothingness by the falling rain, filled the air with their peculiar pungent odor, but it no longer stimulated. For miles on either hand could be heard the hoarse murmur of the battle, breaking out nearby with frightful distinctness, or sinking to a murmur in the distance; and the one sound aroused no more attention than the other.

We had been placed again in rear of those

guns, but even they and their iron antagonists seemed to have tired of their feud, pounding away at one another with amiable infrequency. The right of the regiment extended a little beyond the field. On the prolongation of the line in that direction were some regiments of another division, with one in reserve. A third of a mile back lay the remnant of somebody's brigade looking to its wounds. The line of forest bounding this end of the field stretched as straight as a wall from the right of my regiment to Heaven knows what regiment of the enemy. There suddenly appeared, marching down along this wall, not more than two hundred yards in our front, a dozen files of gray-clad men with rifles on the right shoulder. At an interval of fifty yards they were followed by perhaps half as many more; and in fair supporting distance of these stalked with confident mien a single man! There seemed to me something indescribably ludicrous in the advance of this handful of men upon an army, albeit with their left flank protected by a forest. It does not so impress me now. They were the exposed flanks of three lines of infantry, each half a mile in length. In a moment our gunners had grappled with the nearest pieces, swung them half round, and were pouring streams of canister into the invaded wood. The infantry rose in masses, springing into line. Our threatened regiments stood like a wall, their loaded rifles at "ready," their bayonets hanging quietly in the scabbards. The right wing of my own regiment was thrown slightly backward to threaten the flank of the

assault. The battered brigade away to the rear pulled itself together.

Then the storm burst. A great gray cloud seemed to spring out of the forest into the faces of the waiting battalions. It was received with a crash that made the very trees turn up their leaves. For one instant the assailants paused above their dead, then struggled forwards, their bayonets glittering in the eyes that shone behind the smoke. One moment, and those unmoved men in blue would be impaled. What were they about? Why did they not fix bayonets? Were they stunned by their own volley? Their inaction was maddening! Another tremendous crash!—the rear rank had fired! Humanity, thank Heaven! is not made for this, and the shattered gray mass drew back a score of paces, opening a feeble fire. Lead had scored its old-time victory over steel; the heroic had broken its great heart against the commonplace. There are those who say that it is sometimes otherwise.

All this had taken but a minute of time, and now the second Confederate line swept down and poured in its fire. The line of blue staggered and gave way; in those two terrific volleys it seemed to have quite poured out its spirit. To this deadly work our reserve regiment now came up with a run. It was surprising to see it spitting fire with never a sound, for such was the infernal din that the ear could take in no more. This fearful scene was enacted within fifty paces of our toes, but we were rooted to the ground as if we had grown there. But now our commanding offi-

cer rode from behind us to the front, waved his hand with the courteous gesture that says *apres vous*, and with a barely audible cheer we sprang into the fight. Again the smoking front of gray receded, and again, as the enemy's third line emerged from its leafy covert, it pushed forward across the piles of dead and wounded to threaten with protruded steel. Never was seen so striking a proof of the paramount importance of numbers. Within an area of three hundred yards by fifty there struggled for front places no fewer than six regiments; and the accession of each, after the first collision, had it not been immediately counterpoised, would have turned the scale.

As matters stood, we were now very evenly matched, and how long we might have held out God only knows. But all at once something appeared to have gone wrong with the enemy's left; our men had somewhere pierced his line. A moment later his whole front gave way, and springing forward with fixed bayonets we pushed him in utter confusion back to his original line. Here, among the tents from which Grant's people had been expelled the day before, our broken and disordered regiments inextricably intermingled, and drunken with the wine of triumph, dashed confidently against a pair of trim battalions, provoking a tempest of hissing lead that made us stagger under its very weight. The sharp onset of another against our flank sent us whirling back with fire at our heels and fresh foes in merciless pursuit—who in their turn were broken upon the front of the invalided brigade

previously mentioned, which had moved up from the rear to assist in this lively work.

As we rallied to reform behind our beloved guns and noted the ridiculous brevity of our line—as we sank from sheer fatigue, and tried to moderate the terrific thumping of our hearts—as we caught our breath to ask who had seen such-and-such a comrade, and laughed hysterically at the reply—there swept past us and over us into the open field a long regiment with fixed bayonets and rifles on the right shoulder. Another followed, and another; two—three—four! Heavens! where do all these men come from, and why did they not come before? How grandly and confidently they go sweeping on like long blue waves of ocean chasing one another to the cruel rocks! Involuntarily we draw in our weary feet beneath us as we sit, ready to spring up and interpose our breasts when these gallant lines shall come back to us across the terrible field, and sift brokenly through among the trees with spouting fires at their backs. We still our breathing to catch the full grandeur of the volleys that are to tear them to shreds. Minute after minute passes and the sound does not come. Then for the first time we note that the silence of the whole region is not comparative, but absolute. Have we become stone deaf? See; here comes a stretcher-bearer, and there a surgeon! Good heavens! a chaplain!

The battle was indeed at an end.

FOUR DAYS IN DIXIE

During a part of the month of October, 1864, the Federal and Confederate armies of Sherman and Hood respectively, having performed a surprising and resultless series of marches and countermarches since the fall of Atlanta, confronted each other along the separating line of the Coosa River in the vicinity of Gaylesville, Alabama. Here for several days they remained at rest—at least most of the infantry and artillery did; what the cavalry was doing nobody but itself ever knew or greatly cared. It was an interregnum of expectancy between two régimes of activity.

I was on the staff of Colonel McConnell, who commanded an infantry brigade in the absence of its regular commander. McConnell was a good man, but he did not keep a very tight rein upon the half dozen restless and reckless young fellows who (for his sins) constituted his "military family." In most matters we followed the trend of our desires, which commonly ran in the direction of adventure—it did not greatly matter what kind. In pursuance of this policy of escapades, one bright Sunday morning Lieutenant Cobb, an aide-de-camp, and I mounted and set out to "seek our fortunes," as the story books have it. Striking into a road of which we knew nothing except that it led toward the river, we followed it for a mile or such a matter, when we found our advance interrupted by a considerable creek, which we must ford or go back. We consulted a moment and then

rode at it as hard as we could, possibly in the belief that a high momentum would act as it does in the instance of a skater passing over thin ice. Cobb was fortunate enough to get across comparatively dry, but his hapless companion was utterly submerged. The disaster was all the greater from my having on a resplendent new uniform, of which I had been pardonably vain. Ah, what a gorgeous new uniform it never was again!

A half-hour devoted to wringing my clothing and dry-charging my revolver, and we were away. A brisk canter of a half-hour under the arches of the trees brought us to the river, where it was our ill luck to find a boat and three soldiers of our brigade. These men had been for several hours concealed in the brush patiently watching the opposite bank in the amiable hope of getting a shot at some unwary Confederate, but had seen none. For a great distance up and down the stream on the other side, and for at least a mile back from it, extended cornfields. Beyond the cornfields, on slightly higher ground, was a thin forest, with breaks here and there in its continuity, denoting plantations, probably. No houses were in sight, and no camps. We knew that it was the enemy's ground, but whether his forces were disposed along the slightly higher country bordering the bottom lands, or at strategic points miles back, as ours were, we knew no more than the least curious private in our army. In any case the river line would naturally be picketed or patrolled. But the charm of the unknown was upon us: the mysterious

exerted its old-time fascination, beckoning to us from that silent shore so peaceful and dreamy in the beauty of the quiet Sunday morning. The temptation was strong and we fell. The soldiers were as eager for the hazard as we, and readily volunteered for the madmen's enterprise. Concealing our horses in a cane-brake, we unmoored the boat and rowed across unmolested.

Arrived at a kind of "landing" on the other side, our first care was so to secure the boat under the bank as to favor a hasty re-embarking in case we should be so unfortunate as to incur the natural consequence of our act; then, following an old road through the ranks of standing corn, we moved in force upon the Confederate position, five strong, with an armament of three Springfield rifles and two Colt's revolvers. We had not the further advantage of music and banners. One thing favored the expedition, giving it an apparent assurance of success: it was well officered—an officer to each man and a half.

After marching about a mile we came into a neck of woods and crossed an intersecting road which showed no wheel-tracks, but was rich in hoof-prints. We observed them and kept right on about our business, whatever that may have been. A few hundred yards farther brought us to a plantation bordering our road upon the right. The fields, as was the Southern fashion at that period of the war, were uncultivated and overgrown with brambles. A large white house stood at some little distance from the road; we saw women and children

and a few Negroes there. On our left ran the thin forest, pervious to cavalry. Directly ahead an ascent in the road formed a crest beyond which we could see nothing.

On this crest suddenly appeared two horsemen in gray, sharply outlined against the sky—men and animals looking gigantic. At the same instant a jingling and tramping were audible behind us, and turning in that direction I saw a score of mounted men moving forward at a trot. In the meantime the giants on the crest had multiplied surprisingly. Our invasion of the Gulf States had apparently failed.

There was lively work in the next few seconds. The shots were thick and fast—and uncommonly loud; none, I think, from our side. Cobb was on the extreme left of our advance, I on the right—about two paces apart. He instantly dived into the wood. The three men and I climbed across the fence somehow and struck out across the field—actuated, doubtless, by an intelligent forethought: men on horseback could not immediately follow. Passing near the house, now swarming like a hive of bees, we made for a swamp two or three hundred yards away, where I concealed myself in a jungle, the others continuing—as a defeated commander would put it—to fall back. In my cover, where I lay panting like a hare, I could hear a deal of shouting and hard riding and an occasional shot. I heard some one calling dogs, and the thought of bloodhounds added its fine suggestiveness to the other fancies appropriate to the occasion.

Finding myself unpursued after the lapse of

what seemed an hour, but was probably a few minutes, I cautiously sought a place where, still concealed, I could obtain a view of the field of glory. The only enemy in sight was a group of horsemen on a hill a quarter of a mile away. Toward this group a woman was running, followed by the eyes of everybody about the house. I thought she had discovered my hiding-place and was going to "give me away." Taking to my hands and knees I crept as rapidly as possible among the clumps of brambles directly back toward the point in the road where we had met the enemy and failed to make him ours. There I dragged myself into a patch of briars within ten feet of the road, where I lay undiscovered during the remainder of the day, listening to a variety of disparaging remarks upon Yankee valor and to dispiriting declarations of intention conditional on my capture, as members of the Opposition passed and re-passed and paused in the road to discuss the morning's events. In this way I learned that the three privates had been headed off and caught within ten minutes. Their destination would naturally be Andersonville; what further became of them God knows. Their captors passed the day making a careful canvass of the swamp for me.

When night had fallen I cautiously left my place of concealment, dodged across the road into the woods and made for the river through the mile of corn. Such corn! It towered above me like a forest, shutting out all the starlight except what came from directly overhead. Many of the ears were a yard out of reach.

One who has never seen an Alabama river-bottom cornfield has not exhausted nature's surprises; nor will he know what solitude is until he explores one in a moonless night.

I came at last to the river bank with its fringe of trees and willows and canes. My intention was to swim across, but the current was swift, the water forbiddingly dark and cold. A mist obscured the other bank. I could not, indeed, see the water more than a few yards out. It was a hazardous and horrible undertaking, and I gave it up, following cautiously along the bank in search of the spot where we had moored the boat. True, it was hardly likely that the landing was now unguarded, or, if so, that the boat was still there. Cobb had undoubtedly made for it, having an even more urgent need than I; but hope springs eternal in the human breast, and there was a chance that he had been killed before reaching it. I came at last into the road that we had taken and consumed half the night in cautiously approaching the landing, pistol in hand and heart in mouth. The boat was gone! I continued my journey along the stream—in search of another.

My clothing was still damp from my morning bath, my teeth rattled with cold, but I kept on along the stream until I reached the limit of the cornfields and entered a dense wood. Through this I groped my way, inch by inch, when, suddenly emerging from a thicket into a space slightly more open, I came upon a smouldering camp-fire surrounded by prostrate figures of men, upon one of whom I had almost

trodden. A sentinel, who ought to have been shot, sat by the embers, his carbine across his lap, his chin upon his breast. Just beyond was a group of unsaddled horses. The men were asleep; the sentinel was asleep; the horses were asleep. There was something indescribably uncanny about it all. For a moment I believed them all lifeless, and O'Hara's familiar line, "The bivouac of the dead," quoted itself in my consciousness. The emotion that I felt was that inspired by a sense of the supernatural; of the actual and imminent peril of my position I had no thought. When at last it occurred to me I felt it as a welcome relief, and stepping silently back into the shadow retraced my course without having awakened a soul. The vividness with which I can now recall that scene is to me one of the marvels of memory.

Getting my bearings again with some difficulty, I now made a wide detour to the left, in the hope of passing around this outpost and striking the river beyond. In this mad attempt I ran upon a more vigilant sentinel, posted in the heart of a thicket, who fired at me without challenging. To a soldier an unexpected shot ringing out at dead of night is fraught with an awful significance. In my circumstances—cut off from my comrades, groping about an unknown country, surrounded by invisible perils which such a signal would call into eager activity—the flash and shock of that firearm were unspeakably dreadful! In any case I should and ought to have fled, and did so; but how much or little of conscious prudence there

was in the prompting I do not care to discover by analysis of memory. I went back into the corn, found the river, followed it back a long way and mounted into the fork of a low tree. There I perched until the dawn, a most uncomfortable bird.

In the gray light of the morning I discovered that I was opposite an island of considerable length, separated from the mainland by a narrow and shallow channel, which I promptly waded. The island was low and flat, covered with an almost impenetrable cane-brake interlaced with vines. Working my way through these to the other side, I obtained another look at God's country—Shermany, so to speak. There were no visible inhabitants. The forest and the water met. This did not deter me. For the chill of the water I had no further care, and laying off my boots and outer clothing I prepared to swim. A strange thing now occurred—more accurately, a familiar thing occurred at a strange moment. A black cloud seemed to pass before my eyes—the water, the trees, the sky, all vanished in a profound darkness. I heard the roaring of a great cataract, felt the earth sinking from beneath my feet. Then I heard and felt no more.

At the battle of Kennesaw Mountain in the previous June I had been badly wounded in the head, and for three months was incapacitated for service. In truth, I had done no actual duty since, being then, as for many years afterward, subject to fits of fainting, sometimes without assignable immediate cause, but mostly when suffering from exposure, excitement or

excessive fatigue. This combination of them all had broken me down—most opportunely, it would seem.

When I regained my consciousness the sun was high. I was still giddy and half blind. To have taken to the water would have been madness; I must have a raft. Exploring my island, I found a pen of slender logs: an old structure without roof or rafters, built for what purpose I do not know. Several of these logs I managed with patient toil to detach and convey to the water, where I floated them, lashing them together with vines. Just before sunset my raft was complete and freighted with my outer clothing, boots and pistol. Having shipped the last article, I returned into the brake, seeking something from which to improvise a paddle. While peering about I heard a sharp metallic click—the cocking of a rifle! I was a prisoner.

The history of this great disaster to the Union arms is brief and simple. A Confederate “home guard,” hearing something going on upon the island, rode across, concealed his horse and still-hunted me. And, reader, when you are “held up” in the same way may it be by as fine a fellow. He not only spared my life, but even overlooked a feeble and ungrateful after-attempt upon his own (the particulars of which I shall not relate), merely exacting my word of honor that I would not again try to escape while in his custody. Escape! I could not have escaped a new-born babe.

At my captor’s house that evening there was a reception, attended by the élite of the whole

vicinity. A Yankee officer in full fig—minus only the boots, which could not be got on to his swollen feet—was something worth seeing, and those who came to scoff remained to stare. What most entertained them, I think, was my eating—an entertainment that was prolonged to a late hour. They were a trifle disappointed by the absence of horns, hoof and tail, but bore their chagrin with good-natured fortitude. Among my visitors was a charming young woman from the plantation where we had met the foe the day before—the same lady whom I had suspected of an intention to reveal my hiding-place. She had had no such design; she had run over to the group of horsemen to learn if her father had been hurt—by whom, I should like to know. No restraint was put upon me; my captor even left me with the women and children and went off for instructions as to what disposition he should make of me. Altogether the reception was “a pronounced success,” though it is to be regretted that the guest of the evening had the incivility to fall dead asleep in the midst of the festivities, and was put to bed by sympathetic and, he has reason to believe, fair hands.

The next morning I was started off to the rear in custody of two mounted men, heavily armed. They had another prisoner, picked up in some raid beyond the river. He was a most offensive brute—a foreigner of some mongrel sort, with just sufficient command of our tongue to show that he could not control his own. We traveled all day, meeting occasional small bodies of cavalrymen, by whom, with one

exception—a Texan officer—I was civilly treated. My guards said, however, that if we should chance to meet Jeff Gatewood he would probably take me from them and hang me to the nearest tree; and once or twice, hearing horsemen approach, they directed me to stand aside, concealed in the brush, one of them remaining near by to keep an eye on me, the other going forward with my fellow-prisoner, for whose neck they seemed to have less tenderness, and whom I heartily wished well hanged.

Jeff Gatewood was a "guerrilla" chief of local notoriety, who was a greater terror to his friends than to his other foes. My guards related almost incredible tales of his cruelties and infamies. By their account it was into his camp that I had blundered on Sunday night.

We put up for the night at a farmhouse, having gone not more than fifteen miles, owing to the condition of my feet. Here we got a bite of supper and were permitted to lie before the fire. My fellow-prisoner took off his boots and was soon sound asleep. I took off nothing and, despite exhaustion, remained equally sound awake. One of the guards also removed his footgear and outer clothing, placed his weapons under his neck and slept the sleep of innocence; the other sat in the chimney corner on watch. The house was a double log cabin, with an open space between the two parts, roofed over—a common type of habitation in that region. The room we were in had its entrance in this open space, the fireplace opposite, at the end. Beside the door was a bed,

occupied by the old man of the house and his wife. It was partly curtained off from the room.

In an hour or two the chap on watch began to yawn, then to nod. Pretty soon he stretched himself on the floor, facing us, pistol in hand. For a while he supported himself on his elbow, then laid his head on his arm, blinking like an owl. I performed an occasional snore, watching him narrowly between my eyelashes from the shadow of my arm. The inevitable occurred—he slept audibly.

A half-hour later I rose quietly to my feet, particularly careful not to disturb the black-guard at my side, and moved as silently as possible. Despite my care the latch clicked. The old lady sat bolt upright in bed and stared at me. She was too late. I sprang through the door and struck out for the nearest point of woods, in a direction previously selected, vaulting fences like an accomplished gymnast and followed by a multitude of dogs. It is said that the State of Alabama has more dogs than school-children, and that they cost more for their upkeep. The estimate of cost is probably too high.

Looking backward as I ran, I saw and heard the place in a turmoil and uproar; and to my joy the old man, evidently oblivious to the facts of the situation, was lifting up his voice and calling his dogs. They were good dogs: they went back; otherwise the malicious old rascal would have had my skeleton. Again the traditional bloodhound did not materialize. Other pursuit there was no reason to fear; my

foreign gentleman would occupy the attention of one of the soldiers, and in the darkness of the forest I could easily elude the other, or, if need be, get him at a disadvantage. In point of fact there was no pursuit.

I now took my course by the north star (which I can never sufficiently bless), avoiding all roads and open places about houses, laboriously boring my way through forests, driving myself like a wedge into brush and bramble, swimming every stream I came to (some of them more than once, probably), and pulling myself out of the water by boughs and briars—whatever could be grasped. Let any one try to go a little way across even the most familiar country on a moonless night, and he will have an experience to remember. By dawn I had probably not made three miles. My clothing and skin were alike in rags.

During the day I was compelled to make wide detours to avoid even the fields, unless they were of corn; but in other respects the going was distinctly better. A light breakfast of raw sweet potatoes and persimmons cheered the inner man; a good part of the outer was decorating the several thorns, boughs and sharp rocks along my sylvan wake.

Late in the afternoon I found the river, at what point it was impossible to say. After a half-hour's rest, concluding with a fervent prayer that I might go to the bottom, I swam across. Creeping up the bank and holding my course still northward through a dense undergrowth, I suddenly reeled into a dusty highway and saw a more heavenly vision than ever

the eyes of a dying saint were blessed withal—two patriots in blue carrying a stolen pig slung upon a pole!

Late that evening Colonel McConnell and his staff were chatting by a camp-fire in front of his headquarters. They were in a pleasant humor: someone had just finished a funny story about a man cut in two by a cannon-shot. Suddenly something staggered in among them from the outer darkness and fell into the fire. Somebody dragged it out by what seemed to be a leg. They turned the animal on its back and examined it—they were no cowards.

"What is it, Cobb" said the chief, who had not taken the trouble to rise.

"I don't know, Colonel, but thank God it is dead!"

It was not.

WHAT OCCURRED AT FRANKLIN

For several days, in snow and rain, General Schofield's little army had crouched in its hastily constructed defenses at Columbia, Tennessee. It had retreated in hot haste from Pulaski, thirty miles to the south, arriving just in time to foil Hood, who, marching from Florence, Alabama, by another road, with a force of more than double our strength, had hoped to intercept us. Had he succeeded, he would indubitably have bagged the whole bunch of us. As it was, he simply took position in front of us and gave us plenty of employment, but did not attack; he knew a trick worth two of that.

Duck River was directly in our rear; I suppose both our flanks rested on it. The town was between them. One night—that of November 27, 1864—we pulled up stakes and crossed to the north bank to continue our retreat to Nashville, where Thomas and safety lay—such safety as is known in war. It was high time, too, for before noon of the next day Forrest's cavalry forded the river a few miles above us and began pushing back our own horse toward Spring Hill, ten miles in our rear, on our only road. Why our infantry was not immediately put in motion toward the threatened point, so vital to our safety, General Schofield could have told better than I. Howbeit, we lay there inactive all day.

The next morning—a bright and beautiful one—the brigade of Colonel P. Sidney Post

was thrown out, up the river four or five miles, to see what it could see. What it saw was Hood's head-of-column coming over on a pontoon bridge, and a right pretty spectacle it would have been to one whom it did not concern. It concerned us rather keenly.

As a member of Colonel Post's staff, I was naturally favored with a good view of the performance. We formed in line of battle at a distance of perhaps a half-mile from the bridge-head, but that unending column of gray and steel gave us no more attention than if we had been a crowd of farmer-folk. Why should it? It had only to face to the left to be itself a line of battle. Meantime it had more urgent business on hand than brushing away a small brigade whose only offense was curiosity; it was making for Spring Hill with all its legs and wheels. Hour after hour we watched that unceasing flow of infantry and artillery toward the rear of our army. It was an unnerving spectacle, yet we never for a moment doubted that, acting on the intelligence supplied by our succession of couriers, our entire force was moving rapidly to the point of contact. The battle of Spring Hill was obviously decreed. Obviously, too, our brigade of observation would be among the last to have a hand in it. The thought annoyed us, made us restless and resentful. Our mounted men rode forward and back behind the line, nervous and distressed; the men in the ranks sought relief in frequent changes of posture, in shifting their weight from one leg to the other, in needless inspection of their weapons and in that unfailing

resource of the discontented soldier, audible damning of those in the saddles of authority. But never for more than a moment at a time did anyone remove his eyes from that fascinating and portentous pageant.

Toward evening we were recalled, to learn that of our five divisions of infantry, with their batteries, numbering twenty-three thousand men, only one—Stanley's, four thousand weak—had been sent to Spring Hill to meet that formidable movement of Hood's three veteran corps! Why Stanley was not immediately effaced is still a matter of controversy. Hood, who was early on the ground, declared that he gave the needful orders and tried vainly to enforce them; Cheatham, in command of his leading corps, declared that he did not. Doubtless the dispute is still being carried on between these chieftains from their beds of asphodel and moly in Elysium. So much is certain: Stanley drove away Forrest and successfully held the junction of the roads against Cleburne's division, the only infantry that attacked him.

That night the entire Confederate army lay within a half mile of our road, while we all sneaked by; infantry, artillery, and trains. The enemy's camp-fires shone redly—miles of them—seeming only a stone's throw from our hurrying column. His men were plainly visible about them, cooking their suppers—a sight so incredible that many of our own, thinking them friends, strayed over to them and did not return. At intervals of a few hundred yards we passed dim figures on horseback by

the roadside, enjoining silence. Needless precaution; we could not have spoken if we had tried, for our hearts were in our throats. But fools are God's peculiar care, and one of his protective methods is the stupidity of other fools. By daybreak our last man and last wagon had passed the fateful spot unchallenged, and our first were entering Franklin, ten miles away. Despite spirited cavalry attacks on trains and rear-guard, all were in Franklin by noon and such of the men as could be kept awake were throwing up a slight line of defense, inclosing the town.

Franklin lies—or at that time did lie; I know not what exploration might now disclose—on the south bank of a small river, the Harpeth by name. For two miles southward was a nearly flat, open plain, extending to a range of low hills through which passed the turnpike by which we had come. From some bluffs on the precipitous north bank of the river was a commanding overlook of all this open ground, which, although more than a mile away, seemed almost at one's feet. On this elevated ground the wagon-train had been parked and General Schofield had stationed himself—the former for security, the latter for outlook. Both were guarded by General Wood's infantry division, of which my brigade was a part. "We are in beautiful luck," said a member of the division staff. With some prevision of what was to come and a lively recollection of the nervous strain of helpless observation, I did not think it luck. In the activity of battle

one does not feel one's hair going gray with vicissitudes of emotion.

For some reason to the writer unknown General Schofield had brought along with him General D. S. Stanley, who commanded two of his divisions—ours and another, which was not “in luck.” In the ensuing battle, when this excellent officer could stand the strain no longer, he bolted across the bridge like a shot and found relief in the hell below, where he was promptly tumbled out of the saddle by a bullet.

Our line, with its reserve brigades, was about a mile and a half long, both flanks on the river, above and below the town—a mere bridge-head. It did not look a very formidable obstacle to the march of an army of more than forty thousand men. In a more tranquil temper than his failure at Spring Hill had put him into Hood would probably have passed around our left and turned us out with ease—which would justly have entitled him to the Humane Society's great gold medal. Apparently that was not his day for saving life.

About the middle of the afternoon our field-glasses picked up the Confederate head-of-column emerging from the range of hills previously mentioned, where it is cut by the Columbia road. But—ominous circumstance!—it did not come on. It turned to its left, at a right angle, moving along the base of the hills, parallel to our line. Other heads-of-column came through other gaps and over the crests farther along, impudently deploying on the level ground with a spectacular display of flags

and glitter of arms. I do not remember that they were molested, even by the guns of General Wagner, who had been foolishly posted with two small brigades across the turnpike, a half-mile in our front, where he was needless for appraisal and powerless for resistance. My recollection is that our fellows down there in their shallow trenches noted these portentous dispositions without the least manifestation of incivility. As a matter of fact, many of them were permitted by their compassionate officers to sleep. And truly it was good weather for that: sleep was in the very atmosphere. The sun burned crimson in a gray-blue sky through a delicate Indian-summer haze, as beautiful as a day-dream in paradise. If one had been given to moralizing one might have found material a-plenty for homilies in the contrast between that peaceful autumn afternoon and the bloody business that it had in hand. If any good chaplain failed to "improve the occasion" let us hope that he lived to lament in sack-cloth-of-gold and ashes-of-roses his intellectual unthrif.

The putting of that army into battle shape—its change from columns into lines—could not have occupied more than an hour or two, yet it seemed an eternity. Its leisurely evolutions were irritating, but at last it moved forward with atoning rapidity and the fight was on. First, the storm struck Wagner's isolated brigades, which, vanishing in fire and smoke, instantly reappeared as a confused mass of fugitives inextricably intermingled with their pursuers. They had not stayed the

advance a moment, and as might have been foreseen were now a peril to the main line, which could protect itself only by the slaughter of its friends. To the right and left, however, our guns got into play, and simultaneously a furious infantry fire broke out along the entire front, the paralyzed center excepted. But nothing could stay those gallant rebels from a hand-to-hand encounter with bayonet and butt, and it was accorded to them with hearty good-will.

Meantime Wagner's conquerors were pouring across the breastwork like water over a dam. The guns that had spared the fugitives had now no time to fire; their infantry supports gave way and for a space of more than two hundred yards in the very center of our line the assailants, mad with exultation, had everything their own way. From the right and the left their gray masses converged into the gap, pushed through, and then, spreading, turned our men out of the works so hardly held against the attack in their front. From our viewpoint on the bluff we could mark the constant widening of the gap, the steady encroachment of that blazing and smoking mass against its disordered opposition.

"It is all up with us," said Captain Dawson, of Wood's staff; "I am going to have a quiet smoke."

I do not doubt that he supposed himself to have borne the heat and burden of the strife. In the midst of his preparations for a smoke he paused and looked again—a new tumult of musketry had broken loose. Colonel Emer-

son Opdycke had rushed his reserve brigade into the *melee* and was bitterly disputing the Confederate advantage. Other fresh regiments joined in the countercharge, commanderless groups of retreating men returned to their work, and there ensued a hand-to-hand contest of incredible fury. Two long, irregular, mutable and tumultuous blurs of color were consuming each other's edge along the line of contact. Such devil's work does not last long, and we had the great joy to see it ending, not as it began, but "more nearly to the heart's desire." Slowly the mobile blur moved away from the town, and presently the gray half of it dissolved into its elemental units, all in slow recession. The retaken guns in the embrasures pushed up towering clouds of white smoke; to east and to west along the reoccupied parapet ran a line of misty red till the spitfire crest was without a break from flank to flank. Probably there was some Yankee cheering, as doubtless there had been the "rebel yell," but my memory recalls neither. There are many battles in a war, and many incidents in a battle: one does not recollect everything. Possibly I have not a retentive ear.

While this lively work had been doing in the center, there had been no lack of diligence elsewhere, and now all were as busy as bees. I have read of many "successive attacks"—"charge after charge"—but I think the only assaults after the first were those of the second Confederate lines and possibly some of the reserves; certainly there were no visible abatement and renewal of effort anywhere except

where the men who had been pushed out of the works backward tried to re-enter. And all the time there was fighting.

After resetting their line the victors could not clear their front, for the baffled assailants would not desist. All over the open country in their rear, clear back to the base of the hills, drifted the wreck of battle, the wounded that were able to walk; and through the receding throng pushed forward, here and there, horsemen with orders and footmen whom we knew to be bearing ammunition. There were no wagons, no caissons: the enemy was not using, and could not use, his artillery. Along the line of fire we could see, dimly in the smoke, mounted officers, singly and in small groups, attempting to force their horses across the slight parapet, but all went down. Of this devoted band was the gallant General Adams, whose body was found upon the slope, and whose animal's forefeet were actually inside the crest. General Cleburne lay a few paces farther out, and five or six other general officers sprawled elsewhere. It was a great day for Confederates in the line of promotion.

For many minutes at a time broad spaces of battle were veiled in smoke. Of what might be occurring there conjecture gave a terrifying report. In a visible peril observation is a kind of defense; against the unseen we lift a trembling hand. Always from these regions of obscurity we expected the worst, but always the lifted cloud revealed an unaltered situation.

The assailants began to give way. There was no general retreat; at many points the

fight continued, with lessening ferocity and lengthening range, well into the night. It became an affair of twinkling musketry and broad flares of artillery; then it sank to silence in the dark.

Under orders to continue his retreat, Schofield could now do so unmolested: Hood had suffered so terrible a loss in life and *morale* that he was in no condition for effective pursuit. As at Spring Hill, daybreak found us on the road with all our impedimenta except some of our wounded, and that night we encamped under the protecting guns of Thomas, at Nashville. Our gallant enemy audaciously followed, and fortified himself within rifle-reach, where he remained for two weeks without firing a gun and was then destroyed.

Foreword

In November, 1927, in the course of a business trip to Chicago I met Emanuel Haldeman-Julius at the Palmer House. No sooner had we ordered our orange juice (at breakfast) or chicken gumbo soup (at dinner) than we began talking shop. In the publishing business this is inevitable. I have talked shop to book publishers, magazine and newspaper publishers, but have never heard anything quite as unusual—to me—as the stories Haldeman-Julius told of his career among the Little Blue Books.

From the mass-production, big-business point of view I was intensely interested to hear how it was possible to manufacture and market a book (even a little blue one) for five cents. From the advertiser's standpoint I was charmed with his candor in giving the exact figures of his results in advertising in the New York *Times*, *Liberty* and the *Nation*. I was as astonished with the results some of these publications produced as I was amused at the magazines refusing to run his advertising—a list which has now dwindled down to three.

But most interesting of all was the psychology of Haldeman-Julius's customers, the American people. In a country where *The Saturday Evening Post* has the greatest mass appeal I was surprised to hear that sex seems to interest the public more than any other one subject. Secondly, the

FOREWORD

public wanted self help: how to order chicken à la King, how to learn Spanish, how to play the saxophone, how to spell correctly. I learned that in California books on the occult have a tremendous vogue, that love interest in literature is most profitable in the solid south.

Here, then, was a man who has sold a hundred million five cent books—not via wholesalers and retailers but direct to the American public. He has corresponded directly with his customers, manufactured their books, accepted their nickels, shipped them packages; he has heard their complaints and knows what they want and how they want it. It seemed to me that if any one man had conducted a laboratory of American intellectual taste, Haldeman-Julius was it.

At our fourth luncheon, therefore, I said to Haldeman-Julius: "Why not tell the story of these first hundred million?" He agreed to the suggestion, but wondered whether a story which would necessarily be extremely personal and commercial—in the sense that it would be the story of building up a business enterprise—might not be regarded as propaganda rather than a book on the anatomy of American taste such as I had in mind. To which I replied: "Tell the whole story anyway. Tell how you edit the books, change their titles to appeal to the public, manufacture them, ship them, advertise them, and even why you say: 'No more copies sold after Midnight May 31!'"

So here is the story. To me it is as enthralling an account as it was in Chicago. If it seems commercial, remember, reader, that his publishers asked him to tell the whole

FOREWORD

story, to omit no details. And to answer Mr. Haldeman-Julius's query about whether this book might be regarded as an ad for the Little Blue Books:—if, after considering that this is a \$2.50 book “advertising a five cent one”, the impression still exists that this book is an ad, then so be it: another phenomenon of public psychology!

R. L. S.

New York, June 19th, 1928.

THE FIRST HUNDRED MILLION

NINE years ago E. Haldeman-Julius began a publishing career with a reprint of *The Rubaiyat*. Today this series includes 1260 titles, and over 100,000,000 of these Little Blue Books have been sold.

Here is the story behind The Little Blue Books. It is more than a chronicle of the success of an idea. It is a commentary on the intellectual and emotional anatomy of the American people en masse.

What do people read when they have their choice for a nickel? What is their

attitude toward sex? (Do they want to be debunked?) How popular are books on free thought? Self-education? Occultism?

The people of America have recorded their answers to these questions and many others in the form of 100,000,000 book-ballots. Haldeman-Julius' story of a vast publishing venture chronicle their startling replies.

CHAPTER I

WHAT AMERICA WANTS TO READ

Why the Little Blue Books Tell a Vital Story

MY nine years of publishing the series known throughout the world as the Little Blue Books would be, perhaps, interesting as a publishing achievement—but to a limited group, assuredly. It is, after all, more marvelous to manufacture a watch than it is to print a five-cent book; it is even more marvelous to make a fine watch than it is to print and bind an expensive book. It is not that I have produced books in mass quantities at a standardized low price which makes my Little Blue Books of vital significance. That is business, and mechanics, and salesmanship—but the world is full of more spectacular business, more complicated mechanics, and more dynamic salesmanship.

The business side of my Little Blue Book experience, and the mechanical and selling side are interesting because the Little Blue Books are really of vital meaning. They tell a story which no other series of books, or no other books published anywhere, can tell. They tell what America wants to read.

There would be no reason for my telling the story of the Little Blue Books if it were not because of this realiza-

tion of the idea which brought the series into existence. I thought that it might be possible to put books within the reach of everyone, rich or poor, though mostly poor and grading up to those not so poor but by no means wealthy—books that they would want, and which they could choose for the sake of the books alone. By that I mean that I dreamed of publishing books in such quantities that I could sell them at a price which would put all books on the same level. No book would be chosen instead of another, that is to say, because of any difference in the price. And the price would be so low that no books besides mine would be chosen because of any lower price.

To be more explicit, the Little Blue Books, as they now exist, represent a democracy of literature. All Little Blue Books are born equal, and all have an equal chance to succeed and remain permanently in the series. No single Little Blue Book is given more advertising than any other book; every endeavor is made to sell each Little Blue Book if it is at all possible to make its title attractive or to classify it where the title may catch the eye of a reader. There can never be any favoritism shown any Little Blue Book because of more attractive binding or more desirable size—all are uniformly bound, and all are exactly the same size ($3\frac{1}{2}$ x 5 inches). One Little Blue Book fits as easily into the pocket as any other. The type in all is the same (eight point), with the exception of such special texts as dictionaries.

No Little Blue Book can be said to have any special advantage, then. No Little Blue Book suffers any handicap

peculiar to itself—unless it be the reading matter in it, which is what I am getting to in my statement that the Little Blue Books tell a vital and astonishingly important story about American readers and their tastes. To be sure, Little Blue Books do vary in length—from 32 up to 128 pages, with most of them running to 64 pages—but the number of pages is not given for any Little Blue Book in any advertisement or catalogue, so even this cannot prejudice any bargain buyer for or against any book in the list. This length is governed entirely by the nature of the text—one of Shakespeare's plays may require 128 pages, while a collection of Poe's tales may take only 64 pages.

My contention is that Little Blue Books are bought for one reason only, and that this reason is what makes the story of the Little Blue Books a commentary on the psychology of American readers in general. This reason is that the book is wanted because the buyer wishes to read it. You may see nothing startling or revolutionary in this assertion, and you may even insist that all books are bought to be read. I cannot agree, however, to so sweeping a generalization as this last. All books are not bought to be read, though possibly most of them are. Some—and you will have to admit it—are bought because it is considered *élite* to own them, or because they match the parlor decoration scheme, or as gifts for friends or relatives, especially at Christmas. All publishers play heavily for Christmas business—when there is no satisfactory assurance that books bought for gifts ever will be read. No one buys Little Blue

Books for Christmas gifts—or perhaps I had better say few do—because they are.

But people have no objection to buying five-cent books for themselves, since they want them for only one thing—to read. I can reasonably state that more than 99% of the Little Blue Books sold direct to the purchaser are sold to him because he wants to read them. There cannot be any fraction of error worth considering in my statistics of what American readers buy when they have a wide range of choice with no inducement except the titles and authors of the books.

But, some may object, is there not a thrill, or an inner sense of satisfaction, in being able to buy books at such a low price as five cents each? Perhaps, but this is in addition to the desire to read the books bought. Of course, it is an important part of Little Blue Book advertising to stress the five-cent price, and to indicate that a Little Blue Book is a fat nickel's worth—average 64 pages, 15,000 words of accurate, authentic text, and so on. It sounds compelling to say that you can have your pick of 1,260 different titles—any 20 books for a dollar, sent postpaid to any address in the world. But this serves to attract attention to the advertisement—to the books themselves. If the reader whose attention was attracted in this way found no titles listed that interested him—he would not buy any books, even at five cents apiece, simply to get a thrill or to satisfy an inner craving for taking advantage of a bargain offer.

People do not buy books because they are bargains—unless they have some hope that they will find time to read

them. On the contrary, booklovers and collectors with spare funds often buy books because they are expensive—and not necessarily because they want to read them.

There is far less inducement for people to buy Little Blue Books to preserve them, in fact, than there is for them to buy them to read. In this respect Little Blue Books are like newspapers and magazines. A man does not mind losing or mislaying a Little Blue Book, because it is readily replaceable at almost no expense. Or I'll put the matter another way—since there is no need, and no special inducement, to be very careful of a Little Blue Book, the man who buys one reads it almost at once—before it is, indeed, mislaid or lost.

On January 1, 1928, which is the date on which the facts in this book are based, there were 1,260 different titles in the Little Blue Books—all offered, irrespective of their nature or length, at the same price. A purchaser's choice is limited only to 20 books, the minimum he must order at one time. He can order as many more than 20 as he may care to, all at the same price.

From 1,260 books anyone could select 20 or more that he would like to read. This series comprises probably the most representative literary assembly ever published at a standardized price in a uniform format. Not only works of literature, not only standard classics, not only the recognized forms of literary stock in trade such as biography, history, and the like—but the Bible and books against the Bible, books of self-education, love and passion, medical works—in short, something of everything. If there is any

craving the American reader has for a particular kind of book, he is practically certain to find a way to express it in making his selection of Little Blue Books.

There is nothing that can compare with the Little Blue Books as a test of reading tastes and desires. I use "desires" deliberately in this discussion, because it is evident that some readers of certain Little Blue Books are not satisfied by them. Their purchase of them indicates a desire, a craving, even perhaps a need; some of the Little Blue Books, probably most of them, will satisfy the desire that brings about their purchase. Some—such as *Modern Aspects of Birth Control*—cannot satisfy all of the desire, or the need, that makes the buyer order them. Obviously, the large sale of books with "birth control" in the title indicates both a desire and a need for "birth control information," something which is not included in the title and which most certainly is not in the books, for it is, unfortunately, against the law to mail such information. I am of the opinion that this widespread interest in contraception—even in discussions of it pro and con, as the sales of the *Debate on Birth Control* indicate—will eventually bring about a revision of the law in this matter. For it is a healthy sign—and that the sign is expressed by orders for Little Blue Books shows once more the vital significance of this series as an epitome of public taste.

The Little Blue Books are a weathercock which shows which way the breezes of public taste are blowing; or they are a thermometer which registers the temperature of the American reader's blood—a virile and healthy tempera-

ture, I know. To a large extent the titles that are now in the Little Blue Book series are representative and indicative of American reading tastes—otherwise they would not be there; other titles would have replaced them ere this. If readers—as, for example, those of *Liberty*, as pointed out under “A Comparison of Advertising Mediums” (Chapter XVI)—express a decided interest in Passion, and buy all books listed under this classification almost regardless of title, that is not my fault. I publish both books that survey human passions artistically and present them in the world’s best literature, and scientific books that discuss human passions calmly and sanely—because readers want them. I stop only at printing anything which misrepresents or falsifies human emotions—I do not tolerate “literature” which sensationalizes or sugar-coats passions for the sake of intoxicating gullible readers with inflamed imaginations. I do call passion by passion’s name, and for that seeming offense I am sometimes accused of pandering to “low” desires. I scorn the accusation. If the world’s best artists are wrong, then I am content to be wrong with them. But I stand by them—I believe they are nearer right than lesser men can be.

Whatever readers have expressed a desire for, I have given them—saving only what I consider trash. Perhaps there are readers who prefer such a palpably false and grossly exaggerated concoction as *Three Weeks* to a love story that is truly representative of human nature, such as one of the tales of Guy de Maupassant. Elinor Glyn, at any rate, has won a reputation as an authority on love.

But I hardly think that Madame Glyn or even Beatrice Fairfax, their popularity notwithstanding, can come so near telling the truth about love—not, indeed, what many people would like to believe about love, but what love *is*—as, for example, Montaigne, or Stendhal, or Balzac, or even Emerson.

It cannot be said that the Little Blue Books do not represent American reading tastes and desires on any supposed ground that they are filled with “propaganda.” Such accusations have been aimed at the freethought books I have included in the series. People say I include such books because I am a hopelessly “lost” atheist, and that I want to make everyone else an atheist too. But I give my honest word that I would not publish such books if I could not sell them—as you will see by the statistics in Chapter V, “Religion Versus Freethought.” More than this, if I publish a book called *The Truth About William Jennings Bryan*, I also publish Bryan’s *Prince of Peace*, without critical modification or comment, in the same series and at the same price. People may have their choice; if they prefer skepticism and rationalism to sugary idealism or hypocritical superstition, I repeat that it is not my fault—though I am glad of it!

I have named only one example. It may be worth while to settle the question with two or three more. Take, then, Joseph McCabe’s scathing arraignment of the Jesuits in his *The Jesuits: Religious Rogues*. Joseph McCabe is an apostate, I am reminded, and full of the rancor of rebellion; I disagree that this is a just objection to his work,

but suppose the viewpoint *is* that of a man free of religious influence? I give you the chance to compare McCabe's view of Loyola, who founded the Jesuits, with the view of a religionist, Henry C. Vedder, whose book entitled *Loyola: Founder of the Jesuits* is available to all Little Blue Book readers—at the same price as McCabe's book, and on the same terms. One need only take his choice; the statistics tell the story of this choice in Chapter V. Take even the Bible—I have the *Essence of the Bible*, Little Blue Book editions of Mark and of Luke, even the Sermon on the Mount. Here are four religious books entirely free from criticism—you can buy them if you want them. If you object to Joseph McCabe's *Did Jesus Ever Live?*—why, my friend, you can buy instead Renan's *Life of Jesus*, in the same form and at the same price.

It is the readers of America who make the final choice, not I. Though the Little Blue Books contained only 1,260 different titles the first of January, 1928, the actual number of different titles that have at one time or other been in print far exceeds this. Nearly 2,000 different books have been offered in this pocket series to the American reading public during the past nine years. If nearly 40% of these failed to find a sufficiently large audience, it is because people did not want to read them. The story of many of these failures is told in "The Morgue" (Chapter X). In fact, I have frequently not been content to let a book fail. I have done everything possible to make people want to read it—I have conducted a literary and editorial hospital expressly for the purpose of making the American

public want to read something they showed no signs of wanting to read. The story of this is in "The Hospital" (Chapter VIII).

You might liken a Little Blue Book order blank—one of those large blanks with all the numbers printed, so that buyers can circle the numbers of the books they want—to a voting sheet, a literary ballot. These ballots have been sent out from Girard by the million; thousands of them come back every week. On these ballots the people of America indicate with painstaking exactness the books they want most from the large list offered them. The ballots also show that the readers take the trouble to examine the catalogues and lists from beginning to end. I have never issued a catalogue containing any book which did not sell *some copies*. There never was a Little Blue Book completely overlooked. Every candidate gets at least a few votes.

There is no possibility that these ballots have been falsified. If I had sent out an actual ballot, with lists of 1,000 different books, and had said: "Here is a list of 1,000 books. I am curious to know the books you'd like most to read if you had the time and could afford to buy them. I want this information to put in a book about the reading tastes of the American public. Please check off the titles that appeal to you—select from 20 to 50 out of the 1,000—and mail the ballot back to me at once." If I had done this, and if readers of books had voted, as I asked them to, for the books they would like most to read, the results might be questioned. One could wonder, then, whether peo-

ple—as they often do—voted for the Bible merely because it was expected of them; whether they avoided “sex” because they did not wish to seem too naughty; whether they showed a profound interest in philosophy in order to make America stand high scholastically; and so on. One could wonder, indeed, if the figures had been obtained in such a way.

But nothing of this kind was done. Instead of offering a voting list, I offered the *books themselves*. I offered them *for sale*. The people have had to examine the list with care, and they have had to *pay for every vote they made*. No man could vote for a book just because he wanted to appear righteous and pure and all that—unless he was willing to *buy the book*. He knew, furthermore, that if he bought it, it would be of no use to him if he did not want to read it. Still further, no buyer of Little Blue Books knew that he was voting—he had no idea whatever that he was contributing to a set of statistics, and even if he had it would probably have made no difference. There is a vast gulf between having statistics drawn from voluntary acts, and compiling the statistics by securing them as such. Every Little Blue Book buyer has been uninfluenced by anything except his wish to read; he has not bothered about selecting books for appearance’s sake, but has picked them out to satisfy his own curiosity and his own peculiar craving.

That is why the statistics of the sales of Little Blue Books are vital; that is why the Little Blue Books tell a story that no other publisher’s list can tell. These figures,

with all the meaning that they hold, are the backbone of my story of the First Hundred Million. Without these figures there would be no Little Blue Books, and no story. But this analysis of the First Hundred Million shows some astonishing things about the American reading public—things which some people will want to shut their eyes to, perhaps, but facts which others will welcome gladly—and this analysis, which has cost me nine years of experimentation and constant endeavor, I am giving here freely and honestly, without evasion and without any concealment whatever.

The actual figures which tell the story of what Americans want to read will follow in the next five chapters. First it was necessary for me to show why these figures tell such a story, why it is a story that strikes deep down into the roots of American character and why all of the hope for a future American culture depends upon it. The story gives me new zest—it is a story that is most encouraging to any progressively-minded person, and it is a story so optimistic in its general trend that I am convinced none of our literary and critical sages has ever suspected the unquestionable truth of its conclusions.

CHAPTER II

ARE AMERICANS AFRAID OF SEX?

How the Little Blue Books Answer This Important Question

IT is not new to ask the question which is the title of this chapter. We are told, on the one hand, by self-righteous guardians of the public morals, that sex is a fearsome—even a loathsome—thing. We are given to understand, if we are to believe what we are told, that sex is something to be afraid of, that it should be shrouded in obscurity and carefully rendered harmless by being kept locked in secrecy. We are told, on the other hand, by progressively-minded leaders, that sex needs more light thrown upon it, and that it is desirable for people not to be afraid to learn the truth about sex.

Are Americans afraid of sex? I have definite evidence that they are not afraid of it as a subject to read about in books, for the Little Blue Books contain authentic information on sexual hygiene, written by the best authorities, and they are sold far and wide in quantities ranging from 50,000 to 100,000 copies *per year*. This will hardly permit me to believe that American readers as a whole are afraid of the subject of sex.

In support of my contention that American readers are

strongly interested in sex I am going to give actual sales figures. But first I must explain what these figures represent, so that there will be a clear understanding as to their meaning. I know exactly how many copies of each of the 1,260 different Little Blue Books were sold during 1927, but I cannot use these figures, just as they are, for purposes of comparison. I cannot use them because some of these books were not on sale during all twelve months of 1927—their sales figures, then, would perhaps be less than those for some of the books on sale throughout the year. Further, it would not be right to increase this figure by the right proportion to put it on a par with other figures, for the total would not indicate how the book compared with others when the entire list was advertised and how it may have been influenced by other similar titles placed in competition with it.

To be more specific, if I advertised a list of 100 selected books on sexual hygiene and pushed these 100 books ahead of all others, there would be a natural reason for these 100 titles to be excellent sellers. I could not contend, in such case, that the 100 sex books so advertised indicate a *preference* on the part of American readers. My data are of value only when I can show that *if given his choice* the average reader will pick out a book dealing with sex or love sooner than one on any other subject whatever. And my data become more significant than ever when I point out that the figures are based on an average choice of from 20 to 25 books selected by each person from an assortment of 1,260 different titles.

ARE AMERICANS AFRAID OF SEX?

If a person picks out only 20 books from over 1,000 possible choices, it is fairly safe to assume that he picks out the 20 books he wants most. That is what Little Blue Book readers have done. The figures given in this and the immediately following four chapters are based only on returns from advertising or catalogues listing the complete series of 1,260 Little Blue Books as they were on January 1, 1928. These figures are 1927 sales totals. They were obtained from an analysis of 1,156 orders aggregating 25,000 books. These orders were selected at random, averaging about 30% women and 70% men, and were presumably from readers of all ages, from the teens to the eighties, with the majority in the twenties and thirties. Of the 1,156 orders analyzed, slightly over half were from readers of newspapers—readers, probably, who are only infrequently readers of *books*. The other half were orders from the complete catalogue of Little Blue Books used during 1927.

For these reasons, the figures I give represent accurately what American readers want to read if they have the chance. To make the figures more expressive, as well as impressive, and to make it unnecessary for the reader of this book to perform mental calculations in order to understand their significance, the totals have been converted into the corresponding *annual* sales figures which the distribution of the orders for 25,000 books would represent. By this I mean that book sales are usually thought of in terms of the number of copies sold annually. I base the success of a Little Blue Book on an annual sale of 10,000

copies or more. By converting these figures into round thousands per year, I make them more understandable, and make the comparison no less arithmetical if more idealistic.

The following example may help you to understand exactly how it has been done. Mrs. Margaret Sanger's *What Every Girl Should Know* sold 83 copies in the 1,156 orders for 25,000 books. This is very good, but it might not appear so to the average person unless I convert this figure into something intelligible. I know, from careful investigation, that if I had increased the orders analyzed to twice the number, or aggregating 50,000 books, this book of Mrs. Sanger's would have sold approximately twice as many in orders for 50,000 books as it did in orders for 25,000, or about 165 copies. The percentage of error is extremely small; and the percentage of variability is too slight to bother with, I have found. In orders for 100,000 books the number of copies of Mrs. Sanger's book would have been about four times as many, or 330. In orders for a million Little Blue Books, 3,300 copies of *What Every Girl Should Know* would be sold, if the orders were received from advertisements of the *complete* list, so that this book would maintain its ratio or relative popularity with regard to other titles advertised at the same time.

Since I sold 20,700,000 Little Blue Books during 1927, the annual figure for Mrs. Sanger's book, on the basis of 83 copies in every 25,000 books sold, is 66,000 copies. This annual figure would have been the actual sales total for this book for 1927 if my advertising had been confined

to complete lists only. But I frequently advertise selected lists of from 300 to 600 or 800 best sellers. That is why I am keeping these figures uniform by basing them on sales from the complete list only. Idealistically, the figures I give in this chapter and the four immediately following represent the annual popularity of these books when the readers are given their choice and pick freely from 1,260 different titles on a wide variety of subjects.

I have eight books of the "what you should know" class. By referring to sex information as what one should know, I am guilty of euphemism. I am well aware of this, but I recognize that there is still some embarrassment for many people when this subject touches them in any way. They are not to be blamed for it. If a young lady would rather buy *What Every Young Woman Should Know*, instead of a title like *Sex Facts for Girls*, I am content that she should. The facts are in the book, no matter what the title, and as long as the title indicates the nature of the book accurately, though it is a euphemism, it is all right. We can speak in riddles if the riddles are universally understood.

That these "what you should know" titles are thoroughly understood is shown by the sales of the books. Here are the eight titles with their annual figures:

What Married Women Should Know	112,000 copies
What Married Men Should Know	97,500 copies
What Every Young Man Should Know	95,000 copies
What Every Young Woman Should Know	90,500 copies
What Every Girl Should Know	66,000 copies
What Every Boy Should Know	37,500 copies

THE FIRST HUNDRED MILLION

What Women Past Forty Should Know	34,000 copies
What Expectant Mothers Should Know	25,500 copies

This indicates, certainly, that there are over 100,000 potential readers, per year, of a book of authentic sex information available in the American public of today, for 112,000 readers were found for William J. Fielding's *What Married Women Should Know*. All of these were not women, however, and certainly not all of them were married women. That does not matter, however, though it seems to indicate that the usual purchaser of these books wants all the facts, and not only those which might be doled out to boys. The books, as a matter of record, contain almost the same information, if one is compared with another. The difference lies in their approach to the reader, based upon the supposed preference of the reader for information suited to him or her.

To express myself succinctly, I see no reason why a woman should wait until she is married to discover what a married woman should know about the facts of life. Apparently, the women who read the Little Blue Books agree with me; and the men, also. Similarly, there is ample justification for every healthy young man or woman to understand the facts that every expectant mother should know, long before the young man expects to be a father or the young woman looks forward to being a mother. This phase of sexual hygiene is not nearly so popular as the others, just because it is so particular or specialized; but many of those 25,500 books went to people who

ARE AMERICANS AFRAID OF SEX?

sought the information because of a healthy and justifiable wish to know.

So much for the euphemistic titles. Let us see what the more specific—what some people would call bolder—titles show:

Woman's Sexual Life	97,000 copies
Man's Sexual Life	78,500 copies
The Physiology of Sex Life	65,500 copies
The Common Sense of Sex	63,000 copies
Freud on Sleep and Sexual Dreams	61,000 copies
Homosexual Life	54,500 copies
Womanhood: Facts of Life for Women	52,500 copies
Manhood: Facts of Life for Men	52,000 copies
Confidential Chats with Wives	47,000 copies
Confidential Chats with Husbands	29,500 copies
The Determination of Sex	27,500 copies
The Child's Sexual Life	21,500 copies

I think that the sales record for James Oppenheim's *Common Sense of Sex* (63,000) is clear evidence of the healthy attitude people are taking toward this subject. Surely no one would expect anything in a book of "common sense" except the facts! If it is sound information these people are after—and I am sure my figures indicate this—it is immensely encouraging. The outlook for future Americans, and for the much belied younger generation, looms considerably brighter in the light of these totals. The distribution of the list demonstrates beyond question a desire to have all the facts, and to understand the subject as a whole. American readers have reached the point where they are not interested in halfway measures; they want all

the facts, and they will get them if they are put within their reach.

Havelock Ellis has done more than any other single investigator to purge the modern atmosphere of the fog and mist that once hovered over sex. He is generously represented in the Little Blue Books, and the popularity of his work is gratifying, both to him and to me. Here are the figures:

Plain Talks with the Married	60,500 copies
The Love Rights of Women	39,000 copies
Four Essays on Sex	31,000 copies
Eugenics Explained	29,500 copies
Ellis and His Plea for Sane Sex Living	29,500 copies
Woman and the New Race	16,000 copies

The interest in eugenics is surprising, and encouraging. Half of these readers, remember, are the sometimes despised readers of daily newspapers. Yet they show a strong desire to find out about eugenics. This America of ours is not nearly so hopeless as some pessimists would have us believe.

Modern discussions of sexual problems are incomplete without the arguments for and against birth control. It is illegal to publish or distribute contraceptive information, so, generally speaking, the popularity of books which discuss birth control indicates not only a desire for the information could it be obtained, but also a desire to know the why and wherefore, to know why birth control is or is not desirable. Here are the figures that tell the story:

Modern Aspects of Birth Control	73,000 copies
Debate on Birth Control	27,000 copies

ARE AMERICANS AFRAID OF SEX?

There is three times as much interest in a practical, unbiased discussion of the subject as there is in a debate on its morality. And yet the interest in a dispassionate debate is really amazing; it shows, at least, that there is a strong leaning toward threshing out the truth through open discussion pro and con.

The next phase of the question to be considered is the class of books which do not have the word "sex" in their titles, but which have to do with love. The word "love" may or may not be in the title, but the title implies that the book contains information about the subject. We are still in the realm of facts, remember; the books of fiction and poetry, which deal with sex and love in an imaginative way, are to be considered later.

Here are some of the more general titles which belong under the "love" classification, with their annual figures:

The Art of Kissing	60,500 copies
How to Love	52,500 copies
Psychology of Love and Hate	52,000 copies
What Is Love? (Montaigne)	28,500 copies
Hindu Book of Love (Kama Sutra)	28,000 copies
Psychology of the Affections	22,500 copies
The Art of Courtship	17,500 copies

It is to be observed that, with the exception of the last title listed above, the figures are still quite large, and compare favorably with the books in which the word "sex" is dominant in the titles. As long as the subject keeps to broad and universal lines, which is to say as long as it has wide appeal, it is in demand. Though it does seem that fewer people are interested in intelligent courtship than one would

expect; possibly the lower figure for this book is due to the fact that "courtship" is a word belonging largely to a bygone day, and it may suggest old-fashioned "Victorian" ideas. It might be a good idea to change that title to "How to Choose a Mate."

For purposes of comparison, and for the sake of making this discussion of sex books as complete and revealing as possible, I want to put in here the figures for the more specialized sex books. These are along more particular or more abstract lines than those already listed. These are the figures:

Catholicism and Sex	65,000 copies
Sex Crimes and American Law	39,000 copies
Facts about Sex Rejuvenation	37,500 copies
Phallic (Sex) Elements in Religion	36,000 copies
Sex Obsessions of Saints and Mystics	35,000 copies
Modern Sex Morality	34,500 copies
America and the Sex Impulse	28,000 copies
The Evolution of Sex	25,000 copies
Sex Symbolism	24,000 copies
Sex in Psycho-Analysis	21,500 copies
Genetics for Beginners	21,000 copies

There is clear evidence of a desire to survey the subject from all angles. But it is noticeable that the figures are becoming more uniform; the only sensational seller in this group is *Catholicism and Sex*, and that is undoubtedly because of the linking of Catholicism and sex. It becomes more and more evident that it will be difficult to find a poor seller if the book tells anything about love or sex. Yet I must point out that these books are thoroughly reliable, and state the facts as facts. There is no fringe of sensationalism

ARE AMERICANS AFRAID OF SEX?

in the books, and the readers know it. All of these books were not sold to one reader at one time; he bought some, read them, and came back for more. Readers like publishers to print facts, without glamour and also without evasion.

For a moment, now, I want to turn to the historical aspect of sex. I refer particularly to the series of Little Blue Books giving the history of prostitution. This subject is frequently avoided by the avowedly moral because they seem to think that to mention it will increase its existence. But I am convinced that the subject, important as it unquestionably is, deserves as honest treatment as any other phase of the human or social scheme. It is a social problem, and has been for centuries, and it needs elucidation and discussion as much as religion, or prohibition, or capitalism. These figures tell their own story:

Prostitution in the Modern World	129,500 copies
Prostitution in the Ancient World	84,500 copies
Prostitution in the Medieval World	73,000 copies
Sex Life in Greece and Rome	56,000 copies
Mistresses of Today	52,500 copies
Women Who Have Lived for Love	24,000 copies
The Evolution of Marriage	20,000 copies

It is not surprising that more interest is shown in ancient times and in modern times than in medieval days. I am a little amused, because I think the interest in antiquity is due to the fact that people fancy the ancients were very wicked—much more wicked, indeed, than humanity ever was before or has been since. It will do them no harm, these readers of Little Blue Books, to find out the truth of the

matter. As Joseph McCabe relates, he was once asked to write a book called *The Empresses of Rome*, and the publisher was much disappointed to find that it contained so little real wickedness and such a small amount of flagrant immorality. The book discussing prostitution, from the modern standpoint, is one of the most popular titles in the list. It has some close competitors, so it is not quite permissible to say that it is *the* best.

What about marriage? Marriage is the social sanction the law gives to the existence of sex in human affairs. It is interesting to see how the people of America buy books that discuss the various aspects of marriage. The figures are significant:

Why I Believe in Companionate Marriage. (Marcel Haldeman-Julius)	64,000 copies
Judge Ben B. Lindsey on Companionate Marriage	60,500 copies
Beginning Married Life Right	52,000 copies
Marriage and Morals in Soviet Russia (Anna Louise Strong)	36,000 copies
How to Be Happy Though Married	35,000 copies
How to Avoid Marital Discords	27,000 copies
U. S. Marriage and Divorce Laws	18,500 copies
Marriage vs. Divorce (Debate)	9,000 copies

The emphasis is decidedly on finding out how to improve existing conditions. The interest in divorce as opposed to marriage is very slight. Note the strong desire to find out how to better the *status quo*, however, as shown by the wish to avoid marital discords and the desire to be happy even if married. There is no sound evidence that these people wish to abandon marriage or have any inclination to seek divorce. They want to find out how to

make marriage a more livable institution, if I may put it that way. The powerful attraction of the subject of companionate marriage bears this out; it is not a wish to enter a loose and uncertain relationship, but a sincere urge to discover, if possible, ways to support and bolster up the existing institution by making it more conducive to happiness than it now is. A large number of people, indeed a gratifying number, want to know the laws; not, I am sure, so that they may circumvent them, but so that they may understand them and learn how they may make towards general happiness and goodwill.

So far the question has been considered from a mutual point of view—men and women being the principals in the drama of love and sex. Tradition has always emphasized, however, that woman is the main attraction in matters of the heart, and, as I have already said, men are by about three-fourths the greater buyers of Little Blue Books. The titles that have to do with women, then, ought to be good sellers, approaching the figures for the books on sex and love in general. We shall soon see.

First, I want to mention that old stage property the novelists of an older day always had ready and waiting for suitable scenes—the mystery that used to be a woman. This “mystery” has been stereotyped and filed away for reference long enough. The men of the world—of America, anyhow—want to unveil the mystery of woman. Certainly they are strongly interested in finding out all they can learn about her, and they seem to believe that facts are available and worth investigating. Again this shows not an idle

curiosity, but a wish to know the facts of human psychology—of feminine psychology because it so strongly influences the happiness of the male—in order the better to understand and appreciate life as it is. I continually stress this point, because I believe and shall always contend that a universal interest in sex is natural, and far more healthy than morbid. I cannot accept for a moment the notion that anyone who wants to find out about sex and love, as they really are, is anything but normal.

Women are well represented among the Little Blue Books. Here are some of the more popular titles, with their annual totals:

How to Know Women (Maeterlinck)	49,000 copies
Mental Differences Between Men and Women (Leo Markun)	36,000 copies
The Degradation of Woman (Joseph McCabe) ..	27,000 copies
Woman, the Eternal Primitive (William J. Fielding)	20,000 copies
The Subjection of Women (John Stuart Mill) ..	18,500 copies
Great Women of Antiquity (Clement Wood) ...	13,500 copies

Go back a few paragraphs and compare the figures of *Women Who Have Lived for Love* and *Mistresses of To-day*; also, with the discussion of Havelock Ellis, the figures for *Love Rights of Women* and *Women and the New Race*. There is a wide fluctuation in the figures, partly because the subjects, though all concerning women, are of a widely varying nature. There is an anxiety, still, about the mental differences between men and women, and there is beyond a doubt a strong desire to know women as they are. The interest is at its lowest ebb, you will notice, when

ARE AMERICANS AFRAID OF SEX?

particular women of antiquity, are discussed; the preference is for the general, the quest being for a key to human psychology as a whole. This hardly supports the old idea that no two women are like.

There is, too, an influential trend toward health and hygiene in matters of sex. American readers assuredly are not flinching before the pathological phases of the subject. They want to know the facts about sexual disorders, even though those facts may be unpleasant. The older custom of blinding one's self to the evils of the world is passing away. The newer attitude is to find out the truth and face it. Note these figures:

Facts About Venereal Diseases	41,500 copies
Facts About Syphilis	36,000 copies

These books were written by physicians who have the endorsement of the American Medical Association; as a matter of fact, Dr. William Allen Pusey, who wrote the book on syphilis, is recognized as a national authority on the disease. These are facts. There is no mincing of words here. Some editors would contend, however, that the public is not interested in disease—they would call it morbid, pessimistic, and all that. I know they would and readers of this book know they would. But here is evidence that cannot be disputed. American readers do not evade these facts because they are not pretty. They would, I am sure, resent any attempt to make the facts any less unpleasant than they are. They much prefer to know the whole truth.

The interest in sexual hygiene is further evidence of a strong desire to get more happiness out of life. There is

an earnest endeavor to avoid disease and pain. Look back and notice, too, the interest in *Facts About Sex Rejuvenation*, a book in which Dr. Morris Fishbein has no hesitancy in branding charlatanism for what it is and in which no false lure is held out where there are no facts to support a method or a treatment which claims to prolong youth. Even *Genetics for Beginners* is much in demand, supporting my general assertion that readers are interested in the betterment of conditions, whatever may help them to bring it about.

So much for the phases of sex and love discussed as matters of fact. As we turn more to the imaginative treatment of love as an emotion and sex as a passion, perhaps the interval may be bridged by glancing for a moment at books of love letters that represent man's endeavor always to win the love of the woman he has chosen for his attentions. Here again, the perpetual quest for happiness shows itself. Always and forever it is a growing enthusiasm for finding out how to win love—how to realize felicity, fleeting though it may be. These figures are full of meaning:

Love Letters of a Portuguese Nun	46,000 copies
How to Write Love Letters.....	23,000 copies
Love Letters of a Parisian Actress (Sarah Bernhardt)	21,500 copies
Love Letters of People of Genius.....	12,000 copies
Love Letters of Abelard and Heloise.....	10,000 copies

The interest in Abelard and Heloise is slight, I fancy, because people do not know who they were. Mere names mean little to the great mass of readers. They respond to

ARE AMERICANS AFRAID OF SEX?

subjects far more than to personalities behind the subject every time.

There are books, too, of comment on love—books of epigrams and maxims, and sententious remarks of one kind or other. These have their place, and they compel an interest because they deal with love:

Jokes About Married Life.....	45,500 copies
What Men Have Learned About Women..	36,000 copies
Best Jokes About Lovers.....	35,000 copies
Jokes About Kissing.....	33,000 copies
What French Women Have Learned About Love	29,000 copies
What Women Have Learned About Men...	21,500 copies
Love Code of a Parisian Actress (Bern- hardt)	17,500 copies
Love from Many Angles.....	15,000 copies
Maxims of Love (Stendhal).....	10,000 copies

Astonishing though it is, in some ways, the popularity of jokes about love, and especially about married life, is a good sign. A sense of humor will save many a serious situation from disaster. Then, too, the desire to laugh at ourselves is healthy—it will keep us sane, and at the same time promote the sum total of human happiness.

Before passing to the great love stories of the world's literature, I want to submit the totals for the books giving biographies of famous lovers:

Secret Memoirs of a French Royal Mistress (Pompadour)	37,500 copies
Cleopatra and Her Loves.....	35,000 copies
Casanova: History's Greatest Lover.....	31,000 copies
Pope Alexander VI and His Loves.....	25,500 copies
Madame du Barry: A King's Mistress.....	25,000 copies

THE FIRST HUNDRED MILLION

Love-Life of a Frenchwoman (George Sand)	22,500 copies
Catherine the Great and Her Lovers.....	20,000 copies
Wagner's Great Love Affair.....	18,500 copies
Cellini: Swordsman, Lover, etc.....	18,000 copies
Eleonora Duse and D'Annunzio.....	17,000 copies
Lord Nelson and Lady Hamilton.....	16,000 copies
Shelley and His Loves.....	16,000 copies
Lord Byron and His Loves.....	15,500 copies
Aucassin and Nicolette, Lovers.....	13,000 copies
Romance That Balzac Lived.....	10,500 copies

The interest varies in direct proportion to the degree of notoriety, as is, after all, only natural. Though the superficial impulse is to read something racy—which is a sublimation of a wish to live fully—the result of reading about the world's great lovers must indirectly contribute to human welfare and contentment. It is conceivable that people subconsciously recognize that great loves resulted either in tragedy or a limited and transient bliss. They yearn to find out how it all happened; it is the same sort of lesson that Shakespeare gives in *Romeo and Juliet*, where he shows us the tragedy of two young people who loved not wisely but too well.

Great love stories have an appeal from which nothing—no scruples of morality—can detract. I make no apology for including in the Little Blue Books the greatest stories by the masters of fiction whose work will stand the test of time. I would not mention even the word “apology” here, if it were not for the fact that people still, in some degree, feel somewhat secretive and whisper in hushed tones about the wicked French stories and “the daring tales of that Italian writer, Boccaccio,” and so on. I cannot regard these

ARE AMERICANS AFRAID OF SEX?

masterpieces of the world's literature otherwise than as true pictures of life as these geniuses saw it. As such, they are incomparable. They deserve wide popularity, and these Little Blue Book figures show that they are getting it:

Illicit Love, etc. (Boccaccio).....	81,000 copies
One of Cleopatra's Nights (Gautier).....	60,000 copies
Tales from Boccaccio's Decameron.....	57,000 copies
26 Men and a Girl (Gorki).....	57,000 copies
A French Prostitute's Sacrifice (Maupas- sant)	56,000 copies
French Tales of Passion and Cruelty.....	56,000 copies
Tales of Love and Life (Boccaccio).....	47,000 copies
Amorous Tales of the Monks.....	45,000 copies
Quest for a Blonde Mistress (Gautier)....	44,000 copies
A Bath, etc. (Zola).....	42,500 copies
Lustful King Enjoys Himself (Hugo)....	42,000 copies
Passion Stories of Many Hues (Gourmont)	41,500 copies
None Beneath the King Shall Enjoy This Woman (Zorrilla)	38,000 copies
Forbidden Love (Barry Pain).....	34,500 copies
Queer Night in Paris (Maupassant).....	34,500 copies
A Wife's Confession (Maupassant).....	34,000 copies
Mme. Tellier's Establishment (Maupassant)	33,500 copies
Night in Whitechapel (Maupassant).....	33,500 copies
Night Flirtation (Chekhov).....	33,000 copies
Love's Redemption (Tolstoy).....	32,000 copies
Love and Other Tales (Maupassant).....	29,000 copies
Mlle. Fifi, etc. (Maupassant)	25,500 copies
A Study of a Woman (Balzac).....	25,000 copies
Artist's Wife, etc. (Maupassant)	25,000 copies
The Falcon, etc. (Boccaccio).....	17,500 copies
Romeo and Juliet (Shakespeare).....	14,500 copies
Hedda Gabler (Ibsen).....	12,000 copies

The general conclusions to be drawn from this rather abbreviated list are that the tales of Guy de Maupassant are consistently popular; those of Émile Zola are about

on a par, the one listed being the best of the Little Blue Books of Zola's work; Honoré de Balzac is less popular than other French writers, though his books all sell well. The sale of Shakespeare's *Romeo and Juliet*, and the popularity of Ibsen's *Hedda Gabler*, are both gratifying; they do not come up to the others, but they are quite popular nevertheless. All of Boccaccio sells well, *The Falcon and Other Tales* being carried along on the crest of the popularity of the more sensational titles. Allow me to insist once more, right here, that the titles may sound sensational, but the text is the best that the world's literature affords. I do not consider the titles misleading, either; I hasten to defend the labeling of a story by what is really its right name. In Chapter VII, "Rejuvenating the Classics." I discuss titles more at length, but here I find it necessary to repeat that these books are of the very best work that the greatest writers have been able to do.

What of poetry? Poetry in general is difficult to sell to American readers. This is one literary commodity that comes pretty close to being a drug on the market. But those books of poems which deal with love and passion are fairly good sellers. American readers want their poetry, as well as their other reading, to have the full pulse of life:

The Harlot's House and Other Poems (Wilde)	41,000 copies
A Nun's Desire and Other Poems (John Davidson)	14,500 copies
Passionate Poems (Swinburne).....	14,500 copies
The Vampire and Other Poems (Kipling)	14,000 copies
Love Poems of John Keats.....	12,000 copies
Courtship of Miles Standish (Longfellow) ..	9,000 copies

ARE AMERICANS AFRAID OF SEX?

When it is remembered that these books were bought in these proportionate quantities when they were advertised, each in competition with 1,259 other books, the showing is not a bad one at all. Of general anthologies, the poems of Walt Whitman, Robert Burns, and Edgar Allan Poe are the only ones that approach the best of these in popularity. Kipling's *Mandalay* and *Gunga Din*, being so famous, are the only poems that surpass them.

American readers, it seems, are not afraid of sex. They recognize it as a fact, and they want to know more facts about it. The Little Blue Books have been a medium to impart facts—I have had numerous letters from readers who tell me that one of their greatest debts will always be to the books of sexual information they selected from the series of Little Blue Books—for it is information which can be depended upon as authentic, and thoroughly matter of fact in its intimate accord with life.

A Note on Censorship

There is one thing that the "sex titles" in the Little Blue Book series have always done—they have inspired censorship and taboo in the advertising offices of some of the country's leading periodicals. All Little Blue Books, it must be remembered, are entirely within the United States Postal Laws. They have to be—otherwise they could not be printed and sold. Entirely aside from whether these laws and regulations are just, the Little Blue Books conform to them. I can send them through the mails to anyone who

cares to buy them—if I can reach that purchaser with a list of what I have to sell. But some censorship boards, advising the advertising departments of periodicals like *Collier's*, the *N. Y. Times Book Review*, *Popular Science*, etc., do not wish me to tell their readers—not, at least, through their columns—that I have certain “sex books” for sale.

Censorship would be less irksome if it were consistent—or, indeed, if it were logical and sensible. But one righteous censorship board will ban a certain half dozen or so Little Blue Books: another board, supposed to be looking at the thing from the same angle and supposed to be working toward the same general end, will censor a totally different dozen titles. Where is there logic or consistency in this?

A censorship board is not even consistent or fair with itself. It sees bugbears where there are none, and, in the hope of avoiding offense to the magazine's readers, it lets what someone else might regard as far more sensational-appearing titles slip by. Take, for example, Mr. Fielding's *What Every Boy Should Know*, *What Every Young Woman Should Know*, etc. These titles are euphemisms in themselves; they avoid the direct utterance and the bold phrase. Yet they are censored by one magazine. Why? Is it because they convey information that cannot do anything except aid morality; is it because they combat nothing except ignorance? This same magazine, however, has no objection to *Confidential Chats With Wives* and *Confidential Chats with Husbands*, which are near-euphemisms of a

similar kind. This is inconsistency beyond my understanding. This same magazine, further, lists quite complacently all the books with "prostitution" in the titles. Now why is "What Every Boy, Girl, Young Woman, etc., Should Know" more objectionable than "Prostitution in the Modern World"?

Please understand that I am not pleading the cause of the censors. I do not want those censors to read this note of mine and decide that they have been lax and blue-pencil a score more or so of my Little Blue Books from my next advertisement. I do not want that to happen at all. But I do think that censorship would be more intelligible if it were consistent. If the censors said, "All sex must be banned"—but they don't say any such thing. They hem and haw, and equivocate, and justify, and hesitate. They want to censor, and yet—they don't do it.

Censorship is always that way. It is subject to the fallibility of the human beings that sit on the boards. I put forth as my guess that censorship of this kind often comes about because some reader—perhaps only one, out of many thousand—writes to the editor protesting against a certain book or against a group of five or six books which have aroused his antagonism and his pious indignation. Without any regard for the rights of thousands of other readers the censors listen to the lone voice in the wilderness and thenceforth see to it that this one reader, magnified out of all proportion to his real importance, shall no more be offended.

CHAPTER III

THE QUEST FOR SELF-IMPROVEMENT

The Great Demand for Little Blue Books of Self-Education

IT is not hard to understand why many people object to the so-called "sex-titles" in the Little Blue books, and why they will deplore the great interest that American readers show in such titles. I do not agree with this attitude, but I understand it. I contend that the interest in sex is but one aspect of a widespread desire to find happiness; it is but another phase of that eternal pursuit of elusive happiness which the fathers of the United States regarded as an inalienable right. I heartily agree that it is an inalienable and thoroughly natural right, and I am glad that the Little Blue Books can help in any way whatever. But the fact remains that many people will not look at the matter in this way. They will always hold that it is an unfortunate circumstance, and many of them would even go so far as to prohibit providing such reading if they could.

If the interest in Little Blue Books of sex and love was so paramount as to eclipse everything else there might be some doubt as to my contention that it is part of a quest for self-improvement, though that self-betterment is along emotional rather than what might be called practical lines.

But that the interest in books of love and passion is not exclusive of numerous other interests is what I shall now demonstrate. In fact, placing book against book, there are a number of titles entirely free from any love appeal which are more popular than sex books. Taken as a class, and as might be expected, the popularity of books about love is greater than the popularity of any other single class. But this is not new; it is a fact which is self-evident among other books, in the daily press, on the stage, in the movies, and in everyday activities.

What is probably not so apparent, and what many of my readers may not know and will be surprised to learn, is that the quest for self-improvement along strictly educational and even academic lines is an outstanding aspect of Little Blue Book sales figures. The Little Blue Books prove that the desire for self-improvement on the part of American readers is not an idle dream. They prove that this desire is more than a wish to appear better than people perhaps really are; they demonstrate beyond any doubt that this desire is sincere, and that it is almost universal.

If a person goes to college and secures an academic degree there may be varying impulses behind this apparent wish for education. A degree is in some measure a fetish. A degree is sometimes thought of as an Open Sesame; it is wanted because merely by having it a man or woman may think that it will get him ahead in the world. College enrollments are no criterion of any desire for education for its own sake. Students in night schools are studying in the hope of making commercial progress, it is true, but these

are not so numerous as is sometimes supposed. Again, the night schools themselves and often those who employ the students emphasize constantly the benefits to be derived from such education. These students do not show any spontaneous desire for education until they are urged into it.

Even the national correspondence schools, which widely advertise the increased salaries and greater social prestige that can be secured if one studies by mail, cannot claim that their enrollments prove a sincere American desire for self-education. It is a fact that only a small percentage of the people who enroll for such courses complete them. In some cases this may be because the expense is prohibitive; in others, it is because the students lose interest rapidly, and possibly because the courses are not of a character to create and maintain interest in education as a fascinating adventure. There is still a schoolroom atmosphere—a tinge of compulsion—about taking lessons by mail.

But the Little Blue Books lack the usual drawbacks. They are not expensive; there is nothing of a formal “course” with required lessons about them; every purchaser may exercise his free choice. And it must be remembered that this choice is made in the face of the competition of other titles of all kinds—against the competition, indeed, of those very sex and love titles which I have already shown are so popular. As I have pointed out, the average purchaser of Little Blue Books has only a dollar or two to spend at a time. If in his selection of 20 or so

Little Blue Books he has the discrimination to buy only ten or twelve Little Blue Books of sex or love, and buys eight or ten books of self-improvement or self-education, this is highly commendable. He may even buy only a half dozen books of love interest, and scatter the rest of his order among books of humor, biography, puzzles, games, and self-education. This is hardly cause for alarm, or any reason to suppose that the American reading public is sex-mad.

The Little Blue Books have from the beginning emphasized education in their policy. The series is known far and wide as the University in Print. The strongest part of the editorial policy has been, especially in recent years, the endeavor to add to the series a greater number of educational works. These are especially written for the series, conforming to the established length of a Little Blue Book, and prepared especially so that the reader can educate himself without the aid of an instructor. I have said that I am a business man and not a philanthropist, and I explain in another chapter exactly what I mean by this. Therefore this educational phase of my editorial policy is not self-chosen. I do not print these educational books because I think the public ought to read them—but because there is a tremendous demand for them, and I find myself hard pushed to keep up with that demand.

Please bear in mind that the sales figures I am going to give represent the popularity of these books as people have picked them out from the entire list of 1,260 different titles. These figures have been based only upon orders from

advertisements or the catalogue listing the entire series. These figures are a direct indication of popular preference; these books have been selected in these proportionate quantities—in orders of from 20 to 30 books each—in spite of the competition of all other titles in the series. These figures, in other words, are in competition with the figures I have given for Little Blue Books of sex and love. They are not an independent set of statistics, but should be regarded as just another part of the data from those orders for 25,000 books (explained in the preceding chapter).

First of all, what of the general titles which discuss self-improvement in a somewhat abstract fashion? I refer to these titles:

Success Easier Than Failure (E. W. Howe)	38,000 copies
The Secret of Self-Improvement (John Cowper Powys)	36,000 copies
Hints on Self-Improvement.....	24,000 copies

The fact that a book setting forth the secret of self-improvement sells to the extent of 36,000 copies annually among American readers of today can mean only one thing—that there is a widespread desire for such improvement, that there is, indeed, a universal quest for self-education. Whether you call it self-improvement or success, it means the same thing. “Success” is open to varying interpretations, but the desire for betterment is certainly present.

Education through books must be by reading them. There are Little Blue Books which guide people toward a better reading method, or toward better books, or tell them

how to read to get the greatest benefit from it. These books also sell well:

100 Best Books to Read (Powys)	32,000 copies
Facts You Should Know About the Classics (Joseph McCabe)	25,500 copies
How to Get Most Out of Reading (Georg Brandes)	17,500 copies
How to Get a Liberal Education (Thomas Huxley)	15,000 copies
How to Enjoy Reading (Isaac Goldberg) ..	12,000 copies
Art of Reading Constructively (E. Haldeman- Julius)	10,500 copies
How to Choose Books (Thomas Carlyle) ..	10,000 copies

Another direct proof of my contention that the desire for self-improvement manifests itself more in the sales of self-teaching books than in the actual enrollment for formal university education is that a general guide on *How to Get a Liberal Education* sells 15,000 copies annually, while the Little Blue Book called *How to Work Your Way Through College* just about sells its required 10,000 copies per year. Few of these thousands of Little Blue Book readers could go to college even if they wanted to; of course, I do not mean that the colleges should be abandoned, or that it is a mistake to go to college. I mean that the desire for self-education is proven more soundly by the sales of these general books, and of the titles which I shall cite in the following paragraphs, than by any other statistics available.

All the Little Blue Books are educational, and by rights I should give the figures for all of the books if this chapter were to be really complete. A little book of biography or

of history is just as educational as one of chemistry or physics. Works of fiction by the masters, anthologies of the world's greatest poetry, and even books of humor, are educational all in their own particular way. But for the sake of brevity, and in order to emphasize more particularly those books which are definitely educational in a limited sense along special lines, I shall consider here only books which are usually classed under self-educational headings in the Little Blue Book advertising.

Probably the most outstanding phase of this passion for self-education is the immense popularity of the books which enable one to improve one's English. "Better English" is the classification used in the advertising. This phase of self-education is fundamental; from this readers can go on to other subjects. And here are the figures:

How to Improve Your Conversation.....	77,000 copies
How to Improve Your Vocabulary.....	76,000 copies
How to Write Letters.....	53,500 copies
Common Faults in English.....	47,000 copies
How to Talk and Debate.....	38,500 copies
How to Argue Logically.....	33,000 copies
Most Essential English Words.....	33,000 copies
Grammar Self Taught	31,000 copies
A Dictionary of American Slang.....	29,000 copies
Handbook of Useful Phrases.....	25,500 copies
Spelling Self Taught.....	24,000 copies
Punctuation Self Taught.....	23,000 copies
Rhetoric Self Taught.....	14,000 copies
English Composition Self Taught.....	12,000 copies
The Romance of Words.....	10,500 copies

The social influence can be plainly seen. The strongest desire is for improving conversation and the speaking or

writing vocabulary. People want to appear well among their fellows, and they do not want a false superiority—they are after the facts. These books do not pretend to give anyone any magic key to conversational brilliancy. But they do give the facts in an understandable way, and their popularity shows that there is genuine interest in maintaining our mother tongue in its best form. Even the popularity of the dictionary of slang does not lessen this, for slang is the laboratory in which new words are born and new uses for old words.

Pocket dictionaries which aid in bettering English are also very popular, as follows:

A Book of Synonyms.....	28,000 copies
Words Often Mispronounced.....	26,500 copies
Foreign Words and Phrases.....	24,500 copies
How to Pronounce Proper Names.....	24,000 copies

The Little Blue Book of synonyms, if viewed over the entire history of the series, has been inordinately popular. But this was due partly to the craze for crossword puzzling that swept the country. The figure given here is more exact, and shows more precisely the proper place of this book in the popular demand for books of this kind.

The logical next step in this discussion brings to mind the jest that everyone in America is trying to break into print with some screed or other. Harassed editors bemoan the fact that thousands of people are laboriously putting pen to paper in an endeavor to add to their income, or even, in a few instances, to win fame and fortune overnight by writing some best seller which will later be put into the

movies. Probably no definite figures have ever been available on this question. Even popular contests, in which attractive cash prizes are offered for manuscripts, cannot feel the popular pulse to the extent that the Little Blue Books which offer aid to these people can tell how much interest there is in writing for profit. Of course, too, many people who enter prize contests are under the illusion that writing takes no training, people who believe that writers just dash off their stuff in mad moments of frenzied inspiration. Such people would not spend even five cents for a book to tell them something of the technique of the craft they hope to enter. But here are the figures which indicate how many people there are who would like to write for money, and who are anxious to find out how to do it:

Hints on Public Speaking.....	46,500 copies
Short-Story Writing for Beginners.....	36,000 copies
Hints on Writing Short Stories.....	23,000 copies
How to Write Advertising.....	20,000 copies
How to Prepare Manuscripts.....	17,000 copies
Writing for the Market.....	14,500 copies
Hints on Writing Poetry.....	11,000 copies
Hints on News Reporting.....	10,500 copies
How to Write Movie Scenarios.....	10,000 copies
How to Write One-Act Plays.....	8,000 copies
How to Write Book Reviews.....	8,000 copies

In a general list like the Little Blue Books this is rather amazing—especially the popularity of the manual on *How to Prepare Manuscripts*. In fact, in view of the popularity of this book, I, as one of those same harassed editors, wonder why it is that so few people read the book and follow its plain instructions.

These books, I wish to explain, contain nothing but facts. No claims are made that short-story writing is a grand road to fame and fortune; there is no assertion that the movies are clamoring for the work of amateur scenario writers and offering fabulous sums for it; there is nothing to induce the tyro to enter the writing "game" except the unvarnished essentials of the craft. In fact, these Little Blue Books include warnings against fraudulent organizations which claim to train amateurs to produce manuscripts that will sell for extraordinary amounts.

Proceeding to other titles of self-improvement intent, a wide field opens up under the general heading of Psychology. This recent science, which has made such rapid strides in the past few years, is not yet at a point where it can diagnose all the ills that human flesh and behavior are heir to, but it can help. Again, as always, the Little Blue Books in this field give the facts. It has somehow reached the ears of the general reader that psychology is a panacea of some kind or other, and that if he can study up on psychology and psycho-analysis he will be able to find the secret of success that he believes must be latent within him. Unfortunately, psychology cannot work magic. But these Little Blue Books stay within the limits of scientific knowledge, and make no false pretensions whatever.

There is much bunk about human personality which readers can get from some sources. I mean the you-can-if-you-wish-to-hard-enough personality drivel. There are Little Blue Books which deal psychologically with personality, and I am sure they are helpful, but these books are not

sold because they make any extravagant promises. No lures are held out that these books will make the rosiest dreams come true, not to mention the host of wayward fancies perhaps less rosy but none the less desired. These books are offered only as facts, and as such they are very popular.

Here are the figures for some of the more general titles:

How to Psycho-Analyze Yourself.....	43,000 copies
Psycho-Analysis Explained.....	38,500 copies
Psychology for Beginners.....	35,000 copies
Behaviorism: Newest Psychology.....	25,500 copies
The Puzzle of Personality.....	21,000 copies
Auto-Suggestion: How It Works.....	18,500 copies
Psychology of Jung.....	13,000 copies
Auto-Suggestion and Health.....	12,000 copies

It is not quite true that any title containing the word "psychology" will sell well, but it is almost true. There are few exceptions, so widespread is the interest in this subject. That it is a quest for self-improvement or self-betterment, and part of that eternal pursuit of happiness, that makes psychology and psycho-analysis so popular can hardly be disputed. The entire emphasis of these sciences is on improvement of the individual by better understanding of his weaknesses and his potentialities.

These are some of the titles with a more direct emphasis on self-understanding:

How to Fight Nervous Troubles.....	39,000 copies
Facts About Will Power.....	38,500 copies
Your Memory and How to Improve It....	37,000 copies
Your Talent and How to Develop It.....	35,500 copies
Psychology of Leadership.....	32,000 copies

THE QUEST FOR SELF-IMPROVEMENT

How to Think Logically.....	30,500 copies
Psychology of Character Building.....	29,000 copies
The Conquest of Fear.....	27,500 copies
Psychology of Laughter.....	14,000 copies
How I Psycho-Analyzed Myself.....	13,500 copies

The obvious conclusions are that people want to overcome their nervous disorders and acquire a steadied self-sufficiency; that they want to make the most of any talent they may have; that they would like to lead if it is possible for them to do so; that they want to improve their characters if there is such a thing as improving character; that they really want to know what will power is if there is any and how it may help them solve their problems. There is no doubt that these readers are after the facts, whether they are in accord with their hopes or not. This is most encouraging.

The tally to the credit of American readers as desirous of self-improvement mounts up. Throughout the range of self-improvement books there is an excellent showing. The modern search is for knowledge, and the thirst for information will be satisfied. It will take time for this passion for knowledge to adjust itself to the needs and capacities of the individual, but there is great hope that it will not spend itself in vain.

What would you say if I claimed that I could get 10,000 American people every year to admit that they are stupid? Not only to admit that they themselves are stupid, but to state further that they are anxious to become less stupid if they can? You would not believe me. You would laugh me

to scorn. You would remind me that everyone calls everyone else a moron, but never admits the possibility that he himself may be one.

Of course, I could not appear on a public platform and ask for a showing of hands on such a question. That would be ridiculous. The average American is a timid creature, and he hardly wants to parade his deficiencies, much as he may admit them in the privacy of his self-communion. Nor could I reasonably hope to secure any reliable statistics by asking for a ballot—unsigned votes—on the question. There would be insufficient inducement for honesty. But if I were to *sell* a possible aid toward reducing stupidity, I might reasonably assume that if 10,000 people bought the book they would be admitting at least some degree of stupidity in themselves.

There is such a book in the pocket series. It is called *How to Conquer Stupidity*. One reason why people do not hesitate to order Little Blue Books, and why they forget the inhibitions that personal vanity might set upon them, is that there is a soothing anonymity in the numbers of the Little Blue Books. People order by numbers instead of titles. They feel secure—the timid ones—in the apparent meaninglessness of a list of numbers. So if people think themselves stupid, and want to remedy it, they will not hesitate to order *How to Conquer Stupidity*—for it goes by the three digits 759 and there is no self-reproach in these figures!

To come to the climax of this digression on stupidity, this book sells—not merely 10,000, but 17,500 copies annually! If 17,500 people every year in these United

States are willing to admit that they have some measure of stupidity that needs overcoming, here is a nucleus around which to build something worth while.

These facts about a book dealing with stupidity bring to my mind again those vigilant censors that protect the delicate constitution of the Average American Man. This Average Man must not be led into temptation, and he must not, above all things, be the least bit offended. Indeed, one must not even risk offending him, if there seems the slightest possibility of such an affront. There are publishers who would not include in their list a book entitled *How to Conquer Stupidity*, objecting to it on the ground that their customers would be offended by such a suggestion—the suggestion that the publication of such a book would imply that book-buyers have among their number several stupid individuals who might buy such a book.

Perhaps you think this is fanciful, but I can quickly disillusion you. I have had a recent experience which excellently illustrates my point. Possibly you have seen some of my advertisements of a high school educational course, made up of fifty of the Little Blue Books which include high school subjects. This advertisement implies that there are many people who could benefit from study of these fifty books. A nationally known weekly periodical refused this advertisement, as worded in the original copy submitted, on the ground that they could not risk implying that any large number of their readers were lacking the essentials of a high school education! Yet this same advertisement, implying that a high school course of this kind

will be very welcome to many people, is very successful nearly everywhere it appears. I am sorry, but I cannot sympathize with this constant exaggerated effort to avoid stepping on people's toes. People wear shoes, and besides, their toes are not nearly so tender as some of the guardians of our public safety seem to think. It is preposterous to suppose that an American reader, however average, will give vent to hot and righteous indignation because someone suggests that a little more education may benefit him.

To get back to discussing improvement of personality and character, and such matters, I have another bit of interesting statistical news. Americans are being constantly condemned for their bad habits, and seldom praised, except in funeral panegyrics and political hypocrisy, for their good habits. I must admit that Americans as readers are not so interested in good habits as they are in bad habits. But do not leap to conclusions—the amazing fact is that American readers want to *overcome* bad habits to a greater extent by almost a half than they want to form good habits. Here are the actual figures:

How to Break Bad Habits.	29,000 copies
How to Form Good Habits.	20,000 copies

At that, there are 20,000 people annually interested in finding out how to form good habits. This is far from insignificant. And those 29,000 readers who are so earnest in their wish to break their bad habits—notice once again that they are ready to admit they have them and they eagerly demonstrate their wish to remedy such an appalling

THE QUEST FOR SELF-IMPROVEMENT

state of affairs. I am heartily in accord with these people; much as I decry babbittism and all kinds of the usual success and personality bunk, and the readiness with which people fall for such illusions, the people who are in quest of facts which will really help them win my sympathy—and, yes, my applause. They are a promising multitude, these readers of Little Blue Books.

So much for mental and emotional health—if psychology may be so regarded. Logically, the next phase to be considered is bodily health: physical well-being. Sex has already been discussed (in “Are Americans Afraid of Sex?”). The question now is, are Americans interested in keeping themselves physically fit? The answer of the Little Blue Books is Yes. According to the figures:

Care of Skin and Hair.....	52,000 copies
Eating for Health (Vitamins).....	36,000 copies
Latest Food and Diet Facts.....	27,000 copies
Everyday Health Rules.....	22,500 copies
Home Nursing (First Aid).....	17,000 copies
Facts About Cancer.....	15,000 copies
X-Ray, Violet Ray, etc.....	13,500 copies
Tuberculosis: Causes and Cure.....	12,000 copies
Diabetes: Cause and Treatment.....	12,000 copies
Quacks of the Healing Cults.....	10,000 copies
Truth About “Patent” Medicines.....	10,000 copies
Childhood Diseases (Diphtheria, Scarlet Fever, Chicken Pox, etc.).....	10,000 copies
How to Take Care of Your Mouth and Teeth	8,000 copies

The record is not all one of glory, as you see. It is clear that American readers are far more interested in externals (*Care of Skin and Hair*) than in arbitrary rules for general health (*Everyday Health Rules*)—in fact, they are twice

as interested in keeping an outside appearance of good looks than in mere health without emphasis on appearance. (As for teeth—the low figure for this manual may be because people read so much about teeth in advertisements of dentrifices.)

Vanity creeps into the figures, but it is rather a justifiable vanity. Yet I do not want it to seem that I am optimistic about this reading public we have in America today; though I fancy the facts I cite in my chapter called “The Morgue” will relieve me of appearing too confident of America’s high intelligence in reading tastes. The point I want to make is simply that American readers as a class are not as hopelessly bogged in inconsequential choices of books as some critics would have us believe.

The fact that people are interested to the extent of 36,000 copies per year in eating for the sake of good health is true enough to human nature. Every wife knows how her husband likes to eat. That he should want to eat what is most healthful, however, she may not suspect—but the Little Blue Book record shows it. The book on food and diet is a close second. The idea seems to be that if one can eat and contribute to health at the same time, why not do it?

As I have said before, men are the chief purchasers of these Little Blue Books. It is masculine vanity, then, which jumps up that total for *Care of Skin and Hair*. Feminine vanity may be just as great, but women are not buyers of these books to the same extent that men are. It shows up clearly in the sales figures for a distinctly feminine title: *Simple Beauty Hints*, with an annual total of 22,000 copies.

THE QUEST FOR SELF-IMPROVEMENT

As a side remark, I may say that I have reason to believe that American women as a class prefer to buy their cosmetics; though they may invest in a book on how to use cosmetics intelligently, they buy a book on how to make their own cosmetics only about half as often—*How to Make Your Own Cosmetics* sells only 14,000 copies per year. As for a defense of cosmetics, none is wanted! Max Beerbohm's *Defense of Cosmetics* is a failing title, averaging less than 5,000 copies annually in 1927; if something is not done about this book it will go into The Morgue!

Contributory factors in gaining health are sports and other forms of recreation. The sports classification of the Little Blue Books is weak at the time this book is written; this will be remedied in 1928, and meanwhile the figures available must suffice. They are very revealing:

How to Teach Yourself to Swim.....	27,000 copies
How to Play Golf.....	17,000 copies
Baseball: How to Play and How to Watch it	15,000 copies
Camping, Woodcraft and Wildcraft.....	15,000 copies
Handbook of Golf Rules.....	12,000 copies
Helpful Hints for Hikers.....	10,500 copies
How to Get the Most Out of Recreation....	9,000 copies

Golf wins by a slight margin over baseball. This may be because every small boy learns baseball as part of his adolescence. But golf is more an individual game, and must be learned later. Further, golf is still somewhat an expensive game to play, and there is perhaps a great deal of curiosity, independent of any strong determination to play, about the game and about the fun that may be had playing it.

THE FIRST HUNDRED MILLION

Coming back to more academic educational subjects, suppose we examine the records of some of the courses found in high school and college curricula:

Facts to Know About Music.....	37,000 copies
Psychology for Beginners.....	35,000 copies
Astronomy Self Taught.....	30,500 copies
Facts to Know About Painting.....	27,500 copies
Outline of U. S. History.....	25,000 copies
Chemistry Self Taught.....	25,000 copies
Facts to Know About Architecture.....	16,000 copies
Evolution Made Plain.....	16,000 copies
Physics Self Taught.....	14,500 copies
Outline of Economics.....	14,500 copies
The Weather (Meteorology)	14,000 copies
Botany Self Taught.....	13,000 copies
Zoology Self Taught.....	12,000 copies
Facts to Know About Sculpture.....	10,500 copies
Sociology for Beginners.....	8,000 copies

I am myself amazed at the popularity of the arts—music, painting, sculpture, and architecture. Who would have guessed that there are 27,500 people annually to be found in America interested in learning facts they ought to know about painting? Of the academic subjects, chemistry is more popular than physics, probably because it captivates the imagination to a greater extent. Chemists have been much in the press of late, what with their rayon and other wizardry with cellulose. But the stars win the most favor, with 30,500 people every year anxious to learn about astronomy. This is gratifying, especially when I glance at the record for *Facts You Should Know About Astrology* (really a debunking book), which sold 17,000 copies only. It pleases me to think that almost

twice as many people are interested in the science as in the pseudo-science, though I know that those who read the Little Blue Book on astrology will get nothing but a scientific appraisal and exposure of the subject.

People will have the facts about astronomy and the sciences whether they can reconcile them with their religious beliefs or not, it seems. Even evolution, in spite of all the opposition set up against it, finds 16,000 people annually who want to have it clearly explained to them. If given the chance, people will accept the facts gladly.

Foreign languages, one might think, would have a fairly limited appeal in so general a series as the Little Blue Books. But even here the popular demand for books of self-education shows itself strongly. For these are the indisputable figures:

Spanish Self Taught.....	47,000 copies
French Self Taught.....	46,500 copies
German Self Taught.....	27,500 copies
Italian Self Taught.....	21,500 copies
Esperanto Self Taught.....	17,000 copies
Latin Self Taught.....	10,500 copies

French and Spanish are about tied for first place. It is easy to understand this. Perhaps most surprising is the popularity of Esperanto, that proposed scientific international language which exists nowhere in fact. It is dead like Latin, for it has never come to life—yet 17,000 people a year seem to want to learn it. It may be partly that interest in puzzles and “brainteasers” which so fascinates a large portion of the human race; it may be partly just curiosity. Even the interest in Latin, when it is

THE FIRST HUNDRED MILLION

remembered that this is a cross-section of the American reading public, is much larger than might have been supposed.

Business plays so large a part in contemporary life that the popularity of commercial subjects could be logically presupposed. These are the figures:

How to Write Business Letters.....	37,500 copies
Handbook of Useful Tables.....	33,000 copies
Typewriting Self Taught.....	29,000 copies
Handbook of Legal Forms.....	28,500 copies
Handbook of Commercial Law.....	27,000 copies
A Rapid Calculator.....	24,000 copies
How to Own Your Home.....	17,500 copies
First Aid for Investors.....	17,000 copies
How to Save Money.....	16,500 copies
How Wall Street Works.....	16,000 copies
Arithmetic Self Taught: Part 2.....	14,500 copies
Arithmetic Self Taught: Part 1.....	12,000 copies
U. S. Commercial Geography.....	10,000 copies
How to Budget Your Income.....	10,000 copies

Americans, it appears, show a disposition not only to learn more about business itself, but also to find out how to improve their personal financial affairs. Few care to go to the trouble to budget their income, apparently, but many want to know how to save and how to invest their savings. The popularity of the second part of the arithmetic is probably due to its being regarded as more advanced than the first part. Finally, the exceeding popularity of the book of useful tables is due, not only to its commercial utility, but to its handiness in everyday activities.

As civilization grows more complex there is an increasing need for books of reference, handy manuals in which

THE QUEST FOR SELF-IMPROVEMENT

to look up a fact when it is wanted. Evidently people are not so afraid of such books of reference as the average professor thinks his students are. The pocket dictionaries to be found among the Little Blue Books are very popular:

Book of Familiar Quotations.....	34,500 copies
A Dictionary of Scientific Terms.....	25,000 copies
Pocket Rhyming Dictionary.....	23,000 copies
A Dictionary of Musical Terms.....	21,500 copies
Popular Shakespearian Quotations.....	17,000 copies
A Dictionary of Biblical Allusions.....	16,000 copies
International Dictionary of Authors.....	15,000 copies
A Dictionary of Classical Mythology.....	13,000 copies
A Dictionary of Geographical Names.....	10,500 copies
A Dictionary of Sea Terms.....	8,000 copies

Anent the Shakespearian quotations, who thinks that Shakespeare is not popular in America?

Farming, in spite of the prevalence of agricultural colleges and the journalistic apotheosis of the American farmer, is not popular, comparatively, as a subject for study. I have had to withdraw one of my agricultural titles, and may have to withdraw one or two more. For this is the record:

Hints on Soils and Fertilizers.....	12,500 copies
Poultry for Profit.....	11,000 copies
Hints on Animal Husbandry.....	10,500 copies
Home Vegetable Gardening.....	10,500* copies
Hints on Farming.....	7,500 copies
Beekeeping for Profit.....	7,000 copies
How to Grow Fruits.....	6,000 copies
How to Build Your Greenhouse.....	6,000* copies

Home mechanics, or books which tell a person how to do things for himself, do fairly well. This classification

is still in the experimental stage, so too much must not be assumed from the slight representation:

How to Tie All Kinds of Knots.....	27,500 copies
Principles of Electricity.....	23,000 copies
How to Paint and Finish Woodwork.....	19,000 copies
Practical Masonry: Brickwork.....	17,000 copies
How to Cane and Upholster Chairs.....	8,000 copies
Elements of Woodworking.....	8,000 copies
Bookbinding Self Taught.....	8,000 copies

Apparently the Boy Scouts are not alone in a wish to know how to tie knots! Such books as those above are rather popular, I think, because of the average person's inclination to putter around the home, the back yard, and to tinker with the family car. Human hands itch to experiment with a brush and a can of paint; and I have heard that they also like to wield a monkey-wrench, so one of these days I'll have a Little Blue Book on how to repair your own car.

Interior decoration is a special phase of home-improvement. I think some mention of it belongs here, because these Little Blue Books prove that Americans are weary of unattractive homes. Thousands of people are trying their best to beautify their houses and yards, and they want to do this according to the best tradition and in accord with the best artistic taste. I cite these figures to support my assertion:

Interior Decoration for Small Homes....	29,000 copies
Practical Hints on Interior Decoration....	27,000 copies
How to Make Your Home More Homelike	14,000 copies

Cooking, of course, is an indispensable art. The Little Blue Books have many collections of recipes, as follows:

THE QUEST FOR SELF-IMPROVEMENT

How to Make All Kinds of Candy.....	45,000 copies
Simple Recipes for Home Cooking.....	33,000 copies
How to Make Pies and Pastries.....	29,000 copies
How to Cook Fish and Meats.....	21,500 copies
Better Meals for Less Money.....	17,500 copies
How to Make Ice Cream and Gelatine....	16,000 copies
French Cooking for Amateurs.....	9,500 copies

Thus, even the Little Blue Books contribute data to support the contention that America has a hungry sweet tooth—for the most popular book of recipes is that on how to make candy. Of specialized recipe books, that on making pies and pastries—more sweets—also surpasses the others.

Housekeepers, such of them as may be Little Blue Book readers, are anxious to be good hostesses. Among the men, all want to be socially correct quite as much as do the women. That is why *Hints on Etiquette* sells 72,000 copies per year. In fact, one reader wrote a letter saying that he had read this book and had assimilated all of it; he now felt ready for more particulars, and would like to obtain a much larger book of etiquette so that he might become really and truly cultured! Joking aside, however, American readers do want to conform to social strictures; they believe in social amenities because they serve in a large way the purposes of civilized intercourse. So *The Charming Hostess: How to Entertain* is also popular, selling at the rate of 32,000 copies annually. As part of the wish to entertain guests happily I should add that *Party Games for Grown-Ups* is in demand to the extent of 46,500 copies per year. I shall have more to say about this demand for fun and entertainment in another place.

The figures I have given in support of America's quest for self-improvement will perhaps suffice to show that the desire for knowledge and the yearning for education are much more than a passing fancy. The demand increases, if anything, with the years. I could go on to show that other books—books of poems, masterpieces of fiction, biographies of the great, philosophy, comparative religions, books of maxims and epigrams, and so on—bear out this widespread interest in self-betterment and advancement. In another chapter I explain how a classification called *Cultural Helps* has done much to sell certain "highbrow" titles in the series. The clamor everywhere is for education, culture, knowledge; surely these are signs of the times, and they point hopefully toward an ever brighter future.

The *University in Print* still has gaps. Some phases of self-education are still meagerly represented. For example, there is law. I have secured, so far, very little usable material to enlighten the general public in legal matters. But these gaps will be filled in as time goes on. The public wants the books, and I have no choice, in my capacity as editor of such a series, but to give them the books desired. I am optimistic about this demand for self-education, because it gratifies me to know that there is such a really general interest in acquiring knowledge. It must gratify anyone interested in the progress of modern civilization. For though it may take generations for this desire to take proper shape, and for this avid search for knowledge to

work any real benefits for the race, it cannot ever work for harm or drag us back into those dark ages from which we so recently emerged.

It was fear of knowledge that held humanity back during the Middle Ages, and before. There was fostered in people's minds a fear of the printed word. Reading was an accomplishment few dared to undertake. The invention of printing did much to dispel this popular fear; books were seen not to be very harmful, after all—except perhaps *some* books, which were kept carefully from the public lest the people be contaminated thereby. Censors still stalk among us, placing a taboo on this and another taboo on that. There are still books that moralists and reformers think *no one* should be permitted to read. But the individual's fear of the printed word has gone—probably that is why these self-appointed censors take their tasks so seriously. They know that people would read the books if they had the chance, and so they try to see to it that the public does not get the chance.

American readers are thorough in their quest for knowledge. I have demonstrated that. They place no taboos of their own on anything which may inform them, or help them to understand the world and themselves. One of these days Mr. Average Man may resent being deprived of a book he wants to read, just because some self-styled Superior Man says it won't be good for him. When that time comes, the desire for knowledge will at last have its way: its full, undenied, unhindered way.

A Note on Music

I cannot leave the subject of self-education and self-improvement without a word about music. So particular a phase of culture development seemed to have no place in this chapter, as I went along, so I put it here, as a kind of postscript, and a worthy postscript it is.

Music has been called the purest of the arts. Great music probably requires more education than any other single art to be appreciated to the fullest possible extent. But even the least educated may get something, however little, from great music. Music satisfies a hunger which none of the other arts can do so well or so universally.

Perhaps it is because I am myself so very fond of music that the Little Blue Books have such a generous sprinkling of musical titles. It was with deep regret that I found myself obliged to withdraw some of the operatic titles—the stories of famous operas, with excerpts from the scores. Several remain in the list, I am glad to say, but I still think sadly sometimes of those that had to go into The Morgue.

The popularity of music in America cannot be questioned. The generous support given to such artists as Galli-Curci, Rosa Ponselle, John McCormack, Ignace Paderewski, etc., proves this. Paderewski, indeed, is a name that even a street urchin will recognize as a great musician.

It will surprise no one to learn that Little Blue Books of a musical appeal are popular, except perhaps when one re-

members that there is a difference between the popularity of music itself and books *about* music. There is a vast gulf between, but it is not so wide that popularity cannot bridge it. For even liking music as they naturally do, American readers want to know more about it. They want to learn how to like it even more—they want to educate themselves into greater joy, and truer appreciation, of the greatest of all the arts.

Here are some of the titles, with their revealing sales figures:

Facts You Should Know About Music..	37,000 copies
Dictionary of Musical Terms.....	21,500 copies
How to Learn to Sing.....	19,000 copies
Story of Rigoletto.....	16,000 copies
Old Favorite Negro Songs.....	15,000 copies
Jazz: What It Is and How to Understand It	15,000 copies
Harmony Self Taught.....	14,500 copies
Story of Tannhäuser.....	14,500 copies
How to Teach Yourself to Play the Piano	14,000 copies
How to Enjoy Good Music.....	13,500 copies
Story of Das Rheingold.....	13,000 copies
Introduction to Wagner's Music.....	11,000 copies
How to Enjoy Orchestra Music.....	10,500 copies
Old English Songs.....	10,500 copies
Gilbert and Sullivan Guidebook.....	9,000 copies
Great Christian Hymns.....	3,000 copies

I assure you—for I will be accused of it—that I have not falsified the figures for *Great Christian Hymns*. Some of these hymns (if you leave the words out) are worthy of a place in the world's music; but the public in general has comparatively little interest in hymns. Indeed, they show three times as much interest in old English songs, and five times as much interest in Negro songs!

THE FIRST HUNDRED MILLION

If to some of us the 15,000 annual purchasers who wish to learn about jazz are a little depressing, we can surely brighten up when we know that more than 10,000 people every year want to know how to get greater enjoyment from orchestra music.

CHAPTER IV

AMERICANS WANT FUN AND LAUGHTER

As shown by Little Blue Book Sales Statistics

EVERYONE likes a good laugh. Laughter is sociable—like good wine. We are told to laugh, for all the world will laugh with us. Fun and laughter are catching. A theater full of laughter contains more enjoyment than one of the laughers could get if he saw the same things or heard the same words in the privacy of his apartment. Humor is funnier if two can laugh at it together; funnier still if three can laugh at it, and make a party. Yet for all this sociability, there is fun to be had even if one has to laugh alone.

Readers are solitary persons, while they are reading. A reader may be actually alone in a room, or he may be mentally isolated in a subway train, a public park, or the waiting-room of the Grand Central station. Occasionally such a reader may be seen to smile, or he may so far forget himself as to give way to involuntary laughter. It may even be noisy laughter. For perhaps he is reading a Little Blue Book of jokes.

Humor has always been in the series of Little Blue Books—usually in the form of the work of Mark Twain, Artemus Ward, Josh Billings, Bill Nye, etc. Stephen Leacock is a

happy recent addition. But books of jokes came late, and their popularity was so immediately apparent that the group of collections grew promptly into a sizable classification. That there should be a demand for such books I did not for a long time suspect. I leaned toward the more lengthy humor, in the form of tales and essays, and let compilations of dialogue jokes wait until little more than a year ago.

Now there is hardly a form of wit or humor you cannot find represented in the series of Little Blue Books. The fun-and-laughter classification is well developed, and it is one of the strongest portions of the list. If there is fun to be found in the pages of a book, you are almost sure to be able to find it in the pages of some Little Blue Book or other. That is why the sales statistics for these fun-and-laughter books have such comparative value—why they tell just what kind of a sense of humor American readers have most of, and how they analyze the well-known desire for fun and laughter of all kinds.

The jokebooks began with a simple enough title, wholly unpretentious: *Popular Jokebook*. To show you how late it came in the series, comparatively speaking, I may add that it is No. 972 in the list—and at the time the book was added that number was indicative somewhat of its youth. High numbers are not always younger than the low ones, for there have been many recent substitutions, but high numbers are often quite young. Those over 1000 are all less than three years old.

This *Popular Jokebook* was a good seller from the start.

Its popularity made other jokebooks necessary, and yet, with a score or so of other books of jokes now competing with it for public favor, this first anthology of jokes still holds its own with an annual sales figure of 37,000 copies. Its title is what makes it so popular. The title insists that the book is popular, and so it is! American readers, you see, are in many ways a great deal like sheep—in buying books as well as in buying cigarettes or hosiery or theater tickets. If it is something they rather want anyway, and you point out that other people also want it—they clamor for it.

By way of contrast, this *Popular Jokebook* has a companion—a twin, born into the list at the same time, and given another title mostly for convenience and to avoid confusion. This twin's name is *A Book of Humorous Anecdotes*: its annual sales figure is—it rather appals me, for I had not noticed its low ebb before—only 8,000 copies, or less than a fourth of that of the *Popular Jokebook*.

Suppose we examine more closely some of the annual sales figures for miscellaneous jokebooks:

Toasts for All Occasions.....	55,000 copies
Best Jokes of 1926.....	50,500 copies
Popular Jokebook.....	37,000 copies
Broadway Wisecracks.....	29,000 copies
Best College Humor.....	17,000 copies
Masterpieces of American Humor.....	16,500 copies
Best Jokes of 1925.....	15,500 copies
Masterpieces of American Wit.....	9,000 copies
Humorous Anecdotes.....	8,000 copies

The best of them all is not jokes, but toasts! Is this, I wonder, because “toasts” suggest something said before

drinking—and drinking suggests, well, wine and possibly whiskey? In the imagination, of course—certainly all in the reader's imagination. But why should not drinking be as popular on the printed page as love? Then, people may think also that toasts are funnier than just jokes. Such may have been their experience, due possibly to the mellowing effects of good liquor.

Second best is the *Best Jokes of 1926*; in 1928, of course, it will be the new collection, *Best Jokes of 1927*. Again there is that tendency to choose something someone points out as best. Indeed, here is the reason for all the superlatives you see on billboards and in magazine advertisements—say it is the best long enough, and you may have thousands agreeing with you, provided you have a good product in the first place. Even the *Best Jokes of 1925* is not considered too out of date for 15,500 people every year, though this may drop a little in 1928.

Of particular interest are the jokes about various nationalities:

Best Jewish Jokes.....	43,000 copies
Best Negro Jokes.....	37,500 copies
Best Irish Jokes.....	37,000 copies
Best Scotch Jokes.....	34,500 copies
Best American Jokes.....	16,000 copies
Best Yankee Jokes.....	16,000 copies

There are also books of the best Russian, Spanish, Italian and German humor, but these struggle hard to keep up their required 10,000 yearly. It is the Irish and the Scotch, and, seemingly, the Jewish people who are credited with the best laugh-giving characteristics. Negroes, though a

race—like the Jews—instead of a nationality, speaking broadly, have their generous share of favor. It is a coincidence that American and Yankee jokes have equal popularity, but it is not a coincidence that they are less than half as popular as jokes about any other of the nationalities in the best-seller list. Americans, perhaps, are not quite ready yet to laugh at themselves so much as at others—the others being individuals with strongly marked racial or traditional idiosyncrasies.

What now of the professional jokes? These figures tell a story:

Best Jokes About Doctors.....	25,000 copies
Best Jokes About Preachers.....	23,000 copies
Best Jokes About Lawyers.....	21,000 copies

I daresay that the much looked down upon man in the street shakes with glee at any chance to laugh at a doctor, a lawyer, or a preacher. He is so often victimized, or induced by his imagination to stand in awe or fear of these professions, that laughter is a welcome relief. He laughs long and heartily at jests implying a doctor's brutality or ignorance or carelessness—of all of which he is afraid; he guffaws boisterously at funny cracks suggesting that lawyers are liars, and that they have many weaknesses and faults common to all of their profession; he smiles broadly and haw-haws gaily at gibes aimed at the preacher's sanctimoniousness and overdone righteousness. But it is healthy laughter, and of course it has its foundations in fact. Humor could not exist without a basis of common humanity, and by laughing at our superiors—at these pro-

fessional highbrows—we, as well as our inferiors, can recognize, whether consciously or not, a universal kinship.

Other jokebooks have wide favor, as follows:

Best Jokes About Married Life.....	45,500 copies
Best Jokes About Lovers.....	35,000 copies
Best Jokes About Kissing.....	33,000 copies
Best Hobo Jokes.....	23,000 copies
Best Ford Jokes.....	22,500 copies
Best Jokes About Drunks.....	18,500 copies
Best Rube Jokes.....	11,000 copies

Mr. Henry Ford's Model T died in 1927, but the jokes about it—see the figures immediately preceding—did not. If some 20,000 people or more continue to laugh at trials and tribulations incidental to owning a Ford, Model T may pass but will hardly be forgotten. Though the car may die, the jokes go rattling on. It is not every man who can invent the butt of an everlasting joke!

I gave the figures for the jokes about love and marriage in the chapter dealing with the popularity of sex books in America. I repeat them here for the sake of comparison. These figures are immensely significant, and they strike deeper into the real nature of humor than any psychological analysis can probe. The most popular jokebooks of all, taken as a trio (with the exception only of the *Best Jokes of 1926* and the *Toasts for all Occasions*), are about what human beings have most revered, most idealized, and most consecrated—love and its relationships. Love is human, however, and it is universal; that is why it is such good material for humor, and why we can all easily and gladly laugh about it. We laugh, partly at lovers and partly with

them; for if we have not been lovers yet, we have an inner voice that tells us we may soon be lovers, and it may be best for us to laugh while we may. For lovers themselves do not laugh—at love. Earlier or later they may; but not in the midst of the experience.

It is a good thing, too, this laughter, though it be laughter at love and loving, and all the affairs and circumstances that go with it. For it is not a world for long love, or continually and everlastingly blissful true love. Lovers may make fools of themselves in a harsh world like this. It is good that we know how to laugh at our own foibles, and our own humanity. And we laugh most at married life—at that attempt, as some wit (a Frenchman, wasn't he?) put it, to coördinate economics and emotion—in jokebooks as well as in the comic strips in the daily papers. We laugh loudest at what effects us most, provided we are given the graceful illusion of supposing the joke to be on the other fellow.

So much for jokes in general. What of humorists, those cynical observers of humanity who have turned to laughter for escape from thoughts which may perhaps have become too heavy to face seriously? I shall select a book or two by some of the outstanding names, so that the comparison of their popularity may be made readily. These will suffice:

Jerome K. Jerome: <i>Funny Ghost Stories</i> ..	33,000 copies
Mark Twain: <i>English As She is Spoke</i>	31,000 copies
<i>Humor of Abraham Lincoln</i>	15,000 copies
Stephen Leacock: <i>Ridiculous Stories</i>	14,500 copies
Charles Dickens: <i>Pickwick Papers</i>	14,000 copies

THE FIRST HUNDRED MILLION

Jerome K. Jerome: <i>Idle Thoughts of an Idle Fellow</i>	13,000 copies
Bill Nye: <i>Humorous Essays</i>	12,000 copies
Josh Billings: <i>Humorous Epigrams, etc.</i> ..	11,000 copies
Petroleum V. Nasby: <i>Let's Laugh</i>	10,000 copies
Artemus Ward: <i>Laugh Book</i>	9,000 copies

Mark Twain is without doubt the most popular of the humorists; the rest have their followers, but none to equal his. The popularity of Jerome's *Funny Ghost Stories* is about half laughter and half shivers—the ghosts lure as many nickels as the chuckles in it. Of them all, Artemus Ward is the least popular; this is probably because Ward's was an older day, and he is not remembered because his humor is more superficial and not so well founded on those unchangeable qualities of human nature which make any creative effort enduring. The humor of Lincoln is, of course, traditional, like that of the Irish and the Scotch. It is none the less humor for all that, however.

Humorous verse, comic poems, and nonsense rimes have their place in the great category of humor and laughter. Books of this kind are varyingly popular:

Casey at the Bat, Face on the Barroom Floor, etc	25,500 copies
Book of Comic Poems.....	21,500 copies
Comic Dialect Poems.....	11,000 copies
Book of Humorous Verse.....	10,500 copies
Book of Funny Limericks.....	10,500 copies
Book of Nonsense Poems.....	10,000 copies
Laughable Lyrics: Edwin Lear.....	8,000 copies
Hunting of the Snark: Lewis Carroll.....	7,000 copies

It has been up to mighty Casey to support this list and maintain a residuum of popularity for the versifiers.

Mighty Casey, and that memorable face on the bygone barroom floor—this verse that is the most popular is, you should notice, verse in which tears mingle with the sounds of merriment. It is verse which, if you laugh at it at all, must impress you with a certain pathos; as humor, it is like the screen comedies of Charles Chaplin, so rightly called the pathetic comedian.

Edward Lear is all but forgotten; the limerick is passé; and even Lewis Carroll's reputation, sponsored by Alice, seems to be slipping. For *Alice in Wonderland*, too, sold only 8,000 copies per year. And the *Nonsense Stories and Pictures* of Edward Lear, though much better—at 16,000 copies annually—than any similar book, is not as popular as one would expect. His *Nonsense Alphabets*, also with his inimitable pictures, has not done as well as I had hoped; it is, I am sorry to say, really a failure, selling hardly more than 5,000 copies annually as compared with the others mentioned here.

What, by the way, of the much despised pun, that lowest form of wit, as all good critics call it? There is a book called *Interesting and Amusing Puns*, and I know all punsters will be eager to learn how the public has received it. Punsters, of course, would not condescend to buy the book; its influence might cramp their style. That is the very reason, I suspect, why the book does not sell well—for who is not, or who has not been at sometime, a punster? We have all been victims, of course; most of us, I daresay, have committed the crime itself. For this book sold only—I almost suppressed this shameful figure!—6,500 copies. That show-

ing is its very best. I suspect it is because American readers are too busy making their own puns to buy any ready-made. Viewed in a dispassionate light, however, 6,500 purchasers for this book are appallingly many—one must meet one or more of them sooner or later in this small world of ours.

“Let’s have fun,” cry our boys and girls, our Babbitts and Rotarians, our Ku Kluxers and Masons, our Sewing Circles and our Ladies’ Aiders. It is the desire of the average American to have all the fun he can get—as witness the playgrounds provided at Atlantic City, in Florida, in California, and nearly everywhere else. Chorus girls, vaudeville performers, radio announcers, *et al.*, earn their livings providing fun—though it is often poor fun, unjust to the name and unworthy of fun-seekers. There are the movies, the basis of a gigantic industry. There are the grandstand and ringside seats at baseball games and prize fights. There are carnivals and fairs and circuses galore. And there are books—

Books of fun include games and other forms of recreation, but these I have already discussed, as a subdivision of health, in the chapter on self-improvement books. I shall not repeat those figures here. In this chapter I am more concerned with indoor sports—riddles, parlor games, puzzles, etc. In the Little Blue Book lists these books come under the general classification of Entertainment.

First of all, there is that recent “fad,” intelligence, or rather, information quizzes—the question-and-answer game. In this there is mingled not only fun and entertain-

ment, as in playing a game, but some desire for self-improvement as well. It may not be admirable to get a "kick" out of parading one's superior knowledge by getting a higher "score" than one's fellows—or desperately trying to get it!—but it is human nature. Three Little Blue Books of questions and answers sell as follows:

What Do You Know?.....	45,500 copies
Who, When, Where, What?.....	30,500 copies
General Information Quizzes.....	14,500 copies

I strongly suspect that the *General Information Quizzes* does not appeal because of the matter-of-fact title. There is no suggestion of fun in such a title. The popularity of that first question-and-answer book which swept the country, and whose title became a slang phrase or was borrowed from a slang phrase—whichever was the hen and which the egg—owed much of its success, I am sure, to its title: *Ask Me Another!* Some such title is needed for this laggard Little Blue Book of mine.

Crossword puzzles were earlier in the popular favor for games with pencil and paper. There are two series in the Little Blue Books, and even now they sell like this:

Crossword Puzzles: Series 2.....	21,500 copies
Crossword Puzzles: Series 1.....	21,000 copies

At the height of the craze the influence of a populace madly seeking new words to conquer was felt in the Little Blue Book series by the phenomenal sale of *A Book of Synonyms*. It was found necessary to keep two sets of plates of this book constantly on one press four or five months.

I had supposed that riddles belonged to the past, with

square dances, the cat's cradle, and braiding rugs. But I learned that riddles were still popular, along with other puzzles:

Book of 500 Riddles.....	53,500 copies
Mathematical Oddities.....	37,500 copies
Curiosities of Mathematics.....	35,000 copies
Puzzles and Brainteasers.....	33,500 copies
Popular and Amusing Riddles.....	24,000 copies
Riddle Rimes.....	8,000 copies

It is impossible to prophesy what the reading public may prefer. That book called *Curiosities of Mathematics*, for example, leaped into sudden and lasting popularity. It surprised me. I did not expect it to sell many more than the required quota to keep it in the list. Mathematics, I naturally thought, would hardly appeal to many people. But the suggestion of possible fun—even with figures—is apparently too attractive to resist.

Indoor games are always popular. These are the totals:

Party Games for Grown-Ups.....	38,500 copies
How to Play Auction Bridge.....	37,500 copies
How to Play Contract Bridge.....	30,500 copies
How to Play Card Games.....	29,500 copies
How to Play Checkers.....	21,000 copies
Children's Games.....	18,500 copies
How to Play Chess.....	17,500 copies

There is, as you see, not a failure. Even chess, a game I thought was being forgotten, has some 17,000 devotees—and beginning players, at that—every year. And at last we have statistical evidence of the comparative popularity of chess and checkers; checkers leads by a margin of 3,500 annually.

Of amateur entertainment I have but a brief story to tell. My 1928 list will be expanded to include theatricals, ventriloquism, Hindu magic, sideshow tricks and all the rest. But there is one book on which I have figures, and these are the figures which determined me in an extensive enlargement of the list in this direction. I refer to *Amateur Magic Tricks*, which reached the total of 36,000 copies annually.

Perhaps, speaking of amateur entertainment, this is the best place to insert a paragraph on fortune-telling and character-reading books. I believe, of course, that these are merely playthings—these attempts to read the future or divine “character”—and so these Little Blue Books are careful to explain that though it may be fun, it is quite without foundation in fact to “read” palms, the cards, the stars, or the bumps on the head. The books are popular, nevertheless, as these figures show:

Facts About Fortune-Telling.....	44,000 copies
Facts About Palmistry.....	31,000 copies
Facts About Astrology.....	17,000 copies
Facts About Phrenology.....	12,000 copies

Palmistry, it appears, is either the best known or the best liked method of “looking into the future.” It is a Halloween sport, and is but another bit of evidence of the fun-seeking tendency of American readers.

Hypnotism Made Plain, though as much a psychological treatise as a book of entertainment, owes its popularity, I feel certain, to a hope that there may be some fun in it. Its annual figure is 24,000 copies.

Photography is utilitarian and altogether practical, as a profession. But among amateurs it has all the lure of any other sport, and it becomes, like angling and the rest, just fun. It is not as popular as some of the other books of this class, but *Photography Self Taught* sells at the rate of 13,500 copies a year.

The popularity of radio goes without saying. For the sake of completeness, I tuck in here the statement that *The Simplicity of Radio* has an annual sales figure of 22,500 copies. Even *A Directory of Radio Stations*—which I abandoned because so difficult to keep up to date—sold 12,000 copies annually.

I feel on the verge of closing this chapter with a comedy note. For the last figure that meets my eye reminds me of the thousands of parlors along countless Main Streets where little Mary or tiny Bob is urged to stand up and “recite a piece for the gentleman,” or “now say your little piece for the lady.” This may be unkind, but I am sure the day of the recitation, whether from the center of the parlor carpet or from the front edge of the high school stage, is not past. There is still magic in talking about studying “elocution,” and it is taken as seriously as piano lessons for the growing boy or girl whether there is any evidence of talent or not. It is, like Main Street itself, an American institution.

All of which has been inspired by the fact that *Popular Recitations* has an annual figure of 15,000 copies. I do not suppose that this means that very much uncomfortable reciting for the visiting lady or gentleman really goes on as a consequence of the sale of this book. I was merely reminded

AMERICANS WANT FUN AND LAUGHTER

of it, and I wondered if it did. I sincerely hope that the book contributes to real entertainment, instead. At any rate, I think that the desire for entertainment and amusement on the part of American readers is strong enough to account for the book's popularity.

CHAPTER V

RELIGION VERSUS FREETHOUGHT

Little Blue Book Sales Tell a Significant Story

BLINDERS are popular among some people, notably the incurable optimists, when by optimism they mean the triumph of their side of the question. That is, they like to think their side is on the way to victory, no matter what the facts may be. They fatuously blind themselves to the real situation, and refuse to admit any possibility of failure. Specifically, religious enthusiasts will not admit that there is any widespread tendency toward skepticism and freethought in America.

Yet recent developments in the world of books tell a different story. The trend is ever toward more progressive viewpoints, toward more free and unlimited thinking—toward what is popularly known as freethought. I could point to a dozen outstanding books of the past two years which tread ruthlessly upon religion's toes. Sinclair Lewis and his *Elmer Gantry*, for example—such a book would have been almost impossible a generation or two ago, where now it is a best seller.

Nine years ago books of skepticism, books against superstition and religion, were included in the pocket series. In

those days they were almost alone, those forward-looking books of rationalism and agnosticism. Even now the Little Blue Books, in the half a hundred titles by Joseph McCabe, contain more outspoken arguments against religious dogma, ritual, and any form of blind faith than any other books available today. The Little Blue Books are still in the vanguard, and it is because the readers want such books.

I have made no secret of my own heretical beliefs. For this reason I have been accused of saturating the Little Blue Book series with skeptical books because I wish to print propaganda that agreed with my own notions, and thus convert everyone to my own way of thinking. I have been called various uncomplimentary names on this account, and yet I may suggest mildly that even if this were true, it is only human that I should want others to see things my way.

However, aside from the fact that I am glad to publish books I agree with, the printing of freethought Little Blue Books is not a phase of my vanity. I do not do it because I think it should be done, even if no one would buy the books. I do it because I think it ought to be done, and also because thousands of people buy the books eagerly and readily.

If these skeptical Little Blue Books did not sell well, I would drop them. I have dropped many titles which I like immensely, for I am not forcing upon the public anything it will not read. There was Sir Richard Burton's *Kasidah*. I like that poem, and I put off as long as possible the inevitable fate of that book. It was finally consigned to my Little

Blue Book Morgue because American readers showed no interest in reading it. My great liking for it saved it for a time, but my business sense got the better of my personal preference and the book was withdrawn.

In fact, I am being more than fair in this question of religion. I am an avowed agnostic, or atheist, or rationalist, or whatever you wish to call me—for I subscribe to no religion (I use the word strictly in the dictionary sense, and have no sympathy with those backsliders who stretch out the definition to include anything whatever). I am against all religion—I think the Bible is a dull book. Yet I print the Bible, and in the face of an appallingly low annual sale I keep the book in the series. I do this out of stubbornness. I am determined, because I know I am prejudiced against the book, to give it more than a fair chance. Could supporters of the Bible ask any more of one who does not like it?

Take a specific case. Henry C. Vedder once prepared a two-volume work for the series called *The Words of Jesus*. He gathered all the words of Jesus from the Bible and did modern readers the service of putting the sayings of Jesus into the English of today. I offered this two-volume work in the Little Blue Books for two or three years. But I could not sell it; American readers did not care about it. I withdrew it, finally, at a substantial loss. But I did not quit. I would not admit having failed to sell the words of Jesus, even. I thought it might be possible to make the book more popular by giving it a famous title. So I had a new one-volume work compiled, using the language of the

King James version of the Bible, and called it *The Sermon on the Mount and Other Sayings of Jesus*.

This book of the sayings of Jesus is published without any adverse comment. There is no freethought propaganda in the book. It is offered for its own sake, on its own merits. Its title is a fair indication of what the book contains. It is what might be called a concentrated version of the New Testament. If Jesus uttered anything worth reading today, it is in this Little Blue Book. And by going to this trouble, which my religious enemies are hardly aware of, I saved Jesus for the Little Blue Book readers of America. This book, in its present form, sells about 12,500 copies every year.

Is it perhaps pertinent to ask if any Fundamentalist would have done as much for a book setting forth the tenets of an agnostic?

Other Little Blue Books from the Bible sold as follows:

The Essence of the Bible.....	8,000 copies
The Gospel of Luke.....	5,000 copies
The Gospel of Mark.....	4,000 copies

I suppose I will be accused of doctoring these figures, but I can only sigh in the full knowledge that they are only too true. Those books represent an investment in editorial labor, type-setting, electrotyping, and so on. They take up warehouse space, and each one—Luke as well as Mark—requires its own separate pigeon-hole in the order-filling booths. The plates have to be stored in my crowded fire-proof vaults, in compartments which, if released, might hold the plates for two much better sellers. As I said, I can

only sigh and reflect that it is impossible to sell the Bible in five-cent doses, or in blue covers. The Bible must be black, and complete, and expensive. It cannot be sold for a nickel, and it cannot be given away even to the heathen.

Yet the figures I have just given would be meaningless if I could not make comparisons. What of the other great religious books? Here are their sales figures:

The Essence of the Koran.....	15,000 copies
The Essence of the Talmud.....	13,500 copies

These figures may alarm some people. It looks as though American readers were more devoted to Mohammedanism and Judaism than to Christianity. But the real reason for the popularity of these titles is curiosity. Readers want to find out what other religious books contain. They have been brought up on the Bible, perhaps, and they are curious to see whether the Koran and Talmud are anything like it. They are broadening their outlook, these curious readers, and learning lessons of tolerance. They are escaping from the cramped limits of bigotry into wider and freer opinions.

Suppose we go back and consider some other Little Blue Books which espouse Christianity or Christian principles, and see how popular they are as compared with books of other religions or beliefs:

The Wisdom of Confucius.....	21,000 copies
The Essence of Buddhism.....	16,000 copies
The Essence of Catholicism.....	14,500 copies
The Essence of Judaism.....	12,000 copies
Life of Martin Luther.....	12,000 copies
Life of Jesus (Renan).....	11,000 copies
Life of Mahomet.....	9,000 copies

RELIGION VERSUS FREETHOUGHT

Life of St. Francis of Assisi.....	8,000 copies
History of the Modern Church.....	8,000 copies
Bryan's Prince of Peace.....	7,000 copies
History of the Ancient Christian Church..	6,500 copies
Poems About Jesus.....	5,500 copies
History of the Medieval Christian Church..	5,000 copies
Great Christian Hymns.....	3,000 copies

The evidence, again, seems to indicate a great curiosity on the part of American readers to learn what other faiths have been like. It comes to a climax in the interest shown in the sayings of Confucius (who was an agnostic), which is almost twice as great as that shown in the sayings of Jesus. Too, the life of the infidel Ingersoll is more than twice as popular as the life of Jesus.

Let us see whether this curiosity continues as we examine more skeptical titles, especially books which deal with the facts underlying Christian faith. These figures tell us a great deal:

Did Jesus Ever Live?.....	42,500 copies
Self-Contradictions of the Bible.....	33,000 copies
Reasons for Doubting the Bible.....	31,000 copies
Forgery of the Old Testament.....	30,000 copies
The Myth of the Resurrection.....	30,500 copies
Thomas Paine's Age of Reason.....	29,000 copies
Life of Robert G. Ingersoll.....	25,000 copies
Paine's Revolt Against the Bible.....	21,000 copies
How the Old Testament Was Made.....	16,000 copies
Sources of Bible Myths and Legends.....	10,500 copies

For every copy of the life of Jesus sold in the Little Blue Books, nearly four copies are sold of a book which suggests that perhaps he did not live at all. For every copy of *Essence of the Bible* sold every year, four copies of *Self-*

Contradictions of the Bible are sold. And Thomas Paine's *Age of Reason*, it appears, continues its work of exposing superstition even in this twentieth century, when most of the religionists of Paine's day are all but forgotten and whose books are cherished only by collectors of rare examples of colonial publishing. I should not think, for example, of ever putting any of the work of Cotton Mather into the Little Blue Books!

We are living in an age of skepticism. It is an age when people are seeking the truth. Facts are being weighed against tradition, to the cost of the latter. Faith is no longer quite sufficient to substantiate belief in this or that dogma. But of course these manifestations of a healthy skepticism are true only of readers. People who do not read books are still slaves to the faiths of their fathers. That is why the leaders of religion have always regarded most books askance, and feared the literacy of their followers. One may be led astray by reading, they say.

The demand for Little Blue Books of freethought and skepticism is real. I was venturing into unknown harbors when I first published such books. But the venture was worth the gamble, as you are beginning to see by the sales figures for these books. Freethought is more profitable, from a publisher's point of view, than the most devout creed. The emancipation of American readers has begun. There can be no doubt of that. The day of any possible Index Expurgatorius is, I am sure, far in the past. You cannot say to the reader of today, "Here is a book you must not read because it is dangerous to accepted opinions," and

expect him to leave the book alone. On the contrary, he will probably read it all the sooner.

Take skeptical titles at random. Pick them out as you will. The figures all tell the same story:

Luther Burbank's <i>Why I Am an Infidel</i>	64,000 copies
Voltaire's <i>Skeptical Essays</i>	25,000 copies
What Can a Free Man Worship? (Bertrand Russell)	24,000 copies
Controversy on Christianity (Debate; Ingersoll and Gladstone).....	22,500 copies
Rome or Reason? (Debate; Ingersoll and Cardinal Manning).....	19,000 copies
Rupert Hughes' <i>Ghastly Purpose of the Parables</i>	19,000 copies
What Atheism Means to Me.....	17,500 copies
Clarence Darrow's <i>Voltaire Lecture</i>	17,500 copies
Ingersoll's <i>The Gods</i>	17,000 copies
Wit and Wisdom of Voltaire.....	16,500 copies
Why I did not Enter the Ministry.....	14,500 copies
The Necessity of Atheism (Shelley).....	13,500 copies
Nature of Religion (Schopenhauer).....	12,000 copies
Anatole France on Life and Destiny.....	10,500 copies

The sensational sale of Luther Burbank's *Why I Am an Infidel* indicates a popular curiosity about the man, but this curiosity, it is only fair to explain, was aroused by the wide publicity given the horticulturist's declaration of agnosticism shortly before his death. Preachers, of course, made much of the death of an avowed agnostic; being thus reminded of it, I cannot help pointing out the vicious parallel of the death of William Jennings Bryan—not as divine punishment, of course, but because “his work on earth was done.”

But even the curiosity about Burbank's reasons for being

an infidel is more than a hopeful sign of American reader-emancipation. The fear of reading heretical books is gone, now that the shadow of the rack has faded into nothing. People dare to doubt today; they dare to read to find out whether there are justifiable reasons for doubting. Perhaps some are strengthened in their faith, but I like to believe that for every such person there are a dozen others who are inclined toward the free and healthy atmosphere of modern skepticism and freethought.

It was the success of these scattered Little Blue Books of skeptical trend that set a great scholar to work turning out a complete history of religious controversy, written for the first time from the agnostic angle. The scholar was Joseph McCabe, and he did fifty-odd Little Blue Books in somewhat over a year, comprising "The Story of Religious Controversy." These fifty books represent a substantial investment. Is it fair to my business judgment to suspect me of putting Joseph McCabe at this task just because I wanted to flood America with anti-religious propaganda? And remember, please, that these Little Blue Books are not distributed gratis as are many religious tracts; they cost five cents apiece, you know, and just exactly as much as hundreds of other books offered in competition with them. American readers do not have to buy these books unless they really want them.

The reception of these Joseph McCabe Little Blue Books by the American reading public gratifies me. I do not deny that. It will gratify anyone interested in enlightenment and progress. It is only when there is a clash of ideas that

there can be any intellectual advance. Readers must be ready to peruse other men's views if they are to get out of the rut in which tradition has left them.

What is the verdict, in actual figures, of American readers when offered heretical works by Joseph McCabe? The verdict is as follows:

My Twelve Years in a Monastery.....	46,000 copies
Seven Infidel U. S. Presidents.....	43,000 copies
Horrors of the Inquisition.....	41,000 copies
Absurdities of Christian Science.....	36,000 copies
The Degradation of Woman.....	35,000 copies
The Jesuits: Religious Rogues.....	34,500 copies
Lies of Religious Literature.....	28,000 copies
Galileo and Medieval Science.....	27,000 copies
The Future of Religion.....	25,000 copies
Pagan Christs Before Jesus.....	25,000 copies
The Conflict Between Science and Religion	23,000 copies
The Beliefs of Scientists.....	23,000 copies
The Myth of Immortality.....	21,500 copies
Religion's Failure to Combat Crime.....	21,000 copies
The Futility of Belief in God.....	20,000 copies
The Churches and Modern Progress.....	20,000 copies
The Triumph of Materialism.....	17,500 copies
Failure of Christian Missions.....	17,000 copies
Myths of Religious Statistics.....	16,000 copies
The Fraud of Spiritualism.....	13,000 copies

I have, of course, not given the figures for the entire fifty-one or fifty-two books. But I have endeavored to select those titles which indicate most forcibly the interest in rationalistic books. I have listed all of the out-and-out agnostic titles. That these titles have not scared away thousands of readers is clearly evident. Bear in mind, too, that these are *annual* sales figures, and not the total

sales for the entire time these books have been in print.

Some people wonder if Little Blue Books of this kind do not make more enemies than friends. Probably they do make some enemies. I receive letters from religious devotees who get a package of Little Blue Books and then, happening to notice that the series contains such titles as those discussed in this chapter, they put the whole shipment into the stove. The passion for burning "dangerous" books still survives, even if this is the twentieth century. But these fanatics are the exception rather than the rule. American book readers as a group seem to be tolerant and ready to let everyone have a hearing.

In the chapter I have called "Business Man or Philanthropist?" I point out that, though I am strictly a business man when it comes to publishing these Little Blue Books, I am sincerely endeavoring to guide my editorial decisions by the dictates of my convictions. Obviously, had I been entirely mercenary, I might never have dared to offer Joseph McCabe the contract for writing fifty books or so of this nature. For I would not have printed any skeptical or freethought books in the first place, thinking that they might hinder a few sales here and there. But I did print the skeptical books, and they were successful, and I did employ McCabe, and his books have been successful too. If that is philanthropy, I am glad of it—though my part ended when the demands of the public began.

But what if the books based on the Bible and Christian traditions had been more popular than Ingersoll and Paine and Voltaire and McCabe? Would that, you ask me, have

made the story different? Perhaps. It is a supposition that can never be brought into the realm of workaday facts. If American readers had been so shackled still that they would not read Thomas Paine and his sympathizers, I might never have begun the Little Blue Books in the first place. I might have turned to the manufacture of chewing gum, or something equally free from intellectual dynamite.

It is clear that the genesis of the Little Blue Books is bound up closely with a belief in American readers of today. The whole aim of the series is false unless I believe, and you agree, that American readers will support a series of good books at a low cost price by the tens and hundreds of thousands of copies of each title annually. I had a suspicion, or a hope, that American readers would grab at five-cent books printing good material, free from the usual trash. It was a hunch, but it was the kind of a hunch which made the venturing into freethought and rationalism not only possible but inevitable.

If the Bible had sold by the hundred thousands, would I have quit? Again I cannot answer the question, because it is not in point. The Bible was already selling by the hundred thousand, as a piece of merchandise, thought desirable as a fetish if nothing more. I would hardly have hoped to sell the Bible, at a nickel a selection, as a fetish. I published it as literature—or as “entertainment”—just as I published all the other Little Blue Books. It failed, as compared with other more popular books. Had it been otherwise there would have been something wrong with American readers, or with my estimate of them. As I said,

the readers would have been different. The whole publishing field would have been different. I would not have had the idea of the Little Blue Books in the first place. This success of skeptical and heretical books is but one phase of the realization of a dream based upon a sound foundation in reality.

I did not start the Little Blue Books at some wild tangent. It was not a crazy notion unrelated to the world, without any connection with life as it is today. I thought I saw a demand—I did my best to fill it. Skepticism, rationalism, freethought—these were part of the bill of goods necessary to fill the demand. I interpreted the demand aright. If I myself had not been agnostic, of course I would not have seen it. That is all.

CHAPTER VI

SIDELIGHTS ON READING TASTES

Some Miscellaneous Facts About American Book Buyers

THERE is one book which I suppose will always be in the best seller class. It is justly popular, and yet it has become the bugbear of many a book lover, exactly as it has also been the constant inspiration of publishers of gift books, special editions, and such. I refer, of course, to *The Rubaiyat of Omar Khayyam*, as translated by Edward Fitzgerald. Yes, it is in the Little Blue Books—and it is No. 1! It is the oldest title in the series; it has never been crowded from its numerical first place, and I don't suppose it ever will be. For the *Rubaiyat*, in this edition, sells 50,000 copies annually—and in competition with 1,259 other titles!

If anyone had wanted to lay a wager, before I published this book, I might have been tempted to vote against it, on the grounds that nearly everyone must own a copy already. I have three in my own library: two are gifts. Someone is always giving a copy of the *Rubaiyat* to someone else. Gift editions are too plentiful, and too superficially attractive, to be resisted.

Not that the *Rubaiyat* is not a great poem. It is. I like it;

I even have admiration, mingled with some affection, for Omar Khayyam. He was a man after my own inclination, or perhaps I should say, after some of my inclinations. But the Rubaiyat has been done to death by so many unappreciative mouthers that many readers of books feel urged to hide when it is mentioned. Clarence Darrow quotes it often and effectively, and quite without affectation. But he is the only man of such high attainments who dares to do it.

My liking for the Rubaiyat is clear, because it was the first Little Blue Book I sent to the linotype. That my liking was shared by thousands of others accounts for the fact that it is still No. 1. The sale of the book during its nine years approached the half million mark.

A Word About Poetry

Poetry in general is hard to sell, even for five cents. I am sorry for this for a very practical reason—something like ninety different volumes of poetry were in the Little Blue Books at one time. Many have been withdrawn, and I explain all this in another chapter (“The Morgue”).

Of popular poetry, Rudyard Kipling leads:

Gunga Din, and Other Poems.....	25,500 copies
Mandalay, and Other Poems.....	19,000 copies
The Vampire, and Other Poems.....	14,500 copies

The leadership of the first of the trio is accounted for, I expect, by the familiar phrase: “You’re a better man than I am, Gunga Din!” The second is a favourite song, and the

third—ah, yes, the “rag, a bone, and a hank of hair.” Phrases like these capture popular fancy, sometimes worthily and sometimes not, and they cling tenaciously. For I am, of course, under no illusions. These three little Blue Books of Kipling’s poetry are sold because of three leading titles identifying each of them. If they had been called *The Poetry of Rudyard Kipling*, Vol. 1, Vol. 2 and Vol 3, respectively, they would not have sold nearly as well. For every man who knows the name Kipling, there are a dozen who will respond to “Mandalay.”

The only immediate rival of Gunga Din is the mighty Casey—*Casey at the Bat, and Other Poems* also has an annual sales figure of 25,500 copies.

Humorous verse is popular, but not so popular as comic poems. I am not contradicting myself. This is the explanation:

A Book of Comic Poems.....	21,500 copies
A Book of Humorous Verse.....	10,500 copies

The psychology of this may be that “comic poems” is shorter and more to the point than “humorous verse.” The word “comic” perhaps suggests something funnier than does the word “humorous.” The contents of both books are quite similar. The only explanation of the fact that one is twice as popular as the other is that the title of one is twice as appealing as the title of the other.

Other books of comic poems are:

A Book of Comic Dialect Poems.....	11,000 copies
A Book of Nonsense Verse.....	10,000 copies

THE FIRST HUNDRED MILLION

American poets can now be measured properly as regards their popularity, for here are the indisputable figures:

Poems of John Greenleaf Whittier.....	17,500 copies
Poems of Edgar Allan Poe.....	14,500 copies
Poems of William Cullen Bryant.....	14,500 copies
Poems of Walt Whitman.....	11,000 copies
Poems of Ralph Waldo Emerson.....	10,500 copies
American Poetry of Today (Anthology) ..	9,000 copies
Courtship of Miles Standish (Longfellow)	8,000 copies
Poems of Oliver Wendell Holmes.....	7,000 copies
Vision of Sir Launfal (Lowell).....	6,000 copies
Poetry of the Southern States.....	5,500 copies

I have tried the manner of the Kipling titles—using some popular poem as the lead—with Poe (“The Raven”), Bryant (“Thanatopsis”), Holmes (“One Hoss Shay”), etc., with mild success. General anthologies do not go very well, as can be seen by the low figures for the last two books listed above. Whittier is first, and Poe and Bryant are tied for second place in the reading hearts of their countrymen, with Whitman and Emerson close thirds. Yet, if you had been asked, you might have guessed Longfellow as first. Now you have actual sales statistics to guide you.

British poets are in demand as follows:

Harlot's House, and Other Poems (Wilde)	40,000 copies
Poems of Robert Burns.....	21,000 copies
Poems of John Keats.....	13,500 copies
Tennyson's Enoch Arden.....	13,500 copies
Scott's Lady of the Lake.....	13,000 copies
Poems of Percy Bysshe Shelley.....	12,500 copies
Alexander Pope's Essay on Man.....	12,500 copies
Macaulay's Lays of Ancient Rome.....	12,000 copies

SIDELIGHTS ON READING TASTES

Coleridge's <i>Ancient Mariner</i>	10,500 copies
Great English Poems.....	10,000 copies
Goldsmith's <i>Deserted Village</i>	9,000 copies
Ballad of Reading Gaol (Wilde).....	9,000 copies
Elizabeth Barrett Browning's <i>Sonnets from the Portuguese</i>	7,000 copies
<i>Sonnets of William Shakespeare</i>	7,000 copies
<i>Poems of William Wordsworth</i>	5,000 copies
<i>Poems of Alfred Tennyson</i>	5,000 copies
<i>Poems of William Morris</i>	4,000 copies
Robert Browning's <i>Pippa Passes</i>	4,000 copies
Robert Browning's <i>Lyric Love</i>	4,000 copies
<i>Ballads of Sir Walter Scott</i>	4,000 copies

Robert Burns wins first place without any argument. I leave out Oscar Wilde's book because of the title—it is *The Harlot's House* which jumps up the demand for that selection(see the chapter entitled "Are Americans Afraid of Sex?"). Keats and Shelley sell on the merits of their names alone. *The Ancient Mariner*, *Lays of Ancient Rome*, *Enoch Arden*, *The Deserted Village*, and *The Lady of the Lake* are famous titles. Pope's *Essay on Man* does not suggest verse, and sells so well largely because it implies a discussion of mankind—or so I interpret its popularity. Speaking of famous titles, Browning's *Pied Piper* and Whittier's *Snowbound*, in the same volume, together sell 11,000 copies every year.

Of "foreign" poets, Dante is by far the best with his *Inferno*. The Little Blue Book edition is in two volumes, and the sale runs to 20,000 sets annually. François Villon is next best, though he sells only 9,000 copies per year. *Famous German Poems* sells about 8,000 a year. *The Life and Poems of Catullus* is a book scheduled, one of these

days, to go into The Morgue—at this writing its annual sales total is only 3,000 copies.

The Bard of Avon

What of the popularity of William Shakespeare in this twentieth century? On the stage, if sympathetically presented, I can vouch for him—Otis Skinner as Falstaff in *The Merry Wives of Windsor* can get as hearty laughs from a present-day audience as ever an actor did in Shakespeare's own time. Humor was the same to the sixteenth century Londoner in the pit as it is to the twentieth century American in the orchestra. But do Americans *read* Shakespeare?

The Little Blue Books devoted to Shakespeare's immortal plays are a portion of the series of which I have always been proud. The editions are complete and verbatim—though they often run to 96 and 128 pages each, which are almost prohibitively expensive in these days of a five-cent price uniformly postpaid to any address in the world. The plays sell as follows:

Romeo and Juliet.....	14,500 copies
Julius Cæsar.....	9,500 copies
The Merchant of Venice.....	9,500 copies
Hamlet	9,000 copies
Macbeth	9,000 copies
As You Like It.....	9,000 copies
The Taming of the Shrew.....	9,000 copies
A Midsummer Night's Dream.....	8,000 copies
The Comedy of Errors.....	6,500 copies
The Merry Wives of Windsor.....	6,500 copies

SIDELIGHTS ON READING TASTES

The Tempest.....	6,500 copies
Othello	6,000 copies
Twelfth Night.....	5,000 copies
Much Ado About Nothing.....	5,000 copies
King Lear.....	4,000 copies
Measure for Measure.....	2,500 copies

Romeo and Juliet is the only play which does the necessary minimum or better per year. I shall probably keep all his plays in print that sell 5,000 copies or more a year. All of the historical plays—the Richards, Henrys, and King John—will go into The Morgue, for they all do scarcely 1,000 copies a year. *Venus and Adonis*, the poem, sells about 7,000 copies annually.

Other Dramatists

Henrik Ibsen is probably the best-known name among more modern playwrights. I am also proud of offering his leading plays in Little Blue Book form. They are in demand, too, as can be seen from these figures:

Ghosts	22,500 copies
A Doll's House	15,000 copies
Hedda Gabler	12,000 copies
Pillars of Society	10,500 copies
The Master Builder	9,000 copies
The Wild Duck	7,000 copies
Rosmersholm	5,000 copies

The first three plays are the most famous, which undoubtedly accounts for their popularity. It is but another sign of the reader-curiosity in America about the most famous classics, when such titles are put readily within people's reach.

The dramatist with the next best representation in the series is Molière. His plays sell like this:

Ridiculous Women	11,500 copies
The Show-Off (The Nobody Who Apes Nobility)	10,000 copies
The Misanthrope	8,000 copies

Other miscellaneous plays reach these sales totals:

Love's Redemption (Leo Tolstoy)	29,500 copies
The God of Vengeance (Sholom Asch)	11,000 copies
Lady Windermere's Fan (Oscar Wilde)	11,000 copies
The Land of Heart's Desire (William Butler Yeats)	9,000 copies
Woman of No Importance (Wilde)	8,000 copies
One-Act Plays (August Strindberg)	7,000 copies
Importance of Being Earnest (Oscar Wilde)	6,000 copies

Plays are about on a par with poetry—they are rather hard to sell unless the titles are particularly appealing. They can scarcely be sold at all, as plays. The public likes to see drama on the stage, but apparently cares little about reading plays.

I had a terrible time with the ancient classical dramas of Greece and Rome. I tell the story elsewhere, when I recount my failures and shed tears over the books which had to be withdrawn. Of the plays remaining in the list, it may be apropos here to list some of the sales figures for them:

The Bacchantes (Euripides)	12,000 copies
Prometheus Bound (Aeschylus)	10,500 copies
King Oedipus (Sophocles)	9,000 copies
Electra (Sophocles)	9,000 copies
Antigone (Sophocles)	8,000 copies

SIDELIGHTS ON READING TASTES

Electra (Euripides).....	7,000 copies
The Frogs (Aristophanes).....	7,000 copies
Medea (Euripides).....	6,000 copies
Hippolytus (Euripides).....	5,000 copies

The *Prometheus Bound* was the earliest classical drama to be added to the series, and, from the indications of these figures, it looks very much as though it will be one of the last to be withdrawn—if it ever is. The *Bacchantes* of Euripides, undoubtedly because its title implies joyous dancers or some similar idea, is the most popular classical drama of all. It was the second to be added to the list. Basing hopes on the success of these two, many others were added; too many, as I tell in another place.

Other Ancient Classics

People are curious to know how Plato and his Socratic dialogues, and some of the other classical selections from antiquity, sell as compared with other books in the series. The figures, though often low when placed against the sales figures for more popular books, are still large enough to amaze many readers. For example, here are the sales totals (annual, remember) for some books frequently regarded as “dry,” and thought destined to be read only by professors and other pedants:

Meditations (Golden Sayings) of Marcus Aurelius	22,500 copies
Trial and Death of Socrates.....	15,000 copies
Plato's Republic.....	13,500 copies
Decadent Rome As Seen by Tacitus and Juvenal	12,000 copies
Dialogues of Plato.....	8,000 copies

THE FIRST HUNDRED MILLION

Xenophon's Memorabilia of Socrates.....	6,000 copies
Moral Discourses of Epictetus.....	6,000 copies
Morals of Seneca.....	5,000 copies
Cicero As Revealed in His Letters.....	4,000 copies

It certainly speaks well for American readers to buy 22,500 copies of a book of the thoughts of an ancient Roman emperor, Marcus Aurelius, whose works, though remembered by the embellishment of a glittering title—*Golden Sayings*—one would think likely to be little read in modern circles. It is even hopeful that 4,000 people every year can be found who want to read about Marcus Tullius Cicero; and I wonder, too, if the poor showing of this isn't partly due to bad memories of the orator, hanging over from high school regimens. I'm afraid I shall have to withdraw Cicero, if his name is not in any more demand than this—but I'm letting him stay through 1928, as a special extension of life.

Some Famous Books

Do books survive because people want to read them, or because of some arbitrary decision on the part of college professors? The question, though it may sound foolish, is frequently in the minds of readers. Many famous books are compulsory reading in the schools. Some are read by conscientious readers for "background," or because of some petty notion of self-duty. But if such famous books sell for a nickel apiece, it is fair to assume that they are bought to be read only for two reasons: either to satisfy a natural curiosity, since it isn't costing much; or, finding

other classical titles unforbidding, additional ones are bought because they may prove to be good reading.

Selecting more or less at random, here are some interesting figures:

Dr. Jekyll and Mr. Hyde (Stevenson)....	29,500 copies
The Man Without a Country (Edward Everett Hale).....	27,500 copies
Voyage to the Moon (Jules Verne).....	19,000 copies
Autobiography of Cellini.....	18,500 copies
Confessions of an Opium-Eater (De Quincey)	17,500 copies
Diary of Samuel Pepys.....	17,500 copies
The Pilgrim's Progress (Bunyan).....	17,000 copies
Aesop's Famous Fables.....	16,000 copies
Poor Richard's Almanac.....	14,500 copies
Andersen's Famous Fairy Tales.....	13,500 copies
Travels of Marco Polo.....	13,000 copies
Tales from Arabian Nights.....	12,000 copies
Rip Van Winkle (Washington Irving)....	11,000 copies
She Stoops to Conquer (Goldsmith).....	11,000 copies
Adventures of Baron Munchausen.....	10,500 copies
A Child's Garden of Verse (Stevenson)....	10,000 copies
Thoughts on the Meaning of Life (Joseph Joubert)	9,500 copies
Burton's Anatomy of Melancholy.....	8,000 copies
Meditations on Man (Pascal).....	7,000 copies
The Mikado (W. S. Gilbert).....	7,000 copies
A Christmas Carol (Dickens).....	6,500 copies
Robinson Crusoe (Defoe).....	5,000 copies
Boswell's Life of Dr. Johnson.....	5,000 copies
An Apology for Idlers (Stevenson).....	4,000 copies
The Beggar's Opera (John Gay).....	4,000 copies

A number of conclusions can be drawn from these miscellaneous totals. Here are valuable secrets—here, in short, are revelations of the right classics to issue in handsome editions. *Robinson Crusoe*, it can be seen clearly,

has been done to death; everyone has read this story, in childhood or later. There is little reader-curiosity about such a book, so constantly accessible to nearly everyone.

But Jules Verne still appeals to the adventurous imagination, even with his extraordinary *Voyage to the Moon*. Likewise the famous travels of Marco Polo, the Venetian who made his way to the great Kubla Khan in distant and marvelous Asia. The adventures of that greatest of liars, Baron Munchausen, still hold fair sway over modern readers. And the Arabian Nights—Sinbad, Aladdin, Ali Baba, and the rest—even today, in a twentieth century full of wonders, 12,000 people want to know more about the magical land of Bagdad and the mysterious East.

I have put in some of the failing titles deliberately. This chronicle is not entirely one of success. I tell in the chapter called "Rejuvenating the Classics" how it has been possible to resuscitate, as it were, many of these weaker titles by changing the listing in some way. I am disappointed, I assure you, with the poor showing of Boswell's biography of beloved old Sam Johnson. But something may yet be done with this book—I am thinking about it, and it may be saved from The Morgue, where it surely does not deserve to go.

At Stevenson's *Apology for Idlers* I am not so astonished. After all, America is certainly not a land of idlers, as the Rotary and Kiwanis Clubs will hastily assure you. America has no hankering to read about excuses for "laziness"—yet the more's the pity, for what Stevenson is really talking about is leisure for cultural betterment. Ah, that

is perhaps *it*—the elusive title, the hope of a bad seller! I have happened upon it by chance, while the keys of my typewriter clatter busily away—something about leisure in which to cultivate the mind and pursue that elusive culture which modern Americans are so anxious to capture.

John Gay's *Beggar's Opera*, though plainly listed as comic, does not do well either. Perhaps the word "beggar" is objectionable to busy Americans, who are ever at their work making progress in the world. Perhaps it is the word "opera," which suggests formality, highbrowism, white gloves, and the agony which so many husbands are dragged to endure. In an earlier section of this chapter, I have pointed out that plays—which include operas—do not sell well. Oliver Goldsmith's *She Stoops to Conquer* is one of the exceptions. Its title is excellent, and even if it is a play people are curious to find out what it is about.

Benjamin Franklin's *Poor Richard's Almanac* still has its adherents, new ones every year, 14,500 of them. No one knows how many editions this book has gone through, in the hands of hundreds of publishers. No one can tell into how many languages it has been translated. Yet still it goes on, among the most popular of the famous books, a perennial, even an everlasting, favorite. Its maxims are American, strictly—"early to bed and early to rise will make a man healthy, wealthy, and wise"—what Babbitt could ask for anything nearer the glorious One Hundred Percent? Franklin knew what he was talking about, and he had also a sense of humor—no wonder he is still popular.

The two best among the famous titles listed above are *Dr. Jekyll and Mr. Hyde* and *The Man Without a Country*. In the first we have a story of dual personality—horror mingled with a liking for the occult and mysterious. The story is world famous. In Hale's story there is more than the appeal of a good yarn well told. There is that propagandistic note which Stephen Decatur strikes in his lines about his country, may she always be in the right, but his country right or wrong. Patriotism is the lure—and something deeper, too, for mere chauvinism could not make the story so enduring—something that is revealed in the lines which cause poor Nolan to fling a copy of Scott's *Lay of the Last Minstrel* into the sea: "Breathes there the man with soul so dead who never to himself hath said, This is my own, my native land!" It is provincial, even primitive; it is the Home, Sweet Home chord; it is, in short, so much hokum—but it always has its appeal, and is therefore consistently popular.

In the eagerness to read Cellini's memoirs I detect something else. It is that lure which I discuss at some length in the chapter called "Are Americans Afraid of Sex?" For Cellini—and he is so described in the Little Blue Book catalogue and advertisements—was a notorious murderer, lover, and miscellaneous sinner. He took a great deal of joy in life, and he pursued his notions of happiness with much fervor and zest. He killed willingly, but he risked his own life with as little compunction as he took that of someone else. He tells us he was a hero, and he is not slow to make himself out a good one. Hence he is good reading.

Who Is Your Favorite Philosopher?

In the Little Blue Book poll of philosophers a genuine insight is given into reading preferences. There is no guess-work here, nor is there any need for analytical supposition based on the supposed character of American readers. These are facts, and from them I am in a position to state positively that America readers select (by preference) the following philosophers in the ratio of these figures:

Story of Friedrich Nietzsche's Philosophy.	45,000 copies
Story of Plato's Philosophy.....	39,000 copies
Story of Anatole France and His Philosophy	32,000 copies
Story of Aristotle's Philosophy.....	27,000 copies
Story of Arthur Schopenhauer's Philosophy	26,500 copies
Story of Baruch Spinoza's Philosophy.....	25,500 copies
Story of Francis Bacon's Philosophy.....	25,500 copies
Story of Immanuel Kant's Philosophy....	24,000 copies
Story of Voltaire's Philosophy.....	24,000 copies
Story of Herbert Spencer's Philosophy....	19,000 copies
Story of Mark Twain's Laughing Philosophy	10,500 copies
Story of Ralph Waldo Emerson's Philosophy	8,000 copies
Story of Henri Bergson's Philosophy.....	8,000 copies

There is no question about Nietzsche's taking first place. The book in the above list is the one by Will Durant. Emily Hamblen's *How to Understand the Philosophy of Nietzsche* does nearly half as well with an annual total of 20,000 copies. Even Nietzsche's epigrams, in a book by themselves, sell 13,000 copies per year.

Plato is second choice among American readers. His books of philosophy, apart from Will Durant's account of him, are also popular (see the figures in a preceding sec-

tion of this chapter). Third is the Frenchman, Anatole France. France's *Reflections on Life and Destiny* sells 10,500 copies annually; the total for his *Wisdom of the Ages and Other Stories* is 10,000 copies; and his *Epigrams of Love, Life and Laughter* does not do so well, aggregating hardly 6,000 copies yearly at this writing. (Books of epigrams are another group that is hard to sell in large quantities.) France's *The Human Tragedy*, however, vindicates him with a total of 16,000 copies.

Emerson and Mark Twain, two American philosophers, are low in the scale. Emerson is strongly represented in the series, however, and his books, if taken all together, mount up to a substantial total. Mark Twain is more usually thought of as a humorist than as a philosopher. Of the Europeans, Henri Bergson is least popular. Will Durant's *Contemporary European Philosophers* sells 19,000 copies annually, while his *Contemporary American Philosophers* reaches a yearly total of 28,000 copies. This is in direct contradiction to the figures for Emerson and Mark Twain, but the reason I have noted may help to explain it. Will Durant's name, also, is an inducement.

Books which have subject matter allied to philosophy are fair sellers as a whole. In general, those books which deal with life and mankind are in regular demand. For example, here are some comparative figures:

Is Life Worth Living? (Darrow Debate) . .	33,000 copies
The Art of Happiness (John Cowper Powys)	31,000 copies
Is the Human Race Getting Anywhere? (Darrow Debate)	30,000 copies
Facing the Plain Facts of Life (Maxims of	

SIDELIGHTS ON READING TASTES

La Rochefoucauld)	13,500 copies
Has Life Any Meaning? (Debate).....	13,000 copies
What Life Means to Me (Jack London)....	10,000 copies

The debates in which Clarence Darrow took part are, of course, so popular because of his name. But their popularity is also due to their subject matter. For example, his debate on prohibition sells only 15,000 copies, or only half as well as either of the two titles listed above. His debate on capital punishment jumps up to 28,000 copies. Again, his dry-law debate with Wheeler sells only 14,500 copies. Subject matter has its influence—and incidentally, prohibition is not so vital an issue to American readers as capital punishment.

Americans are clearly interested in how to secure happiness. The sale of Mr. Powys' book is exceeded only by his *Secret of Self-Development* and *One Hundred Best Books*, both discussed in the chapter entitled "The Quest for Self-Improvement."

E. W. Howe, the "sage of Potato Hill," has contributed several booklets of worldly wisdom which could come under the life-philosophy grouping, though I generally list them, for better effect, and quite as appropriately, under Humor. It is interesting here to compare the effect of the titles. For book against book, when the author is the same, is a competition of titles alone:

Success Easier Than Failure.....	77,000 copies
Sinner Sermons.....	20,000 copies
Preaching from the Audience.....	13,000 copies
Dying Like a Gentleman and Other Stories	11,000 copies
Notes for My Biographer.....	5,000 copies

Obviously, *Notes for My Biographer* is, as a title, responsible for the book's low sale. It is being changed to *Stepping Stones Up from Failure*, which really describes the book better. Mr. Howe wanted to call *Success Easier Than Failure*—which has a sensational sales figure, due to the American's everlasting quest for success—*Preaching of a Brother-in-Law of the Church*, which is much too literary and recondite. I am sure that, with these figures against him, Mr. Howe will be glad the change in title was made.

Comparisons of sales totals on philosophers, by the way, are also given in the chapter entitled "A Comparison of Advertising Mediums." I add here by way of an aside that the figures may differ, and pause only to call the attention of the reader to the fact that the figures in these chapters discussing what America wants to read are based on sales from the list as a whole and not from particular advertisements. The results necessarily vary, depending to some extent on the medium and whether the book is in competition with 1,259 or only 299 other titles.

Story Collections

Little Blue Book statistics are available, too, on various types or classifications of stories—adventure, mystery, and so on. These data are alike a commentary on and a revelation of American reading preference. You can get an inkling of it from the newsstand magazines which cater to such

specialized—and stereotyped—fiction as these groupings often imply. But here the result comes from offering good literature, some of it in classified groups for the sake of discrimination. Let the figures tell their own story:

Funny Ghost Stories (Jerome).....	33,000 copies
Tales of Far North (Jack London).....	25,500 copies
Great Ghost Stories.....	21,000 copies
Adventure Stories (Jack London).....	17,500 copies
Great Sea Stories.....	17,000 copies
Tales of Big Snows (Jack London).....	16,000 copies
Mystery Tales of the Sea.....	16,000 copies
Tales of Mystery (Poe).....	14,500 copies
Ridiculous Stories (Stephen Leacock)....	14,500 copies
Civil War Stories (Ambrose Bierce).....	13,000 copies
Great Detective Stories.....	13,000 copies
Masterpieces of Mystery Stories.....	12,000 copies
Masterpieces of Adventure Stories.....	11,000 copies

The ghosts have it. The funny ghost stories, of course, have the additional attraction of humor. Adventure—including the sea and the far north—comes next, helped out to a good extent by the name of Jack London. War stories, at least not Bierce's iconoclastic glimpses of the Civil War, are not so popular as current whitewashed episodes appearing in certain periodicals. But the copies of the Bierce books will do more good than harm; they deserve to be read, for they tell of war as it is—or more nearly do that than much similar fiction.

The detective stories of Arthur Conan Doyle—featuring the ever popular Sherlock Holmes—do about as well as the general detective title given above. The average is about

14,000 copies annually, which is not so bad considering that there are seven different books of Sherlock Holmes tales in the list.

Foreign fiction, grouped by nationality, does not sell as well as might be expected. The well-known names—such as Guy de Maupassant, Émile Zola, Honoré de Balzac, Rémy de Gourmont, etc., for France; Anton Chekhov, Leo Tolstoy, Maxim Gorki, Leonid Andreyev, etc., for Russia—always do rather well. But I am referring more particularly to such collections as the following:

Famous Russian Stories	16,000 copies
Yiddish Short Stories	13,500 copies
African Negro Folk Tales	12,000 copies
Spanish Stories	11,000 copies
African Jungle Tales	9,000 copies
Irish Fairy Tales	8,000 copies
Brazilian Stories	5,000 copies
Costa Rican Tales	5,000 copies

Costa Rica and Brazil do not attract United States readers, it seems. French and Russian fiction are always the most popular of the European possibilities. I am rather amazed at the showing of the Yiddish stories; the success of this book pleases while it surprises me. Ireland is poorly represented here with fairy tales, which, as a class, are not as popular as more realistic fiction.

The Proverbs

A unique feature of the Little Blue Books has been the collections of national proverbs. I began, rather practi-

cally, with the English proverbs, and ranged far over the world, finally including even Persian proverbs, African Negro proverbs, and so on. The venture, as a whole, has been, I regret to say, a failure. I mention it again in "The Morgue," but here it may be well to give the actual sales figures of those books of proverbs still in the list January 1, 1928:

Irish Proverbs	11,000 copies
English Proverbs	8,000 copies
Chinese Proverbs	6,500 copies
Spanish Proverbs	5,500 copies
Turkish Proverbs	5,500 copies
Hindu Proverbs	5,000 copies
Scotch Proverbs	5,000 copies
Modern Greek Proverbs	5,000 copies
Japanese Proverbs	4,000 copies
French Proverbs	3,000 copies
Italian Proverbs	3,000 copies
Arabian Proverbs	2,500 copies
Persian Proverbs	2,500 copies
Russian Proverbs	2,000 copies

I should add here that I tried to save these books—which contain the epitome of national or racial wisdom—by calling each, instead of "Proverbs," the "Wit and Wisdom" of the English people, French people, and so on. These sales figures must be viewed in the light of the change in title, which increased them all somewhat. Many of them were near ciphers before the change. But keeping the change in mind, it appears that American book-buyers feel that Russians, Arabians, and Persians have the least propensity for "wit" or "wisdom" in their national prov-

erbs. The Irish, apparently, are credited with the most wit, and possibly also the most wisdom.

Maxims and Epigrams

Once upon a time I had a classification in the Little Blue Book catalogue named Maxims and Epigrams. It was not a success. Readers do not care for short, pithy sayings in too large doses. So now they are scattered about, and they sell better. However, as a venture in itself, epigrammatic collections are not exciting. Here are some of the figures:

Epigrams of Oscar Wilde.....	13,500 copies
Epigrams of Bernard Shaw.....	9,000 copies
Wit and Wisdom of Disraeli.....	8,000 copies
Wit and Wisdom of Thackeray.....	8,000 copies
Epigrams of Henry David Thoreau.....	7,000 copies
Wit and Wisdom of Dickens.....	7,000 copies
Epigrams of Rémy de Gourmont.....	6,500 copies
Wit and Wisdom of Charles Lamb.....	5,000 copies
Epigrams of Henrik Ibsen.....	4,000 copies
Maxims of Napoleon.....	3,000 copies
Epigrams of George Moore.....	2,500 copies

Oscar Wilde has a reputation as a wit, from the looks of the above figures, even in America.

Personalities

Whom most do Americans want to read about? Whose lives most appeal to American readers? What biographies should be the most successful in America?

I have some interesting statistics toward answering such questions. The Little Blue Books have a large list of short

biographies especially written for the series. The sales figures tell what personalities are of strongest appeal to American readers of today:

Thomas Paine	21,000 copies
Oscar Wilde	19,000 copies
Napoleon Bonaparte	17,500 copies
Abraham Lincoln	13,500 copies
Leo Tolstoy	12,000 copies
Jesus Christ	11,000 copies
Machiavelli	7,000 copies
Benjamin Disraeli	6,500 copies
Thomas Paine (a second biography)	6,000 copies
Michelangelo	5,000 copies
Frederick the Great	4,000 copies
Thomas Jefferson	4,000 copies

The list given here is small. I have selected it principally to show that biography as such does not sell widely enough to justify much of it in a series that must go into the tens of thousands annually. Some of the better titles are discussed elsewhere. A few of the better ones listed above are influenced as much by the title as anything—Oscar Wilde, for instance, whose life is characterized in the advertising as “tragic.” The notoriety of Wilde’s later years is probably recalled, which makes the story of his life take on a sensational aspect. Napoleon, Jesus, and Abraham Lincoln are the best so far as their names alone are concerned—three sharply divergent ideals of human character. In each of these three men, too, it is more the traditional or legendary character that appeals, than the real flesh-and-blood man.

In other chapters the differences made in sales by

changes in title, variations in placing titles first among one group and then another in the catalogue, and so on, are thoroughly discussed. Selling books by the ten thousand is not a simple matter of listing the books and announcing that you can take your pick for five cents. An American reader will not spend even five cents until he is quite sure what he is getting in exchange for his nickel.

CHAPTER VII

REJUVENATING THE CLASSICS

The Cause and Justification of Changing Titles of Books

FIRST of all I want to ask and answer the old question, What is a classic? In schools and colleges a classic is a book which students may be allowed to read with safety—without damage to their moral integrity or to their patriotic zeal—because it has become a part of literary tradition and has ceased to be startling or new or interesting even. A classic, according to the students' idea of it, is a boring and tiresome book that *must* be read just because it is a classic. A classic, in the usual acceptance of the term, is a work written some time in the past, probably by an author now dead, and which is still being read by those who are supposed to have literary discrimination. This is very arbitrary, but it gives the popular idea.

Now I have not the space to go deeply into the accusation against academic English departments that they spoil the classics for our younger readers. I will say, however, that there is no doubt that many a good book has been spoiled forever by this very academic poison for people who would otherwise read it with enjoyment. This poison is so insidious that it is seldom recognized for what it

is: it is poisonous because it suggests or implies that classics ought to be read simply because custom has accepted them and given them their very proper niches in the world's literature.

I have never argued for or against classics as such. To me, as to Oscar Wilde before me, a book is either well written and worth reading or badly written and not worth the trouble. Most classics, I am glad to agree, are well written and worth reading. The judgment of time is for the most part sound and trustworthy. But is it possible to offer such books—such classics—to the reading public with the bare assertion that they have stood the test of time and therefore should be read avidly? I contend that it is not possible to do any such thing.

You can sell the classics as classics, all dressed up in handsome bindings, with gold tops and all that sort of thing, as merchandise. But merchandise is not read. It is put on the library or parlor table for show, along with a china elephant, an amber-colored ash tray, Lincoln book-ends, and a family photograph or two in gilded frames. These classics are bought not for what is inside but for how they look on the outside. The sales patter which puts such books into American homes is particular to stress the appearance of the books—their luxurious binding, their artistic distinction from a mechanical point of view, and so on. It is an old jest that such a set of books, such merchandise, never has the pages cut if they come uncut. I repeat, merchandise is all right as merchandise, but it is seldom if ever read.

It is another thing altogether if a book is sold strictly on the merit of its contents, to while away a spare quarter of an hour, or to educate one's self, or to satisfy a wholly legitimate literary curiosity. It is a practical certainty that a book bound in paper or card covers is not bought to fill a bookcase or to adorn a piece of furniture. I can reasonably make the statement that no purchaser of the Little Blue Books has ever bought his assortment out of any superficial vanity. He has always bought Little Blue Books because, for some reason or other, he wants to read them.

Nor do I mean to say that Little Blue Books are cheap or disreputable or need to be kept out of sight. It has been my experience, in so far as I have been able to find out about Little Blue Book owners, that readers of the Little Blue Books are rather proud of them. They prove the very point I have been making—they buy Little Blue Books for one reason only: to read them. Readers of books are always, and with sufficient excuse, proud of their reading. The Little Blue Books are neat, though inexpensive. There is nothing cheaply flamboyant or sensational about their appearance; the blue covers are quiet instead of some flaming color; the covers have only conventional type printed in black, for there are no startling jackets or flaunted pictures of blood or nudity or pageantry.

Little Blue Books are bought to be read, and now the question is, Do people buy classics in Little Blue Book form in order to read them? This is the nucleus of the whole discussion. This is the critical point. This is what I have been driving at all through the preceding paragraphs.

And the answer is that some people buy some of the classics in Little Blue Book form in order to read them.

When I began the series of pocket classics to become internationally famous as the Little Blue Books, I began it with the idea that I would print the classics in a form everyone could afford. From the first, in my advertising, I made the most of the word "classics." I subscribed to the notion that to call a book a classic was a sufficient endorsement of its worth—or at least that such an appellation would be a strong selling argument in offering the book to the reading public. I still think that the argument is in many ways a strong one, but, as I have already pointed out, it is also a kind of boomerang. Sometimes "classics" is a selling point; at other times it is a handicap, for people would rather read something they know will interest them, instead of gambling with something merely on a reputation fostered largely, they think, by old foggy college professors and bespectacled students of literature.

One of the first things I learned in my publishing experience is that the reading public is a critical audience. I mean this in more than one sense. I mean that readers are often skeptical of what is offered to them. They will by no means swallow a thing hook, line and sinker. They want to be told exactly what they are going to buy, and they prefer to decide for themselves whether they really want to read a particular book or not—classic or no classic.

If anyone will take the trouble to investigate the first two or three hundred Little Blue Books that were offered at ten cents apiece, he will learn that I carried my belief about

low-priced classics for every man into complete reality. I put out almost nothing but classics at first. That was the idea with which I started, and it was not a halfway plan that I had in mind. I selected classics that I had read and liked, and I also put in a number of classics that I had read and did not like. I had a conviction that any classic offered at ten cents a copy would sell by the tens of thousands.

The early experience in Little Blue Book publishing seemed to bear out my belief about low-priced classics. I ventured only so far, and then, finding that the idea was working out, I went farther. The whole expansion of the Little Blue Book series has proceeded by this simple principle—find out what the public wants and give it to them. I would do myself an injustice if I did not point out, at discreet intervals, that the field of dime or nickel books in America was an entirely unexplored one. Much of the progress was made in the dark, with only glimmers of light here and there.

But always, as with a constant hammering, one dominant precept was written down in the Little Blue Book editorial archives. Each rebuff repeated it; each success emphasized it anew. *Buyers of the Little Blue Books can be induced to purchase only what they earnestly desire to read.* This is not because they are afraid of wasting their money. The low price rules that objection out immediately. But it is because there is no other conceivable reason for buying a Little Blue Book. There is never any pictorial or luxury appeal whatever. There is no such thing as a Little Blue Book famous for being a Best Seller, and therefore bought

because it is the thing everyone else is buying and reading. In fact, it is not even because Little Blue Books are books, but just because they contain printed reading matter.

This last point needs a brief aside. One of the handicaps that the Little Blue Books have always had is that they are not substantially books in the mechanical sense of the word. Occasionally some aloof and hypercritical person will contemptuously call them "pamphlets." Of course, a booklet containing 15,000 words of text is not exactly a pamphlet, but the objection is there, nevertheless. For a surprisingly large number of book-buyers, upon whom American publishers depend for revenue, buy books because they are books. They would not think of reading the Rubaiyat of Omar Khayyam in a "pamphlet," but they would—having money to spare—spend five dollars to have it in a handsome library edition. Little Blue Books are not sold, as a usual thing, to a buyer of this class.

There are, naturally, some classics that large numbers of people want to read. These classics have been consistent good sellers in the Little Blue Book series. Edward Everett Hale's famous story, *The Man Without a Country*, is an excellent example. So is Washington Irving's *Rip Van Winkle*, and also Mark Twain's *English As She Is Spoke*. These titles are so well known that they arouse in the mind of a prospective reader what may be called a literary curiosity. He has heard about these books—heard about them rather favorably, probably—and so he wants to read them, and therefore buys them.

But when a survey is made and the results are tabulated,

it is found that the number of well-known classics which tens of thousands of people will buy just in order to read them is disappointingly limited. This number is an arbitrary one, of course; I could not venture to give an absolute figure, but I might say that it is certainly less than one hundred separate titles. This, obviously, could not long be a sound commercial basis on which to publish a series of classics the only appeal of which would be a desire to read on the part of the purchaser.

One way to help the sale of the less familiar classics is to educate the readers about them, and endeavor to create a compelling curiosity about them also. This can be done, to a small extent, with educational volumes, reading outlines, and such. It was not long before the Little Blue Books had such volumes, together with biographies and critical studies of leading literary personalities. But this phase of promoting the classics is also limited. There are strict boundaries beyond which it cannot go.

Keeping always in mind that a well-written book is much to be preferred to a poorly-written book, and remembering that if only a reader could be induced to start many a famous or at least established classic he would probably enjoy reading it, I saw only one course open to me. I refused to be discouraged in my project of publishing classics so that everyone not only could afford them, but so that everyone would read them. If the title of the classic, as it had come down through the ages, did not itself arouse sufficient curiosity in the reader, then it must be changed in such a way that it would arouse such curiosity.

Another important point, a thoroughly practical consideration from my point of view, must also be kept in mind. The larger the list of Little Blue Books grew, the more of a problem it became to advertise them. A product costing a tenth part of a dollar, or less, certainly could not be given individual and expensive advertising display. It is impossible, in other words, to give each Little Blue Book a persuasive blurb. The title, and perhaps the author, must sell the book or it is lost. When the total number of titles reached the thousand mark, the space allotted to each book in national advertising became approximately one agate line. Even at that it took a thousand agate lines to advertise the complete list. It is easily seen, then, why it became necessary for the title of every Little Blue Book to combine identification, blurb, and all the sales persuasion there could ever be.

This is the explanation of how the practice of altering titles came about. The changing of titles became an important part of Little Blue Book publishing. It was a fascinating gamble. It took on the glamour of laboratory experiment. Juggling words about was an editorial and commercial necessity, as well as a sort of amusing pastime. Sometimes it did not work; many times it did work.

A New Way to Treat Old Books

Tampering with the classics, in some aspects, is dangerously like playing with fire; but again, this notion of it is largely a myth. Conventional booklovers pose at throw-

ing their hands up in horror and crying out in anguish when any beloved classic is altered in any way whatever. To apply editorial shears to a master, to blue-pencil a literary tradition, to issue an editorial edict about some immortal book—all these, say the defenders of classics, are to court swift and sure disaster.

I remember that when I first scheduled for publication an abridged version of Sir Walter Scott's *Lady of the Lake*, I had an agitated feeling about it. I likened the venture to carrying dynamite through a burning building. Readers might rebel against it. The precedent of publishing an abridgment of a narrative poem of such established fame might hurt the whole idea back of the Little Blue Books. It was a dare. It was a risk.

But nothing happened, except that the book was sold. Yes, it was sold and it continues to sell. Even schools buy it now and then and use it for a text. There has been no literary uprising; there have been no indignation meetings about it; the integrity of the Little Blue Book publishing idea was not jeopardized. As a matter of fact, people seemed rather to like the abridgment—the duller portions were taken out, and for him who runs as he reads the Little Blue Book version is ample. It is not a summary, for the best of the poem is there. It does Sir Walter Scott justice, and little if any harm.

Well, I breathed easier after that. I watched the first edition go with a little fluttering of the editorial pulse. But there was no shock. My causes for alarm vanished like dreams, bad dreams. I found that the public was receptive

to intelligent presentation of the classics along modern lines entirely removed from the academic and the traditional. To be sure, no change was made in the title in this instance—as it happens, Sir Walter Scott's own title is a very good one. It is much better, I may say, than the title of either *The Lay of the Last Minstrel* or *Marmion*. If I ever put either of these into the Little Blue Books I am sure the titles must be changed.

The title-changing had not come yet. I was still publishing classics under their accepted banners; or, at least, under the banners they had always carried. It began to be apparent that such banners were not always accepted by a large majority of today's readers.

But before the title-changing became an editorial privilege and duty thoroughly sanctioned by success, there was another experiment I should describe briefly here. I had always cherished the notion that the classics of antiquity, Greek and Roman classics, needed to be given a modern angle, or at least to be put into up-to-date language, and offered to modern readers. It has always seemed to me that a literal or even an approximately literal translation is of little merit for the needs of most readers. For scholars or prospective scholars such hairsplitting is all right. But ordinary readers, who are really avid for knowledge and an approach to wisdom, need something less precise and more interpretative.

If you have ever read a fairly literal translation of almost any one of the Socratic dialogues of Plato you will know exactly what I mean. In literal English such a dia-

logue is full of repetition and constant circumlocutions. Such distressing superfluities depress the ordinary reader and drive him away from classical literature in perhaps justified disgust. He refuses to wade through literary barbed-wire entanglements for the sake of empty words like Classics, Tradition, Antiquity, and all that. He wants healthful pabulum for a man in his senses or no food of that kind at all.

It is not the matter or text of the classics to which I object. The substance is exactly what it is desirable to preserve and perpetuate for readers of all time. But it is hard to make the modern reader, whether he has had what is called a classical education or not, perceive that there is anything in the literature of antiquity to interest or benefit him. It is precisely this difficulty which the professors of classical Greek and Latin run up against in handling their groups of high school and college students—or rather I should say pupils, since few are students in the real sense of the word.

Perhaps it is a mistake to have Latin high school curricula at all, when this difficulty looms up in its really prodigious proportions. It takes a mature individual with some knowledge of the world and the various phases and experiences of life to see clearly that classical literature can be really an esthetic pleasure if read in the original—and that there is even a large chance of carrying some of that esthetic essence, or whatever you want to call it, over into English if the translator has some really creative imagination in him. Certainly it is better to read some intelli-

gent English version and get something out of it than to memorize Latin and Greek vocabularies, conjugate verbs, and all that sort of thing, with never an inkling of what it is all about.

The whole objection is epitomized, too, in the old-fashioned idea that a classical education was safe because far removed from the hedonism and other satanic temptations of contemporary life. A classic that is like some empty husk—some transparent shell or chrysalis from which the living butterfly has flown—cannot be expected to interest anyone, least of all an adolescent. Translators have emphasized too much the togas and other paraphernalia of an older and departed day, forgetting that clothes are a costume quite empty when, without a human body in them, they are hung on a hook to droop lifelessly. We do not wear togas, and even though the Romans did, what is there in that except an indication of time? For the Romans certainly loved and hated, connived and condoned, and bled as red blood as any of us. Unfortunately, it is the loving and hating and the rest of life and human nature which most versions of the classics neglect to emphasize or surreptitiously suppress.

Too much effort cannot be expended in making it clear to modern readers that when Aristophanes and Sophocles and Euripides, for example, wrote their powerful dramas they appealed to their people not because they were writing "great plays," but because they depicted life in a manner that the Greeks of their day could recognize and understand. A man went to a good play—a convincing, realistic

play that intensified life—then, as now, to be loved and hated and conspired against and redeemed and so on vicariously. He went, let us say, because in the ordinary run of his daily activity life more or less passed him by. At the play he could, without endangering his profits or his domestic peace, get by proxy many a thrill and realize to some small extent some of the major experiences of human life. But we today are capable of the same feeling—and if we read the classics as they should be read we will find in them much that the Greeks of old found in them. Putting *Hamlet* on the New York stage in modern dress was not so asinine a thing as some people contend—and the classics as far back as ancient Greece certainly deserve to be put to some extent in modern language and dress.

If there is some way of telling modern readers, and making them believe it, that there is real life in any **great** piece of literature, no matter when it was written, I am all for it. A happy twist to the title may do it sometimes by suggestion. Or the substance of the book itself may be given new life by modern presentation—by the treatment which will make it clear that the characters in the piece are not puppets long dead, but living human beings just as we are, though playing their parts on a stage with rather different scenery and props from ours.

I think this latter treatment is particularly suitable for the classical literature of antiquity, because it is so far removed in time from our own day. I would not lay this precept down as an absolute to be applied to all classics—one must pick and choose, carefully deciding, so far as

possible, whether the audience is really widened by such treatment.

The way to put the dialogues of Plato, to take but one instance, into such a popular form did not immediately present itself. Every idea must for a time lie in the back of the mind, awaiting the manner of its realization in fact. I had experimented enough with some of the ancient classics to learn that there was a market for them. With proper treatment and presentation they could well be a permanent part of the Little Blue Book series. I was glad of this. It proved my original contention that the classics could be sold at a low price if they were published and advertised in the right way.

When I saw my way clearly outlined for presenting these classics of Greek and Roman antiquity in a popular form, the carrying out of this plan took three distinct directions through three differently equipped writers. These three contributors to the Little Blue Book series undertook their work at approximately the same time. It was at the opening of a new period in Little Blue Book publishing—just about at the beginning of the policy of having original manuscript provided especially for the series and its purposes.

One of these writers is by now known throughout the United States because of a best seller. His name and his book are household objects. It will amaze many people to learn that the contents of this book first appeared in the form of Little Blue Books. The writer to whom I refer is Dr. Will Durant, author of *The Story of Philosophy*, which

for so many months has been one of the best selling non-fiction book in America—at five dollars the copy. I do not mean to imply that the price of this clothbound book is anything against it. I merely wish to indicate that virtually the same material, though in altogether different dress, first came out in Little Blue Book form, and still is in Little Blue Book form. Dr. Durant helped along my popularization of Greek classics with his *Guide to Aristotle*, and *Guide to Plato*. Later, when the value of “story” in the title of a book of knowledge was demonstrated, these books were called *The Story of Aristotle’s Philosophy* and *The Story of Plato’s Philosophy*, respectively.

Another phase of popularization among ancient classics was new and vigorous translations of the dramas of Greece and Rome. I found in Alexander Harvey exactly the man to do this part of the work. He seemed to catch the spirit of the original and somehow carry it over into English. The zest was still there, though in a new tongue and in a new manner. This was the idea exactly. Alexander Harvey enabled me to offer *The Bacchantes* of Euripides, the *Antigone* of Sophocles, the *Electra* of Sophocles and of Euripides, and so on.

Then there were the dialogues of Plato, the written record of the famous philosopher, Socrates, who walked the streets of Athens expounding his particular wisdom. All the translations I had ever seen of these had the same faults I have already mentioned. It did not seem that it was exactly a new translation that I needed. Rather I wanted a new version, an interpretative version. When Lloyd E.

Smith wanted to try the job I had my doubts. I was skeptical. I wanted to be shown. But in two books Mr. Smith did a good job. He gave the dialogues something they lacked before. He put them into language everyone could follow with interest and complete understanding. He performed a service for the Little Blue Book idea of rejuvenating the classics that was completely in accord with my plans. The two books, still in print, are *The Trial and Death of Socrates*, and *Dialogues of Plato*.

All of this experimenting and its successful exploitation steadily led the way to the title-changing policy—a policy that is probably the most drastic ever adopted by any publisher of established reprints, and in many ways, I feel confident in stating, one of the most daring departures from accepted custom. Only one thing could justify this tampering with the classics—and that is their wide distribution. If by altering a title here and there a good book would be more widely read, then the end certainly would justify the means. There could, if the policy succeeded, be no argument whatever about it.

Please understand me. I emphasize that in a large measure the changing of Little Blue Book titles has concerned what are loosely called “classics,” and it is in this respect that a policy of title-alteration is unique. Usually, and in an altogether regular and accepted publishing etiquette, publishers of “popular classics,” “the best classics,” “famous books,” “gems of the world’s literature,” and so on, keep the titles intact. For example, the novel *Beulah* by Augusta J. Evans keeps that title without change—the

blurb, very likely, gives the book a description that is made as persuasive as possible. But my immediate question, after my Little Blue Book experience, is: "What does the title *Beulah* tell? Is there any suggestion in the title itself of what the book is about—particularly if a person has never heard of either book or author before?" Certainly the title is as ambiguous as any title could be. It tells nothing whatever. But I have yet to see this book offered under any other name.

Changing the title of a book is a common occurrence in an editorial office. Authors are proverbially poor guessers when it comes to titles. They lack practical knowledge of how a book is presented to the public and how the public is likely to receive it. That is why a contemporary book is called one thing in America and another in England, as frequently happens. Editors also help authors—especially when the royalties are figured—by providing apt and striking titles for books. There is nothing new in this—but where is there an editor of *reprints* of fairly well-established classics, classics which have titles that were supplied, conceivably, to appeal to the audiences of an older and bygone day, where is there an editor, I say, who has had the courage to alter in the twentieth century the title of some book whose fame and worth were won in the eighteenth or nineteenth century? Frankly, I know of none.

You clamor for an example. I select the story that Guy de Maupassant chose to call *The Tallow Ball* (*Boule de Suif*). This story is famous, and deservedly well known and genuinely appreciated. That is why I put it in the

Little Blue Books. Certainly, *The Tallow Ball* is a thoroughly reserved, dignified, and assuredly proper title for any story. But what does it *say*? I answer my own question with a word—it says *nothing*. Even if the story is about a ball of tallow, who on earth cares to read a story about a ball of tallow? Indeed, in these modern times, even tallow as a substance has ceased to be of compelling importance. Tallow candles have gone the way of hoop-skirts and kerosene lamps. *The Tallow Ball*, as a title, serves only to identify the story to someone who has heard of it, or whets the appetite of a devoted admirer of Guy de Maupassant. It has no appeal whatever to anyone else.

But this story ought to be read. I wanted to keep it in the Little Blue Book series, and so I cast about for some way to remedy a bad situation. The record in 1925 of orders for *The Tallow Ball*, listed in my catalogue under that title, was 15,000 copies. This was good, but Guy de Maupassant's *Love and Other Stories* sold 37,000, and likewise his *Mademoiselle Fifi*. These last two have titles which suggest more of life—the first names love, and the second is obviously about a woman. As an experiment in titling, therefore, I gave *The Tallow Ball* a new and rather startling listing—I called the story *A French Prostitute's Sacrifice*. That, after all, is what the story is about. Behold, that when a similar sales record of orders was made in 1926, *A French Prostitute's Sacrifice* showed a total of 54,700, or more than three times the selling power of *The Tallow Ball*! Now it surpasses the other two mentioned Guy de Maupassant books.

As an example of the modern method of helping the author—which editors are doing all the time—I may cite the example of the Little Blue Book of poems by Arthur Davison Ficke. This was called at first *The Sonnets of a Portrait-Painter*. Under that title it was practically at a standstill as far as sales went. It was another indication that the public does not rise to the bait of painting unless some suggestion of the red blood of life is made also. I tried, as a substitute title, *The Love Sonnets of an Artist*. This helped a little—not nearly so much as the de Maupassant book just described, but from zero the book went up to about 6,000 copies annually. I remember that Mr. Ficke saw it advertised under the new title and objected strongly on the ground that the title vulgarized his poetry. When I told him the situation, however, he was appeased; even a poet prefers to have his poems read to not being read at all, though it mean the hint of life and love in his title!

Other figures are given in another place, but these will serve to show, at this early stage of the discussion, just what I mean by a drastic policy of title-changing, especially as applied to books which are known as classics. I mean more than editorial suggestion and improvement relating to contemporary work. I mean more than the difference in appeal between an American and an English audience. I mean more than a blurb which tells what a book is about. In short, I mean that it is possible to inject some of the modern zest for living into a book otherwise dead from a commercial point of view—provided only that the book is still readable if some new quirk or twist to

the title or even a new title altogether will induce in buyers of books a desire to read it. As I once metaphorically expressed it, if a book is sent into my editorial Hospital I seek to revive its sales record by pumping some of the life-juice of romance or adventure into it.

Naturally, an important consideration would be how the reading public would receive the innovation. But I had gone through my days of trepidation with Scott's *Lady of the Lake* in abridged form. That had told me that the public is receptive to new methods—that, in short, the public is not afraid of new things even when applied to what is already in a measure old and established, but on the contrary advances rather eagerly to meet them halfway. The first half of the battle therefore was won.

I decided, too, at the start, that there would be no tampering with such classics as had shown themselves to be successful sellers without alteration. I have already named some examples. But Shakespeare's works are probably the best examples of any. I would not think of tampering with Shakespeare—to change Shakespeare would not be sacrilege, for I don't regard things in that way, but it would make out of Shakespeare something else, and, as I have already pointed out, Shakespeare is still sufficiently in touch with life of today to make it worth while to read him unaltered. Shakespeare is more than a name—Shakespeare is Shakespeare, indeed.

Shakespeare has become such a noble part of our literature, in a sense so permanently his own, in a perfection unapproachable, that it would be folly to attempt any sort

of metamorphosis. Shakespeare I intended to offer for his own sake, unadorned, even without a suggestion of blurb—it is the only way Shakespeare should ever be offered to anyone, from the youngest up. *Romeo and Juliet*, *Hamlet*, *The Taming of the Shrew*, *Julius Cæsar*, all of these are titles fully adequate in themselves. They have the advantage of a fame that nothing added can ever increase.

Saving, then, something less than a hundred titles, so well known as to need no change, I was launched on a definite policy of altering titles of classics to fulfill the requirements of identification and persuasive description. The title of any book should tell something about it. I am in favor of only those titles which tell something definite about the contents of a book. If an otherwise ambiguous title, such as Rudyard Kipling's *Gunga Din*, is in its way a tag for the thing it names, because known for so long as such, I consider that a descriptive title. But if the title is both ambiguous and comparatively unknown—then it has to be changed, or the book must be withdrawn.

Always, for obvious reasons, it has been necessary to keep the reader in mind. Any change in title must be validated by the actual contents of the book. The change must serve, not deception, but enlightenment; the change must advance some particular information as to exactly the book's contents. It would never do to retitlè Chaucer's *Canterbury Tales*, for example, unless the title were also to indicate that the tales were still in archaic verse.

CHAPTER VIII

THE HOSPITAL

How Little Blue Books Are Given New Zest by New Titles

WHEN the Little Blue Books were approaching the thousand mark in number of different titles in print and on sale at the price of five cents per book there was a great deal of investigating and tabulating going on in Girard. Any number of influences were constantly being brought to bear on the selling totals of various books. A book that was a good seller in a list of 300 titles became a very poor one in a list of 800 titles. There must be reasons for such discrepancies. Figures were obtained. Inventories were scrutinized. And there grew up what I rather like to call The Hospital, an editorial sanctum sanctorum into which were sent those books which were not selling their quota.

In any scheme of mass production and a low-priced product a certain average distribution must be maintained. In the Little Blue Books it developed that any single book must be sold in a minimum quantity of at least 10,000 copies every year. This was not exactly a fixed figure, but was flexible to the extent that a book might sell 8,000 or 7,000 copies annually and still be kept in the list. But it meant chiefly that any book running consistently below

10,000 copies annually was sent to The Hospital for consideration of the selling points shown in its title-and-author listing in the catalogue and advertisements.

When The Hospital began it was overcrowded with book-patients. The list of Little Blue Books had grown with such leaps and bounds in the five years it had then been in existence that a number of titles had been passed along the way and left dying in a ditch behind us. That is, it was not noticed until very suddenly that some of the earlier books were losing their place—they were not selling, or, when they came to be investigated, it was found that they had never sold quite so many copies as they ought. The first thorough tabulation of figures sent a hundred or so books to The Hospital for a complete examination and going over.

A good title is a work of genius. I have no hesitancy in saying that, for it is genius whether it is the inspiration of a lucky moment or the painful elaboration of a faint idea through an hour of deep thought. I have always made the final decision as to the title of any Little Blue Book, but I have never confined the search for a new title entirely to my own efforts. An editor must have recourse to more than one method for achieving any desired result. Often a Little Blue Book sent to The Hospital would be read by two or three editorial assistants, and they would all comment on it, making suggestions. Out of that a new title would be born and given a trial.

Alice, my ten-year-old daughter, has even played her small though significant part in the birth of new titles.

Children are voracious readers, and they usually read with such directness of viewpoint that they have something definite to say about what they read. They approach books with freshness, and a book must be vital and alive to hold their interest. As any writer for children knows, children make the most critical audience in the world. For example, I gave Alice a copy of Captain Marryat's *Privateersman*, which had not been going well. Perhaps people did not know what a privateersman might be. Alice did not know. Yet it was a good story, and it is still in the list because Alice said, after reading it: "It's about a seaman and battles." It was rechristened *The Battles of a Seaman*, with a marked improvement. In 1925 it sold 7,500; in 1926, 8,000—and in 1927, with the change of title, it sold 10,000 copies.

One of the first books to go into The Hospital was Théophile Gautier's *Fleece of Gold*. This amazed me; in fact, it nearly floored me. There were two good reasons why this book should be a top-notch seller. First, the author was a Frenchman—American readers have a "weakness" for tales by French authors. Second, it is an excellent story, full of love interest and everything that should place it high among the stories of love and sex. But a moment's consideration of the book shows at once what is wrong. What could "fleece of gold" mean to anyone who had never heard of Gautier or his story before? Little, if anything. It suggests Greek mythology instead of modern France. Gautier's title is picturesque, even poetic, but it lacks informative value. It tells nothing whatever. A happy

thought brought this title to mind: *The Quest for a Blonde Mistress*, exactly the sort of story it is. The record is, in 1925, under the old title, only 6,000—in 1926, under its new banner, this jumped almost unbelievably to 50,000!

Some skeptics will raise the objection—I know, for I have already considered it—that such retitling cheapens a book. In refutation I offer an example or two from classical literature where authors showed more precision in titling their own works. Is there any great difference between the tone of *The Quest for a Blonde Mistress* and *The Taming of the Shrew*? The latter is by William Shakespeare, unaltered. And how about *The Merry Wives of Windsor*, an accepted Shakespearean title? Such an objection vanishes into thin air when parallel examples are cited. The reason that a new title such as I gave Gautier's story *seems* to cheapen the book is that it is, at first, rather startling. Again, consider Balzac's *A Study of a Woman*, or his *Splendors and Miseries of a Courtesan*. These titles could not be more apt. Even Gautier himself was particular and to the point in his titling of *One of Cleopatra's Nights*, a title that cannot be improved upon.

Then there was Molière's play, *Les Précieuses Ridicules*. For a long time this was in the Little Blue Books under the French title, with the name of Molière to recommend the book. The French title was bad for another reason—it intimated to some readers that the whole play was in French. By a happy chance the best possible English title was hit upon for this book: *Ridiculous Women*. This conveys the idea exactly: comedy and irony are both suggested.

I do not think this play has ever been given a better English title. Something like *The Highbrow Ladies* is usually used, but I don't like that. It is rather too pompous; it sounds "genteel." But *Ridiculous Women* connotes the whole spirit of the play—and it sells the book. Under the French title, as the list grew in variety, this book dropped to almost zero. The new title raised it to better than 10,000 annually.

Another Molière play, *Le Bourgeois Gentilhomme*, was also a problem. A lame attempt was made to make use of *The Nobody Who Ases Nobility*, but this was awkward and wholly inadequate. There is no real idea in this title that can be grasped at a glance. You can figure it out, to but sure, but what reader is going to regard titles as riddles? The right title for this book, in modern American slang, is *The Show-Off*; and that is what it is now being called. In yearly sales it has jumped from slightly above zero to almost 10,000.

At one time in the history of the Little Blue Books, as I have said, little attention was paid to titles. The enterprise was growing so fast that the most important thing was to get new books into print—the public demanded books, and before its choice was spread over so wide a range of subjects—before it had a real choice to make, in other words—the title did not matter so much so long as the book was a good one. But as soon as choice became paramount in making out an order for Little Blue Books, the title leaped into first-place significance. Now the title is considered from every possible angle before a Little Blue Book is put on sale.

In those early days two volumes of the collected essays of Llewelyn Powys were put into the series. I was glad to do this—the essays are eminently readable and I was sure Little Blue Book readers would enjoy them. And I let Mr. Powys give his own titles to the books. So the books appeared as *Honey and Gall*, and *Cupbearers of Wine and Hellebore*. This was very pretty, and appealed to a few readers—but only a few, in fact, almost none. Something had to be done to save these essays from an untimely death. They are now called, with fair success, *Studies in Mystic Materialism* and *A Book of Intellectual Rowdies*. The first sold 15,000 in 1926; the second 11,000. For those who may like them, the older and less informative titles are still on the covers of the books.

A similar poetic mistake was made when several volumes of Jack London's stories were put into the series. One book, because I fancied the phrase from one of the stories, was called *Tales of the White Silence*. This seemed to me particularly expressive. I really thought the book would go. Of course, the name of Jack London carried the book satisfactorily, but still it seemed to me that it should do better. At last I was forced to give up my fanciful preference for the "white silence," and now I think that the newer title is really the better. It is: *Tales of the Big Snows*. The difference in expressiveness is instantly apparent.

It is really amazing what the change of a word may do. The mere insertion of a word often works wonders with a book. Take the account of that European mystery of intrigue and political romance, which Theodore M. R. von

Keler did for me under the title of *The Mystery of the Iron Mask*. This title was fair. It certainly tells what the book is about. But there is something aloof about it. It may, says the reader to himself, be another one of those poetic titles. It may fool me, he thinks, and so he bewares. But I changed it to *The Mystery of the Man in the Iron Mask*, and now there can be no question for the record is 30,000 against 11,000 copies per year. Two other "slight" additions come to mind. Victor Hugo's drama, *The King Enjoys Himself* (*Rigoletto*; translated by Maurice Samuel), and Zorilla's, the Spanish Shakespeare's, *None Beneath the King* (translated by Isaac Goldberg) were both rather sick—8,000 for the first and only 6,000 for the second. In 1927, lo and behold, the miraculous cure of title-changing brought 34,000 sales for *None Beneath the King Shall Enjoy This Woman*, and 38,000 for *The Lustful King Enjoys Himself!* Snatched from the grave!

Then there was Whistler's lecture, fairly well known under the title *Ten o'Clock*. But readers of Little Blue Books are numbered by at least ten thousand for each title yearly. Due to the concentrated interest shown in self-education and self-improvement this helpful lecture on art should be read widely—following this reasoning, the proper explanatory title evolved into *What Art Should Mean to You*. Readers are more interested in finding out what art should mean to them than in discovering what secret meaning may lie behind such a phrase as "ten o'clock." In 1925 the old title sold less than 2,000; in

1927, the sales, stimulated by The Hospital's service, mounted to 9,000.

Francis Bacon's *Apothegms*, under that name in the Little Blue Books, was one of my cripples. Here is a great book by a great philosopher. And yet, so listed, it was practically at a standstill—less than 2,000 copies yearly when I came to investigate it. What is wrong with it? The fault lies on its face—the average person, even many a person above the average, does not understand what the word “apothegm” means. I know I had to look it up in the dictionary the first time I came upon it. Many people do not like to go to the dictionary: they prefer to pick up their new words in conversation, where the relation of one word to another will indicate something of its meaning. This is not commendable, perhaps, but it happens to be true. Not one person in a thousand knows what “apothegm” means.

People are not afraid of meaty reading, of a substantial reading diet. I can prove that. But they fight shy of the utterly strange. A book by the same Francis Bacon entitled *The New Atlantis* was doing a little better than 7,000 yearly—not satisfactory, but on the brink of success, so to speak. There is hope when a book gets some distribution, even if it is less than one has hoped. But when it practically stands still the burden is unnecessarily heavy.

This collection of apothegms is a splendid book, in which a great philosopher gives several hundred brief sentences, many of them sparkling epigrams, about this

thing we call life. The sentences are interesting, because they tell us about what interests us most—life. What is an apothegm, then? Simply a terse truth. Look it up for yourself. So, taking the problem in hand, I remedied the situation by retitling the book: *Terse Truths About the Riddle of Life*. The following year (1926) this book climbed to a sales total of a few copies over 9,000—which is worth selling, I am happy to say.

Robert Louis Stevenson belongs, to a large extent, with those accepted literary giants—in the sense of world fame, for I do not propose to be critical here—who should not be altered. Certainly I have proved by the success of the pocket edition of *Dr. Jekyll and Mr. Hyde* that this is a title that cannot be altered with impunity or benefit. Even the movies kept this title, which is a good sign of its widespread effectiveness. But with *Will o' the Mill* and *Markheim* (both in one volume) a question arises. Are these two stories sufficiently familiar to make them desirable books to read? The sales record of this book indicated that they were not. The latter story is a psychological study of a murderer and his crime—yet the man's name alone does not convey this at all. It might be any sort of story from the title as Stevenson had it. I called it *Markheim's Murder*, which gives it a definite classification, and from practically a cipher the book leaped to 7,000 copies annually. It is still shaky, as you see! Perhaps something more drastic should be done to it.

Rudyard Kipling has several good titles of his own that I should not venture to touch. What could be better, for

example, than *Without Benefit of Clergy*? Certain of his poems, too, are so famous that they are clamored for as they are—*The Vampire*, *Mandalay*, and *Gunga Din*. Some of the stories, as *The Man Who Would Be King*, go very well also. But there is a lure in these stories that is not expressed in the title, and that I have no way of suggesting except by the title. By this I mean the fascinating adventures of the British soldiery in India—those unforgettable episodes of happy-go-lucky army life. So I am experimenting with some titles like *Tales of British Soldiers in India* and *Stories of Army Life*.

It seemed to me that there could be no reason why Oscar Wilde's *Pen, Pencil and Poison* should not sell. That title appeals to me. But it apparently does not appeal to the public at large, as the records of this book showed. And anyone can see, now that the change has been made, that *The Story of a Notorious Criminal* is much more likely to aid the wide distribution of the book. It is another good example of the change from the poetic to the practical, for from 5,000 annually the book rose in 1926 to 15,800 copies!

A number of definite tendencies in titling have come up in this experimenting with what banner a book shall go forth under. All of this is, of course, a revealing commentary on the reading tastes of the American public. There is, for example, the yearning for the truth about things. Americans want to know the truth, even if it hurts—and if you tell them that you are giving them the truth they will at least believe you long enough to read what

you offer them under that name. Take, for example, Dr. Arthur J. Cramp's "*Patent Medicine*" and the *Public Health*. This is a purely academic, professional-thesis sort of title. It indicates what the book is about, but it suggests nothing of controversy, nothing that anyone ought to know. Yet *The Truth About "Patent Medicine"* tells the reader that there is some sort of exposure here, something which he may owe it to himself to find out about. This book sold scarcely 3,000 copies in 1925; in 1926, being the "Truth," it did a trifle better than 10,000 copies. That is why *The Truth About New York's Chinatown* is a better title than simply *New York's Chinatown*. That is why, too, such a book as *The Truth About Los Angeles* is read throughout the United States.

There is another magical word in titles. It is Life. The American reading public of today is intensely interested in real life. Witness the success of the confession type of magazine, which tells in loud language that it is offering the truth about real lives. Witness the dominance of love and sex books over all others in the sales record of Little Blue Books as a whole; sex is undoubtedly the most intimately connected with everyday living of any subject you could name. The interest in life is clearly evidenced by the repeated selections of books which have that word in the title. There was Charles J. Finger's book entitled *Addison and His Times*. This title is too scholastic: it sounds too much like a thesis written before graduation from a university. But *London Life in Addison's Time* indicates that the book may be at least interesting. Before the change

I moved this book, as a matter of fact, only in complete sets; now it squeezes by with 7,000 per year.

Dan Hennessy's *On the Bum* never was a bad seller. As a matter of fact, it is one of the steadiest selling books in the entire list. But the addition of *Sketches of Tramp Life* to the more figurative title helped it even more. There is even one of my books, *The Color of Life*. My own books in the Little Blue Book series are on the whole poor sellers, as I have more than once candidly admitted. But this book, since it has so good a title—and its contents, I venture to hope, live up to it—is a very fair seller as compared with the others. And such combinations, of course, as *Love Tales of Italian Life*, *French Tales of Passion and Cruelty*, and Boccaccio's *Tales of Love and Life* cannot be beaten.

The ever-present tendency of the public toward self-improvement has naturally influenced many a title in the series. I have already mentioned one or two examples. People want to improve their conversation, their vocabulary, or they simply want general principles of self-improvement, as in John Cowper Powys' lecture, *The Secret of Self-Development*. Arthur Schopenhauer is a forbidding name to the uninitiated. His *Art of Controversy* never did go very well. But now it is called *How to Argue Logically* and has earned its permanent place in the list. This is another one of those "naughts" which leaped suddenly, through the magic of words, to 30,000 copies per year. The "how to" beginning for a title is still another magical catchphrase. Piano-playing is all right, but notice how much more dynamic and compelling *How to Play the Piano* is, or even,

if there is space to print it, *How to Teach Yourself to Play the Piano*.

The book on conversation has an interesting anecdote to be told about it—at first it was simply Thomas De Quincey's *Essay on Conversation*. When this book came into The Hospital past experience showed immediately that it ought to be called *How to Improve Your Conversation*. But De Quincey's essay is a bit too studied and scholarly to be offered to an unsuspecting public under that title, at least by itself. It is still in the book, but half of the book is now taken up with Lloyd E. Smith's portion, written especially to fit the title *How to Improve Your Conversation*. That is one of the inside stories of how one popular Little Blue Book was born! Arthur Schopenhauer's *Art of Controversy*, mentioned in the preceding paragraph, is more practical and did not need such a preamble.

An entirely separate field of title experimentation was opened in the general classification of biography. "Biography" seeming to be less colorful, I have been trying out "Personalities" as a catalogue division. My experience has been that names alone, even if world-famous, are not sufficient to sell Little Blue Books. It appears that the book-buyer is one of the laziest persons on earth when he examines a catalogue of books. He may know perfectly well that Leo Tolstoy is a Russian story-writer, but he refuses to identify that name for himself. I know that this is so because I used to offer Garnett's *Life of Tolstoy*, and I am able to compare it with the records of the book under its present title: *Tolstoy, Russian Novelist*. It is 2,500

against the present average of 6,500 copies per year. The book is not yet secure—but the change in sales is nevertheless significant.

The general rule in titling biographies has been to name the person and identify him. Fanciful titles will not do at all for five-cent accounts of the life and works of various prominent people. The prospective reader must be reminded, in so many words, of precisely whom the book is about; and, if possible, the title must also tell the book's particular bias or motivating thesis. Thus, Joseph McCabe's biography of Ingersoll is called *Robert G. Ingersoll, Benevolent Agnostic*. You can see at a glance that this is ever so much more effective than simply *Life of Ingersoll*.

There are cases where the simpler and more obvious title will sell a biography. This is usually true of only what may be called "standard" biographies, however. I refer to *Life of Jesus*, by Ernest Renan; *Life of Lincoln*; *Life of Napoleon*, etc.

Often the biographical titles require a great deal of experimenting. When the Little Blue Books were young I put in as No. 10 in the series that delightful essay by Francis Thompson on Percy Bysshe Shelley. That jewel of literature always seemed worthy of perpetuation to me, and I wanted to have it read by thousands of people. I cannot say that my hope for it has been fulfilled, although the book is still in print and available. But I am trying it under the title of *Shelley, Idealistic Dreamer*. If I called him a poet I hardly think that would help: few people are compellingly interested in the life of a poet.

But Shelley was more than a poet, and if I can only get people to buy Thompson's essay I'm confident each one will feel that it is five cents well spent. At any rate, the new title does four times as well as the old—8,000 against 2,000 copies annually.

A classic example of failure to comprehend the man a book is about is the *Life of Barnum*. When Charles J. Finger wrote this book for me he offered the forceful title: *Barnum, the Man Who Lured the Herd*. Unfortunately, viewing the matter in the light of my later experience, I am afraid the public thought that Barnum was either an eccentric cow-puncher or a rustler of cattle! Consequently, this book was sent to The Hospital, and it came forth with the brand-new appellation of *P. T. Barnum and His Circus*. This is not only much better, but it tells exactly what the book is about. It jumped the book from 4,000 copies in 1925, to 8,000 in 1926.

Martin Luther is another case in point. A life of Luther without any other recommendation did not appeal to readers anywhere near to the same extent as does *Martin Luther and Protestantism*. On the other hand, it might seem that a life of Benjamin Franklin could succeed very well with such a name alone. But of late years it has become desirable to accentuate the human qualities of our great men, and that is probably the reason that I have found *Benjamin Franklin, Printer and Statesman* slightly less popular than *Franklin, Lover of Life*.

I would have gambled a great deal on Clement Wood's

biography of Casanova, especially since it was deliberately entitled *Casanova and His Loves*. The universal popularity of the "sex books," so called, would seem to indicate that this book on Casanova should be automatically a best seller. It did not work out that way. The diagnosis of the failure was that people did not know the name Casanova, and so they did not care a nickel's worth about whom he loved or did not love. There was a mild revolution in the sales record of this book when it was advertised as *Casanova, History's Greatest Lover!* Witness the figures—8,000 before the change: a yearly sale of 22,000 after it! A similar example is Ralph Oppenheim's life of George Sand; it is now called, with a gain of 6,000 copies a year, *The Love-Life of a Frenchwoman*. Which proves, if anything, that the public would rather buy a book about an unknown Frenchwoman, when reminded that she is French, than one about someone whose name suggests neither nationality nor familiarity.

Scientific titles have also needed elucidation and popularization from time to time. Science has the reputation, with the general public, of being very dry reading. A few magazines, featuring the strange and bizarre, particularly in mechanical inventions, have managed to make science commercially popular as reading matter. But among books there is still great progress to be made. The "outlines" did a great deal to remove the stigma, and now the "stories" of this and that phase of knowledge are helping us all to progress in the humanizing of scientific knowledge. (I

might say, in passing, that the titles of the individual numbers of my *Key to Culture* series have been carefully chosen with this point in mind.)

There has always been a market for books which make things plain, such as *Evolution Made Plain*. Then I tried "introductions" to this and that, and scientific subjects "for beginners," but neither of these variations of title has been quite so successful as "the facts you should know" caption. An important secret of successful titling is to be imperative, to insist in the very name of the book that the reader should have it! Now *Life Among the Ants* was much improved in its distribution by extending it thus: *Facts You Should Know About Life Among the Ants*, or sometimes, when less space is available, *Fascinating Facts About Ant Life*. I took a tip from the "Fact Compendiums" of some years ago, and from the "Handy Books of Facts" which are still commercially profitable reference books. The public of today wants facts, and it likes to be told that it is getting facts.

But there is no general rule applicable to all cases. There is always room for experimentation, and I have changed a title of one book as many as half a dozen times. What works in one place is just as likely to be a failure in connection with some other book. For example, *Facts About the Moon* does not have nearly the selling value of *Is the Moon a Dead World?* The latter has romance in it, adventurous suggestion in it, and all the force of the continual controversy about whether or not there is life on other globes besides the earth. The same characteristics may be

discerned in this title: *Solving the Mystery of the Comets*. Maynard Shipley, the author of the last-named two books, deserves a great deal of credit for his work as a popularizer of such subjects.

Poetry I have left until the last because it has been something of a bugbear in my editorial life. I may as well confess that I read almost no poetry from inclination, although I recognize its place in the literature of the world and would not for anything bar it from any Utopia I could conceive. For this reason, knowing that other people have a wholly justifiable liking for poetry, and due to a sense of my own "blind spot," I have been led into the weakness of including too many books of poetry in the pocket series. At one time I had nearly a hundred different volumes of poetry in print. I even had—but some of this part of the story belongs in the chapter headed "The Morgue"!

No publisher needs to be told that poetry is not a commercial literary commodity except in a very few exceptional cases. The old masters do very well in gift editions, text-books, and the like. So I find that there is every reason to keep in print Little Blue Book anthologies of *Best Poems of John Keats*, *Best Poems of Robert Burns*, *Best Poems of Walt Whitman*, etc. But it is not true that contemporary poetry is salable in mass quantities just because it is poetry. *Today's Poetry* is fair as a general compilation. But it was necessary to call John Davidson's volume *Ballad of a Passionate Nun, and Other Poems* to make it earn its place in the list. I have found it wise, too, to pick out a well-known title, like *Thanatopsis* or *The One Hoss Shay*, to

feature on the cover of the book and in the advertising. But the general conclusion from my experience with poetry is that the audience for poetry in America is still greatly in need of broad and hearty development.

While discussing titles, I should give some answer to the question sometimes put to me whether the length of a title makes any difference. I am not able to give figures to bear out any of my opinions on this point, and I can only present my own ideas—though these ideas are born, even if unconsciously, from constant experience with the publishing and selling of Little Blue Books. There are, too, some definite strictures determined by the nature of the Little Blue Books themselves, and by mechanical limitations as well as advertising costs.

First of all, I state flatly that there is a great deal of nonsense in the notion that brevity is the soul of wit or anything else. In naming certain commodities, such as cigarettes, an attempt has been made to use a short name that will easily roll off the tongue. Thus, "Camel" was decided upon, no doubt, with the idea that the man who wants a package of Camels will step into the shop and say one word: "Camels." That is highly theoretical, and anyone knows it is not proved by what actually happens. The man goes in and delivers a lengthy speech something like this: "I want a package of Camels," or, "Give me a pack of Camels," or, "Fork over some Camels." The human animal is incapable of being so brief and wordless as to say merely: "Camels."

As applied to books, it is necessary to consider other

things. If the book is going to be given plenty of advertising space the title does not make so much difference. Descriptive phrases, catchwords, slogans, sales talk, and so on, can be plastered all over the advertising and even on the jacket of the book. The title sinks into obscurity, except when ordering the book or asking for it in a bookshop. Even then the purchaser is likely to use some advertising phrase in lieu of the title, and the clerk who handles the order is expected to be up on his stuff sufficiently to interpret the customer's jargon and get the right book for him with the least possible delay.

I recall a case in point from my own experience. By stuffing circulars in outgoing packages of Little Blue Books listing some carefully selected clothbound books, usually picked to appeal to readers of Little Blue Books, I sell a surprising number of more expensive books in the run of a year. *Havelock Ellis*, the recent biography by Isaac Goldberg, was one of these—especially since Goldberg is known to Little Blue Book readers. On the circular advertising this book, however, the headline was used: "The man who debunked sex!" Beneath this catchline the title of the book and the author were given in large type—but the name Havelock Ellis, without explanation, meant little to many people. Several orders came in for the book entitled *The Man Who Debunked Sex!* Now to me that is a better title for the book than the man's name.

But it can never be decided once and for all that a short title or a long title is the best. It is seldom a question of length. The real difference is one of appeal—of what the

title tells, of whether it gives a clear idea of the nature and contents of the book. As I have said, if there is space to add a description of the book, the title matters much less than if the book must be sold by its title and author alone.

I think of Will Durant's *Story of Philosophy*. Here is a title in three words, or with the definite article, four. This book could have a shorter title, for it could be called *Philosophy*. Yet the difference between the short and the long title is not one of words: the longer one clearly is better because it suggests a continuous, interesting narrative (story). To go to the other extreme, this book could have a longer title, for it could be called *A Comprehensive Survey of Various Systems of Philosophy from Antiquity to the Present*. Here, the difference is again not one of words: the shorter title is better because it avoids any suggestion of pedantry, and emphasizes that philosophy as a whole has a story behind it which can be told in a fascinating and informative way. The effectiveness of titles cannot be measured with a yardstick!

As for the Little Blue Books, the cost of advertising per agate line (the space occupied by a line of agate or 5½ point type [14 lines to an inch] set a column wide, the unit of measure in advertising space) has always been an important consideration. Now there are 1,260 Little Blue Book titles. If all these are listed in one advertisement, and each book is allotted one agate line, for the listing alone 1,260 agate lines are required! In this case the titles of the books in this advertisement are automatically limited to the number of words that can be set in

agate type a column wide. The wording must be chosen to fit the space and at the same time to describe the book persuasively so that it will be bought.

Brevity is valuable as a characteristic only when it is more effective than something longer. There is Fannie Hurst's story called *T. B.* This is all right if the book is listed under Fiction, but what does it tell in a numerical list if someone does not know the name Fannie Hurst? It may suggest that the book is a medical treatise. But this, I may point out, is the shortest title in the present list of Little Blue Books, and I cannot say that its brevity is of any merit. I am of the opinion that a much better title could be found for this story.

There is room for housecleaning in the matter of titles. The whole atmosphere of titling is shrouded with cobwebs of myth and convention and what might be called superstition. On the one hand it is told that Shakespeare had a great contempt for titles—calling one of his plays *As You Like It*, and another, *Twelfth Night, or What You Will*. On the other hand, some of Shakespeare's titles are very apt, as *A Comedy of Errors*. *The Taming of the Shrew*, and *The Moor of Venice* are strongly descriptive and distinctive.

Authors seem to take pride in writing things without titles and then casting about with loud wailing and painful moaning for a title that will fit. Other writers hit upon some pretty group of words which catches their fancy, or some title with a symbolic or metaphorical implication—to cite a blatant example, Harold Bell Wright's *The Mine with the*

Iron Door. Such titles are handles, well enough. They serve for identification and do very nicely for listing in the huge card indexes of public libraries. But if they had to sell the books they caption they would, most of them, fail pitifully.

I have indicated many of my conclusions—the lessons I have learned—from my experimentation with titles. I pointed out that there are magical words like Truth, Life, Love, How to, Facts You Should Know, etc. I think I have made it clear that titles with hazy poetic haloes will not work, and that titles which state the plain facts about a book are in almost all cases the best.

In general, my own rules for titling a book are few, but they are much to the point. Particular books often demand particular treatment, but there are one or two lessons of general application that I have learned at some cost, and that I am glad to pass on to others for whatever they may be worth. For even though a book will have a large and lurid blurb, and plenty of bolstering with advertising space, I see no harm in giving it a title which will carry it alone if necessary. If the title does describe the book it will help to eliminate confusion in the minds of prospective readers, and clarify for them just the book they may decide to buy.

In that last sentence is my first rule: Make the title describe the book. The title should contain some dominant word which clearly indicates the subject of the book. If it is biography or criticism, I think the title should also indicate what the man stood for or what the matter criticized chiefly represents. If human nature can be put into

the title, well and good. Every effort should be made to tie up the book with real life, or with the average person's desire for romance, adventure, and fun.

My second rule is: Make the title as distinctive as possible, so as to compel attention and awaken interest. I subordinate this to the descriptive requirement. But I have a notion that many publishers put my second rule first—they seem to prefer the bizarre and startling to the suggestive and revealing. But by putting this first it is necessary to add the description on the flap of the jacket or in the body of the advertisement. I cannot do this, so I am obliged to consider the description of first importance, and distinction second.

In a series such as the Little Blue Books, description can be given first importance for another reason. Any publisher is aware that there is a constant demand for certain books of information, education, and such. That is to say, there is a fairly constant interest in a manual of Parliamentary Law. Several of these are always on the market, differing chiefly in price. There is a Little Blue Book on Parliamentary Law, and here the title is descriptive only. It is not necessary for it to be distinctive, since any attempt to distinguish this Little Blue Book manual from other manuals is obviously superfluous—the distinction lies in the fact that this is a Little Blue Book for five cents, whereas the others are bigger books costing much more money. The first rule only is necessary in titling such books.

As a final word, I might hint in a loud whisper: Take

a leaf out of the page of the movie-titler's ritual. Titles of books and stories are nearly always changed for the motion picture version—due undoubtedly to the necessity to make a much wider appeal. Allow me to ignore the merits of the photoplays themselves, and cite two of the titles as examples. John Barrymore began work on *François Villon*, but this was released under the much more popular title of *The Beloved Rogue*. Or consider that other Barrymore film, from Antoine François Prevost's *Manon Lescaut* (which would have been a total failure as a movie title), which was called *When a Man Loves*. Considered merely as titles, these are both more descriptive and distinctive than the originals.

CHAPTER IX

WHAT A CHANGE OF SCENERY WILL DO

Sick Books May Be Helped by Changing Location

THOUGH changing titles is a publishers' practice with a well-established reputation, there is an aspect of this Hospital to which sick Little Blue Books go which I am sure is unique. Keeping the figure, this phase of the treatment of books which need new life put into their sales may be called giving the book a change of scenery. A doctor may say to his patient: "You're really all right, old man. There's not a thing I can do, but I think a change of scenery might pep you up. I suggest that you run down to Florida for a month or so." If the patient improves in the Florida climate he may move there permanently. That is the way it happens with a Little Blue Book.

By scenery I mean the classifications used in listing Little Blue Books either in the regular catalogue, in a sales catalogue, or in the advertisements. These classifications are being changed, more or less, all the time—new classifications are being tried and old ones discarded. In general, however, these classifications were at first specific and rather dry, such as the thoroughly established divisions of reading like Biography, History, Fiction, Debates, Epigrams, Drama, Essays, Science, Religion, Philosophy, etc.

Later on it was thought advisable to liven up these classifications, and Biography became Personalities, Fiction was broken up into many smaller groups, Science became Wonders of Science, and so on.

As my latest advertising shows, I have found that these classifications are important. They are a vital part of the selling of the Little Blue Books; in their way, they are also titles. In certain advertising I have found that it pays to use such words as Fun, Jokes, Entertainment, Murder, Mystery, Horror, and so on, in listing the books. More and more of this form of classifying is likely to characterize Little Blue Book advertising of the future.

The change of scenery, in treating a failing Little Blue Book, is to move it from one classification to another. Astonishing as it may seem, this has actually worked wonders in the sales records. Take, for example, a book by my wife, Marcet, which was first called *What the Editor's Wife Is Thinking About*, and was reprinted from the *Haldeman-Julius Weekly* in response to numerous requests. This book sold well only at first, among the more steadfast of Little Blue Book readers. It then dwindled to almost zero. The title was changed to *Intimate Notes on E. H.-J.*, without noticeable result.

The first classification under which this book appeared was Biography, and later, under Personalities. I kept the book in the list because there were numerous personal requests for information about me which it was easiest to answer by sending a copy of this Little Blue Book. Its annual average was, nevertheless, appallingly low—some-

thing around 1,000 copies, which would be partly accounted for in complete sets of Little Blue Books. Then I experimented with a classification called Confessional Autobiography, and this book of Marcet's was moved there. Still it did not show any signs of life, doing scarcely 2,000 copies in 1927.

As a last resort, during 1927, this book was listed under the classification Famous Women, as follows: *Marcet Haldeman-Julius' Intimate Notes on Her Husband*. This, amazing as it really is—I was quite flabbergasted when I learned it—sold 16,000 copies of this book in 1927!

There was another book which gave me a great deal of concern. This was an anthology called *Poems of Evolution*, really an unusual collection and deserving a better fate than *The Morgue*. The title seemed to be what was the matter with it—it did not tell that these poems are interesting, artistic (in spots), useful and amusing, intelligently done. The first poem in the book, indeed, is Langdon Smith's famous *Evolution*, with its fairly well known line: "When you were a tadpole and I was a fish"—which is a lively and excellent piece of poetical journalese.

Then a trip to The Hospital brought forth a major operation, with gratifying success—the patient lived! *Poems of Evolution* was changed to *When You Were a Tadpole and I Was a Fish*. The jump in sales from a mere 2,000 in 1925 to nearly 7,000 in 1926 amused the doctor, for he has always been especially stubborn about any threatened child. He did not want to etherize any youngster with the word "evolution" in its title (The Dayton, Tenn.,

farce was at its height at the time). Sheer stubbornness and the inspiration of a happy title saved the creature.

This book came back to The Hospital, though, for it did not quite total 10,000 annually. There was another consultation. I, as the doctor in this apt metaphor, took the patient's pulse and noticed its healthy beat, with no little satisfaction. The triumph of 7,000 copies in 1926 proved that the child was well on the road to health. There was only one thing to do—to prescribe a change of scenery! Which means that the book, which had once been listed under Poetry, and was now under Evolution, was moved to a new listing under the broad banner of Humor. The end of 1927 shows that about 21,000 copies were sold!

In general, I have found the classification of Juvenile Books unsatisfactory. Children do not buy from my advertising, though young people do. But it seems that young people do not identify themselves with the word Juvenile—though they might like to read *Robinson Crusoe* or *Gulliver's Travels* or tales from the *Arabian Nights*, they are turned away by a Juvenile listing. They do not even care to be referred to as Young People, I have found. So these books are now distributed through the various classifications, and no separation is made for age. Each group or generation can find the books it wants for itself, and it is working out much better so. The change of scenery for books that were formerly listed only under Juvenile has certainly done them good; it has widened their scope, and thereby increased their sales.

There has always been a group of books—essays, belles-

lettres, odds and ends of literature—which it has been difficult to classify. In the days of sharp division, a classification headed Miscellaneous or simply Literature was used for these. They never sold very well, largely, I am sure, on that account. Later, with the newer and livelier classifications, it became necessary to place these books more definitely and more alluringly. Some of them went readily under Mystery, or some such general head, but others—particularly things like *Great English Poems*, or Joubert's *Thoughts on the Meaning of Life*—needed other treatment.

The classification, now being used extensively, called Cultural Helps has been most successful. Books that before were close to the zero mark—books that have earned their right to be in the world's literature—have picked up wonderfully with this change of scenery. The desire for culture on the part of reading Americans is thus clearly shown; if there is anything in these books—and surely there is cultural help in any piece of literature—which will help them to find a sound basis for culture, American readers want it.

That Cultural Helps classification was an inspiration and a good one. It emphasizes the idea of culture behind the University in Print—that culture for which the American reading public is ever clamoring. The books are cultural, whether attention is called to the fact or not, but it is a sound assumption that the prospective purchaser will not use his imagination. It is better to name the thing for what it is—if the books are cultural, say so.

A number of Little Blue Books readily fall into this

classification. The beauty of it is that they do not readily fit into any other classification. In early days (in 1922 and earlier), I was often "lazy" and made use of a Miscellaneous classification—which, of course, is quite meaningless and weak. I also used a Literature classification, which was simply another way of saying Miscellaneous. Books which could not reasonably be put under any other heading were placed under either one of those. Then the list was so small that people willingly went through the entire 200 or 300 titles; but now, with 1,260 titles, anything under "Miscellaneous" or so general a heading as "Literature" would be completely overlooked.

The first attempt to find a compelling classification for those "miscellaneous" cultural books was too poetic. It was "Door to New Worlds," which was apt enough, but hardly in sufficiently plain English to be forceful. I also tried "Explanations of Life," which was better, but not so well suited to several of the books. I made shift with "Doors to New Worlds," but the books listed thereunder—including *Spirit of Brazilian Literature*, *Spirit of Yiddish Literature*, *How to Enjoy the Humor of Rabelais*, etc.—continued to hover exasperatingly and disappointingly around the zero mark.

The Rabelais book, by the way, was first titled *A Guide to Rabelais*, which suggested little if the name of the author of *Gargantua and Pantagruel* was unfamiliar. Then I tried *How to Understand Rabelais*, but even this did little better than 2,000 copies annually. The success of *How to Enjoy the Humor of Rabelais* (which is to say, or intimate,

"Rabelaisian" humor) is partly due to the word "enjoy" in the title, for we all want to enjoy things, and to the word "humor," for we all like to laugh as part of our enjoyment—but it is due also to the emphasis on self-improvement in the classification Cultural Helps, where it sold 13,000 copies in 1927.

Even Percy Bysshe Shelley's *Defense of Poetry*, with the emphasis on culture, sold 6,000 copies in 1927—not very good, but far better than the 1,500 it sold in 1926. I. B. Stoughton Holborn's *Need for Art in Life*, now listed more personally as *Why You Need Art in Your Life*, under the "Cultural Helps" classification sold almost 14,000 copies in 1927, when it was facing withdrawal the year before. *The Spirit of Brazilian Literature* showed improvement only—it is still far from a successful book, for it scarcely sold 4,000 copies during the last year, and *The Spirit of Yiddish Literature* did less than 3,000—but you must take into account the fact that both of these books moved less than 1,000 copies each in 1926. I am afraid that these two books will sooner or later find themselves in the great abyss of my Morgue. But my point is clear—Cultural Helps is a definitely successful classification. The change of scenery has done all of the books some good—it has prolonged their lives, if it has not always made them immortal.

My list of books under Poetry and the books under Biography grew rapidly, and they became unwieldy and forbidding in appearance to the prospective purchaser. Shorter and more alluring classifications have proved their

worth. The development of the catalogue-classification of Little Blue Books has proceeded until I can positively assert that it serves more than convenience in listing a book—it is a constructive form of salesmanship.

Usually it would be thought that classifying books must always conform to set rules. If there is a heading Biography, it would be assumed that all the biographies in the series would necessarily group themselves under that heading. That is what I did, for a time, until I experimented and found a better method. Now the classifications of Little Blue Books are loose rather than strict—the Biography group, Personalities group as it is now, is representative only; some of the better biographies in the Little Blue Books are classified as such. Other ostensible biographies are given other places, and for very good reasons.

Take the Little Blue Book life of Jean Paul Marat, for example. This was always put under Biography until lately. But biography, to be significant and appealing, must build itself around famous figures, outstanding personalities. Who, at a venture, knows the name of Marat? Even identifying him and keeping the book under Biography or Famous Personalities is not so good as putting this life of him along with other radical books—for this biography is really a “study in radicalism.” The book was a failure for two years; in 1927, with the radical emphasis, it sold 9,000 copies!

The same is true, substantially, of Constantine Volney’s famous *Ruins of Empires*, of which the Little Blue Books contain an excellent summary. This also is a radical book,

in many ways a devastating book. By putting it under Skepticism, Iconoclasm, or some similar classification—for the place of no Little Blue Book is quite permanent, but in different catalogues and advertising moves about, though keeping the same general emphasis—this book also reached a sales total of 9,000 in the past year.

Other biographies have been scattered in a similar fashion. The life of Pasteur is now put under Health or Hygiene, because his name really is better known in the word "pasteurization." Lives of Franklin and Jefferson and Paine find themselves linked successfully with United States history—but if they are placed with general biographies they are lost. Paine and Voltaire, too, are put with the skeptical books, the books of freethought and iconoclasm for which I have learned hundreds of thousands of Americans are hungering. You see the idea—instead of allowing Biography to become too solid a mass of type, I have found it better to put many of the biographies under subject classifications.

I have done the same with poetry. Longfellow's *Courtship of Miles Standish* does better under Love than anywhere else, and the same is true of Elizabeth Barrett Browning's *Sonnets from the Portuguese*—a bad title if there ever was one! Oliver Wendell Holmes' *One Hoss Shay and Other Poems* does much better under Humorous Verse—almost 7,000 against the previous 3,000 as an annual figure—than under Poetry with the weaker title, *Poems of Holmes*. And *Poems About Jesus*, a failure so far, is being put, for 1928, under the general heading of

Religion, and under the sub-heading of Christianity—where I have real hopes that it may do well enough to stay in the list.

To go back to my experiment with “Doors to New Worlds”—in 1926 Francis Bacon’s *The New Atlantis* was in this classification and came to my Hospital for resuscitation. I had begun to think this was one of those “literary” masterpieces which could not be sold widely, but I quickly found that I was killing the book by keeping an unhealthy aroma of “classic” about it. The rare atmosphere of high-brow literature was smothering this book. When I got it out and away from the dust of dry tomes, into fresh air and sunlight with books of adventure—along with the Arabian Nights and Robinson Crusoe and Gulliver’s voyage to Lilliput—and called the book simply *The New Atlantis: Lost Island*, it leaped up to 16,000 copies in 1927.

Everyone knows that Swift’s scathing satire, *Gulliver’s Travels*, can be read as pure fanciful adventure. If one does not wish to think about the satire, one does not have to think about it. The same is true of *The New Atlantis*—as my Little Blue Book experience has proved beyond any possible doubt. The story can be read simply as a story; you can even do that, to some extent, with John Bunyan’s *Pilgrim’s Progress*, overburdened as it is with allegorical dogma and ritual—a book which, by the way, sold 11,000 copies in 1927 in the Little Blue Book edition, listed under Famous Tales.

This change of scenery is after all just a device to compel attention and center the spotlight on certain books.

The fundamental purpose of Little Blue Book classifying is nothing else but putting the books on good display, as in a store window—putting those on Fifth Avenue which seem to do best there, and those on Seventh Avenue which do best there, and those in the Bronx or down by the Battery or along the Bowery which do best there, always remembering that the high and the low will to some extent gaze in the windows of all these localities!

Some books are lost in some classifications which stand out brilliantly and enticingly when placed elsewhere. When George Moore's *Euphorian in Texas*—an abominable title from my point of view for such a fascinating story—is placed in a list of general fiction it is lost, but when it is given an explanatory subtitle, as *An Unconventional Amour*, and put with other stories of love or amorous dalliance, it stands out and, in 1927, it sold 22,000 copies. The record for 1926, I am sorry to report, was less than half of this; and for 1925 the sales of the book had sunk almost out of sight. The vanishing point was reached under George Moore's own recondite title—the old image of hiding a light under a bushel basket.

Few people nowadays will run through the entire list of 1,260 different Little Blue Books when making up an order for a dollar or two. They scan the list in a cursory fashion, and if 20 or 30 books catch their eye at once, they perhaps order them without looking further. It behooves me, in selling these books, to see to it that in so far as possible all of the books are given adequate display and emphasis—for two reasons. First, so that the same books will

not be sold in excessive quantity, squeezing out others just as worthy, and unbalancing the list; second, so that those who have bought 20 or 30 books—those which readily caught their eye—will not toss aside a new catalogue after glancing at it, in the false notion that it contains nothing to interest them.

This is the real reason why a change of scenery so surprisingly affects the sales record of a book. In the new classification, in a later catalogue, going to old buyers of the Little Blue Books—who are circularized at least twice every year—a book catches the eye of those who probably overlooked it in its less effective classification in the previous catalogue or circular. Americans have the reputation for being miserly of their time, and are great lovers of time-saving devices—no less in a Little Blue Book catalogue than elsewhere.

And there is another important point in this connection.

My list of biographical titles, as I have said, was always too long in comparison with other classifications in the catalogue. The fact that such listings as Biography and Fiction did run far too long to be useful was one reason for changing the classifications from conventional divisions according to the literary form to the nature of the material in the books as the basis for division.

Biography had reached a low level when these changes in classification were tried. Some of Biography, for example, was satisfactorily split up into smaller groups like Famous Lovers, Beacon Lights of History, Benefactors of Mankind, Famous Women, Confessional Autobiography,

etc. The lives of humorists were put directly after Humor, with the heading Great Humorists. The biography of Torquemada, the famous torturer, was put under Horror. The religious biographies, or the lives of rationalists, went under Comparative Religions or Skepticism, as the case might be. In another place I mention the improvements made with biographical titles by identifying the person in the title. But the sales of these books have increased wonderfully by these changes, in nearly every instance.

I have found, however, that the Thing is more interesting than the Person, in treating biographical books. By that I mean that people are more curious about a set of ideas or notions than about the person who may have discovered, invented, or sponsored them. For example, *Sarah Bernhardt's Philosophy of Love* sold 14,000 copies in 1926, which is very good. But on the principle that Sarah Bernhardt might not be as interesting as her profession, the listing was changed to *The Code of a Parisian Actress*—with the startling result that the book sold 29,500 copies in 1927.

Or take the 1927 figures alone, and compare three books of a similar nature. *The Truth About Christian Science* sold 26,000 copies, in round numbers; Joseph McCabe's *Absurdities of Christian Science* sold 36,000 copies; but *The Real Mary Baker Eddy* sold only 22,000 copies. This indicates that fewer people identify Mary Baker Eddy with Christian Science than might be supposed, or else, which I believe, it shows that people are indeed more interested in the subject than in the personality behind it.

Thomas Carlyle did a brave thing to romanticize history by writing it around heroic figures, but my own experience seems to show that the people would rather have the history than the historical characters. For example, I have a book giving brief lives of all the U. S. presidents. This sold about 14,000 copies in 1927—but *An Outline of United States History* sold twice as many. Even *A Short History of the Civil War* did close to 15,000 copies, and that is only a portion of U. S. history. Of course, the lives of the presidents also represent only a portion of the country's history—but the fact remains that interest in persons does not dominate interest in the thing or things with which the persons are concerned.

Take Einstein and his theory of relativity. This book was put into the list under the title of *An Introduction to Einstein*. It readily sold 15,000 copies, but it seemed possible to improve it. The change in title was not as drastic as you might think—the new listing was *Einstein's Theory of Relativity Explained*, which sold 42,000 copies in 1927. The thing, Relativity, is of more interest than the man, Einstein.

The same thing happened with Friedrich Nietzsche and his philosophy—Nietzsche is, by the way, the most popular of all the philosophers the world has yet produced. I have a book which was called at first *An Introduction to Nietzsche*. It did well, for the name Nietzsche is known. But I was amazed to find that by linking the name with the thing, and calling the book *How to Understand Nietzsche's Philosophy*, the sales leaped up—to 19,000 copies in 1927.

Even Will Durant's book on Nietzsche, which was at first called *Nietzsche: Who He Was and What He Stood For*, doing barely the necessary 10,000 copies annually, sold in 1927 no less than 45,000 copies under the title *The Story of Nietzsche's Philosophy*.

Another significant comparison is that of Fascism against its founder, Mussolini. The figures tell the story, and bear out the general conclusion that the man is of less interest than the thing. In 1927 *The Truth About Mussolini* sold only 14,000 copies, as compared with 24,000 copies of *The Facts About Fascism*.

Or take the book which was called *E. Haldeman-Julius: The Man and His Work*. This was marked for The Morgue, when, acting on this principle of the thing being better than the man, the book was listed as *The History of the Little Blue Books*—of which the sales were 13,000 copies in 1927.

Compare again the sales total of *The Jesuits: Religious Rogues*, 34,000 copies in 1927, with the record of *Loyola: Founder of the Jesuits* which sold only 8,000 copies. It is not hard to understand that if Joseph McCabe had written *The Story of My Life*, the sales record would have been far less than his *My Twelve Years in a Monastery*, which, in 1927, reached the wonderful sales total of 46,500 copies. The thing—life in a monastery—is beyond a doubt more interesting than merely the life of Joseph McCabe would have been.

I might summarize all this by saying that the men die and are forgotten but the things which they discovered,

invented, or established go on forever. The fickleness of human memory may be food for cynicism or not, just as you happen to look at it, but it is none the less a fact. We remember gravitation, but forget Newton; we have steam engines, and Watt is already slated for oblivion except in school texts and question-and-answer games. It will not do to write a book about radium and name it after Madame Curie, any more than it would suffice to list the Little Blue Book on Behaviorism under the name of John B. Watson. Modern health boards approve of pasteurization without ever thinking of Louis Pasteur, and there is more interest in the psychology of sexual dreams than ever could be aroused in Sigmund Freud.

CHAPTER X

THE MORGUE

What Happens to the "Failures" Among Little Blue Books

THIS is the most painful part of my story. Those books which go into The Hospital and do not come out are consigned, with regrets, to The Morgue. The Morgue is filled with books that have not found a large audience among the readers of today. It is also filled with many a bitter lesson, and some experience, though negative, the value of which cannot be measured in dollars and cents.

I have never had a complete failure, if by that you mean a book that did not sell at all—a copy at least now and then. It appears that there is always someone to buy a few copies of any book you could possibly print and offer for sale, provided it is a good book of its kind. But I had as near a failure as I ever care to come with the *Short Poems of Friedrich Hölderlin*. It was a good book, but it was poetry, plus the fact that no one knew—or cared!—who Mr. Hölderlin might be. I printed 10,000 copies of this book. My confession is complete when I add that I finally baled, after a year and a half, 8,000 of these. This book went into The Morgue and stayed there, for it was certainly dead.

One book that went into The Morgue is still a profound regret in my memory. I hated to delete such a title from the list. I argued with myself, and for a time I let the book ride along merely for the prestige and the satisfaction it gave my *amour propre*. For Sir Richard Burton's version of *The Kasidah* has been a favorite of mine ever since I first read it as a young man. I always wanted to make an edition of that book available to the public at far less than the several dollars it usually costs. But *The Kasidah* kept coming into The Hospital. There seemed nothing that could be done with it. At last it was consigned to The Morgue. But one of these days I'll find a way to sell *The Kasidah*, at a fraction of a dollar, and it will be brought back to the light.

Just when does a book go into The Morgue and any remainder into the bales of waste paper? Well, as I have said, in order to sell Little Blue Books at a nickel apiece it is necessary for each title to sell to the extent of at least 10,000 copies annually, speaking in round numbers. If every book sells at least its quota, then, with 1,260 titles the total distribution must be 12,600,000—in one or two bad years, and at first, the sales for a year fell below this figure, and in 1927 exceeded 20,000,000. Some books sell far better than 10,000 copies a year, and help to support those which fall behind and which it is, for one reason or another, desirable to keep in print.

In general, the rules which slate a book for The Morgue are not too drastic. But if a book sells less than 5,000 copies annually, and nothing can be done to increase that

total, it goes into The Morgue and any remainder is sent to the baler. If a book sells 6,000 copies in a year I may keep it on sale, especially if it is a thoroughly good book, and lends prestige to the series. I may try to jump up that sales total—but the book may not immediately go to The Morgue even if it does not do better than 6,000 a year.

In a sales test made in 1925, in 400 orders selected for the test, ranging from 20 books each and over—up, in some cases, to as many as 100 books in a single order,—not one order was received for the following books. These were, in other words, at the zero mark—most of the stock of them was standing still in the warehouse and accumulating dust. This is the list of dead-heads discovered in October, 1925:

- Herbert Spencer: His Life and Works
- Defense of Poetry. Percy Bysshe Shelley
- Rudolph Eucken: His Life and Philosophy
- † Witticisms of Madame de Sevigne
- Aphorisms. Thomas Huxley
- Literature and Art. Goethe
- Poems. Robert Southey
- * Addison and His Time. Charles J. Finger
- † Guide to Stoicism. St. George Stock
- † Yugoslav Proverbs
- † Literary Stars in Scandinavian Firmament. Julius Moritzen
- † Essays on Rousseau, Balzac and Hugo. John Cowper Powys
- † Essays on Emily Brontë and Henry James. John Cowper Powys
- The Unworthy Coopers. E. and M. Haldeman-Julius
- † Essays on Euripides. Alexander Harvey
- † Essays on Aeschylus. Alexander Harvey
- † Essays on Sophocles. Alexander Harvey
- † Poems of Carew, Sucking, Lovelace and Herbert
- † Matthew Arnold's Literature and Dogma
- † Proverbs of West Africa

THE FIRST HUNDRED MILLION

- A Guide to Aeschylus. Henry T. Schnittkind
 Camoens: Central Figure of Portuguese Literature. Dr. Isaac
 Goldberg
 † Georg Brandes' Main Currents of Nineteenth Century Liter-
 ature
 Essays on the Friends of Jesus. Alexander Harvey
 Götterdämmerung. Theodore M. R. von Keler
 The Gospel of Luke
 The Gospel of Mark
 † Prince Hagen. Upton Sinclair.
 * A Collection of Apothegms. Francis Bacon
 † Poems and Prose of William Blake
 * Cup-Bearers of Wine and Hellebore. Llewelyn Powys
 † Short Poems of Frederick Hölderlin
 † Poe as a Literary Critic. Dr. Isaac Goldberg
 † Hauptmann and Sudermann: Two German Dramatists.
 George Seibel
 † Talks with Lamb, Coleridge and Goethe
 † Revolt in German Drama. Pierre Loving
 † Perkin Warbeck and Other Poems. Lord Alfred Douglas
 King Henry VI. William Shakespeare
 * A Ballad of a Nun, and Other Poems. John Davidson
 * What the Editor's Wife Is Thinking About. Marcet Halde-
 man-Julius
 † Mexican Poetry: An Anthology. Dr. Isaac Goldberg (editor)
 † The Acharnians. Aristophanes
 † Proverbs of Turkey
 * Sonnets of a Portrait-Painter. Arthur Davison Ficke

Those starred (*) were saved by title changes as dis-
 cussed in the chapter entitled "The Hospital." Those with a
 dagger (†) against them are in The Morgue, or soon will
 be. The others are still awaiting remedy or removal.

A glance at this list shows that it is crammed with titles
 of limited or rather scholastic appeal. Many of these
 sooner or later went into The Morgue. But I should explain
 that although not one person out of the 400 selected at

random for this test ordered a copy of any one of these books, they did not actually stand still without a single copy ever being sold. Some of them, taking it by and large over a year with thousands of orders pouring in, would do around 5,000. Some of them were saved by the efforts of The Hospital, already described.

Then, too, it is never possible to make replacements wholesale. There is always a waiting list for The Morgue—unfortunately this will always be true in a list as large as that of the Little Blue Books—and as a rule those go into the discard first which somehow or other show on the inventory at 5,000 copies or less on hand. That is why some books are still waiting for The Morgue. Others, which it is necessary to drop, reach the deadline sooner. Some day, if a few of these books do not move at all, they will be dropped forthwith. I have baled, in one or two instances, as many as 28,000 or 30,000 copies of a book. This is expensive, but I needed the warehouse space and it is better to list a book which moves a little than to waste space on one which does not move at all.

In the preceding list you will notice, if you look carefully, two books taken from the Bible. It is customary to cite the Bible as the best selling book in all publishing history—but I must be intrepid enough to point out that this does not mean it is the most widely read book in print. On the contrary, for, as I have already proved, a Little Blue Book is purchased, if any book is, in order to be read—and no one, generally speaking, will buy the Bible in Little Blue Book form. I have both *The Sermon on the Mount and*

Other Sayings of Jesus and *Essence of the Bible*, besides the two listed above, and all are poor sellers.

I once had a compilation of the *Words of Jesus*, made by Henry C. Vedder, in two volumes, nicely couched in the best of modern English. I think that modernizing the language of an ancient book is desirable—but people do not care for the Bible in modern English. They do not want to *read* it anyway, you see—or at least they don't want to make any sense out of reading it, and want it just because it is the Bible and one really ought to have one somewhere on the premises.

To sell the Bible you must publish it between *black* covers. The standardized stiff blue card covers used for the Little Blue Books mean, in the eyes of purchasers, that it is not the Bible. For the Bible is not a book—it is an object, a fetish, a piece of furniture. A large mail-order house once tried to sell a clothbound Bible—in blue or red covers. They were forced to abandon the project—people did not want the Bible just as a book.

But criticisms of the Bible—ah, that is something else entirely. People eagerly purchase all sorts of adverse comments on the Bible, the truth about its origin, the sources of its myths and legends, a collection of its self-contradictions, facts about forgeries of some of its books, discussions of whether Jesus ever lived or not—as the Little Blue Books of this kind have shown. The facts about this will be found in Chapter V.

Among the recent consignments to The Morgue there is Oscar Wilde's *Critic as Artist*, which I kept in the list for

a long time as two volumes in the Little Blue Books. At an earlier date it was found necessary to eliminate Poe's *Marginalia*, and *Critical Excerpts from Poe*, and *Poe as a Literary Critic*. It is disappointing to have to remove these books, but there was no alternative. They are not books that it is feasible to sell on a basis of mass production.

I did not so much regret the passing of the *Poems of Philip Freneau*. I readily saw that Freneau was in the same depths of obscurity as Hölderlin. It was a bad mistake to put such a book in the list in the first place. The same is true of Sainte-Beuve's essays on Chesterfield and Rabelais; good as they are, they were out of place in the general scope of the growing series and they could not be effectively grouped for the best selling emphasis. Likewise, the *Essay on Swinburne*, by Sir Arthur Quiller-Couch.

In a somewhat different class was the *History of Printing*, by D'Israeli. This simply seemed to be an example of limited interest. An original work, published in the Little Blue Books for the first time, called *A Newspaperman's Estimate of the Fourth Gospel*, by Olin Wellington Archer, met the same fate for the same reason. I should also list here Charles J. Finger's decidedly interesting brochure entitled *England in Shakespeare's Time*. It went the way of the others, for no other reason than that it had limited appeal.

Certain expansion-centers in the growth of the Little Blue Books would now and then stray beyond the precise boundary set by commercial success. I mean by this that the public would express a desire for a certain class of

books, and, to meet this desire, new books being printed of the same class would exceed—when things had quieted down and the first flutter of popularity was over—the capacity that mass production would justify. A clear example is the Greek and Roman drama classification, translated chiefly by Alexander Harvey. It became necessary to withdraw some of these books, including *Iphigenia at Aulis*, by Euripides; *Oedipus at Colonus*, by Sophocles; *The Clouds*, *The Birds*, *The Knights*, *The Acharnians*, *The Wasps*, and *The Peace*, by Aristophanes; *The Captives* and *The Pot of Gold*, by Plautus; *The Self-Tormentor*, by Terence; and so on. A few of these classics, in accord with the popularization of the works of antiquity, as discussed earlier in this chapter, are being retained. There is a real demand for a very limited list of this kind of reading.

At the end of 1927 I find that the series of proverb collections in the Little Blue Books, as a series, is a failure. At first there were only nine of these books—Chinese Proverbs, Irish Proverbs, Russian Proverbs, etc. People were much interested in the early days—these collections have always been a unique feature of the University in Print, embodying, as they do, the crystallized wisdom of various races and nations. But as a wider range of popular books was offered, interest in this form of reading dwindled, until now only three or four of these books are successful—notably the Proverbs of China and those of Ireland. The others—there are 19 books of proverbs in all as I write, and I may retain half a dozen—are slated for The Morgue. They have to go. Even pointing out, by the cata-

logue listing, that these proverbs are the best wit and wisdom of large groups of humanity has done no good: in general, it has been shown that readers are not interested in such collections.

Occasionally I have found it necessary to send a biography to The Morgue. As a general principle, however, a biography can usually be saved with proper attention to the title, provided it is a good piece of work. The *Life of Keats* was one of the first to go, and also *Whistler: the Man and His Art*. For some reason not altogether clear to me the lives of painters and poets, as individuals, do not interest the greater portion of the reading public. I also killed a lengthy critical study of Shakespeare and his plays. Among others, there was *Diderot and the French Encyclopedists*, probably too pedantic in tone; and, withdrawn for much the same reason, *Hauptmann and Sudermann*, by George Seibel. Among the first to go, incidentally, was an old-timer, *The Trial of William Penn*. Another old-timer, a *Life of Columbus*, was sent to The Morgue, only to be replaced, with fair success, by an edition of *The Diary of Columbus in 1492*.

As I have shown from the beginning, the general development of the Little Blue Books has been along broad lines. Few books of a particular nature, isolated from others similar to it, get into the series. Now and then this has happened, sometimes successfully and sometimes not. Among the failures were such titles as *When the Puritans Were in Power* (although there is now Rupert Hughes' *Facts About Puritan Morals*), *Voices from the Past*, *Satan*

and the Saints, State and Heart Affairs of Henry VIII, James Anthony Froude's *Science of History*, etc. Others of this class, successful and still in the list, are *Twenty Years Among African Negroes*, Max Beerbohm's *Defense of Cosmetics*, Burton's *Anatomy of Melancholy*, etc. I cannot, of course, predict how long some of these titles will stay in the list; some of them I am determined to keep, but others will have judgment passed upon them by the actual verdict of the buyers of the books.

There is one general rule The Morgue taught me. At one time I thought that longer works, like Upton Sinclair's *The Jungle*, could be issued in a half dozen or so volumes of the Little Blue Books, making the whole work cost much less than a dollar. I tried this idea out with two-volume, three-volume, and four-volume works particularly. Every one of them has been a failure. And principally for the reason that when books are offered in this way, your choice at five cents, readers will buy the first volume only, to see what it is like, and then never get around to ordering the rest. A contributory objection, no doubt, is that there is something forbidding about a work in several small pocket-sized volumes. If a book is to be carried in the pocket, and that is one of the points in its favor, then it must be in some sense of the word a brief book.

Among the many-volumed works sooner or later to be found in The Morgue are *The Jungle*, aforementioned, and Frank Harris' *Man Shakespeare* (4 vols.), *Psychical Research* (2 vols), *Words of Jesus* (2 vols.), *Dante and Other Waning Classics* (2 vols.), Upton Sinclair's *Millennium*

(3 vols.), etc. Although the objection may be advanced that some of these books are, by their nature, as compared with other single-volume works in *The Morgue*, destined to such a fate, I can also cite the example of the *Memoirs of Madame de Pompadour*, which was formerly in two volumes and not a satisfactory success. It is now in one volume under the title: *Memoirs of a French Royal Mistress*. The only best seller in more than one volume is Dante's *Inferno*.

A solution of the difficulty has been to give the separate volumes their own titles. This was done with the *Arabian Nights*, and it is at present being tried with the four volumes of Emerson's *Representative Men* and the four volumes of Frank Harris' *Contemporary Portraits*. These latter two, being biographical in nature, are being identified by the men treated in the separate volumes, in the manner of single biographies. This treatment has not always been possible, I am sorry to say.

The story of *The Morgue* has been a long one. It has, indeed, been much longer in existence than *The Hospital*. Buried in it there is more than one corpse, long since a skeleton to haunt the editorial closet. Such ghastly relics as these I hesitate to exhume. But I have vowed that I would tell a straight story, and tell it honestly. In some ways it is ghoulish, but I owe it to the demands of this chronicle to state the facts.

In my younger days I was a Socialist journalist. I mean this in a political and something of a fanatical sense. All young men who dream dreams are fanatics. When I was in

my twenties Socialism was a more important issue, under that name, in America than it is now. People were interested in Socialism. It was being talked about. People wanted to read about it. But the interest passed, Socialism waned, until now it is really a dead issue from any bird's-eye point of view you may choose. It lives only here and there. I cannot go into the causes of this decline here. That would make an essay by itself, if not a whole book.

But in *The Morgue* you will find the remains of an early Socialistic debauch of mine in the Little Blue Books. I can call it nothing else, for the list of such titles is, as I look back at them now, appalling. They went into *The Morgue* because they ceased to sell. I have space to mention a few of them, and I think the titles are of enough interest to justify it. There was, for example, *Kate O'Hare's Prison Letters*. That brings back many an almost forgotten memory. Then there were the following: *The Socialist Appeal, From Terror to Triumph* (Soviet Labor Laws), Jack London's *Dream of Debs, Shall Church Property Be Taxed?* (A Debate), *Socialism vs. Catholicism, Socialist Pepper-Box, Keir Hardie Calendar, Fight for Your Life, Solution of the Trust Problem*, etc., etc. In the Little Blue Books as they are today you will find issues of the hour treated in a practical, truth-telling way, visionary aspects aside. For example, Anna Louise Strong, in a series on Russia, gives the facts about the Soviet Union, as in *How the Communists Rule Russia*. Arthur Garfield Hays tells his side of the story in *What I Saw in Russia*, and so on. Two debates on

Socialism are also still in the list, so that the subject has fair representation.

So much for one large area in The Morgue. Another generous group brings back another phase of the Little Blue Book idea in the process of growth and transformation. Many of the titles consigned to The Morgue have been dropped to make room for better books. I mean this in a strictly critical sense, entirely aside from whether the books will sell or not. For there are some books in The Morgue, about which I now propose to tell, which were very good sellers—and yet they were withdrawn.

I refer to a series of a dozen or so books dealing with the improvement of the mind, the personality, and that sort of thing. *How to Strengthen Mind and Memory* was the title of one of these books; *How to Be a Leader of Others* was another. I withdrew these books because they were false. They did not give the facts, but drew rosy pictures, fostered erroneous views of life—in short, these books were nothing but bunk. They were killed, all of them.

Then, later, it became possible to approach similar subjects from a more scientific point of view. I found a way to offer the facts, instead of falsities, and you will find most of those earlier books replaced in the series as it is today by books which are sound and authoritative and tell the truth about life. For example, William J. Fielding discusses personality in *The Puzzle of Personality*; Leo Markun has written *The Psychology of Leadership and Facts You Should Know About Will Power*, and so on.

The Morgue has taught me that the public does not want large doses of highly-colored propaganda. Some people regard any presentation of facts as propaganda, but I use the word here to signify books which abandon reason and logic and facts and set about creating fanciful notions based entirely on the imagination. The Morgue has also taught me that the public does not want bunk if it can get the truth. I feel entirely justified in killing those earlier "self-help" books, for the new Self-Improvement books thoroughly live up to their aim and do honor to the series as a whole.

The Little Blue Books have taken shape as a series of wide appeal. The policy expanded to be nearly all-inclusive: those were dangerous days, full of publishing risks. In those days I talked of going on and on, to two thousand titles, even to ten thousand titles. But I soon saw that the only outcome in that direction would be a gigantic warehouse, full of an assortment so large that no one could make a real choice, and so expensive that no one could get any real benefit from it. From a rather indefinite intention to publish almost anything to sell for a nickel, the conflicting forces brought to bear upon the Little Blue Books, as they were offered in the market, chiseled out for them a policy of their own.

The Morgue has removed from the list, and is still removing from the list, those titles that do not coincide with this policy of good books with a wide appeal. That is why Ernest Dowson's *Pierrot of the Minute* is in The Morgue. That is why the literary criticism of John Cowper Powys,

his essays on Emily Brontë and Henry James and the rest, are destined for The Morgue. That is why Theodore M. R. von Keler's concise summaries of many of the lesser-known operas will all find themselves one of these days in The Morgue—some of them are already there. These are good books, but they are not of wide appeal.

There has at times been a current, topic-of-the-hour phase of the Little Blue Books. In general, this is not worthwhile. Sometimes it is all right to put in a book that will stay for perhaps a year and then drop out. I refer to such dated items as the 1926 *Price Range of Stocks*, 1927 *Directory of Radio Stations*, 1924 *Republican and Democratic Platforms*, and the like. The fad of crossword puzzling brought a couple of crossword puzzle books into the list, but these will stay. Their sale is nothing like what it was during the height of the craze, but it is good enough to be worth devoting a number or so to it. When the Ku Klux Klan finally fades into oblivion, it may be that the two books on the Klan will go into The Morgue. Meanwhile, there is enough interest to sustain them. And there is no reason why *The Best Jokes of 1926* should not sell for years to come, like the O'Brien short-story anthologies.

I am sorry that such a book as Dr. Isaac Goldberg's *Guide to Cervantes* should have had to go to The Morgue. But even this tells its helpful story. I can put alongside it Goldberg's *Dante: An Esthetic View*, and Julius Moritzen's *Significance of Georg Brandes* and also his *August Strindberg: Literary Enigma*, all of them now in The Morgue, and say to you that this again proves the evolution of the

Little Blue Books into a general series of wide appeal. Why is it that Dante's *Inferno* is a good seller, while an introduction to Dante as a whole goes begging? There is only one answer. The reading public is willing to accept guides to anything except reading, speaking generally. People would rather read a famous book by Dante than read about him. They will accept a tabulation of good books, like John Cowper Powys' *One Hundred Best Books*, but they do not care for the significance of Georg Brandes or anyone else when it is written like a thesis for a collegiate degree.

I am sorry, just as I know many who read this candid account will be sorry, that the story, in some of its aspects, is not different from the truth. I would like more than I can say to have kept many of these books out of The Morgue. I wish I could keep them before even that small portion of the public which would like to buy one of them now and then. But I am not playing hit or miss, like some playful god—like, at a venture, the Setebos fancied by Caliban in Browning's poetic description of theology on the island! I am not putting in this title and taking another out just because I think I should. It is all a matter of figures, as the Efficiency Expert would say if I had one. The books are wanted or they are not wanted—it is quite simple.

As for general conclusions from The Morgue, it can all be summarized by simply saying that the reading public, viewed as a whole, wants books that are not too esoteric, not too high-hat, not too refined and highbrow. People as a

mass want books for everyday appeal and value, which does not at all mean that they want badly-written books, or books which deal insincerely or half-heartedly with the subject treated.

The worst classes of books, from my point of view, as a publisher in mass quantities, are poetry, literary criticism, biographies of less than international figures and personalities that are known by people of special education or limited interests, compilations of any sort except fiction or humor and works of the better known masters, and the large group of books usually called belles-lettres for want of a better name. On the whole, I avoid both the familiar and the formal essay, unless the subject is of wide appeal. Books of orations and speeches are not desirable as a class, though I have succeeded very well with a large group of debates. The printed drama as a group is decidedly not in demand.

If I could have given myself, when I began the Little Blue Books, advice which I now might offer out of my nine years' experience, I would have said something like this: "Whenever you consider a book for publication, pick out twenty-five imaginary readers for it from all levels of life. Pick out a college professor, a scientist, a college student, a highschool boy and a highschool girl, a day laborer, a factory worker, a stenographer, a housewife, a school teacher, a hobo, a chorus girl, an editor, a doctor, a lawyer, a soda-fountain clerk, a waitress, a Pullman porter, a millionaire, a salesman, a bootblack, an undertaker, a grocery man, a preacher, and a tired business man—and put your-

self in the place of each one in turn, and ask yourself candidly whether such a person would buy the book for the price you are selling it if he had the chance. If fifteen out of the twenty-five would probably buy the book, then I would recommend putting it into the Little Blue Books. If less than fifteen would be likely to buy it at some time or other, its success as a Little Blue Book would be doubtful. If less than ten would buy it, its failure would be assured."

CHAPTER XI

AN EDITOR AND HIS WRITERS

Peculiar Editorial Problems of the Little Blue Books

As I look back at the history of the Little Blue Books, from those first two volumes of poetry—*Rubaiyat of Omar Khayyam* (No. 1) and Oscar Wilde's *Ballad of Reading Gaol* (No. 2)—to the list as it is now, totaling 1,260 different volumes, I am amazed at the panorama of experience spread out before, or rather behind, me. Nine years have contained a surprising number of things. When I began with two fairly well-known classics, and poetry at that, I had not the least inkling that my top number would be a book by my wife on a contemporary sociological situation, *Story of a Southern Lynching*. Nor had I any idea, either, that the next to the top number would be a reference volume such as *A Dictionary of Geographical Names*, compiled by Leo Markun. But those four volumes, the first two and the last two, numerically speaking, are an epitome of the wide range of editorial growth and change through which the Little Blue Books have carried me.

It was Frankenstein who created a monster and gave it life, whereupon it leaped beyond his dreams and terrified him. Sometimes I feel like that. Sometimes I am awed by

contemplating how I started the Little Blue Books—pocket classics for the people—and how they leaped into the impressive conception of a “University in Print,” finally realized. Of course, the series is incomplete. I haven’t been able to keep pace with it at all. I candidly admit that the series has grown like some mighty beast, now and then obeying my command, but just as often cavorting here and there seemingly of its own free will.

But what would you have in nine years? According to arithmetic, which is practical enough certainly, the average increase per year is 140 titles. That is an aggregate of 2,100,000 or so words. As a matter of fact, some years I added more than that, for many of the years, especially the first years, the expansion did not proceed to anywhere near that speed. I am not ashamed that I made mistakes. And I do not hesitate to be proud that I have behind me a record of real publishing achievement.

All of which is intended as a preamble to saying that there is nothing else quite like the Little Blue Books. I had newspaper experience before I tackled this pocket series idea. I cannot imagine what other background could have helped me at all. I was plowing a virgin field, and I knew that I had to hit stones and that I had to risk the harvest, good or bad. As I have emphasized in another place, there was only one principle to guide me in editing a series of this kind—a Little Blue Book would be bought only to be read.

Problems that arose in editing the Little Blue Books were unique. I had nothing to guide me except my own ex-

perience, and why shouldn't I confess that my own experience was precious little at times? I was getting that experience even as I struggled along. Occasionally it was costly. Often it was profitable. But I did not hesitate; there was never any backsliding, never any attempt to pass the buck, never any claim that my inspiration was infallible, never any admission that I was failing. For after all, as the present list of Little Blue Books shows, it was a magnificent success all around. Now the story can be told. Now I can tell, and I am doing it, exactly what nine years of publishing and editing these 1,260 Little Blue Books have taught me.

The series had not progressed very far—possibly there were 250 titles in print—when the first important editorial step had to be taken. Up to this point the series had been strictly made up of reprints of classics—and by that I mean books which had appeared in print before, most of them by writers already dead, most of them in the public domain, which is to say that there was no longer any copyright making them the exclusive property of any individual or corporation. The series had to start this way. There could not be any payment to authors, for special manuscripts for the series, until capital accumulated to justify such an expenditure. But the success of that first 250 books, reprints though they were, opened the way for a new era of publishing pocket-sized books. It meant that writers could be hired to prepare manuscripts of exactly the right length, in exactly the right style, on exactly the right subjects, to embody the Little Blue Book idea.

I am tempted into an aside about copyrights and the so-called public domain of literature. I sincerely beg the pardon of any readers whose sense of coherence and unity and all that pedantic ritual is outraged, but the story of the Little Blue Books contains so many interesting oases along the route that I cannot help being lured into bypaths. Many people have not the least idea what a copyright is or what it means. Most people stand in considerable awe of the majesty of the law anyway, and seem to have the strange notion that it is all beyond their puny understanding. I have frequently had the question put to me, for example, how it is that I am able to publish Shakespeare in the Little Blue Books without paying colossal royalties.

Again, many people have been under the impression, fostered largely by the beginning of the Little Blue Books, that the entire series, even today, is made up of reprints. Such people are always astounded when I tell them that fully three-fourths of the list is protected by copyright. They are incredulous when they are informed that a large part of the material in the Little Blue Books can be obtained in no other form. But that is the actual state of things—the copyright records and documents of the Little Blue Books occupy an important niche in the plant's huge vault. This sounds puerile, but I give you my word that it will be news to some of my readers.

Copyrights have a definite life. When they expire they may be renewed, but renewed only once. After that the work automatically becomes a part of the public domain, and may be published by anyone without payment of roy-

alty. Unfortunately the United States copyright law is in many ways inefficient and unjust, but I cannot go into the technicalities of the law here. The general statement is enough to give an understanding of the situation. Shakespeare, Boccaccio, Irving, Poe, and so on, are in the public domain. It is rather funny, then, to have someone ask me how I can publish these works.

Affidavits for copyright registration are always made out by a girl in the office and this has given rise to some amusing incidents. I remember how one of the girls who had this among her duties, once asked me if Boccaccio was a citizen of the United States. I think she was intending to slip in a copyright on *The Falcon and Other Tales*, by Boccaccio of Decameron fame. At another time she, in an absent moment, handed me the form properly and correctly made out for 4,000 *Most Essential English Words*, which has no author, but lo and behold! in lieu of an author she had drafted the book's subtitle into extra duty and entered, in the blank space for author, "A Basic Literacy Test."

In contrast with such anecdotes is one I read somewhere about a plagiarist who tried to foist Bret Harte's *Luck of Roaring Camp* on an editor of a fiction magazine. The amateur pirate insisted the story was his own work, and when told that, due to some irony of fate, a gentleman by the name of Bret Harte had written it long before him, he retorted that it was true but made no difference since the story was in the public domain. All of which adds to the merriment of life, but is not getting me on in my chronicle.

The Little Blue Books, as I said, soon entered the field of including copyright works especially written or edited for the series. Immediately this necessitated a somewhat unusual editorial policy. Due to the strict mechanical requirements, which at first were confined to 64, 96, and 128 pages in the completed book, and later were standardized to 64 pages or occasionally 32, it was impossible to consider unsolicited manuscripts in the manner of most publishing houses. In other words, I could not go into the general publishing field and pick out here and there a book or two from the great mass of freelance manuscript. It was impossible. It could not be thought of—manuscript already written was so much flotsam and jetsam as far as I was concerned, no matter how excellent.

Manuscripts for the Little Blue Books are now strictly standardized to 15,000 words each. This is the absolute mechanical requirement, and although it may and does vary a trifle, the margin of variation is very small. In the first place, a 64-page Little Blue Book must contain at least 60 pages of type matter or the man who buys it will feel cheated. This is a fact that always has to be kept in mind. After all, there is always that sales resistance to a “pamphlet,” and when I advertise that a Little Blue Book contains 15,000 words it simply cannot contain, with any frequency, only 10,000. In the second place, type is not infinitely elastic. If the manuscript for a Little Blue Book, when set in the usual style of 8 point on an 8-point slug, 16 ems wide, runs beyond the bottom of page 64, it has to be cut, and that is expensive. When you are producing a five-

cent product expense must be reduced to a minimum. Hence, manuscripts are written strictly to order.

Of course I have had the accusation of "hack-writing" flung at me time and time again. The implication is silly, as any editor knows. Art is one thing, well enough, and literary craftsmanship is another. Whether a thing is written to order, or comes from "divine" inspiration, matters very little. The result is what counts. An editor can tell a good book when he sees one and he bothers his head not at all about how it came to be written if it meets his need. The folly of crying "hack-work" at anything done on order, and according to specifications, is easily shown. But the prize incident which comes to my mind is the slurring letter I once received which accused me of hiring an ordinary hack by the name of Francis Thompson to write a stupid essay on Percy Bysshe Shelley. That is No. 10 in the Little Blue Books. I would have been proud to hire Mr. Thompson—but the work had been done for some other editor before me, and it was my honor only to reprint it.

I do not pretend to imply that I am the only editor who corresponds with writers and tells them what he wants. That would be preposterous. All editors do this regularly, especially with writers from whom they can expect work to meet their requirements. It is even done with fiction, that standardized fiction which entertains the masses from week to week, and I see no objection to it as an editor. I do not use that kind of fiction, for with fiction I have other standards, but then, I am doing a different work. But I do say, flatly, that my particular method of eliciting work from

writers by correspondence was induced by the requirements of the Little Blue Books and has peculiarities all its own.

The Little Blue Books are quite different from the publishing program of any publisher of clothbound "library" volumes, which arbitrarily includes from 20 or 30 to 100 or so new volumes every year. There is seldom a peak in the sales record of an individual Little Blue Book, and then a steady decline until the book is sold out and never reprinted. It is my intention, when I schedule a Little Blue Book for publication, that it shall remain in the list indefinitely. I am not clairvoyant, and many a Little Blue Book has had to be withdrawn, as my Morgue readily shows, but in general the life of a Little Blue Book is the life of the series itself. If it is a genuine Little Blue Book, filling all the requirements of the series, it stays for good.

Thus, you can begin to see how the Little Blue Books have blazed their own trail, so to speak. They have made it necessary to impress upon writers these special requirements, and they have eliminated at once those writers whose work is creative along rather indefinite artistic lines. For example, I might not have published the stories of Sherwood Anderson if he had submitted them to me originally. But it fitted into my plans admirably to be able to make arrangements with Mr. Anderson's publishers for two volumes of his representative stories, after he became known. The same has been true of Ben Hecht, Stephen Leacock, Fannie Hurst, Theodore Dreiser, Wilbur Daniel Steele, etc.

In a manner of speaking, the Little Blue Books have been a kind of periodical, each volume being an issue, of which the best-selling "back numbers" are continually kept in print and on sale. This illustrates rather well the necessity for general and constant appeal in considering a manuscript for publication, combined with the excellence and high literary standard which I have always set for my writers. The original works have been confined to the preparation of specially written biographies, brief histories, self-teaching educational volumes and to a slight extent volumes of literary criticism. Original works of fiction, poetry, and belles-lettres, not previously published, have not been sought.

From the first, then, my contact with writers has always been—when they have been working for the Little Blue Books—through extensive correspondence and frequently by discussions in personal interviews. One of the first writers to work for me, Charles J. Finger, I made all arrangements with in person. I remember when the Little Blue Books were still young—it was along in April, 1923—that I drove from Girard to Fayetteville, Arkansas, where Mr. Finger has his workshop, expressly to talk over the matter of Little Blue Book manuscripts with him. He had already done some books for me, and there was waiting for me, when I arrived on that trip, *Oscar Wilde in Outline*.

It was to introduce a number of classics that Charles J. Finger was specially needed at that time. He wrote the introduction for Burton's *Kasidah*, which later had to be con-

signed to The Morgue. Among his books still in the list are such unique Little Blue Book features as *Sailor Chanties and Cowboy Songs*; *A Book of Strange Murders*; *Great Pirates*; *Lost Civilizations*; *Historic Crimes and Criminals*; *Adventures of Baron Munchausen*, etc. Of his biographical and literary introductions, among the best liked are *Barnum and His Circus*; *Robin Hood and His Merry Men*; *Thoreau, the Man Who Escaped from the Herd*; *Mark Twain, the Philosopher Who Laughed at the World*, etc. Mr. Finger helped the Little Blue Books wonderfully in those early days. He was close at hand, which was necessary, because many a conference was imperative before these manuscripts could be properly prepared.

Murray Sheehan was another resident of Arkansas who wrote for me in the beginning. Some of these names, I take pride in pointing out, were but little known when they began to appear among the Little Blue Books, but have leaped into more prominence in recent years. A most remarkable case was Will Durant. Mr. Sheehan was especially helpful along practical lines, writing such books as *Hints on News Reporting*, *A History of Architecture*, *A History of Painting*, etc.

Anyone who has followed the Little Blue Books closely will have noticed that certain of my writers gained rather rapid prominence in the list and then ceased work so far as the Little Blue Books were concerned. I made use of a writer only so long as he could serve the purpose of the series itself. The requirements of the Little Blue Books, in different phases of their growth, have sapped several pro-

lific writers dry. Names that loom large in the list have been seemingly spasmodic, because the Little Blue Books have been able to absorb all of a writer's work that would fit. Such names, besides the two already mentioned, are those of Leo Markun, Carroll Lane Fenton, William J. Fielding, Hereward Carrington, Theodore M. R. von Keler, Vance Randolph, Clement Wood, Lloyd E. Smith, Isaac Goldberg, Alexander Harvey, Julius Moritzen, James Oppenheim, Ralph Oppenheim, R. A. Power, Maynard Shipley, Miriam Allen deFord, Henry C. Vedder, Nelson Antrim Crawford, George Sylvester Viereck, Keene Wallis, Clarice Cunningham, Josephine Headen, etc. Each of these writers either wrote or edited several Little Blue Books—they were good workmen, within their limitations, and their work was needed.

Some of these people have written for me over a long period. William J. Fielding is a notable example—without doubt the most popular writer in the entire series. More of him in due course. Of those still at work, Joseph McCabe is the outstanding king of them all. In the list I have given you see at once the small army which the Little Blue Books have put to work, a veritable battery of busy typewriters. (Of them all Joseph McCabe is the only one who prepared his manuscripts by hand, with pen and ink.) Nor is this all. There are two or three dozen names of writers who prepared from one to three or four books which I have not mentioned, among them such familiar ones as Floyd Dell, Ludwig Lewisohn, Pierre Loving, Thelma Spear, B. Russell Herts, etc.

I haven't the space to discuss each of these writers at length. George Sylvester Viereck I put to work at a time when, because of the aftermath of the World War, he was finding it hard to get into the swing of things again. Prejudice has never meant anything to me if a writer can do the work I want the way I want it, particularly that prejudice which comes from difference of opinion. Julius Moritzen I accepted at his own valuation as the semi-official representative of Georg Brandes and Scandinavian literature in America. Henry C. Vedder, as a religionist, served very well to give the Bible and certain theological personalities places in the list. James Oppenheim took charge of psychology in his role of psycho-analyst. Keene Wallis did some admirable translations from the French; perhaps it will be remembered that he won the Blindman's Poetry prize for 1925 with his poem entitled *Coal Black Jesus*; in this same contest Clement Wood received honorable mention. Hereward Carrington was active chiefly in that demi-monde between science and psychic paraphernalia, a field which I soon thought wise to abandon. And so on and on.

All of this work was arranged by correspondence. Strict specifications were given each writer, even to such prosaic particulars as the number of typewritten pages, margins, and so on. It has always surprised me to find out how few people who write for a living really know how to prepare manuscript properly. This is a difficulty all editors have, and it finally drove me to include in the Little Blue Books a complete set of directions: *How to Prepare Manu-*

scripts. Writers who failed to follow instructions had their manuscripts returned to them, and probably they did not get any more work to do for me. It is possible to write a biography in 15,000 words; several of my writers have proved it. Every subject the Little Blue Books have required has been fitted into this mechanical measure, or a multiple of it.

When illustrations were desirable, writers either made them for their own manuscripts, or drawings were made by a commercial artist. People are often surprised to find Little Blue Books generously illustrated. It is expensive, of course, but where it has been necessary it has always been done. Even regarding the illustrations careful instructions were always given.

Hundreds of unsolicited manuscripts have been received. That is inevitable. But I can truthfully say that I never received one which was ready, without correspondence, to go into the series of Little Blue Books. The work has all been done on assignment. Instead of fitting the book to the manuscript, making each volume conform to the nature of the copy, with me it has been a problem simply of fitting the manuscript to the book.

One scientist who did a lot of work for me was Carroll Lane Fenton, a professor; he was sometimes assisted by his wife, who is a paleontologist. Mr. Fenton not only prepared various manuscripts about the earth, evolution, zoölogy, and so on, but he frequently did accurate scientific illustrations. He did much to popularize certain phases of science through the mass medium of the Little Blue Books. Later

on, his work was carried to wider fields by Maynard Shipley, President of the Science League of America, and author of the recent book, *The War on Modern Science*. Mr. Shipley's work more directly linked science with a rational view of life, which especially fitted into my plans and my own beliefs. From this last I do not want it assumed that the Little Blue Books are any sort of engine for propaganda. True, it has been my effort to give the facts and the truth about things, in the light of modern discoveries and from intelligent viewpoints. But the wide variety of the material in the series defeats any accusations of special and limited propaganda. The Little Blue Books are representative: that much has been achieved beyond the question of a doubt.

So far as I am aware the fact that the Little Blue Books have included such works as Maynard Shipley's *Sources of Bible Myths and Legends* or his *Evolution vs. Dogma* has never been any handicap to their popularity. Once in a while some fanatic will take the trouble to write me that he has burned his supply of Little Blue Books because he happened to see some anti-religious work in the list. This sort of wild-eyed activity, however, no publisher should take seriously. I have never given any of my writers any curbing as to saying exactly what they believe, so long as they err on the side of being too scientifically frank or too rationally candid.

As a matter of record, my instructions to authors have now and again included admonitions to beware of bunk. I have always urged my writers to give the facts, and at the

same time to avoid carefully empty wordiness and blatant poppycock of one kind or another.

I shall always point with pride to the story of philosophy as told in a dozen Little Blue Books by Will Durant. This work went on, as a matter of fact, subsidized by the support of Little Blue Book readers. It was the pocket classics which made this continuous introduction to the world's great philosophers possible. That it should, when issued as a clothbound five-dollar book, become the best-selling non-fiction book in America is no more than just.

Beyond a doubt, as far as the Little Blue Books themselves are concerned, those bearing the name of William J. Fielding are far and away the best sellers. This is partly because of the immense interest his subjects are sure to arouse in any prospective reader, and also, in all fairness, partly due to the well-known name of the author. His larger books in recent years have included such as these: *The Caveman Within Us*, *Sanity in Sex*, and *Sex and the Love-Life*. His first Little Blue Book was *Psycho-Analysis: Key to Human Behavior*. This was rapidly followed by others along psychological lines, especially his *Puzzle of Personality*.

It soon became clear that there was a greater and still more important work for which Mr. Fielding was eminently fitted. Every intelligent and progressive person believes that honest information about love and sex should be available to everyone. This information should be accurate and authentic. By this is not meant anything obscene, any pornography, or stuff of that sort. Just the facts,

told in a way everyone can understand, without concealment, with nothing of false modesty, so as never to be in any way misleading. I had tried out Margaret Sanger's *What Every Girl Should Know* in the Little Blue Books. The demand for this book showed beyond any argument that the Little Blue Books were the medium which should give information about sex and its place in life to the public at large.

Taboo has played no part in the job of editing the Little Blue Books, except as it may have kept bunk and hypocrisy out of the list. The taboo against sex is being rapidly lifted in these more enlightened days, and the next few years will see an even more intelligent attitude toward it, but when William J. Fielding first undertook the task of preparing a Rational Sex Series for the Little Blue Books, we were still in the fringe of the dark ages. It was all right to speak of love, but the word "sex" was never used in the most polite parlors of our great American homes. A few magazines still censor some of the Fielding books from my national advertising, but I am sure the general public has never been anything but grateful to have these always available in the complete catalogue of 1,260 titles.

First of all, Fielding followed Mrs. Sanger's admirable lead, with *What Every Boy Should Know*, and so on for every young woman, young man, married woman, and married man. If there is anyone who winces at the candid manner of these titles, or of *Woman's Sexual Life* and its companion volumes on man, the child, and homosexuality, I challenge him to read the books themselves. For a time

the Canadian Government prohibited the importation of these books into Canada, under the impression that they must be disguised obscenity. Finally I was enabled, through the kindness of a Canadian citizen who prefers to remain anonymous, to get in direct touch with the authorities, and when the books were properly examined the ban was immediately lifted. I cite this as but one indication of the honesty, the straightforwardness, the health and sanity of these rational booklets of sex information. I know that many a publisher would have shied like an unbroken colt at one of Mr. Fielding's really courageous and genuinely helpful "sex" books. I refer to *What the Woman Past Forty Should Know*. I know, too, that many a writer would have insisted on hiding behind a pseudonym—and yet, for what earthly, sensible, or even extraordinary reason? This is life. It is nothing to be ashamed of. It is the way the world is and the way we are; knowledge can only help, and never hinder.

Mr. Fielding is one of my indispensable writers. He is still carrying on, just now completing a new series on woman down through all history. The first of this new group is already in print: *Woman, the Eternal Primitive*.

My story runs ever longer than I wish, but there is so much more to tell than it has ever seemed. Years fly swiftly, crammed as they are with events and progress. One who has stood by me from early days is Isaac Goldberg, the affable critic who lives in Roxbury, Mass., a part of Boston. Goldberg did his best work for the Little Blue Books in two volumes of the self-help group, *How to Enjoy*

Music and How to Enjoy Reading. He has done much other work, some of it literary criticism, some vitally concerned with music, notably his recent *Jazz: What It Is and How to Understand It*. To regular followers of my publications, Goldberg is best known for his book review column in my *Weekly*.

Some of Goldberg's Little Blue Books, too, grew into larger clothbound volumes, notably his *Havelock Ellis* and his *The Man Mencken*. Thus have the Little Blue Books frequently paved the way for more conventional library volumes—paved the way in two separate capacities: first, by enabling the author to publish his work before the complete material for the larger book is ready, and, second, by testing out the appeal of the material to the populace. Naturally, I do not offer the Little Blue Books as a testing ground for miscellaneous writers. I publish only those manuscripts which seem to me, as I am influenced by the policy of the moment, to fit snugly into the series.

Versatile Clement Wood gave the pocket series much of his effort at a time when it was in need of a wide range of new subjects. Mr. Wood is a facile worker—at times he seems to sacrifice accuracy for speed, so rapid is his production. It was Clement Wood who edited a variety of collections from Mother Goose rimes to limericks and Broadway wisecracks. He did several volumes on women and famous lovers, as *Great Women of Antiquity* and *Cleopatra*. He did a booklet on *The Stone Age*, one on philology, a dictionary of slang, a history of the Jews, a brochure on Torquemada, the crossword puzzle books, etc. His in-

dustry was due to my need, and the scope of his books show how readily a writer may adapt his output to specific requirements. I point this out principally to refute the contentions of those who cry "hack" at every edict of an editor's pen. Clement Wood wrote a biographical and critical study of Amy Lowell which won the praise of so discerning a critic as Isaac Goldberg; yet the same man could, under the Little Blue Book regimen, turn out a booklet of mathematical oddities.

I sometimes wonder if inspiration and working according to specifications are so incompatible. Of course, such practical Little Blue Books are not works of art, but they are certainly good craftsmanship. Take, for example, the books which Leo Markun did for me. This young chap over in Indianapolis undertook to cover the many phases of practical psychology—memory, laughter, fear, and so on—after he had also proved his versatility. He worked strictly according to order. Yet his books are eminently readable and deservedly popular. If I had waited for the writer to receive the inspiration the books would be still unwritten.

The main thing was always to find the writer, unknown or not made little difference, who could do the work well. That is why I had no hesitancy in letting Lloyd E. Smith prepare an entire series of self-teaching volumes on English grammar, spelling, vocabulary, etc. Mr. Smith even undertook the arduous task of compiling for the Little Blue Books an entirely original dictionary of synonyms, which was devoured hungrily by crossword puzzle fans during

the height of that word-mania. This book of synonyms is still an excellent seller. Though it may seem impossible to offer such handy books of reference for five cents apiece, nevertheless, due to the coöperation of this same Lloyd E. Smith, it has been done—including *4,000 Words Often Mispronounced* and *How to Pronounce 4,000 Proper Names*. Good work, accuracy, and a thorough understanding of the requirements, mechanical as well as editorial, are the elements which have made assignment-work of this kind feasible.

But my crowning achievement in finding a writer and putting him to work came to pass when I met the famous British scholar, Joseph McCabe. I may say that this man is British only because he happens to reside in England; his scholarship and his outlook are as cosmopolitan and timeless as it is humanly possible for them to be. He has educated himself in many lands and through many languages; as he wrote in one of his books, nothing is alien to him when he travels. He combines a mature deliberation and judgment with the energy and fire of youth. He feels more fit, he says, at sixty-one than he remembers he did at twenty.

Joseph McCabe was in the United States debating and lecturing in the winter of 1925-1926. I already knew of the man—for who has not heard of or read his *My Twelve Years in a Monastery*? Even at that time I had already included in the pocket series his debate with Arthur Conan Doyle on spiritualism, in which Mr. McCabe, of course, took the negative. When I was informed that he was ac-

cepting my invitation to come to Girard my enthusiasm mounted until, after he had come, and was gone, there was a contract for no less than fifty Little Blue Books, to be written strictly according to specifications. The work was to take a year; the books were to comprise a complete, thoroughly candid, humanistic and rationalistic history of religious controversy.

Joseph McCabe's 50-volume story of religious controversy was completed, closely following the original outline discussed and drawn up when he was with me in Girard. Apart from this he also did a personal interview with Luther Burbank, following the horticulturist's declaration of agnosticism, and a volume giving vital facts about the classics viewed as a whole.

This book about the classics, by the way, grew out of an interesting experience with the American reading public. Some years ago I put into the series, in two volumes of the Little Blue Books, Albert Mordell's *Dante and Other Waning Classics*. It soon developed that this was a failure. People did not care anything about Dante and any companion classics, on the wane or not. The title of these two books, volumes I and II, was changed to *Facts You Should Know About the Classics*. The sales record jumped from less than 1,000 copies a year in 1925 to over 15,000 copies in 1926. Such is the wizardry of titling—a bad seller was made a good seller, and it was discovered that the public wanted a book such as the new title implied. Therefore I assigned to Joseph McCabe the task of writing a 64-page one-volume work (works in more than one vol-

ume, as I have remarked elsewhere, are not feasible in the series) to be called *Facts You Should Know About the Classics* and the Mordell volumes have been withdrawn.

But this work done, what next? Here was a man who began to think about life and the whys and wherefores of things when he was a monk in a monastery, known as the Very Reverend Father Antony. Slowly but surely he came to a rationalistic and substantially an agnostic viewpoint; though he dislikes labels so much that it is really unfair to classify him. He is certainly a thoroughly debunked, enlightened, and civilized human being. He harbors no bitterness for the loss of his youth within monastic walls; in fact, his tolerance of modern youth and his sincere sympathy with youthful hopes and interests is one of the most invigorating and refreshing things to be found in his books. Finally he left the Catholic Church, giving a true account of his experiences in the autobiographical chronicle of his monastery years which I have already mentioned.

The process of education and the acquisition of knowledge did not stop there. Joseph McCabe has traveled all over the world, and I do not hesitate to acclaim him as the greatest scholar now living. If the Little Blue Books have done nothing else, they deserve a great deal of honest credit for finding such a scholar as McCabe and putting him steadily to work so that much of his learning and experience may be offered to the general public. It is strange how things happen, but due in a large measure, perhaps, to the prejudice against McCabe because of his apostasy in the eyes of orthodox believers, this eminent scholar was slip-

ping into obscurity. It was Joseph McCabe who was engaged to prepare the *Outline of Science*, but he had it taken away from him and it was turned over to Professor J. Arthur Thomson. I suppose the publishers were afraid of Mr. McCabe's unsavory—to their nostrils—reputation.

Here was a man who had written the complicated story of the evolution of mind; a man who had made an excellent English translation of Ernst Haeckel's *Riddle of the Universe*; a man who knew Haeckel and Huxley personally; a man who wrote outstanding biographies of Abelard and of Talleyrand; a man who had followed the lure of knowledge around the world and through the labyrinths of foreign tongues; a man who had worked to some extent in books popularizing science—a man who, in short, had done many amazingly wonderful things, but who had never been given a real chance to do his utmost. I have McCabe's own word for it that the task of writing those fifty Little Blue Books put new life and zest into him. I cite from one of his enthusiastic letters:

I am feeling better than ever and rejoice in the big work before me. Have had a splendid holiday across Mexico and Cuba—and learned much.

The preceding was on his return to London, dated April 14, 1926. Much later (January 17, 1927), when nearing the end of the Little Blue Book contract, he wrote:

"Life will seem quite blank when I have completed my fascinating task."

Again, on February 11, with two more books to write:

"This big job has been quite a pleasure to me and I am glad you appreciate the work. I feel on my part that you are doing more good—broader work and more of it—than all the heterodox associations put together, and I am proud to be so much in it."

Commenting on a report of the success of the books then in print, he wrote on February 18:

"I have your letter in which you tell me, to my pleasure, that the books are going satisfactorily. I have been anxious that you should not lose, as one has a chance of doing on a big and bold enterprise like that. I think we may say that between us we have done the finest thing for advanced thought that has been done for many a year. I am inclined to think that the value of the work will be gradually realized and the sale go up."

And on August 13: "I continue to have better health than I ever had before and am quite reconciled to life." I cannot help feeling proud of an enterprise like the University in Print, which has literally brought to life and busy activity a scholar such as this man McCabe. Through the Little Blue Books he has reached a wider distribution than ever was possible from the lecture platform or in any other medium of publication. Further, it is all newly written work, copyright material, and I assure you that it all follows the best Little Blue Book tradition—if a series can be said to have a tradition after nine short years of actual existence.

If I ever did a courageous thing in making a publishing venture, I would rather the McCabe series should be cited than any other. Some people consider it a mark of editorial courage. It is daring, they say, to offer so much "propaganda" (their word) against established theology and

dogma and ritual. Perhaps it is. But it is the only honest thing to do. If it is courage, it is the courage of conviction.

I have never seen any reason why the Little Blue Books should restrict their program of education because of this and that taboo. The standard I set was that of an enlightened and civilized minority, but the immense circulation of the McCabe books—and *Self-Contradictions of the Bible*, merely an unsigned compilation, is a real best seller—and others along similar lines demonstrates powerfully that the general public is curious and has a strong desire to satisfy that curiosity. If people want the truth I believe in giving it to them. I tried them by offering the truth—I am happy to say that they have been willing to pay for it. Not much, but as I pointed out in other places, Little Blue Books are bought only to be read.

The culmination of the revival of Joseph McCabe has come with his newest and most comprehensive work, *The Key to Culture*—a series of forty 30,000-word essays comprising all the knowledge everyone should have as a foundation for general culture. This is still in process, but it is an important forward step in the great task of humanizing knowledge for the masses. Here, at last, and due to the Little Blue Books and their commercial success, is the full result of a scholarship matured and perfected through forty years of continuous study. I can do no better than let this effectively close this chapter.

CHAPTER XII

HOW THE LITTLE BLUE BOOKS ARE PRODUCED

The Facts About Mass Production

THE question people ask most frequently about the Little Blue Books is this: "How can you turn them out in such large quantities and for such a low price as five cents apiece delivered anywhere in the world?" Of course, the two words Mass Production tell the whole secret, but many people would no doubt like to know the facts behind this production of literature in mass quantities—just how many books are produced, and how it is done. It is easy enough to mumble Mass Production in reply to this persistent inquiry, but *how*? Sooner or later I have always known that I would find an opportunity to answer the question in detail. In a book telling the whole story of the Little Blue Books a chapter on production surely finds its proper place.

Usually there is little romance attached to the manufacture of a product. In spite of the fact that poets have attempted to find souls in machines (there is even a movie called "Metropolis" which makes capital of marvelous machinery), few people ever become greatly excited about it. Machinery is dirty—it is always greasy, for one thing—and it is terribly noisy.

But printing is something else again. From Gutenberg on down, the printer's craft has had a glamour about it. When the first types were made and the first books produced it was thought wonderful that several hundred copies of a book could be made without immense labor. Nowadays, viewing the gigantic presses which turn out a modern metropolitan newspaper, one looks back at the early methods thinking what a lot of work printing used to be. Certainly it is a far cry from the hand-printed books of days gone by to an output of pocket-sized classics running to as many as 80,000 books in one 8-hour day—the utmost capacity of my plant. Yet this can be tripled, if necessary, by running three 8-hour shifts—with no increase in equipment.

The production of the Little Blue Books began, however, like the acorn and grew into the oak. When I look back at the laborious method of turning out those first few books—in editions of 3,000 each, and some of them running to over 100 pages—I sigh rather heavily and reflect that in a mechanical sense the world, and the various units that make it up, certainly do progress.

The first books sold for twenty-five cents. Getting the price down to five cents per book was a matter of increasing production, after installation of the latest machinery, and of increasing the sale of the books enough to support production on a large scale. The sale of the books belongs under the last three chapters, and is told there with all its details.

A Little Blue Book, when finished, measures $3\frac{1}{2} \times 5$ inches. The standard size contains 64 pages, the type meas-

uring 16 ems wide by 25 ems deep (including the folios or page numbers). The first books were printed on a 12×18 -inch job press, in signatures of 16 pages at a time. This meant that only 8 pages were printed at an impression, and when one side was completed this had to be backed up, making a sheet or signature containing 16 pages. Thus it took four such signatures to make a 64-page book, or 8 impressions for each book, not counting the cover. An edition of 3,000 thus meant 24,000 impressions—and some of the books had more than 64 pages. This press could turn out a thousand impressions an hour at its best—it thus required three working days of eight hours each to complete the printing of one book alone—still without its cover.

I have been idealistic even in these computations of the printing of the first books. I have made no allowance for the time taken to change the forms, or to make ready on each form—preparing the type so that it will print evenly and with a clear impression all over the sheet. This would certainly, on the average, increase the press time by another half day for each 64-page book in an edition of 3,000. It took another half day to print the cover. Then each of the four signatures and the cover all had to be folded by hand—an extremely tedious process—and stitched one at a time with two staples in each book on a foot-power stitcher of an old type. Then followed the trimming and the book was done.

It is easy to understand, considering these particulars, why the first Little Blue Books sold for twenty-five cents apiece. They were not Little Blue Books either—that is,

they were not known as such, for the name by which the series is now internationally known came into being something like two years after the first books were printed. These first books had covers of all colors—red, brown, green, yellow. The series was variously called the Pocket Classics, the People's Classics, the Pocket Series, etc., for the first two years or so.

One of the first numbers of the Pocket Series, in the days when it was printed so laboriously, was *The Trial and Death of Socrates*—made up of verbatim Platonic dialogues, with no attempt at editing and without any explanatory introduction—totaling no less than 160 pages. Early readers of these books may remember this title. It was later supplanted by a specially prepared edition with the same title.

The first books were always printed from linotype slugs. Old Nick, the czar of the linotype, set some of those first titles. Nick, which is short for Mr. Nichols, still operates the linotype keyboard—he has been an operator for the past thirty years, or close to it, and turns out an astonishingly clean galley of slugs in record time. It was his chief task to set the first Little Blue Books, until the series began to grow too fast for even the two linotypes in the Girard plant, and the setting of the Little Blue Books began to be done on contract in Kansas City, Mo.

Something like 500 titles in the Little Blue Books were in linotype slugs at one time, stored away on galleys in the Girard composing-room. The weight of the metal was tremendous. It was awkward to handle those linotype pages

whenever a new printing of a particular title was required. Even with the utmost care, pied pages and transposed lines would occur, and not always be caught on the press proof. Occasionally a line would be lost entirely. Any publisher knows the handicap if he has had occasion to send a book in linotype slugs to press for the second or third time. And some of these Little Blue Books in linotype slugs went to press as many as ten or twelve times. Then the type would wear out and the book would have to be reset.

Even the covers of the Little Blue Books were standing in type at first. Some of them were set by hand every time a new edition went to press. The type was larger than the linotype could produce. Now each title has a cover plate, cast in a nickeltype, mounted on a wood-base, ready to go into the form which prints the covers 64 at a time. This is made at the same time the Little Blue Book is electrotyped.

Soon the books were graduated, however, from the job press to a flat-bed press which would print signatures of 64 pages each—32 pages at a time, then back up. This was a considerable advance, and this press is still in the shop and is now called, affectionately and not at all contemptuously, the Pony. The series now contains a few books of only 32 pages, and the Pony still serves by printing these smaller books. The Pony is able to turn out about 1,500 impressions an hour. In number of impressions it is faster than the new Perfector—but the Perfector prints four books at a time, complete.

The series grew by leaps and bounds. Soon two new flat-bed presses were added, capable of printing 64 pages

at a time, or signatures of 128 pages when necessary. But these double signatures were cut in half to be folded. At about this time the special folders were installed, of which the plant now has four. These folders readily handle, when required, the capacity output of 80,000 Little Blue Books in one day.

So far the Little Blue Books were printed singly, making them rather small to handle and trim. This caused bungling at times, and I had to consider the problem of how to eliminate some of the handling. The solution was simple enough, but it revolutionized the production of Little Blue Books. The price was dropped to ten cents apiece as a direct consequence of the innovation.

From that time on the Little Blue Books were printed, folded, stitched and trimmed in pairs—one book above another, two at a time all through the shop. Pick up two of your Little Blue Books—any two with the same number of pages—and place one directly above the other, so that one title is on top and the other just below it. The cut which separates the two books is the last cut made in manufacture—we call it guillotining. A single knife slices the books apart, whereupon they are packed in corrugated cardboard boxes and sent to the warehouse.

Pairing the Little Blue Books for production purposes was possible only when there were enough titles to justify it. Nearly 500 titles were in print when the innovation was made. The same press-work, folding and stitching labor, and handling for trimming and the other processes, thus sufficed for two books instead of one. At this time it ap-

peared to be advisable to standardize new books as far as possible at a maximum length of 64 pages each. All 64-page books could thus be readily paired.

A 64-page Little Blue Book, with its companion which follows it like a Siamese twin all through its manufacture until the final severing, requires one sheet of paper 29×42 inches in size. This sheet thus represents two books, and it is one signature. On the three smaller presses—not including the Pony—this means two impressions for every two books: the printing of one side and then the backing up or the printing of the other side, making 128 pages in all, 64 pages to each book. A 128-page book, of which there are still several in the list, requires two such signatures and thus increases the cost of manufacture by about one-half. The 96-page books, of which there are still a few, require two signatures—one of 64 pages and one of 32. The labor is the same as for 128 pages.

The printer's arrangement of the pages for two 64-page books, so that when the sheet is folded the pages will follow in proper numerical order, is as follows. I put these data in for the benefit of many of my readers, to whom printing books is much of a mystery—as I am made fully aware by the many visitors who view the plant and its work in Girard.

52 13 20 45	36 29 4 61	62 3 30 35	46 19 14 51

Later, partly to offset the additional expense of the desirable 96-page and 128-page books, and also because many titles did not lend themselves readily to a book as long as 64 pages, a small number of 32-page Little Blue Books were added. These are printed on the Pony press, each pair of 32-page books requiring a single signature of 64 pages.

The covers for the Little Blue Books, all on a standard blue stock of stiff cardboard, are paired to correspond with the books as they are printed. A run of 64 covers at a time, or 32 paired combinations, is made on one of the smaller presses, known in the shop as the North press or the Miehle. Knives are inserted so that as the large sheet of cover stock is fed through the press, just after it is printed, it is automatically cut into strips of eight covers each. These strips are later folded on a special folding-machine, which puts a single crease down the middle where the book is to be stitched, and at the same time cuts the strip into its four pairs. These folded pairs are packed away in boxes until the bindery is ready for them.

It is essential that in running covers the various pairs exactly match the pairs of books being printed. Due to the obvious fact that no two Little Blue Books sell at exactly the same rate, it is impossible to decide how the books shall be paired very far in advance. The pairs are determined by a stock report of those books of which ten boxes (a 64-page

book packs about 500 in a box) or less are shown on the inventory. So far as possible, those books are paired together which have approximately—though never quite—the same sales record. Since the printings vary, ranging from 10,000 to 30,000 books at a time, depending on a book's popularity, this attention to pairing is imperative.

It is also necessary always to pair two 64-page books, two 32-page books, or two 128-page books. Unless this is done the books cannot be printed or otherwise handled together.

The next innovation was double—it came with the setting up of the huge Perfector (Miehle) press which prints both sides of a sheet at a time. The one in Girard was the first of its kind west of the Mississippi, if not west of Chicago. It prints two pairs of Little Blue Books, making four complete books at every double-revolution of the cylinders. The output is 40,000 Little Blue Books every eight hours.

By this time all the other presses had been equipped with automatic feeders. Those on all the smaller presses are of the buckling type, which is a system of knobs or rollers pushing up each sheet as it is ready, and shoving it into the grasp of metal fingers which slide it into place against the cylinder, whereupon it is whirled around, printed, and slides onto long metal fingers which somersault it through the air to the printed stack at the other end of the press. Friction is the basic principle of these feeders.

The Perfector press is equipped with an air-suction

feeder, one of the latest models. Here the top sheet of the pile of stock is lifted by suction-cups and shoved into place for going down against the first cylinder. Vacuum is the basic principle of this feeder.

The two flat beds of the Perfector work with a shuttle-motion opposite each other, each having its own cylinder. The unprinted sheet is whirled around the first cylinder, and one side of the sheet is printed. Then it goes onto the adjacent cylinder, is whirled around again, and the back of the sheet is printed. It will occur to everyone immediately that the ink from the first impression must still be wet when the sheet is backed up, and therefore what is known in printing as offset might result. However, this press, at the top of this second cylinder, has a special roller which dips into oil. As the printed sheet goes with its printed side against the tympan or backing paper fastened to the cylinder, it leaves an imperfect impression of its printing on that roller. To prevent this from rubbing off on the next sheet, this oil-roller places the thinnest possible film of oil on the tympan, which does not harm the next printed sheet and keeps the ink from offsetting.

On the three smaller presses, and also on the Pony, the stock has to be loaded from the warehouse platforms onto an elevator attached to the press. This elevator-platform holds from 10,000 to 20,000 sheets at a time. A special hoisting-motor then raises it so that the top sheet is in position under the automatic feeder.

But for the Perfector this handling of stock is eliminated. The loaded platform of stock from the warehouse,

moved by one of the "iron men" or trucks which move platforms of everything around the large plant, can be wheeled right under the Perfector's feeder, where two steel bars are slipped under it and chains raise it into position. And though the other presses stack the printed sheets onto a raised table at the front end, where at intervals a lift of 500 sheets or so has to be removed by the pressman, the Perfector stacks an entire run of 10,000 sheets on a specially arranged platform at its front end, where the platform can be wheeled into the warehouse, when ready, by one of the trucks.

With this Perfector press able to print four Little Blue Books at a time, an even lower price level for the series was in view. This was finally experimented with—the famous five-cent price for each book—and meant the other innovation which the Perfector made necessary: electrotyping the Little Blue Books.

Linotype metal has a comparatively short life, besides the difficulty of handling that I described in the preceding pages. With the prospect of electrotyping, it was desirable also to reduce handling of the plates to a minimum—and I am very proud of the solution which is still in operation. The arrangement of the Little Blue Book plates has always been one of the most interesting and original aspects of their production in mass quantities.

A single plate for a page measuring only $3\frac{1}{2} \times 5$ inches would be awkwardly small. The solution was to gang the plates in fours—four plates for four pages grouped to-

HOW THE LITTLE BOOKS ARE PRODUCED

gether in a horizontal row. Thus, if you will refer to the table of arrangement of pages for a 64-page book, given a page or two back, the four page-numbers at the left of the top row represent the first solid electrotype plate. Each row thus contains two electrotype plates, and for a 64-page book there are 16 plates in all—or 32 separate plates for the paired-combination of two 64-page books.

These electrotype plates are not made type-high (.918 inch). The type-surface is of copper, fastened to a lead base, the whole being about three-twentieths of an inch (11 points) in thickness. A special base is locked in the chase which goes on the press, or which is always on the Perfector, so arranged that when a Little Blue Book electrotype plate is put on it the whole is type-high and the plate can be locked on by flanges which grip and hold it in place. The 32 plates necessary to print a pair of 64-page Little Blue Books weigh 88 pounds. The linotype slugs for the same two books would weigh about 160 pounds. The difference, entirely aside from the immense saving in handling and elimination of error, and besides the much longer life (four or five times that of linotype) of the plates, is immensely significant.

These electrotype plates are cast from type set in Kansas City, Mo., and sent down to Girard by overnight freight. Page proofs of the Little Blue Books are always read by the editorial staff in Girard before any book is given an okay for being sent to the foundry. Each Little Blue Book is read, on the average, four times in order to make it as

free from error as possible. In the case of originally prepared manuscript, the author is also asked to read the proof.

To set that first 500 books in type and have electrotypes made was a colossal task, indeed. But it was done, and now the entire list of 1,260 different books is in plate form, stored in three huge vaults, one above the other from the basement to the second floor, in the Girard plant. These vaults are fire-proof with special automatically locking fire-doors. When you reflect that it takes 16 plates of four pages each for every 64-page Little Blue Book, you will realize that these vaults contain in excess of 20,000 separate plates. The plates of all withdrawn Little Blue Books are also on file—sometime, you know, it may be desirable to issue them again.

Little Blue Books are printed on a fair grade of book paper. The stock is commensurate in quality with the selling price of the books. It is shipped to Girard direct from the mills in carload lots, ranging from 25 to 35 tons to a car. It comes all ready in the proper sizes for the Perfector and other presses and is stored in the warehouse, stacked flat on platforms. These platforms are wheeled in to the hungry presses on the trucks before mentioned. Usually a dozen stacks are kept in the pressroom, especially in winter, to be dry and warmed so as to keep static electricity down to a minimum. Static, by the way, which causes sheets to balk at the feeder, to run crookedly down to the cylinder, and so on, making all kinds of grief, is one of a publisher's annoying problems.

HOW THE LITTLE BOOKS ARE PRODUCED

All the presses and other machinery are electrically driven, by power supplied from the municipal power plant in Girard. Even the automatic letter-opener in the front office runs by electricity.

From the presses the printed stacks of paper go to the bindery, where the automatic folders I have already mentioned proceed to fold each signature of two books to make them ready for stitching. It takes five folds to complete the folding of a pair of 64-page books. The signature now looks like two books, one above the other, without covers, unstitched and untrimmed.

The boxes of folded signatures and boxes of corresponding folded covers are now placed alongside the stitchers—of which there are two. For a 64-page book it takes three girls to operate the stitcher—one feeds the signature on the endless chain, another feeds the cover to match, both are jogged automatically so as to be even and are then stitched with two wire staples in each book, and the third girl receives the stitched book and packs it again into boxes.

The boxes of stitched books now go to the trimmers, of which there are also two. In stacks of 16 these stitched books, still paired, go into place under the knives—a stack of 16 on each side. With the trimmers in use here, two operations are necessary—the books are first trimmed on the outside edges and then, being turned around on the block by a special handle, they are trimmed on the ends. The operator packs the trimmed books into boxes once more.

Now the books are ready to be guillotined. One cutter only is necessary to handle the entire output at this final stage of the manufacture of Little Blue Books. In stacks of 16, the books are placed parallel under the long knife, there being room for 12 such stacks. When the knife comes down, motor-driven, it cuts the book exactly in half at one operation. The books are then packed in "house boxes," each box being numbered to indicate the book it contains, and the boxes are stacked on platforms ready to go into the warehouse and be put away on the shelves. The place of each box as it is put away is recorded on the inventory cards, so that a box of any desired number can be located in a moment. Each house-box contains about 500 books; for an edition of 10,000, therefore, about 20 boxes are required for storage. This varies for 32-page books, which average 800 books to the box; 96-page books average 350 to the box, and 128-page books average 250.

At any time, with a list of 1,260 titles, the warehouse inventory shows an average total stock of between 7,000,000 and 12,000,000 books. The lowest level in times of active distribution has been 6,000,000 books—or an average stock of 5,000 copies of each title. This would last only six months on the principle that a successful Little Blue Book must have a sales record of 10,000 copies annually—and the best sellers run to as many as 30,000, 50,000 and even 70,000 copies sold in a year. The necessity for a routine printing procedure to keep all the books in stock is thus clearly evident.

HOW THE LITTLE BOOKS ARE PRODUCED

The minimum edition or printing of a Little Blue Book is set at 10,000 copies. The maximum is limited to 30,000 copies at one printing. Some are printed in quantities of 20,000 copies. The reason for this is the limit of warehouse space, plus the necessity of constant rotation in printing the editions in order to keep all the books in stock. Naturally, it would be cheaper to print editions of 50,000 copies and store them away; but the growth of the series has been so extraordinarily rapid that facilities have not grown sufficiently to take care of more than the average printing of 10,000 books at a time. There are always about 300 books with a stock of less than 5,000 copies—some of the fairly slow sellers—so that there are always books ready for new printing. Thus the presses have always been kept in operation.

The total number of Little Blue Books produced and sold is taken up and analyzed in the first six chapters. The average printing, distributing it evenly over the nine years from 1919–1927 inclusive, has been close to 13,000,000 books annually. At first, of course, the figure was but a fraction of this, and at maximum capacity it has run to over 25,000,000 books in one year.

The waste from the trimmers and other machines is, of course, baled and sold for waste paper, by the carload. It is worth while to mention, in passing, that the only serious accident during the entire nine-year record of Little Blue Book production occurred with this motor-driven baler—the young man operating it got his finger caught in the

tightening wire and lost the first two joints of the second finger on his left hand. He is now an apprentice in my composing-room.

Summarizing, the machinery ready for a maximum output of 80,000 completed Little Blue Books per day of eight working hours, includes one Perfector press, three smaller presses, and the Pony press, four folders, two stitchers, two trimmers, and one guillotine. There is also one folding-machine for folding covers. Occasionally covers are run two up or four up on a job press—especially for a rush printing—and the two smaller cover-folders stand ready to fold these special runs. There are four job presses—one 12×18 and three 10×15 , all with automatic suction-feeders—for printing special runs of covers, order blanks, office forms, circulars, etc. There are two special folders to handle the output of these presses. There is also a perforator, for office forms, and a foot-power stapler if desired. There is also a motor-driven extra cutter for preparing special stock, and a motor-driven sharpener to sharpen the various knives used in manufacturing the books. For waste paper there is the baler.

For maximum production, the total number of employees runs about as follows: For the pressroom, eight; for the bindery, sixteen; for the baler and warehouse, five to seven. The latter includes the labor of wheeling stock into the pressroom, printed stacks to the bindery, shelving books for inventory, etc. Besides this, for changing the presses and for such composition as may be necessary, there are

two linotypes, with operators, and a foreman and two assistants in the composing-room.

I have not described my three publications—the *Monthly*, *Quarterly* and the *Weekly*. For the latter, to mention it for the sake of completeness, there is a rotary press capable of printing from four to sixteen newspaper-sized pages. There are also the necessary equipment and machinery for putting from four to eight pages “to bed,” making steam-heat-hardened mats, casting rotary stereotype plates, etc. The *Haldeman-Julius Weekly* is printed in the same manner as the famous *Appeal to Reason*, of which it took the place when I bought the old Appeal plant. So thoroughly did the Appeal, as it was intimately known, fasten its name upon the town of Girard that even now the Haldeman-Julius plant is always spoken of by the townspeople, and even by many of the employees, as “the Appeal.”

CHAPTER XIII

FOLLOWING A NEW TITLE FROM COPY TO CUSTOMER

How a Little Blue Book Gets from Author to Reader

UNDOUBTEDLY the best way to understand the whole process of getting a Little Blue Book into print, on sale, and sold, is to follow one of the titles added during the big year of 1926 through the entire process of its creation and manufacture, advertising and delivery. There are certain aspects of the process which cannot be told in any better way than this. And this will insure a unified and continuous narrative of all that goes into the making of each Little Blue Book—following it from its inception and assignment, and its birth on the author's typewriter (assuming for this purpose that it is a book especially prepared for the series), to the home of the ultimate reader who has seen it advertised and has included a copy of it in his order.

I put down the year 1926 as the banner year of Little Blue Book growth. The list leaped in that year from slightly over 900 to more than 1,200 titles, and there began a drastic policy of replacing almost 200 books scheduled for The Morgue with new and more popular books. For various mechanical reasons—one of them being the fact

that a larger list becomes increasingly unwieldy and expensive to handle—the list has become fairly established at the total of 1,260 different titles. The rather odd number is due to the capacity of the order-filling departments. But the limit is also approximately that of the capacity of the present equipment to keep in stock. Occasionally, as some old title and very slow seller sells out or nearly sells out, new titles will be added as replacements of old numbers. Public taste is always changing, and must be met and satisfied.

The idea for a new title is born from the union of several contributing factors. Possibly a series—as on English grammar and syntax—has been planned and there are still a few titles needed to round out the series. Perhaps a sudden and unforeseen popularity of some isolated book—as the *Book of Riddles*, for example, gave rise to books of puzzles, brainteasers, and more riddles, one of which, a book of tongue-twisters, is in the process of preparation even now—possibly the popularity of some such books as this riddle book will indicate that a number of similar books are needed. Perhaps there is just a sudden and unaccountable “inspiration,” or spontaneous idea, for a new title—as happened when I impulsively decided to add two books, one on Fascism and one on Mussolini, and promptly wrote to Miriam Allen de Ford to do the job. It just seemed as though those two books ought to be successful Little Blue Books; and so far, I am happy to say, they have been.

Then again, some regular contributor to the series may have ideas of his own. He is not in touch with the sales

end of the Little Blue Book organization, and he is probably not familiar with the broad lines of the growth of the series, but he sends in a batch of ideas, jotted down for ready reference. Out of this list of ideas submitted by a writer new titles are frequently born. Just as civilization has advanced the most rapidly where there has been a clash of cultures, so the Little Blue Books have increased where the ideas of several people have mingled and multiplied.

Thus, either the idea emanates from the Girard editorial sanctum, so to say, or it is an idea approved and perhaps somewhat modified in that pregnant retreat. For it is here, not behind closed doors and without secrecy or ceremony—though in fancifully facetious moments I sometimes like to think of the birth of a new Little Blue Book idea being heralded with tom-toms or at least with hautboys and viols!—that every Little Blue Book has had its real beginning. The title fairly well decided upon—it may still be changed when the manuscript arrives, before it is set in type—the author is selected to do the job, unless it is an idea which some author has submitted, when, of course, he is given the chance to write an acceptable manuscript for it.

I like my authors to be prompt. Few of those who have contributed to the Little Blue Books have taken longer than two months to deliver a manuscript assigned to them to prepare. For one reason, the books any single writer has done have nearly always been on subjects he is familiar with already, reducing the labor of research. As discussed in the chapter entitled “An Editor and His Writers,” the author is given very specific instructions.

FOLLOWING A NEW TITLE FROM COPY TO CUSTOMER

When the manuscript is ready, prepared according to specifications, it is sent to me in Girard. I read it—at once. I cannot understand editors who keep authors waiting for decisions on manuscripts—especially those within the Little Blue Book limit of 15,000 words. Long book manuscripts are another matter, but work of this kind and length should require no more than a week for a decision. I often read a manuscript during the evening of the day it is received—and if it is acceptable a check for it goes to the author by the first mail the following day. This has been an unbreakable rule of mine for work done on assignment. I have had the pleasure of having some of my authors express personal appreciation of this promptness of payment. And I know from my own freelance days that it is a method of payment which, in effect, doubles the actual amount of the check in the eyes of the grateful and appreciative recipient of it. The rate of payment, incidentally, has been decided in the correspondence which assigned the manuscript; it is governed, of course, by the author's experience, prominence, etc.

Having been accepted and paid for, the manuscript is scheduled for publication. First of all, it is given a number. Before the series reached its top number, this simply meant giving the manuscript the next highest number available. This is recorded in a card index, with the number, name of the author, title of the book, and the number of pages the book is to contain. This last information is so that the cover may be printed far in advance of the book itself, and paired off with another title with the same number of

pages. Now that new titles are replacements only, the number has to be determined by the stock report, and it is the one of some book destined for The Morgue.

Before being sent to the typesetters in Kansas City, Mo., the manuscript is carefully edited. I often do most of this when I read the manuscript the first time editorially. Matters of style are indicated, the position of illustrations is indicated if the author has not already done it, the type, copyright notice, etc., are written on the copy. Usually, a Little Blue Book is set in 8-point type cast on an 8-point slug, which makes 35 lines to the standard Little Blue Book page. Sometimes, when it is very desirable to get in more words, it is set 8 point on a 7 point slug, which makes 40 lines to the page. Quoted matter is marked to be set 7 point, and likewise any footnotes. A long index is usually set 5½ point, two columns to the page.

The copy is set in Kansas City, on contract, and the galley proofs are read and corrected there. The book is then paged, being made up with title page first, then copyright notice and Table of Contents; the first page of the text is on either page 3 or page 5. Running heads repeating the title are at the top of each page, though sometimes this heading varies and indicates each separate story in a collection of short tales. The book is proofread once and sent back for revise, or correction. Then the proof is sent to the author, as an extra precaution, and when it comes back the author's corrections are checked and the book is given a final reading before being given an O. K. When at last O. K. it is sent back to Kansas City, and the type is de-

FOLLOWING A NEW TITLE FROM COPY TO CUSTOMER

livered in the foundry for the casting of the electrotype plates described in the chapter entitled "How the Little Blue Books Are Produced."

The plates for the new Little Blue Book arrive in Girard by freight, or by express if it is a rush. It is promptly scheduled for printing, and no doubt the covers are ready waiting for it. In the regular routine it is printed, goes through the bindery, and is ready for the warehouse. Each box in which this title is packed has the number on it—everything relating to this book throughout the plant is done entirely by its number—and as it is shelved a boy records it on its inventory card. When the order departments need new supplies of the book it can be readily found and promptly put in place.

When the new book is first placed in stock, several copies of it are brought to the office. Everyone in charge of a department gets a copy, including each of the proofreaders—and fifty complimentary copies are sent to the author, if it is a book written specially for the series. If the book is to be copyrighted (as all the new books are), the proper form and affidavit are made out, I sign the latter before a Notary in the approved manner, and it goes to Washington, D. C., with two copies of the book, for recording in the federal archives.

Meanwhile, from the time the proof has been given an O. K., plans have been under way to list the new book in the catalogue and in the advertising. Little Blue Book enthusiasts scan each new advertisement, I am told, with all the fervor of astronomers scouring the heavens for new

stars or comets. When a new title appears these Little Blue Book fans spot it, I gather, with a cry of "Eureka!"

But the new title is given a classification before it can be listed. This classification may vary from the one in the catalogue, for several systems of classification are in use. Sometimes the sorting is done rather pedantically—Fiction, Biography, History, Science, etc. At other times it is done more loosely—Murder, Women, Love, Mystery, Health, Jokes, Fun, Entertainment, etc. It all depends on the audience for which the advertising is intended. In general, the looser and more general classifications have had the better sales record. Single-word classifications are now thought best in the national advertising. This is all described in the chapter entitled "An Editor Turns to Advertising." (I simply must keep some order in this narrative, which is very much like an untamable leopard and *will* run away with me!)

Soon the Little Blue Book is being ordered. Its number is found listed among others that the customers want to read (the minimum order being for twenty books, or one dollar). By this time, if everything has gone smoothly as it should, the new book should have been completed and is in stock.

The number only is necessary when ordering a Little Blue Book. Each book is identified by its number everywhere in the plant. The orders are filled by the numbers. If titles only are sent, prompt filling of the order is impossible because it must be set aside for a special clerk to look the numbers up and write them on the order. Now and

FOLLOWING A NEW TITLE FROM COPY TO CUSTOMER

then there is a little confusion when a new title replaces an old title with the same number—especially when someone orders from an old advertisement or catalogue. This is usually adjusted, however, and frequently it is caught by the checkers before the books are sent out. Or occasionally a typographical error slips in and a book is listed with the wrong number. But this is fortunately rare, and the system of identification by numbers works out, on the whole, extremely well.

The orders arrive in Girard at a varying rate. The average has been, in the past three years, about 2,500 orders per day, being much less in summer and going to a fairly constant average of 4,000 in the winter. This mail is opened several times a day—each letter being slit by an automatic mail-opener which slices a tiny strip from one edge of the envelope.

Girls sort the orders into pigeon-holes by states, and the mail is finally opened as arranged by states. This is for convenience in zoning the parcel post labels later on. Pairs of girls work together in opening the mail, each pair having an adding-machine. They sit on opposite sides of a desk, with a specially constructed box between them which has separate compartments for checks, money orders, bills, specie, one-cent stamps, two-cent stamps, and other stamps.

As each letter is opened one girl carefully notes the amount of the remittance enclosed, tossing all the other contents of the envelope, as well as the envelope itself, to her partner. The contents, plus the envelope (which may be useful in checking carelessly written addresses, or for

identifying orders which contain no name or address inside the envelope, as frequently happens), are placed on a file by the second girl. The first girl calls out the amount of the remittance, indicating its nature, as "X" if it is a check, "P. O." if it is a money order, "cash," or "stamps." Thus, if a man sends a dollar bill, the girl calls: "One dollar cash." If it is a check for \$1.10, she says: "One dollar ten cents X." If it is stamps, she says: "Forty-two cents stamps."

The second girl verifies this amount with that in the order or letter. If it agrees she writes the amount and character of the remittance in red pencil on the order or letter; if there is a discrepancy it is checked up at once. At the same time the amount is recorded by the first girl on her adding-machine. The total of each file of orders is thus secured, and the adding-machine slip pinned to the full file, to be checked upstairs in the clerical department before the orders are sorted into departments. C. O. D. orders and general inquiries are placed on separate files, as the mail is opened. If no remittance is enclosed, it is so written on the order.

Finishing her share of the mail, the first girl totals her adding-machine. Then the contents of the box—checks, money orders, cash, and stamps—are carefully counted and checked. If no mistake has been made this agrees with the adding-machine total. If there is a mistake it is searched for until found. Then the various receipts are prepared for deposit in the bank, and the group of mail-openers starts on the next mail. There are usually four such openings

every day. In busy times eight girls work all day opening the mail.

Upstairs in the clerical department the mail is further sorted into orders for Little Blue Books, clothbound books (a small list advertised on circulars in outgoing packages), the publications, and foreign orders. The latter are given separate clerical files for handling by the more experienced clerks. Trade or wholesale orders are also separated and sent down to the Trade Department.

The Little Blue Book orders are then carefully checked—the number of books ordered is counted and checked with the remittance. Discrepancies are set aside for handling by the head of the department. Each order having been checked, and the orders being grouped in files of twenty-five orders each, typists prepare a combination parcel post label and receipt. Then the orders are “zoned,” as the girls say—the parcel post zone being indicated for the guidance of the stamping clerk when the package is mailed. On the order is marked to go by express, freight, etc., as may have been requested. A clerical force of from fifteen to forty girls, depending on the amount of business, is required for this part of the labor.

The files of orders are sent down to the Order Filling Booths, where girls take the files and start their endless promenades from number to number. These booths contain 650 pigeon-holes each, and each such hole will hold about 30 Little Blue Books, depending on the number of pages. It thus takes two booths for each complete order-filling section. These are arranged in numerical order, with guide

numbers at the top of each row, so that the girls walk from number 1 around to 1260 to fill an order. It is helpful if customers list their orders in numerical sequence.

Specially detailed girls known as "case-fillers" see to it that the pigeon-holes of Little Blue Books are always full. They get their extra supplies from the house boxes, which are arranged likewise in numerical order on large shelves just outside the booths. These empty house-boxes, in turn, are replaced with full boxes by ever-watchful boys.

Other girls act as checkers, sitting at long tables where each order, after it is gathered, is checked for error or omission. Each checker initials the order when O. K., fastens the parcel post label to the books, and it goes in oblong flat boxes, with other orders, to the packers. The checkers alternate with the girls who walk about filling orders, in about two-hour shifts, so that they first walk and then sit down, thus keeping them from tiring too much.

Little Blue Books are substantially packed in specially manufactured corrugated pasteboard cartons, which are ready in sizes suitable for 20, 25, 30, 40, 50, 80, 100, 200, 400, 500, and 1,000 Little Blue Books, respectively. These cartons are sealed with strong gummed tape—it is permissible for mail-order houses to seal parcel post packages if they guarantee the contents to be as indicated on the label, and also if the parcel bears the notation: "May be opened for postal inspection if necessary." This makes a thoroughly sturdy package and makes sure that all shipments of Little Blue Books arrive in good condition. It is also a swifter and more efficient method of packing

than the old-fashioned way of wrapping-paper and twine.

The sealed cartons, with the labels glued on, then go to the mailers. Here they are weighed and stamped according to the zone indicated on the label, and those to go by express drop down a special chute where an express agent picks them up at regular intervals. The stamped parcels go into United States mail sacks, and are carried to the postoffice by truck four times a day. Efficient train service from Girard means that the books are soon on the way to the customer, and, received in good condition, the Little Blue Books are ready to be read.

The order-filling, packing, and stamping girls vary in number according to the press of business. The minimum, at times of lowest ebb, is ten girls. The maximum has been rather flexible—once in a while the number of girls desired is not available—but it has been as many as forty-five girls, working in four sets of two booths each.

Of course, with the volume of orders constantly being handled, there are errors and misunderstandings, and consequently complaints. But the complaints are all handled by one girl in charge of the Complaint Desk.

As soon as the inventory of a Little Blue Book shows less than ten boxes in the warehouse it is reported to the front office and a new printing of the book, if it is selling its quota, is scheduled. If the book is falling behind its quota it is sent to The Hospital, as described in the chapter on "Rejuvenating the Classics."

Such is the routine from day to day. Orders come in from everywhere—from China, Japan, India, Australia,

New Zealand, all the countries of South America, from the West Indies, Central America, Mexico, and thousands from Canada, and also from all over Europe, and from Siam, Iraq (Mesopotamia), Egypt, South Africa, etc.—in short, wherever English periodicals may be sent and read. One order, of which I have always been especially proud, recently came from 'way up North, on Alaska Red River, a tributary of the Yukon in the Arctic Circle—where there was only one mail service a year. The customer wanted a supply of reading to last from one year to the next.

There is more than a little romance in the daily mail. It must keep any mail-order business from becoming dull. Aside from manuscript and regular routine correspondence, there are all kinds of unsolicited communications—freely offered suggestions and advice, pleas for financial aid or donations of books, urgent inducements to invest in a new patent fly-wheel or some other “patent” whatever-you-may-care-to-call-it—sent in, by the way, complete with blue prints—confidential letters from fanatics who have found the secret of the universe or a panacea for all human ills, people who have always wanted to write a book or who have written one and are still seeking to get it published, pencil-written screeds and laboriously penned hopeless manuscripts, and so on. I have been invited to join scores of societies, associations, and clubs; I have been asked to be an honorary member of this or a contributing editor to that. People want my advice on the books their children should read, or they want me to quote chapter,

page, and verse for them on data for some debate or other.

But I have passed up many such chances to become rich in a single night, or to be an everlasting benefactor to mankind, or to learn the deep, dark, hidden secret which rules this gigantic universe. I have never lost any sleep over these opportunities I have missed, for the next mail, along with a generous batch of orders for Little Blue Books, is sure to bring others to keep me and my assistants from being bored with nothing but nickels and numbers of titles wanted.

CHAPTER XIV

BUSINESS MAN OR PHILANTHROPIST

Is the Policy of the Little Blue Books Commercially Sound?

PHILANTHROPY is a word that has been gratuitously applied to the Little Blue Books so many times that it has come to be almost an accusation. One thinks of philanthropy as applied to hospitals, with thankfulness, and sometimes as thankfully when applied to libraries, but it becomes more of a gesture and less of a benefit when it takes the form of statues, bronze plates, and other bric-a-brac. To label the Little Blue Books with philanthropy, then, may be a doubtful compliment; though it may indicate the generosity of the sponsor, it also suggests that the power of money alone supports the existence of the enterprise, and that is scarcely complimentary to the perspicacity and generalship that may be behind it all. It is an axiom that money can do anything, and people have ceased to be very much surprised by what money does. If they are impressed it is not because it is exceptional that money has such power, but because they are forcibly reminded of all that money may do if it can be obtained in sufficient quantity.

I insist that I am a business man and not a philanthropist. I invested my capital in the Little Blue Book idea because I thought it was a sound business venture. It was my belief that the American reading public would support a series of this sort, and I gambled on that belief—gambled, that is to say, after carefully weighing the chances and deciding that there was likely to be more than an even break.

Perhaps the notion that philanthropy was backing the Little Blue Book arose when the series was given the idealistic name of a University in Print. For a five-cent series of pocket-sized booklets to aspire to be a University in Print is unheard of in modern business annals: it is visionary, say the skeptics, and surely it is folly, say the statistical business physicians who keep their fingers on the commercial pulse.

The only thing anyone thought could be sold to the public in mass quantities, in the way of reading matter, was a magazine or a newspaper, and particularly a sensational sheet with screaming headlines, or a tabloid with kindergarten pictures. So said the intellectual skeptics. It was even contended that you could sell chewing gum in mass quantities, but you could hardly expect the buyers of it to read even what is said on the wrappers. The Ask-Me-Another craze showed how few people who smoked thousands of cigarettes really had noticed whose picture was on the government tax stamp affixed to every package. But one is privileged to wonder, is he not, how significant all of these observations may be?

By openly advocating a University in Print—not at a hundred dollars or so, but at five cents as a basic price per unit—I can understand that I did lay myself liable to the charge of philanthropy. But in this book there are figures, and tabulations of sales, and anyone can see for himself that I did not have to be a philanthropist—that, to put it very bluntly, I was as interested in making a profit as Henry Ford.

I use the word philanthropist in its most prosaic sense—as implying someone who gives for the sake of charity. He gives expecting nothing in return unless it be the plaudits of the multitude. The philanthropist is a lover of mankind because there is a vicarious notoriety in it; it is the next best thing to being a monarch or a general or a manufacturer of automobiles. But philanthropy may also have a figurative implication—it might be applied, I daresay, to an enterprise which is commercially sound and yet which is genuinely valuable and beneficial.

So though I reject the name of philanthropist, and prefer being regarded as a business man, I hasten to explain that I would not do “anything for money.” I am glad that my profits have not come from the manufacture of munitions of war, for example. I am glad, in other words, that I have been able to use good business toward the improvement instead of the exploitation of the masses.

There were series of dime and nickel books before the Little Blue Books. Among others, there were the dime novels—many of which, by the way, were not as scarlet as they have been painted. But “dime novel” is universally

accepted to mean something trashy and perhaps contaminating. "Little Blue Book," on the other hand, represents a standard—just because a book would sell in large quantities at five cents was never a sufficient reason for putting it into my series.

There is a difference between making money from the wide sale of a bad book and making a profit from the popularity of a good book. The difference is gratifying. It is one of those virtues which are their own reward. I see no reason why a man should not be proud of doing such a thing, and I see no reason why he should not insist that it is good business and not charity.

Certain denizens of an intellectual demi-monde fling the word "popular" at this and that as though it were always a condemning epithet. What nearly everyone wants or nearly everyone is doing is, perforce, they contend, empty and worthless—flat and stale, though profitable. This is no true judgment. No sweeping generalization can be a true judgment.

The Little Blue Books have gradually become popularized and are becoming more so yearly. I admit this, because it was the aim of the series in the first place, and because I see nothing derogatory in it. Early experimentation was to a large extent finding out what the reading public wanted most at a low price in the way of good reading. My fundamental contention was that the public would buy good reading if it was made available in a convenient form at a fraction of a dollar. This was borne out, and is still borne out, by the results.

Necessarily, there has been a large number of books—part of the world's best literature, certainly—which have not had a wide popular appeal. This could not be expected. Even the proverbial well-read man has not read all of the good books, for there are plenty which will not appeal even to him. Tastes differ; some books are by their nature of wide appeal, while others are limited. The very fact that I did not keep unpopular books in the series, when it was found they were not selling, is really sufficient evidence that I am not a philanthropist.

But with the ideals which have always been behind the Little Blue Books the series, though growing more popular year by year, has never been degraded. Do you consider joke books degrading? A sense of humor is hardly low-brow, and even the broadest joke the most intelligent of us may laugh at, for there is really nothing contaminating in the laughter that makes the whole world kin. Life needs more laughter. Joke books do not distort the truth, do not mislead their readers, do not misrepresent life—except, with the license of comedy, to make existence more endurable.

Profitable ventures among the cheap paper-backs have been manuals of fortune-telling, palmistry, astrology, and other forms of fanciful character-reading, so called. People will buy such books, I gather. But the books are deliberately misleading. Though ostensibly for entertainment and good fun, they induce the credulous to believe that there is something in them. What do you find in the Little Blue Books? Instead of solemn compendiums of this

false knowledge, there are books which expose the frauds and show the falsity of all such systems, books written, too, with a sense of humor and good fun that makes them at the same time popular and honest.

I have dropped profitable books from the series because they did not come up to the standard set for the Little Blue Books. Such books got into the series in the early days—especially several on improving the mind, doctoring up the personality, and giving a rosy glow to the daily humdrum of life. These books were liars. They played falsely upon the imagination. Because of the great rush of the first days of the series—the necessity to get a large number of books into the series—some bad books, but lightly scrutinized, got into the list. This improvement group proved immensely popular—but later, in calm deliberation and determination to keep to a definite high standard, the books were killed. They went into The Morgue. This, if you wish, is idealism, or philanthropy in its figurative sense. But if you contend that it is not also good business, I retort by asking you, then, what is the worth of a good will built upon a maintained standard of truth-telling, sham-smashing, and a debunking policy that knows no favoritism or evasion?

I say again that this is good business. It is commercially sound because the reading public of America has shown that it will buy the truth if it can get it. It will buy good reading and the facts about life as it is, along with its fun and entertainment—with its jokes and its puzzles and its games, this reading public will buy Shakespeare, psy-

chology, authoritative manuals of health, significant debates, science, the best fiction in the world's literature, self-educating books, some poetry, and the best thoughts of the world's greatest thinkers.

You can point out that this reading public will also buy bad books galore, that it is not really capable of exercising judgment or discrimination. I am not so sure of this. At any rate, it is the publishers who exercise the discrimination, and a man who must read willy-nilly will buy, after all, only such books as are on the market and within reach of his purse. But given a chance, these readers will buy good books, and by reading them they will acquire a better taste and learn to tell the difference between a good book and a bad one.

If I claim credit for anything, aside from establishing a commercially sound series of five-cent books, it is that this series, which has lived up to its aim of a University in Print, has done much to improve the reading taste of the American public. As I point out to some of the better-known writers today, if some of their best work appears in the Little Blue Books, a wider market for their other work is created. A man who reads one or two of the stories of Wilbur Daniel Steele, or some of the humor of Stephen Leacock, in the Little Blue Books, will be on the watch for other work, published elsewhere, by these same writers. I take a great deal of pleasure, personal deference aside, in introducing such names as Fannie Hurst, Theodore Dreiser, Ben Hecht, E. W. Howe, Will Durant, Joseph McCabe,

William J. Fielding, Isaac Goldberg, Manuel Komroff, James Oppenheim, Sherwood Anderson, Max Beerbohm, John Cowper Powys, Clarence Darrow, Upton Sinclair, and so on, to mention some of the contemporary names, to a new audience through the Little Blue Books.

Incidentally, this is probably the best place to demolish another astonishingly prevalent misconception of the purpose of the Little Blue Books. The charge is sometimes brought against me that I am trying to injure the clothbound book business by putting out these paperbound "jitney classics." This is absurd. In the first place, a Little Blue Book by its very nature, though substantial and durable, cannot supersede a clothbound book. It has never been my intention to have it do so. Frequently, by circularizing buyers of Little Blue Books, I sell large quantities of clothbound books of other publishers—for I issue no clothbound books whatever myself.

The aim and field of the Little Blue Books are distinct from any other. Far from being competitors, the Little Blue Books are really tiny missionaries, spreading a taste for good literature and inducing a desire for better reading. The average man, the potential book-buyer of tomorrow, has but little spare cash to spend for books. The chances are he will not spend it at all unless he can be sure of getting what he wants. Perhaps he reads the reviews, but many times he does not. Even if he does, they do not tell him all he wants to know. But by making a selection from a series such as the Little Blue Books, he

can nibble and sip at small cost, and thereby learn what he wants to read—and perchance find out that good books are not really dull after all, which is something, I wager, that he never learned in school.

CHAPTER XV

AN EDITOR TURNS TO ADVERTISING

How the Little Blue Books Have Been Advertised and Sold

SOME people think it strange that I have always been my own advertising manager. But the enterprise of the Little Blue Books does have the peculiarity that production and selling are closely linked with editing the books. The phases are so closely interwoven with each other that it is really impossible to separate them. As an editor I could do my work best only by knowing the situation from the point of view of the advertiser; as an advertiser I could act to best advantage because I was also the publisher.

Though I have always been ready to consider good suggestions from others, the advertising of the Little Blue Books has been to a large extent dependent upon my experience in editing and publishing them. In another chapter I give a clear exposition of the date-lines sales policy in advertising the series, and why that policy has served its usefulness and is already discarded. That sales policy, however, as I pointed out, was a direct outcome of the publishing circumstances and conditions.

In national advertising several general principles characterize my policy. Of national advertisers using full-page

space in magazines and newspapers, I am the only one who utilizes literally every agate line. My advertising has less "white space," and consequently more type, than any other I can remember. Much of my advertising, since it carries a large list of Little Blue Book titles, is almost solid type. Though this is contrary to the dictates of some of the best advertising experts, all I can say is that it has done the work.

At the start of this discussion of advertising I should perhaps explain that advertising is measured in "agate lines." An agate line is the amount of space required for a line of agate ($5\frac{1}{2}$ point) type a column wide. A newspaper or magazine page is divided customarily into a specified number of columns, a certain number of agate lines in each column. Agate lines run fourteen to the inch, so that an advertisement a column wide and ten inches deep would measure 140 agate lines. An agate line is the unit of measurement, and the advertiser must pay for it even though the space is not occupied by type, if the space is divided off from the rest of the page or paper as part of his advertisement.

Another consideration in Little Blue Book advertising has been that in printing the list of titles it has been necessary to confine each title to one agate line, if possible. This requirement has often made it necessary to alter the title, and it has always made it necessary to include all possible description—what would be the blurb for a larger and more expensive book—in that one agate line of space. I have discussed all this in the chapters entitled "Rejuve-

nating the "Classics," "The Hospital," and "The Morgue,"

The Little Blue Book business, too, is fully ninety-five percent a mail-order business. A few scattered bookstores, and to some extent the five-and-ten-cent stores, handle assortments of Little Blue Books, but by far the greater part of the business is directly received from the customers themselves through the mails. This is another characteristic of the advertising—all of it urges the customer to order direct from Girard, enclosing his remittance with his order.

The fact that the orders are received direct from the customers is important. It has enabled me to test the pulling power of all kinds of advertising mediums and methods, for all Little Blue Book advertising is "coupon advertising"—which means that it requires the customer to send direct to the Haldeman-Julius Publications, and the address given contains a "key" number, such as Department X-114. This "Dept." or "key" number on the envelope or in the letter enclosed with the order tells at once what advertisement should receive credit for the business. It is much better than requesting the customer to "mention" the magazine or paper when ordering, and I have found that less than one person in a hundred omits the key number when addressing his order.

Key advertising is thus different from general advertising which has no direct returns. The advertisements of tobacco, cosmetics, chewing gum, automobiles, gasoline, machinery, and so on, which have no coupons (such as requests for samples), are published widely—and the only possible test is whether the business of the company

as a whole, as compared with the advertising budget for previous years and the present year, shows a proportionate improvement. But the advertiser who uses no key cannot tell at all whether one magazine is better than another, or whether his billboards are doing any good whatever.

Even the advertising of most book publishers is unkeyed. The usual line is "at all bookstores," or "ask your bookseller." If the book sells enough copies to pay all expenses, including the advertising, with a margin of profit besides, the publisher balances his books with a smile. But he has no assurance that some of his space was not wasted; he does not know, for example, that he might have done even better had he stayed out of certain publications entirely and doubled his space in certain others. He has no way of knowing. The net result of the whole is the only figure available to him.

One might think it safe to assume that a magazine with a guaranteed circulation, with an advertising rate proportionate to that circulation, and with a sufficient number of regular advertisers to substantiate the stability and commercial worth of the publication, would be a good medium for advertising Little Blue Books. This is not at all a safe assumption to make. I would test such a magazine with keyed copy, and see how it compared with others of similar circulation and cost. If good, all right; if it failed, that would be the end.

Advertising is an "art," not a science. That is to say, if it is successful it depends more upon a happy inspiration than upon a hard-and-fast rule of technique, all the adver-

tising schools notwithstanding. If it were a science it would always work according to fixed laws; the expert could determine in advance, with graphs and formulas, just what the outcome would be—he could foretell whether the returns would vary as a parabola or would rotate like an ellipse. But, I am sorry to say, this cannot be done. Whenever I issue a piece of advertising copy, even to a medium that I know to be good, I await the result with an open mind. Often I am anxious; sometimes I am delighted, sometimes disappointed.

I have seen some of what I considered my best ideas fail when put to the test. I have been amazed to find others taking hold wonderfully. For example, two or three years ago I tested some copy headed: "An Agnostic Looks at Life," feeling that the time had come for general circulation of literature that advocated a liberal attitude toward religion. This failed. Now, recently, I am experimenting with Joseph McCabe's fifty Little Blue Books, discussing religion, with the headline: "The fascinating story of man's struggle to grasp the meaning of religion," and it looks as though this will be a success. And in the face of a failure to put across a Little Blue Book "Library of Love," as a set, I am having encouraging results from an endeavor to sell a high school "Educational Course," made up entirely of Little Blue Books, as a set. It is simply impossible to forecast what an advertisement will do.

It is a constant gamble—or, if you do not like that word, it is a constant repetition of experiment and change, and experiment again. It is not even true that the same

piece of copy will do its work indefinitely; as a matter of fact, the results from one advertisement, without change in appearance, are never the same twice in succession. In this connection I should point out that I have never been able to afford—due to the low price of my product—advertising merely for “propaganda” purposes. For example, I could not spend money to run a standardized column-advertisement announcing new Little Blue Books, or to run copy which endeavored merely to get people’s curiosity aroused about the Little Blue Books. Such methods double or treble the cost of the advertising necessary to put over a sale. I must sell, as I later explain, from the first insertion itself. That is one reason, perhaps, why I must always change the appearance of my advertisements, trying first this appeal and then that.

Many things must be taken into account when estimating the value of a magazine or paper. In the first place, if the periodical has a large circulation, how did it build up that circulation? A number of so-called “mail-order” periodicals have weekly or monthly circulations sometimes above the million mark—papers such as *Home Friend*, *Household Journal*, *Comfort*, *Home Circle*, *Gentlewoman*, etc.—but are these magazines bought to be read? To a large extent, of course, the magazines will be at least hastily examined in the homes to which they go, for one reason because they go to rural districts and farms where little reading of any kind is available. But the circulation is built up with premiums—you get a dozen rose bushes, and two or three magazines for a year, all for a half dollar or a

dollar, as the case may be. The magazines contain comparatively little reading matter—on the whole they have been found undesirable mediums through which to sell Little Blue Books.

There are some magazines which base their advertising rate, not on the number of hundred thousands circulation, but on the *quality* of the circulation. If the magazine is read largely by families with incomes over eight or ten thousand dollars a year, or by people interested only in the more expensive products, this periodical can charge a rate commensurate with the quality of that circulation. Such magazines are *House and Decoration*, *New Yorker*, *Vanity Fair*, *Vogue*, etc. Due to the low price of Little Blue Books, and though many of the readers of these magazines might like to read the pocket series, these magazines cost too much for the business they get for such a low-priced product. I do not use them for Little Blue Book advertising, except possibly in very small space at different times, as a test.

There are a vast number of trade and class publications, of which the average reader has no idea. The tobacco world alone has several monthly periodicals devoted to it; so has the drug trade, the cosmetic and beauty shop business, hardware merchants, groceries, and all the rest. Even the filling stations have their own periodical. But these magazines are not read for general interest; their appeal is based on the business or trade they represent. It is the same with union labor publications, or religious journals, or lodge papers. Their interest is so specialized that they

do not divert a proper amount of attention to an advertisement of general reading such as the Little Blue Books. I have found them, on the whole, undesirable mediums.

In a group by themselves are the school and college papers. These run into the hundreds. They are nearly always unsound financially, and their advertising rate has no relation to their pulling power. I see no reason why vast national industries, with money to scatter promiscuously in advertising, should not help out these struggling student attempts. But I have found—either because the students are often penniless, or because their studies give them enough to read—that I cannot sell Little Blue Books to the school and university groups through their own periodicals. Though my audience is largely made up of modern youth, I reach these young people through the magazines they buy on the newsstands.

Of the more general magazines, printing an assortment of fiction and articles, the group known as women's magazines is the largest and boasts the largest circulation. I mean such magazines as *Pictorial Review*, *Ladies' Home Journal*, *Women's Home Companion*, *Delineator*, etc. I have tested these at different times—or some of them—and I have always confirmed the early rule that women's magazines do not pay for Little Blue Book advertising.

Perhaps some of my readers will throw up their hands in amazement, protesting that women are known to be the largest part of the American reading public. Perhaps that is so. I have no precise figures to contradict this statement, but if it is true it must be because they buy their reading

from other mediums than their own magazines. Of course, these women's magazines are largely addressed to the interests of the housewife and her household—and housewives have, on the average, little time to read much besides the one "home" magazine they may receive. Business women, who read many of the same general periodicals as men—like *Liberty*, *Judge*, *Collier's*, *Current History*, *Review of Reviews*, *Golden Book*, *Smart Set*, *Physical Culture*, *Cosmopolitan*, etc.—perhaps are better buyers of books than housewives.

I do have one set of figures that is significant. In 1926 the Research Bureau of *Liberty* made an exhaustive test of Little Blue Books sold through their columns. This test—of 1,000 orders selected at random, confined only to 25 books each—showed that 79.8 percent of the books were ordered by men and only 20.2 percent were ordered by women. This ratio may be ten percent off, due to the fact that many women sign their names with initials only, and in this test only those orders that were obviously from women were counted as such. But the figures indicate that not more than 30 percent of the orders came from women. I think it fair to assume that *Liberty's* circulation represents a cross section of the multitude of American people, and if this is granted, it shows that more than twice as many men buy and read Little Blue Books as women. These are the only exact figures I have, but they strongly suggest why I have never been able to make the women's magazines pay.

In support of this arraignment of women as Little Blue

Book readers I can say that I have a fair list of books devoted exclusively to women's interests—beauty hints, how to dress, cosmetics, care of the baby, pin money, cooking, home helps, etc. But none of these books are sensational sellers, though most of them show a fair average. On the other hand, books *about* women—such as *Women of Antiquity*, *Women Who Lived for Love*, *Woman the Eternal Primitive*, etc.—are very good sellers, probably because they are widely purchased and read by men. A new book is being added in 1928—*100 Professions for Women*—which may indicate whether the professional interest is stronger in reading women than the home interest. It will be interesting to watch the record of this book. I am sorry that no figures are available for this discussion.

Unfortunately I have no figures whatever as to age. I have always had the feeling that Little Blue Book readers are largely young people. It is certain that a large number of them are of college age, or are in their early twenties—I gather this from letters I receive. But due to the fact that periodicals which appeal strongly to young people—as *Smart Set* and *Physical Culture*—are always good paying mediums, I know that young people form a large division in the army of Little Blue Book enthusiasts. I believe in the youth of America—these youngsters are wide awake, ready to learn, and urged on with real energy and ambition. They want to know all the facts—but it is a healthy sign that they want facts and not sordid misrepresentations or lurid products of the imagination.

How do I know whether an advertisement for Little Blue

Books pays? I have already explained how the advertising is keyed, so that every order received can be credited to the proper advertisement. This keying is done by one girl every day, as the orders are checked over. Special cards are provided, with the key number, name of the publication, copy used, space used, position given, and the cost. Entries on these cards are made twice daily—the morning receipts and the afternoon receipts. Thus I know not only how much the advertisement finally brings, but I know how long it pulls, how soon the receipts reach their peak, how soon the advertisement brings in its cost, and so on.

Good magazines pull for months after the advertisement has appeared; orders are still received from advertising as far back as 1925—in *Liberty*, for instance. But these dribblings do not materially help the advertisement's record, except that they show how long old magazines are perused.

In general, I am willing to spend from two to two and a half cents to sell a Little Blue Book—especially to get new names. If I have to spend less than two cents to sell each book, the medium is of exceptional pulling power. If I get \$2,000 or more from an advertisement costing \$1,000, I am satisfied. If I get \$2,500 to \$3,000 I am enthusiastic.

Here are some of the actual receipts from some particular advertisements:

	Date	Space	Cost	Returns
N. Y. Times Book Review..	10-30-27	2 pages	\$2,500	\$4,348.89
Mid-Week Pictorial	9-15-27	2 pages	300	924.56
N. Y. Daily News.....	1-30-27	1 page	1,400	2,789.49

THE FIRST HUNDRED MILLION

	Date	Space	Cost	Returns
Physical Culture	Oct. 1927	1 page	800	\$1,759.19
Smart Set	Nov. 1927	1 page	850	1,888.35
Pathfinder	4-11-25	1 page	1,000	2,763.66
Life	9-26-23	1 page	650	1,215.23
Harper's Monthly	Oct. 1926	1 page	200	382.15
Review of Reviews	Oct. 1925	1 page	325	642.68
Golden Book	Oct. 1925	4 pages	800	1,927.48
Liberty	1-9-26	2 pages	5,000	13,321.31
Chicago Tribune	2-10-26	1 page	1,300	2,884.36
Hearst's International	Feb. 1925	1 page	1,000	2,369.12
The Nation	9-10-24	1 page	150	349.29

To show how the returns from an advertisement steadily increase to a peak and then fall off, I am including a table of three insertions of two pages each in *Liberty*. This table shows the fluctuation of the receipts in an understandable way. It is worthy of note that the general trend of the receipts is the same, substantially, for all three.

Daily Returns from Three LIBERTY Insertions (Sundays Are Not Counted)

Date of In- sertion	1st Day	2nd Day	3rd Day	4th Day	5th Day	6th Day	7th Day
Sept. 18, 1926 (1st Day 9-13)	\$13.74	\$85.01	\$447.38	\$613.07	\$849.06	\$713.48	\$1,042.48
Jan. 9, 1926 (1st Day 1-4)	94.86	108.47	403.83	698.57	768.65	844.81	1,222.43
Jan. 30, 1926 (1st Day 1-25)	55.43	98.61	452.65	666.36	699.84	233.40 ¹	1,396.36
	8th Day	9th Day	10th Day	11-12th	13-15th	Final Total	
Sept. 18, 1926	\$319.82	\$429.96	\$344.11	\$412.69	\$904.62	(Dec. 6)	\$10,050.39
Jan. 9, 1926 ..	356.23	526.11	612.75	920.64	802.52	(Mar. 6)	13,231.31
Jan. 30, 1926 .	363.97	492.56	455.27	741.17	1,187.41	(Apr. 2)	12,051.46

¹ Saturday on which mail was opened only in the morning; what would have been the afternoon's mail is included in the next day's (Monday's) total.

In brief explanation of the figures in the foregoing table,

I should add that an insertion in *Liberty*, if successful (and I have never had a failure in this magazine so far), will more than “pay out” (which means to bring in the cost of the advertisement or better) within the first three weeks of returns. The first returns begin almost always on Monday—the magazine is placed on the newsstands the previous Saturday, being dated the Saturday following. That is, *Liberty* for September 18, 1926, was placed on the newsstands September 11, and I had the first returns on the 13th. *Liberty* always “pulls” (brings returns) regularly for nearly ninety days, and then drops down to from one to five dollars a day for another month or so, finally dwindling to a dollar or so every now and then.

Advertising in the newspapers has the same characteristics as that in the magazines. The emphasis in Little Blue Book copy—now that date-lines and sales inducements have been abandoned—is on two things: the established five-cent price, including postage to any address in the world, and the great scope of choice—1,260 different titles. These two selling points, added to the reputation and general excellence of the series, are now doing all the work of selling the books to a wide and constantly increasing audience.

I can make the general statement, from a wide experience, that advertising a mail-order product in small-city newspapers *never* pays. Only newspapers in the larger cities—New York, Boston, Philadelphia, Baltimore, Chicago, Los Angeles, etc.—are good. Some papers in these larger cities are much better than others, not due so much,

perhaps, to variations in the mentality of their readers as to a difference in purchasing power. An important factor is the reader-interest the newspaper has—and this is a matter of reputation. Is it bought because it is examined thoroughly from first page to last, or does it depend upon one or two features to build up its circulation?

I know that I have mentioned only two general considerations, and that even these cannot be applied like a blanket to all cases. The difference in pulling power between two papers in the same city is, after all, much more deep-rooted than either of these things. It would take an involved analysis to explain it. All that I know is that all papers are not alike, and I keep away from those in which I once wasted my money.

But it is an absolutely general rule that the small-city newspaper does not pay. This is because the rate is based upon two things—the actual circulation and the cost of running the advertisement. The latter includes typesetting, ink, paper, etc. But the circulation of the small-city paper is not sufficient to justify an advertising rate based upon that alone, so that per hundred readers, let us say, the cost is proportionately greater than it is to reach every hundred readers of a newspaper in one of the larger cities. The larger the paper the lower the cost. For example, I have mailed copy from Girard late Saturday afternoon, every line of which had to be set—totaling actually more than 1,300 lines of type—and have had the pleasure of seeing the complete advertisement inserted in the early morning editions of the *Chicago Tribune* for the very next

Tuesday, and have received the first orders Wednesday afternoon! Chicago, you know, is 600 miles from Girard. The cost of rushing through that advertisement is really very large—a small-city newspaper could not afford it at a rate based upon circulation at so much per thousand as the *Chicago Tribune* figures it.

Newspaper advertising is more ephemeral than that in the magazines. By this I mean that it reaches its peak sooner, and falls off more rapidly. Newspapers are read soon after being delivered—at least on the evening of the day they are dated—and, except Sunday newspapers, which approach more nearly to the magazines, their readers act quickly on any mail-order advertising that appeals to them. To show this I am also putting in a table of three insertions of one full page each in the *Chicago Tribune*, which shows the fluctuation of newspaper receipts. Compare this with the table of *Liberty*—and then with the table of an insertion of two pages in *Review of Reviews*, a monthly of steady pulling power.

Daily Returns from Three CHICAGO TRIBUNE Insertions
(Sundays Are Not Counted)

Date of In- sertion	1st Day	2nd Day	3rd Day	4th Day	5th Day	6th Day	7th Day
Feb. 10, 1926 (1st Day 2-11)		\$202.19	\$391.05	\$177.80	\$408.78	\$118.62	\$210.61
Jan. 14, 1926 (1st Day 1-15)	11.31	962.08	491.67	258.32	221.54	154.23	161.19
Jan. 5, 1926 (1st Day 1-6)	14.76	350.76	448.35	332.65	295.77	53.71	153.49
	8th Day	9th Day	10th Day	11-12th	13-15th	Final Total	
Feb. 10, 1926	\$198.67	\$100.21	\$74.27	\$135.55	\$361.12	(Mar. 10)	\$2,884.36
Jan. 14, 1926	72.10	83.55	69.56	156.81	107.56	(Mar. 10)	3,788.62
Jan. 5, 1926	98.35	81.73	141.12	54.41	105.30	(Mar. 10)	2,959.81

There are some interesting things to be noted about these three newspaper insertions. All represent copy for the sale which closed February 28, 1926—threatening the withdrawal of certain titles, which were later withdrawn as had been advertised. The returns from Chicago usually start very slowly on the afternoon of the day following the insertion—for February 10 this small amount was not recorded. The big returns come in the first week, always—a newspaper is read very soon after its purchase or delivery, especially a weekday issue, but this was date-line copy and a number of people must have torn out the advertisement and set it aside until they were ready to order. The fact that all three of these insertions pulled rather steadily up to a week or so after the closing date of the sale shows this. It is also worthy of note that though two of these insertions were only nine days apart, both did very well indeed. Though some re-ordered who had responded to the insertion on the 5th, it is practically certain that a large number of those who answered the 14th advertisement had not noticed the one nine days before. Some, of course, were reminded of the previous advertisement, on which they had neglected or forgotten to act, and immediately took action when so forcibly reminded that these books must be bought immediately. But many people do not notice much that comes under their eyes—they may have been in more of a hurry on the 5th than on the 14th—so that in a paper with a large circulation it often pays to repeat frequently. Finally, note that the insertion of February 10, close to the closing date of the sale, kept much higher returns

AN EDITOR TURNS TO ADVERTISING

through a longer period—because the advertisement pulled from twenty-five to thirty-five days *less* than the previous insertions. Date-line copy always slumps to zero shortly after the closing date—its main disadvantage.

Daily Returns from an Insertion in REVIEW OF REVIEWS (Sundays Are Not Counted)

October, 1925

Date of In- sertion	1st Day	2nd Day	3rd Day	4th Day	5th Day	6th Day	7th Day
(1st Day 9-28)	\$10.97	\$4.65	\$12.02	\$8.08	\$17.46	\$11.44	¹ \$7.95
	8th Day	9th Day	10th Day	11-12th	13-15th	Final Total	
	\$14.00	\$14.25	\$9.82	\$22.47	\$33.04	(Jan. 1) .. \$518.68	

¹ Saturday on which mail was opened only in the morning; what would have been the afternoon's mail is included in the next day's (Monday's) total.

It is interesting to observe that the *Reviews of Reviews*, being a monthly magazine, pulls much slower than *Liberty*, a weekly, or the *Chicago Tribune*, a daily. This magazine pulls fairly steadily for three months, paying out usually in the first thirty days. The difference in the way the returns come in is accounted for by the fact that a monthly magazine lies around on library table and lounge for weeks, where different members of the family pick it up and glance through its pages. It is filed away, too, more permanently in libraries, and even some individuals keep files of their favorite magazines. That is why some of my magazine advertising pulls—though it is in very small amounts—for a year, or even two years. It is therefore impossible ever to use a monthly publication if quick returns are desired—for quick results the newspapers are the only mediums. The closing date of monthly magazines, being

far in advance of the date of the publication, is another handicap. They are valuable, but copy for them must be planned far in advance, and usually it is necessary to wait some time for full returns.

In general, I make but little change—sometimes no change at all—in the list of books advertised in magazines of the quality class, magazines usually classed as “low-brow,” high-class newspapers, and the tabloid newspapers. All of these supposedly vastly different audiences are given their choice of exactly the same books, at exactly the same price, under exactly the same conditions. To some extent, their selections from the same list do vary. In another place I compare these differences. But in general the appeal of the Little Blue Books is thoroughly democratic—they lure the nickels of the well-to-do as well as the nickels of those who have few to spare.

My newspaper campaigns are a unique feature of Little Blue Book advertising. Their success shows more than anything else that there is a real field for good reading at a price within reach of the average Pocketbook. People like to taste, also; they will nibble at the classics and at college subjects if it will not cost them too much to make the experiment. The crowning achievement of Little Blue Book distribution, indeed, I regard as the success of selling them through the pages of the tabloids—the gum-chewers’ ad-sheets, the most sensational papers printed anywhere. In these papers, I have successfully listed and sold Little Blue Books of acknowledged excellence—many

of the same books bought by readers of *Harper's* and the *Atlantic Monthly*.

A complete list of the magazines that have printed Little Blue Book advertising would fill more than a page of this book. Some of them have proved good mediums for a time; others were tried for test purposes only. Several are used at long intervals; some are used regularly. They range all the way from *Police Gazette* to *Asia*; from the *Nation*, a liberal, to the *Pathfinder*, a conventional; from *Smart Set* and *True Confessions* to *Current History* and *Personality*; from the *Mid-Week Pictorial* to the *New York Graphic*; from *Hygeia* to *Physical Culture*; from *Harper's* to the *Writer's Digest*. Little Blue Books have been sold through the Capper Publications, the Fawcett Publications, the Newsstand Group, and the Macfadden Publications. They range from *Life*, *Judge*, and *College Humor* to the *Golden Book* and *Red Book*. Wherever readers are found—there is a place for the Little Blue Books.

From my nine years of advertising in all kinds of periodicals and papers I have built up a mailing list exceeding half a million names and addresses the world over. After each order has been filled file clerks look up the name and address of the customer in these drawers of stencils; if the name is not already there, a metal stencil is stamped on a special machine, and this stencil is filed in its proper place by state and city. Filing by addresses is for the convenience of the postoffice department when large mailings are made from these lists. That is why, when there is a change of ad-

dress, a customer must send both his old and his new address—for the stencil is filed by his address, and not alphabetically by his name.

These 500,000 names and addresses of book-buyers—only purchasers' names are stenciled, mere inquiries being answered and thrown away—are kept constantly up to date by a corps of clerks. All mailings of catalogues or circulars bear the line "return postage guaranteed," so that if the address is wrong the piece of mail will be returned and the stencil can be removed from the files. In every mailing—and there are at last two each year—from ten to fifteen percent of the addresses have changed.

This list of names, by the way, pays for its upkeep by rental. Other publishers or mail-order organizations using direct-mail advertising rent the use of this list of names. I remember that Edward Bok, when seeking to give the widest possible publicity to his Peace Plan, used the entire list of Little Blue Book buyers. The circular letters, already in envelopes, sealed and stamped, were sent to Girard by express. Only the addresses were affixed here. This is the usual procedure, and the business from this rental of the mailing list pays for keeping it in shape, and it is always ready for my own use—a convenient list of people who have bought Little Blue Books and who are likely to be interested in new catalogues with new titles.

Though I am largely dependent upon direct returns from national advertising being large enough to be profitable in themselves, at the same time I count upon a large amount of re-orders, as every mail-order house does. In

every outgoing parcel post package of Little Blue Books there is a small 32-page catalogue of the 1,260 Little Blue Books. From this catalogue alone thousands of dollars' worth of business accrues in the course of a year. For example, the little catalogue keyed as Dept. C-33, which was first sent out May, 1927, has brought in, to date, \$20,-630.55 worth of orders. These orders cost only the manufacturing cost of the catalogues; there was no mailing expense or other advertising expense whatever. The parcel post packages also contain "stuffing," which is made up of circulars and advertising matter about my publications—*Weekly*, *Monthly*, and *Quarterly*, and Joseph McCabe's *Key to Culture*—and some advertisements of clothbound books of other publishers which I think will interest Little Blue Book readers.

A most interesting aspect of this stuffing is a small, inconspicuous $3\frac{1}{2} \times 5$ -inch slip, on ordinary book paper in black ink only, with room for very little argument or persuasion of any kind. This slip has been inserted in Joseph McCabe's Little Blue Books, and merely calls attention to Joseph McCabe's new series, *The Key to Culture*. The amazing power of Mr. McCabe is shown by the fact that several people a day who read his Little Blue Books use this little slip, this tiny "stuffer," to send in a subscription to *The Key to Culture*. This is selling a \$5 article to a man who first buys something that costs only five cents. And just because of the influence of a man's name.

Another regular circular is a four-page $5\frac{1}{2} \times 8\frac{1}{2}$ -inch folder describing William J. Fielding's new clothbound

book entitled *Sex and the Love-Life*. This is stuffed in all outgoing packages of Little Blue Books, and its only sales argument is a complete list of the contents of the book—and the price, \$2.65. An average of 20 copies of this cloth-bound book are sold every day from this inexpensive circular—and to buyers of five-cent books. This speaks well for the influence of Mr. Fielding, and also for the sincere desire on the part of these readers to improve themselves by getting at the facts about life.

I constantly send out a $3\frac{1}{2} \times 5$ -inch "coin-card," advertising the *Haldeman-Julius Weekly* for ten weeks at ten cents. This coin card urges the reader to send back a dime and receive the *Weekly* for ten weeks. This card alone keeps the circulation of the *Weekly* at an average of 70,000 copies—making it an excellent medium to advertise not only Little Blue Books, but my *Monthly* and *Quarterly* magazines. The *Monthly* costs \$1.50 annually, and has been built up almost entirely through advertising in the *Weekly* to a circulation of 50,000 copies. The *Quarterly*, at \$3 per year, has been similarly built up to 18,000 copies. Joseph McCabe's *Key to Culture* (\$5 per 24 issues), through advertising in these publications and various circulars, has reached a subscription list of 7,000 (January 1, 1928).

Incidentally, I should point out that these publications of mine—especially the *Monthly* and the *Quarterly*—are not only valuable to me as advertising mediums for the Little Blue Books and for each other, but their editorial

requirements constantly complement the editorial needs of the Little Blue Books. Manuscripts bought for Little Blue Books are run serially in the publications, thereby advertising the author, and manuscripts bought for the publications are frequently gathered together later for Little Blue Books. Some very successful books have been evolved through this mutually helpful method. I point out particularly how such authors as Joseph McCabe, William J. Fielding, Will Durant, etc., have been made well known to Little Blue Book readers by this policy. This also reduces the expense of manuscripts and helps to keep the selling price of Little Blue Books at five cents each.

At one time I utilized the space on the back covers of the Little Blue Books themselves for advertising. I could, as a matter of fact, sell this space for a tidy sum annually. But I took my own advertising off, and have allowed no other advertising on the Little Blue Books, for no other reason than that it cheapened the books without enough gain to offset this lowering of the quality of the product. Little Blue Book covers present an attractive if inexpensive appearance in their plain blue covers, except for the number and title and author on the front. I prefer not to mar this neat appearance, even though it might sell a few more books per year.

For catalogue distribution I depend almost solely upon the little catalogues stuffed in outgoing packages, and in yearly catalogues mailed to my list of buyers of the Little Blue Books. Although to some extent, when a new catalogue

is ready, I advertise the publication of this new catalogue in magazines other than my own, I have found that the "general inquiry" form of advertising does not pay.

By general inquiry advertising I mean that which does not solicit orders, but endeavors to arouse the interest of the reader so that he will write for a free sample, a free booklet, or a free catalogue. For something fairly expensive, like a large set of clothbound books, when the margin between manufacturing cost and selling price is large, this is all right, because it is not necessary to sell to so many different customers in order to make it pay.

But in selling Little Blue Books I must sell to a great many individuals, due to the low profit each separate order represents. If I depend on inquiries for catalogues, I have to do the work, in effect, twice—first I have to interest the reader in a catalogue, and then, with the catalogue, I have to interest him in the books. It is better, I have found, to list some of the more attractive books in the original advertisement, and solicit orders directly on the merit of the product itself. If the reader also wants a free catalogue—well and good. But his attention is focussed at once on the books, and his business is solicited without any intermediary correspondence.

Little Blue Books do well in this form of direct advertising because if a man knows what they are and does not buy them from their titles as listed he will not buy them at all—for I cannot afford to spend many pennies arguing him into a purchase which the lure of the product itself cannot consummate. My best policy has always been to

print my catalogue—or as much of it as there may be room for—in the pages of the magazines and newspapers which carry my advertising.

A new form of Little Blue Book advertising is at present undergoing experimental exploitation. With so large a list it is possible to break the books up into a number of small, closely related groups of books. For example, Joseph McCabe has some fifty Little Blue Books giving a complete survey of religious controversy. These fifty books are being advertised, with promising returns, as a set—sold in unbroken lots of fifty, no choice being permitted. A series of fifty Little Blue Books giving the essentials of a high school education is being advertised and sold in the same way. This shows that different forms of appeal have their very separate values—people are buying these special sets who may have up to the moment ignored general Little Blue Book advertising in which they could have picked out these fifty titles or any fifty or less that they might have wanted.

A variation of this group advertising is also used when less than full-page copy is desired. I refer to advertisements of one column only, in a magazine, or even as small as 100 or 75 agate lines. I have even used as small an advertisement as 35 agate lines—listing a series of Little Blue Books on crime and criminals, with a choice of one book or more at five cents each plus a cent a book for postage. This is always to get new names from sources where it would not pay to run larger copy.

Some of the smaller advertisements have been headed: **IMPROVE YOURSELF!** These were usually in space of

75 agate lines, and are run in a wide variety of publications during spring and summer, when larger copy is likely not to pay out. I also use more sensational little ads, headed "I Want to Know About Love," with a list of the helpful Little Blue Books on sexual hygiene and love stories from the world's literature. These are the advertisements, usually in space of 50 agate lines each, which I now and then run in the "mail-order" publications. A list of from 50 to 70 Little Blue Books, though with abbreviated titles, can be set in small type in a space of 50 agate lines—giving a fair range of choice and making it possible for the advertisement to pay out on the two-to-one basis which I require.

Some of the results from such advertising are as follows:

Publication	Date	Space	Cost	Returns
Hygeia	Feb. 1927....	1 column	..\$ 60	\$128.58
Smart Set	July 1927....	50 lines	 80	312.35
Psychology	Aug. 1927....	50 lines	 25	123.49
Grit	May 1927....	50 lines	 60	120.96
American Girl	Feb. 1927....	1 column	.. 40	96.77
Youth's Companion ..	3-17-27....	100 lines	 125	236.49

Frequently, of course, I have the advantage of being able to test a piece of new advertising copy in one of my publications—the *Weekly*, *Monthly*, or *Quarterly*, or even in all three. If it pays out in these publications I can be fairly certain that it will have a good chance of paying out elsewhere, especially in periodicals I know to be good mediums for Little Blue Books.

For if I have learned any one general truth from my

experience in advertising Little Blue Books, it is that human nature is the same in all walks of life—which is nothing new. It is just that the Colonel's lady and Rosie O'Grady are really sisters under their skins, and so both of them buy approximately the same Little Blue Books. It may seem impossible that readers of the *Atlantic Monthly* should buy practically the same titles as readers of *Smart Set*, but it is nevertheless the truth. The desires and inclinations of all readers are much alike—they are limited chiefly by their ability to understand, by the range of their knowledge, and not by what they would like to read about if they can grasp it.

CHAPTER XVI

A COMPARISON OF ADVERTISING MEDIUMS

Are Different Little Blue Books Sold Via Different Magazines?

IT is to their wide appeal that the Little Blue Books owe their success. By wide appeal I mean, of course, a series of books so selected and so distributed over a variety of subjects that the titles will lure orders from readers of *Harper's* as well as from readers of *Liberty* and *Pathfinder*. The same books are sold to all classes of readers—though there is a variation in the actual books selected, this variation is not as large as one might suppose. In most cases it is sound advertising to use the same copy in a group of publications of widely different tone and policy.

However, I have learned some interesting facts from my use of the same copy, in a variety of magazines and papers. I have learned, for example, that the *New York Times Book Review* is the only medium through which I can sell, in an appreciable quantity, the Little Blue Book edition of Charles Dickens' *Christmas Carol*. Don't ask me why—many of the results from Little Blue Book advertising are almost riddles. For this book does not sell at all, comparatively, to the readers of *Harper's*—and only

mildly to readers of the *Nation*. The nearest competitor to the *Times* on this book is the *Smart Set*, with a sale of half as many.

Before I go into a lengthy discussion, I must explain the figures I shall use. I shall take up, in particular, the actual statistics secured from similar advertisements of 1927 in *Harper's*, *Nation*, *Smart Set*, *Pathfinder*, *N. Y. Times Book Review*, *Liberty*, and *N. Y. Daily Graphic*. This offers a wide range. *Harper's* is a magazine of limited appeal—a rather conventional, “quality,” thoroughly safe and reliable magazine. The *Nation* also has limited appeal—but it is liberal, decidedly progressive, and reaches a group of aggressively alert, somewhat radical readers. The *Smart Set* is a rather sensational young people’s magazine, dealing in the confession type of short story, articles on love and marriage, and so on. The *Pathfinder* is a weekly news magazine, thoroughly conventional, going chiefly to small towns (less than 10,000 population), with a circulation that is entirely mail order—no newsstand sales whatever. The *New York Times Book Review* is a feature section of the Sunday edition of the *N. Y. Times*, undoubtedly one of the world’s greatest newspapers. The intellectual level of this review is high. *Liberty* is a national weekly “for everybody,” reaching a mass of middle class and laboring class readers, partly because it is a five-cent magazine, and partly because its editorial content is kept up to the minute, short and easy to read, and planned to attract the weary reader who is anxious to amuse himself in fleeting spare moments. The *New York Graphic* is a

tabloid newspaper—read to a large extent in the subways of Manhattan, by thousands on their way to and from their work.

The question to be approached in this chapter is whether there are any wide differences in the books purchased by these seven groups of readers; and what these differences are. There are some, and they tell a story. But there are strong and significant similarities also—which will be demonstrated in due course.

The basis of the statistics has had to be given a common denominator, so to speak. The actual returns from the advertisements are necessarily widely divergent. But for the sake of comparison the figures used here represent the number of books ordered in 1,000 orders. That is to say, if 1,000 orders (of about 20 books each; or roughly 20,000 books in all) are received, and out of this group 90 people order Dickens' *Christmas Carol*—the 1,000 figure for this book is 90. As a matter of fact, 90 people out of the 1,000 selected from the *N. Y. Times Book Review* returns did order this book; 50 people out of the 1,000 *Smart Set* readers also ordered it—but of the 1,000 orders received from the *Nation*, only 10 ordered it. These are round numbers, but they hold true, and are genuinely representative.

There is one possible explanation of the difference in the sales of this particular title. Readers of the *Nation*, being well educated and for the most part well read, are already familiar with the story. Readers of the *Smart Set* and *Times*, however, have merely heard of it (speaking in

general), and are curious to read it. I cannot explain, however, the peculiar silence on the part of the readers of *Harper's*, who bought, for example, *Dr. Jekyll and Mr. Hyde*—to the extent of 70 orders out of 1,000.

One broad generalization can be made without any possibility of contradiction. High or low, rich or poor, read or unread, the interest in sex—the relationship between men and women, the attraction of male for female and vice versa—is universal. Rich man, poor man, beggar man, thief; doctor, lawyer, merchant, chief—all are fascinated by this subject. Whether the orders come from palatial residences or hovels, from cities or villages, from offices or homes, from colleges or prisons, the dominance of this subject is inevitable.

The interest in sex and love may express itself in different ways. The orders may be, indeed, for somewhat different books—but the impulse behind the orders, the motive for buying the books, is everywhere the same. Here are the figures, reduced to actual percentages, for the seven groups of orders to be analyzed here: *Harper's*, 41 percent of the readers buy books on sex, love, marriage, or a related subject; *Nation*, 61 percent; *Smart Set*, 70 percent; *N. Y. Times*, 54 percent; *Graphic*, 62 percent; *Liberty*, 71 percent; *Pathfinder*, 27 percent. In every case the proportion is more than a fourth; in all but two cases it is over half.

One of the amazing aspects of these percentages, to me, is the very low—comparatively speaking—sale of “sex books” to readers of the *Pathfinder*. Actually, these read-

ers bought books of self-improvement and self-education—which is to say books helping them toward better English, better health, better understanding of themselves and others and their relation to the world—to the extent of 31 percent. The *N. Y. Times Book Review* also runs to 31 percent self-improvement books, but the *Times* readers wanted to know about love and sex to twice the extent that *Pathfinder* readers did.

It is possible—no statistics are available, and I am merely offering a hypothesis—that readers of the *Pathfinder* are largely family groups, many of them perhaps elderly, living in small towns. Their interest in love and marriage has ceased to be intense, if I may put it that way. They show clearly that they are much more interested in educating themselves along lines other than phases of the relationship between male and female.

Viewing this interest in sex in more detail, though the dominance of the subject is paramount throughout all these mediums, the actual titles selected vary considerably, and are variously significant. For the sake of comparison I have before me lists of 100 Best Sellers for each of these seven magazines. In this list of 100 there are some sex books—a series by William J. Fielding—which are found in *all* seven lists. These are books which *everyone* wants, almost with exception:

What Married Women Should Know	260
What Married Men Should Know	220
What Young Women Should Know	200
Woman's Sex Life	200

Man's Sex Life	190
What Young Men Should Know	170

The figures indicate the average number of copies sold in each 1,000 orders. It is interesting to notice that the best seller of the group is *What Married Women Should Know*, and that the books for women outsell those for men. This holds true, in general, for all of my advertising. To some people this may indicate that women are more interested in securing authentic information of this kind than men. But in another place I have pointed out that from most indications men are the best buyers of Little Blue Books, and I rather think that men buy these books of facts for women as well as those addressed more particularly to themselves. I see no reason why both men and women should not read all of the books, and I am quite sure that this interest in the opposite sex explains the larger sale of the books for women.

As to whether men actually do buy more Little Blue Books than women, I have taken the trouble to find out. A careful tabulation of the orders received shows that 71 percent come from men and only 29 percent from women. Elsewhere I have pointed out how women's magazines seldom pay out for Little Blue Books advertising, and I explained that this was probably the reason. The legend that women do most of the reading in America must be founded upon something apart from the Little Blue Books if it is to be something more than a legend. For these facts are indisputable—the Little Blue Books do depend on men for their greatest support.

Mr. Fielding's *What Women Past Forty Should Know* is among the 100 Best Sellers for every magazine except the *Nation*, where it sold only 60 copies in 1,000 orders. This seems to indicate that most of the readers of the *Nation* are men, for this is a book which men are not likely to be interested in. The average figure for this book in all the mediums is 100, which is hardly more than half the sale of any of the books listed above. It sold best in the *N. Y. Times*, 200 copies in 1,000 orders; next best in the *Graphic*, 130.

Gloria Goddard's *Confidential Chats With Wives* is a better seller than Dr. Wilfrid Lay's *Confidential Chats With Husbands*, in all the magazines except *Harper's*, where these two books were not advertised, in the ratio of 90 to 70 out of 1,000 orders. They sold best in *Smart Set* (140 for Wives, 150 for Husbands) and *Liberty* (150 for Wives; 110 for Husbands).

Interest in marriage centered itself in the wide publicity now being given companionate marriage, as advocated by Judge Ben B. Lindsey. The book called *Judge Lindsey on Companionate Marriage* is among the 100 Best Sellers for *Harper's*, *N. Y. Times*, *Nation*, *Smart Set*, and *Liberty*. Its average sale was 160; its best sale was 300 in the *Nation*; its worst was 50 in the *Pathfinder*, though it sold only 60 in the *Graphic*. Readers of the last two publications can therefore be regarded as less abreast of the times in that they do not know about or do not care to know about companionate marriage. The sale of this book in the *Nation* shows clearly, too, that the readers of this pro-

gressive weekly are thoroughly wide-awake to what is going on in modern movements toward improving social welfare and individual happiness.

The book by my wife, Marcet Haldeman-Julius, called *Why I Believe in Companionate Marriage*, was also a best seller in the *Nation*, though not as good as the Lindsey book, selling only 110 copies in 1,000 orders. The next best figure is 100 for *Harper's*. The worst is 20 for the *Graphic*, though *Smart Set* readers bought only 30 copies in every 1,000 orders when they bought 220 of the Lindsey book. The average for all seven magazines is 70. Thus I say again that it is never possible to predict what a book may do, or where it may sell the best.

Another book with interesting figures is Clement Wood's rather humorous book called *The Art of Kissing*, which sold an average of 170. The actual figures for each publication are: *Smart Set* 350; *Harper's* 200; *Nation* 160; *Liberty* 150; *Graphic* 140; *Pathfinder* 100; *N. Y. Times* 80. The younger readers of *Smart Set* can explain that total, but how about staid and sober *Harper's*? And how is it that *Liberty* is fourth in the list? And *Pathfinder* actually displayed more interest in kissing than the *N. Y. Times*. Such are the vagaries of human inclinations. Mr. Wood's companion book, called *The Art of Courtship*, sold an average of only 60, as did also *Jokes and Clever Sayings About Kissing*. The latter book, by the way, went up to the phenomenal figure of 130 in the *Graphic*, practically equaling the sale of *The Art of Kissing*.

Fielding's *The Child's Sex Life* is among the 100 Best

Sellers in only two publications: *Graphic* and *Smart Set*, each with 90 sales in 1,000 orders. Dr. Reed's *What Expectant Mothers Should Know* is a Best Seller only in the *N. Y. Times* 90, *Graphic* 100, *Nation* 80, and *Harper's* 90. *Freud on Sleep and Sexual Dreams* leaps to prominence in startling fashion: *N. Y. Times* 250; *Pathfinder* 60; *Graphic* 300; *Liberty* 190; *Nation* 150; *Smart Set* 300; it was not advertised in *Harper's*. Havelock Ellis' *Love Rights of Women* is also interesting: *N. Y. Times* 120; *Pathfinder* 50; *Graphic* 110; *Liberty* 40; *Nation* 130; *Harper's* 110; *Smart Set* 130.

The two books available on birth control—which is to say discussions of it pro and con, since specific contraceptive information is prohibited by law—show a widespread interest in the subject. A comparison is best shown by parallel figures, as follows:

	Debate on Birth Control	Aspects of Birth Control
N. Y. Times	110	160
Pathfinder	30	50
N. Y. Graphic	120	150
Liberty	90	80
Nation	80	30
Smart Set	50	120
Harper's	Omitted	Omitted
Totals	480	590

The *Nation* is the only periodical whose readers show a marked preference for the controversial side of the subject. The greater interest in the "aspects" is, I fear, due to a vain hope that the book may contain hints or at least some

slightly veiled information, when it is obvious that a debate will not contain any details whatever.

The emphatic interest in sex, no matter what the phase, and regardless of the author of the work, is evidenced again by Theodore Dreiser's *America and the Sex Impulse*, certainly the best selling Little Blue Book of the trio he has in the list. This title, in fact, reaches some rather astonishing figures: *N. Y. Times* 140; *Pathfinder* 40; *Graphic* 130; *Liberty* 100; *Nation* 130; *Harper's* 100; *Smart Set* 80. Even Clement Wood's *Modern Sexual Morality*, which is wholly argumentative and rather abstract, shows these results: *N. Y. Times* 60; *Pathfinder* 20; *Graphic* 120; *Liberty* 60; *Nation* 120; *Smart Set* 150; *Harper's*, not advertised.

Wickedness, or what people regard as wicked, even when it is only the history of wickedness, has undoubted attraction. It is the lure, naturally, of forbidden fruit, more often than a genuine interest in understanding the circumstances the better to know life thoroughly and enjoy it sanely. Still, though the interest is in forbidden fruit, the books which people buy in my University of Print will inevitably give them the facts, and thereby induce an interest in the facts. I am confident that there is no false coloring, no misleading evasion, in any books I print. That is why I consider the large interest in prostitution healthful rather than otherwise, for it is clear that the series of histories of prostitution, written especially for the Little Blue Books by Leo Markun, are among the best sellers nearly everywhere. Witness these figures:

THE FIRST HUNDRED MILLION

	Ancient Prostitution	Medieval Prostitution	Modern Prostitution
N. Y. Times	160	140	210
N. Y. Graphic	120	140	200
Liberty	130	80	150
Smart Set	220	180	230
Totals	630	540	790

These three books were not advertised in *Pathfinder*, *Nation*, or *Harper's*. The interest increases, understandably, as one nears modern times. And yet a book called *Sex Life in Greece and Rome*, though this may be due to a prevalent notion that Greece and Rome were immoral, sold like this: *N. Y. Times* 160; *Pathfinder* 50; *Graphic* 130; *Liberty* 60; *Nation* 50; *Harper's* 80; *Smart Set* 210.

Even books about men and women, without stressing sex or love, create widespread interest and bring in hundreds of orders. In particular it is interesting to observe the figures for two books of quotations from great men and women writers, as follows:

	What Great Men Learned About Women	What Great Women Learned About Men
N. Y. Times	60	70
Pathfinder	40	50
N. Y. Graphic	80	80
Liberty	60	30
Nation	70	50
Harper's	40	130
Smart Set	140	150
Totals	490	560

As usual, the women have it. This is substantiated by the success of a fairly new book called *What Frenchwomen Have Learned About Love*, which sold like this: *N. Y. Times* 80; *Pathfinder* 50; *Graphic* 110; *Nation* 50; *Liberty* 70; *Harper's* 140; *Smart Set* 170.

I should point out here that the people *will* have sex in some form or other in their reading, and if they cannot get it as specific as they wish, they will take what they can get. The larger totals of some of the milder books in such magazines as *Harper's* prove this. If the readers are given a choice between a mild title and a sensational title, they will nearly always take the latter if they can't afford to buy both. If they can have only the mild title, they will take it rather than nothing. It is human nature.

Before passing to other subjects, I want to say that the largest lists of books were advertised in *Liberty*, *N. Y. Times*, and *Graphic*. I have been especially interested to notice that only one classification or group of titles in *Liberty* has a 100 percent sale—which is to say that not a title under this classification showed zero. This classification was PASSION. Even books which would not have sold if listed miscellaneously, sold extremely well when placed under this heading. These are the books so classified, with their sales figures:

A Nun's Desire and Other Poems	220
Mme. Tellier's Establishment. Maupassant	200
Passion in the Desert. Balzac	190
Amorous Tales of the Monks	180
Lustful King Enjoys Himself. Hugo	180
Quest for a Blonde Mistress	170

THE FIRST HUNDRED MILLION

The Falcon, etc. Boccaccio	160
Sex Obsessions of Saints	150
Night in Whitechapel. Maupassant	140
Short Stories of French Life	140
Amateur Peasant Girl. Pushkin	130
A Bath, etc. Émile Zola	130
Italian Tales of Passion	130
Unconventional Amour. Moore	120
Lost Phoebe. Theodore Dreiser	110
Wages of Sin. W. D. Steele	100
Brazilian Love Stories. Lobato	90
Girl with 3 Husbands, etc.	80
Policewoman's Daughter. Hecht	70
Jazz, etc. Ben Hecht	70
Polite Parisian Scandals	70
Hedda Gabler. Ibsen	70
Montes: Matador and Lover. Harris	60
Love's Heroism and Other Tales	50
Happy Hypocrite's Love-Life	50
Smart Epigrams. De Gourmont	40

All those over 60 are in the 100 Best Sellers for *Liberty*, which gives this classification outstanding importance. The heading "Passion" is responsible, I know, because some of these titles, listed thus, do better than more sensational titles listed elsewhere.

For example, if Boccaccio's *The Falcon* were placed in competition with his *Illicit Love and Other Stories*, without any other description, the latter would do better. As it is, the former sold 160 against the latter's 130 which is truly amazing, for there is nothing suggesting love or sex in *The Falcon*. Similarly, Ibsen's *Doll's House* is zero, as against *Hedda Gabler's* 70, but the former is usually the better seller. Again, of Guy de Maupassant's books, *A*

Wife's Confession is usually up for first honors, but in this advertisement it sold only 110; while *A French Prostitute's Sacrifice*, always a sensational seller, did only 140, as compared with 140 and 200 for the two Maupassant titles listed under Passion. Likewise, Dreiser's *Lost Phoebe* just outdistances his *America and the Sex Impulse*, by 110 against 100, which is unheard of. It is the heading or classification that does it—such headings are an important part of my advertising.

It is significant, too, that the best seller under the listing Passion is a book of poems—entirely because the title is the most sensational. Even poetry, generally a difficult form of reading to sell, will be clamored for if it is linked up with sex or love or their manifestations.

Incidentally, the classifications FAMOUS LOVERS and WOMEN do less well, on the whole, than might be expected. Casanova, for example, does not arouse interest unless his amorous reputation is known. *Casanova: History's Greatest Lover* shows these revealing figures; as compared with other famous lovers, better or less known, as the case may be:

	Casanova	Cleopatra	Catherine the Great	Madame du Barry	Abelard & Heloise
N. Y. Times.	60	60	50	80	10
Pathfinder ..	10	80	10	60	0
N. Y. Graphic	40	150	100	70	20
Liberty	20	30	30	50	0
Nation	150	60	60	50	40
Harper's ...	Omitted	90	80	90	100
Smart Set ..	Omitted	Omitted	Omitted	150	Omitted

Casanova and Abelard with his Heloise sell best among the more educated readers of the *Nation* and *Harper's*. The women, once more, do best of all. The omission of most of these Famous Lover titles from the *Smart Set*, I should explain, was not due to censorship, but to lack of space—only one page was used in this magazine.

Even in matters of health the sex interest dominates, for instead of general rules of health, the people prefer to buy a book which tells them how to take care of their skin and hair—in other words, they put the emphasis on external appearance. Sex rejuvenation, of course, and sex physiology, with books about venereal diseases, also take the lead. These are authentic medical books, written by recognized physicians, under the general supervision of Dr. Morris Fishbein of the American Medical Association. This is the way these books compare:

	General Health Rules	Care of Skin and Hair	Sexual Rejuve- nation	Venereal Diseases	Syphilis
N. Y. Times.	60	80	130	80	30
Pathfinder ..	50	70	60	50	20
N. Y. Graphic	60	Omitted	110	180	100
Liberty	20	50	90	70	30
Nation	10	70	Omitted	110	80
Harper's ...	30	Omitted	Omitted	Omitted	Omitted
Smart Set ...	Omitted	Omitted	90	90	70

Interest in other phases of health, and other diseases, is not so universal, as is shown by these figures from the periodicals in which the books were advertised:

A COMPARISON OF ADVERTISING MEDIUMS

	Cancer	Diabetes	Tuberculosis	Teeth	Patent Medicine
N. Y. Times ...	40	20	20	20	0
Pathfinder	40	30	30	40	0
Liberty	0	10	10	0	10
Nation	0	0	10	10	10
Totals ...	80	60	70	70	20

This interest in sex will be found to run through all other subjects, for even when we come to humor and jokes, there are jokes about lovers, kissing, married life, etc. The general collections of jokes have these figures.

	Married					
	Kissing Jokes	Life Jokes	Lover Jokes	Ford Jokes	Drunk Jokes	College Jokes
N. Y. Times .	50	30	40	30	30	70
Pathfinder ..	60	60	40	20	20	20
N. Y. Graphic	130	110	90	20	40	40
Liberty	40	40	50	10	20	30
Nation	50	50	30	10	30	40
Harper's	20	70	40	10	0	40
Smart Set ..	90	90	100	90	30	20
Totals ..	440	450	390	190	170	260

When it comes to nationalities and humor, the Irish have it. Proverbial Irish wit has made itself famous around the world, and here is the indisputable evidence:

	Irish	Negro	Amer- ican	Jew- ish	Scotch	Yankee	Rube	Hobo	Totals
	Jokes	Jokes	Jokes	Jokes	Jokes	Jokes	Jokes	Jokes	
N. Y. Times ..	100	60	70	170	100	60	20	70	650
Pathfinder	150	60	60	60	60	30	20	10	450
N. Y. Graphic .	50	30	90	70	40	70	20	40	410
Liberty	30	10	20	30	60	20	0	20	190
Nation	20	50	30	Omitted	30	20	10	70	230

THE FIRST HUNDRED MILLION

	Irish Jokes	Negro Jokes	Amer- ican Jokes	Jew- ish Jokes	Scotch Jokes	Yankee Jokes	Rube Jokes	Hobo Jokes	Totals
Harper's	100	50	30	50	90	30	20	10	380
Smart Set	90	60	40	60	100	20	20	30	420
Totals	540	320	340	440	480	250	110	250	

It is amusing to notice the popularity of Jewish jokes among the readers of the *N. Y. Times*, a popularity which extends somewhat to the readers of the *N. Y. Graphic* as well. But the Irish win the vote, beyond any question, and the Jews and the Scots come next. Though the last two columns are not nationalities, I listed them for comparison. There is comparatively little interest, it appears, in rube jokes—the metropolitan readers of *Liberty*, in fact, evince no interest whatever, and *Pathfinder*, going to small towns and rural districts, shows as much interest as any. One fact, not in the table, is that *Best German Humor* is among the 100 Best Sellers in the *Nation*. What this means, however, I cannot say.

Suppose we next look to the jokes about the professions, and see which of our professional classes provides the most fun for the masses:

	Jokes About Doctors	Jokes About Lawyers	Jokes About Preachers	Totals
N. Y. Times	70	60	50	180
Pathfinder	80	60	30	170
N. Y. Graphic	90	60	30	180
Liberty	20	0	10	30
Nation	50	90	30	170
Harper's	20	50	40	110
Smart Set	30	40	50	120
Totals	360	360	240	

The conclusion to be drawn, it seems, is that people like to laugh at themselves, or at their competitors, for it is assumable that lawyers are found largely among readers of the *Nation* and *Harper's*, although it may not be true that doctors particularly favor the *Graphic*. A craving for humor is not strong among readers of *Liberty*, as is shown by both this and the foregoing table; a liking for jokes, as a matter of fact, seems to be most compelling among readers of the *N. Y. Times*.

Even tastes for humor vary widely, at times, however. Besides the collections of jokes already listed, of which those 70 or over are among the 100 Best Sellers in the *N. Y. Times*, the 100 Best Sellers for this paper also include the *Popular Jokebook* (80), *Humor of Lincoln* (80), and *Best Jokes of 1926* (90). *Pathfinder* has among its 100 Best Sellers, in addition to those 60 or over in the preceding tables, *Toasts for All Occasions* (140), *Best Jokes of 1926* (100), *Popular Jokebook* (70), *Funny Ghost Stories* (80), and Mark Twain's *Answers to Correspondents* (120). The *N. Y. Graphic*, besides those 80 or over in the preceding tabulations, includes among its 100 Best Sellers *Humorous Anecdotes* (80), *Broadway Wisecracks* (90). *Liberty* has only the following in its 100 Best Sellers that can be classed as evidence of a sense of humor: *Best Jokes of 1926* (60), *Scotch Jokes* (60), *Funny Ghost Stories* (60), *Toasts for All Occasions* (100), and Mark Twain's *English As She Is Spoke* (70). Readers of *Harper's* show a wider choice, for besides those already mentioned as 80 or over, they picked out these: Mark

Twain's *English As She Is Spoke* (100), *Toasts for All Occasions* (120), Stephen Leacock's *Ridiculous Stories* (120) and also his *Funny Dramatics* (100), and the *Humor of Lincoln* (90)—all of which must be included in the 100 Best Sellers for the *Harper's*. Readers of the *Smart Set* insist that *Masterpieces of American Wit* (100) be among their 100 Best Sellers, together with *Popular Jokebook* (130), *Toasts for All Occasions* (180), Mark Twain's *Answers to Correspondents* (130), and *Best Jokes of 1926* (140), with any in the preceding tables that show a figure of 90 or over.

Interest in self-improvement and self-education manifests itself chiefly in a strong desire to better one's English—to speak well, pronounce correctly, spell according to the dictionary, and so on. The books under the classification Better English are all good sellers. Best of all are those on conversation and improving vocabulary. Here are the figures so you may compare them:

	How to Improve Conver- sation	How to Improve Vocab- ulary	Spelling Self Taught	Grammar Self Taught	Punctua- tion Self Taught
N. Y. Times ...	200	190	110	200	160
Pathfinder	150	90	60	120	100

Nation	50	50	40	10	10
Harper's	70	150	120	120	50
Smart Set	160	140	70	50	150
Totals	610	640	630	420	750

From these figures it is clear that there is a feverish interest in our mother tongue throughout the reading range of these seven publications. Readers of the *Nation* are least interested, first of all, I daresay because many are well educated; indeed, only one of the Better English books is numbered among the *Nation's* 100 Best Sellers, and that is *How to Improve Your Conversation*. The *Pathfinder* also shows low figures, but this is partly because the selections of *Pathfinder* readers are spread over the widest

variety of titles. Those 60 or over are among the 100 Best Sellers for *Pathfinder*, and these are also in this popular 100: *Hints on Public Speaking* 90, and *Hints on Writing Short Stories* 100.

The popularity of the *Book of Synonyms* is really astonishing—this book has always been one of the best sellers in the series. It is hard to explain, unless people associate it with improving their vocabulary, for there is certainly a universal passion for improving vocabularies if the sales of Little Blue Books are any indication. The interest in the *Dictionary of American Slang* is probably as much curiosity as any desire for self-improvement, but the book is listed under Better English, which proves the attractiveness of this classification.

An interesting variation is shown by *Smart Set* readers, for among the 100 Best Sellers for this magazine is *Hints on Writing Poetry*, which sold 100 copies in 1,000 orders. Of the books listed in the preceding tabulations, those selling 9 or over are among the *Smart Set's* 100 Best. Also among the favored 100 are *Foreign Words and Phrases* 110, *How to Talk and Debate* 100, *The Romance of Words* 90, and *Hints on Public Speaking* 90. But the interest in writing poetry is the most remarkable, for this is the only magazine where this book sold at all well. It is probably due to the younger element in this magazine's readers; the next nearest periodicals for this book are the *N. Y. Times* and the *Graphic*, the readers of both of these buying 30 copies in each 1,000 orders.

Readers of the *N. Y. Graphic*, on the other hand, showed

the most interest in *How to Write Business Letters*, selling 120 in every 1,000 orders. All books running 80 or over are in the *Graphic's* 100 Best Sellers; this also includes *How to Talk and Debate* (180), and *How to Argue Logically* (90). Readers of this tabloid are evidently desirous of improving their ability to aid the progress of business, for the next nearest competitor on this book is the *N. Y. Times* at 90. The *Times*, however, backs up its interest with *How to Make Money in Wall Street* among its 100 Best Sellers at 80—a book which sold only 30 to every 1,000 *Graphic* readers, 40 to every 1,000 readers of the *Nation*, and only 20 to every 1,000 *Liberty* readers who ordered Little Blue Books.

Of related interest is the series of Little Blue Books teaching foreign languages, together with pocket foreign-language dictionaries, easy readings, etc. *French Self Taught* (80) is among the 100 *Times's* Best Sellers and, also *Liberty's* 100 Best (70), but *Spanish Self Taught* (90) is among the 100 Best for *Pathfinder*. These are the only two periodicals which showed a foreign-language book among the 100 Best Sellers. The general result is as follows:

	German	French	Spanish	Italian	Latin
N. Y. Times	30	80	10	40	70
Pathfinder	40	60	90	60	10
Liberty	10	70	50	10	20
Nation	30	30	20	20	20
Totals	110	240	170	130	120

General books of self-improvement and education are in demand also. John Cowper Powys' essay, *The Secret of Self-Development*, is among the 100 Best Sellers of *Harper's* (80), and the *N. Y. Graphic* (90). Thomas Huxley's *How to Get a Liberal Education* is likewise a best seller in the *Graphic*, at 70 in each 1,000 orders; it is also a Best Seller in the *Pathfinder* at 60. The *Graphic*, however, is the only publication where *How to Work Your Way Through College* sells at all, where it is bought at the rate of 40 copies in every 1,000 orders. These tabloid readers are far from hopeless, my friends! *Graphic* readers, indeed, buy *How to Conquer Stupidity* at the rate of 80 per 1,000 orders, putting the book among the 100 Best Sellers for this paper. In this popular 100 for the *Graphic* also are these: *Is Life Worth Living?* 100, *Facts You Should Know About Will Power* 120, *How to Improve Memory* 120, and *The Conquest of Fear* 120. I wonder what this will signify to those who are aghast at the state of American culture? These readers are trying hard, at any rate, to better themselves.

As a matter of fact, readers of the *Graphic* buy 22 per cent self-educational books when given their choice. This is the most of any of the seven publications we are discussing, except the *N. Y. Times* and *Pathfinder*, each of which is 31 percent. Numbered among the *Graphic's* 100 Best Sellers will also be found a book of philosophy, *Story of Nietzsche's Philosophy*, by Will Durant (130); a book of psychology, *Mental Differences Between Men and Women* (110); two books of poetry, *Rubaiyat of Omar Khayyam*

A COMPARISON OF ADVERTISING MEDIUMS

(90) and Dante's *Inferno* (80). These people are even seeking to free themselves from religious bigotry and superstition, for their 100 most popular titles include Thomas Paine's *Age of Reason* (80), *Self-Contradictions of the Bible* (80), Joseph McCabe's *Degradation of Woman* (100), and Ingersoll's *Reasons for Doubting the Inspiration of the Bible* (110).

No doubt many righteous people will be horrified at the sale of these heretical books. But the facts are that the readers want to get at the facts, and if they are given a chance to buy the books they will order and read them. It is true that more books on religious controversy are sold to readers of the *Nation* than to any other group, but this is to be expected. What is more interesting is that readers of the conventional publications are also buying such books, and buying them in appreciable quantities. An undercurrent of freethought and skepticism is, judging from my sales figures for Little Blue Books, running through the country among people of all classes. Look at these figures:

	Bible Contra- dictions	Age of Reason	Reasons for Doubting Bible	Why I Am an Infidel	Totals
N. Y. Times	30	10	40	40	120
Pathfinder	0	20	50	10	80

Harper's	110	140	80	130	460
Totals	360	360	490	430	1640
		—313—			

When I see figures like these I am for the people who read the *Graphic*. They show more gusto and progressiveness than the sober readers of the *N. Y. Times*, for while the *Times* readers are afraid to face honest doubts, readers of the *Graphic* courageously try to find out the facts—there you have it, 350 out of every 1,000 *Graphic* readers buying these four skeptical books as against only 120 out of every 1,000 of the *N. Y. Times*. Luther Burbank's *Why I Am an Infidel*, by the way, is one of my very best sellers—a fact that I like to think about and dream over, for to me it tells much of the future of human thought and progress. It makes the pessimism of Maynard Shipley's *War on Modern Science*, for example, a little easier to bear. Skeptical books were, I am sorry to say, omitted from the *Smart Set* for lack of space, but I feel sure that *Smart Set's* younger readers would have bought them avidly.

We can pass easily from freethought to the great thinkers of the world, the philosophers about whom Will Durant wrote in his best-selling *Story of Philosophy*—which also sells well in Little Blue Book form. What do the sales figures for the little Blue Books have to say about the popularity of philosophy in America? Here are some figures for some of the world's outstanding thinkers, as computed from the sales totals of the Little Blue Books about them:

	Nietzsche	Schopenhauer	Plato	Voltaire	Spinoza	Aristotle
N. Y. Times	70	50	60	60	70	50
Pathfinder	0	0	20	30	0	0
N. Y. Graphic ..	130	70	40	Omitted	50	70

A COMPARISON OF ADVERTISING MEDIUMS

	Nietzsche	Schopenhauer	Plato	Voltaire	Spinoza	Aristotle
Liberty	80	10	40	10	20	20
Nation	80	120	20	80	90	80
Harper's	230	190	170	Omitted	220	200
Totals	590	440	350	180	450	420

	Bergson	Emerson	Bacon	Spencer	Kant
N. Y. Times	50	20	20	20	90
Pathfinder	10	50	0	0	0
N. Y. Graphic	50	Omitted	10	70	70
Liberty	10	0	20	0	20
Nation	80	0	30	30	90
Totals	390	70	240	280	490

The moral of all the above is that if you want to sell philosophy advertise it in *Harper's*. Your next best bet would be the *Nation*, and strange though it may seem, the next is the *N. Y. Graphic*, a tabloid. For, considering that two of these philosophical titles were omitted, the *Graphic* beats the *Times* though both total 560 above. Nietzsche attracts the most readers, but Schopenhauer follows close after him, and the interest in other philosophers is much larger than one might think. Even readers of the *Pathfinder* are not hopeless, though they are handicapped by a lack of classical education, for among *Pathfinder's* 100 Best Sellers is *Chinese Philosophy of Life* to the tune of 100 copies in every 1,000 orders.

To digress for a moment to a few individual titles, there is one that is on the list of Best Sellers for all of these publications except the *Nation*. This is *Party Games for Grown-Ups*, with these figures: *N. Y. Times* 80; *Pathfinder* 200; *N. Y. Graphic* 100; *Liberty* 90; *Nation* 40; *Harper's* 110; *Smart Set* 100. The consistent popularity of this book

speaks well for the good disposition of humanity at large, for there is evidently a universal desire for passing away the time happily in all kinds of good fun.

Another consistent best seller is Esther Floyd's *Hints on Etiquette*, which has these figures: *N. Y. Times* 110; *Pathfinder* 40; *N. Y. Graphic* 80; *Liberty* 80; *Nation* 70; *Harper's* 50; *Smart Set* 50. It seems that the rural readers of *Pathfinder* have not so much need for etiquette, while perhaps the readers of *Harper's* already feel proficient in its conventions, and the youngsters of the *Smart Set* are not yet ready for it. I offer these guesses merely to explain the lower figures for these publications; the book is a good seller in all, nevertheless.

I am especially interested in the figures for *Facts You Should Know About the Classics*, because this is a new title replacing Albert Mordell's book, *Dante and Other Waning Classics*, which was a failure. The change in title made a good seller out of a bad one, so I had Joseph McCabe write a new book to fit the new title. This title brought these results: *N. Y. Times* 70; *Pathfinder* 40; *N. Y. Graphic* 10; *Liberty* 30; *Nation* 60; *Harper's* 130; *Smart Set*, omitted. Apparently "classics" do not seem practical to readers of the *Graphic*, but they appeal strongly to readers of *Harper's*.

The greatest interest in miscellaneous fiction, particularly of the detective and adventure sort, is shown by readers of *Pathfinder*. This must be because time passes slowly in rural regions, and good reading is perhaps diffi-

cult to obtain. At any rate, the following belong in *Pathfinder's* list of 100 Best Sellers, with the figures noted:

Sherlock Holmes Tales. Conan Doyle	280
(70 each of 4 different titles of Holmes stories)	
A Bath, etc. Émile Zola	140
One of Cleopatra's Nights. Gautier	130
Voyage to the Moon. Jules Verne	110
Adventure Stories. Jack London	110
Girl with Three Husbands, etc.....	100
Quest for a Blonde Mistress	100
Mark of the Beast. Kipling	90
Tales of Far North. Jack London	90
Five Weeks in Balloon. Jules Verne	90
Tales of Terror and Wonder	90
Adventures of Kit Carson	90
A Wife's Confession. Maupassant	90
Book of Real Adventures	80
Mysteries of Egypt's Pyramid	80
Gruesome Tales. E. A. Poe	80
On the Bum: Tramp Life Sketches	80
Carmen: Adventure Story. Mérimée	70
Great Sea Stories	70
Battles of Seamen. Capt. Marryat	70
Great Pirates and Their Deeds	70
Great Detective Stories	70
Dr. Jekyll and Mr. Hyde. Stevenson	60
Great Ghost Stories	60

Consistent with this interest in adventure, *Camping, Woodcraft, Wildcraft* (70) is also among *Pathfinder's* 100 Best, and likewise *How to Know the Songbirds* (100).

Before passing on to some of the peculiar choices of other publications, I should point out that *Pathfinder's* 100 Best Sellers also include the following: *How to Tie Knots* 100; *How to Make Candy* 110; *Familiar Quotations* 110;

500 *Riddles* 110; *How to Think Logically* 90; *Popular Recitations* 110; *Lives of U. S. Presidents* 100; *Puzzles and Brainteasers* 120; *Speeches of Lincoln* 80; *Sailor Chanties and Cowboy Songs* 80; *Interior Decoration for Small Homes* 80; *Dictionary of Authors* 80; *Amateur Magic Tricks* 70; *How to Play Checkers* 70, etc. You can, if you consider these judicially, discern a rural inclination all through—some of these are books that people are likely to buy in the outlying country districts.

Turning to the younger readers of the *Smart Set*, and the 100 Best Sellers they have selected, we find them also interested in *How to Make Candy*, to the extent of 200 copies in every 1,000 orders. They picked out from Wibur Daniel Steele's trio, *A Devil of a Fellow* 100, and they expressed a strong wish to read Kipling's *Without Benefit of Clergy* 130. Their interest also centered itself in *The Truth About N. Y.'s Chinatown* 120, and *Beginning Married Life Right* 100, and *The Charming Hostess* 90, and *How to Play Card Games* 90, and *Genetics for Beginners* 90, all of which is more hopeful than otherwise.

I have already had a great deal to say about the readers of *Liberty*. As final clean-up data at hand, I can add that they picked out, among their 100 Best, Jack London's *Son of a Wolf* 80, Fielding's *Puzzle of Personality* 70, Kipling's *Gunga Din* 70, both *Crossword Puzzle Books*, 70 each, *Handbook of Commercial Law* 70, *Mathematical Oddities* 60, etc. *Liberty* is the only medium in which the crossword puzzles were so popular as to be among the 100 Best Sellers. This is perhaps due to the fact that *Liberty*

has run, for a long time, a weekly puzzle as part of its editorial content.

Of the *N. Y. Times* much can be said. In general, it has always been an excellent medium through which to sell Little Blue Books. In addition to titles already mentioned elsewhere in this chapter, however, the following of the 100 Best Sellers are significant: *Mystery of the Man in the Iron Mask* 100; *Mary, Queen of Scots* 100; *Louis XVI and His Corrupt Court* 90; *Shelley and His Loves* 90; *Familiar Quotations* 100; *Facts About Fortune-Telling* 90; *Ibsen's Doll House* 80; *Facts About Architecture*, 80; *Memories of Sarah Bernhardt* 80; *Memoirs of Madame de Stael* 80; *Dante's Inferno* 70, etc.

Characteristic of what has been said about the readers of the *Nation* are the following additional citations from the 100 Best Sellers: Maeterlinck's *Pelleas and Melisande* 90; Bertrand Russell's *What Can a Free Man Worship?* 200; Frank Harris' *Daughter of Eve* 100; Joseph McCabe's *Phallicism in Religion* 100; Bierce's *Debunking Tales* 100; McCabe's *Did Jesus Ever Live?* 130; Harris' *A Mad Love* 90; Luther Burbank's *Funeral Oration*, by Judge Lindsey 80; Clarence Darrow's *Voltaire Lecture* 80; *Behaviorism, Newest Psychology* 100; Darrow's *Debate on Capital Punishment* 80; *Astronomy for Beginners* 80; McCabe's *World's Great Religions* 80; Dumas' *Crimes of the Borgias* 70; Upton Sinclair's *Naturewoman* 70; Darrow's *Is Mankind Progressing?* 70; McCabe's *Horrors of the Inquisition* 70; McCabe's *Seven Infidel U. S. Presidents* 70; McCabe's *The Dark Ages* 60; etc. The strong in-

terest in Behaviorism may be due in part to the recent series emphasizing it which ran for a time in the *Nation*. Special considerations like this, when known, sometimes explain what might otherwise be mystifying preferences shown by readers of different periodicals.

Of the *N. Y. Graphic* I have probably said sufficient. However, I must take a sentence to say that *How to Teach Yourself to Swim* is in the *Graphic's* list of 100 Best Sellers, with 110 sold in every 1,000 orders. It is not in any other list of Best Sellers.

Coming finally to *Harper's*, I notice a strong interest in psychology, more consistently displayed than in any of the other publications I have here discussed. These titles, for example, are among the 100 Best Sellers: *Psycho-Analysis Explained* 120; *How to Psycho-Analyze Yourself* 120; *The Psychology of Leadership* 100; *Behaviorism* 120; *Psychology of Character Building* 100; *Sex Symbolism* 90; *Psychology for Beginners* 80, etc. Evidently psychology and philosophy, before mentioned, are excellent subjects to advertise in *Harper's*.

Harper's is the only one of these seven publications, too, where books giving the facts about palmistry (160), astrology (100), and fortune-telling (70) are excellent sellers. There is a strong interest in entertainment of all kinds, it seems, for *Curiosities of Mathematics* (160) and *Mathematical Oddities*, (100), are both Best Sellers. Others on the favored list of 100 are: Dante's *Inferno* 140; *Cellini, Swordsman, Lover, Sinner* 100; Hecht's *Tales of Chicago Streets* 120; Bierce's *Devil's Dictionary* 120; Mc-

Cabe's *Did Jesus Ever Live?* 100; *Marriage and Morals in Soviet Russia* 90; *Love Letters of a Parisian Actress* 90; *Memoirs of Madame de Stael* 90; H. G. Wells' *Stolen Bacillus and Other Stories* 90; McCabe's *Phallicism in Religion* 90; *Speeches of Lincoln* 80; Kipling's *Vampire* 80; Kipling's *Mulvaney Stories* 80, etc.

I have taken particular pains in these last wholesale listings of Best Sellers to select titles that are peculiar to the magazine cited—by which I mean titles that are not Best Sellers (limited to 100 for each publications) in the other six. I thus indicate partially some of the peculiarities, some of the special choices made by different groups of readers.

In summing up, I do not wish anyone to emphasize too much these differences—for these figures are necessarily limited. Though a book is not among the 100 Best Sellers, it may sell well enough to pay to advertise it in a given publication. In general, when the choice is spread over a large group, it is possible to advertise a list of 500 good sellers in all seven of these publications, without any change of emphasis for any one of them apart from the others, and get substantially the same results. It is true, however, that in a larger assortment, readers of *Pathfinder* would be more interested in detective and adventure books than in philosophy, while readers of *Harper's* would like to have more philosophy and psychology. Readers of the *Nation* would like more controversial subjects, particularly books giving the facts about religion. And so on.

All of them, I repeat, want books dealing in some way

with sex, or love, or marriage. That is perhaps the only general conclusion that can be drawn from the statistics I have here presented. But I add to it a growing interest in skepticism and freethought—otherwise how is it possible to explain the success of the Little Blue Books, which lean strongly toward rationalism, and yet have sold over 100,000,000 copies in the past nine years?

Three things—three main subject classifications—I would name as the trio which will encompass most of the interest displayed by the readers of these seven publications, if taken *en masse*. They want Sex, which includes love, marriage, passion, men, women, birth control, etc.; Self-education and Self-Improvement, which includes bettering their English, educating themselves in particular subjects, philosophy, psychology, etc.; and Freethought or Skepticism, which means releasing themselves from the fetters of superstition, religious bigotry, and theological dogmatism. Perhaps, however, I should put on a par with Freethought the widespread desire for Fun and Laughter—which includes jokes, games, sports, etc. But if I increase the trio to these four—Sex, Self-Improvement, Freethought, and Entertainment—I am sure that I cover 90 percent of the reading interests of America.

CHAPTER XVII

THE PASSING OF THE "SALES POLICY"

Why the Little Blue Books No Longer Need Date-Line Sales

FOR a little over eight years the Little Blue Books were in an experimental state; then, for the first time, a clear way began to appear toward something more dependable, toward something established. By experimental I mean that the Little Blue Books, for at least eight years, were fighting their way toward real commercial success. The goal was not quite reached, perhaps, during 1927—a peak year with a total distribution of 21,000,000 books—but as 1928 opens I can assert with great confidence that the experimental period during which "date-line sales" were a necessity has passed.

No date-line advertising copy—by which I mean advertising which gives a definite closing-date, before which all orders must be mailed in order to get the benefit of the sale—has been used in Little Blue Book sales promotion for almost a year. It is true that "closing out" copy has been used, especially during the early winter months of 1927–1928, but I explain this a little later. This was not sales copy in the usual sense, but a statement of policy—it was thought expedient to close out the Little Blue Books

to make room for a new series. Results indicated that the Little Blue Books had not yet reached a saturation point; the public is not weary of the five-cent pocket series, so it is going on—with new advertising which offers only the pick of the list, without a date-line, and without any “hurry-up” sales feature.

To tell the story from the beginning I must go back to 1919, when the Little Blue Books were in embryo. Or perhaps I should not use that figure, for some of the books were in existence in 1919—books that were the nucleus of the series that was to be. Perhaps I should say that in 1919 the Little Blue Books were like a very young infant, an infant with promise of robust health, an infant with husky lungs and a loud voice betokening strong adolescence and sturdy manhood. Even now the child is only nine years old—yet it is ready to stand firmly on its own legs, without any special pleading or sensational argument to insure its support.

I ask my readers to bear in mind continually that the Little Blue Books are only nine years old; that even now the series is beginning only its tenth year. This extreme youth throws a helpful light on much of the history of the Little Blue Books; this youth is the real explanation of the experimental eight years or so during which various advertising expedients were genuinely imperative.

In 1919 the Little Blue Books sold for twenty-five cents apiece, then at five for a dollar, and later, as an experiment, they were offered at ten cents each. Each price re-

duction meant, in effect, that the total distribution must leap up in inverse ratio: if the price were halved the sales must more than double, and so on. Briefly, this is because the selling expense must be reduced by a larger volume of sales from the greater effectiveness of the new selling point of a lower price. At the same time the initial expense of putting a new title into the list must be diffused over a wider distribution of the books—though the manufacturing cost per book would remain the same until production could be increased to a point where newer and more automatic machinery could be installed.

This sounds involved. Perhaps I can make it clearer by using a small store as an example. Suppose this store has two clerks, and they are idle more than half the day. Though the store may be paying expenses, and netting a fair percentage on the investment, and though both clerks may be needed to handle the routine, there is a possibility that the store can increase its business, and its profits, by a price reduction. Suppose that the prices are cut twenty-five percent. This is a real inducement for customers to come and buy. If the increased business swells the volume so that the clerks are kept busy, and makes the turnover or disposal of stock twice as rapid as before, the store can be content with a smaller margin of profit on the larger volume of business because the selling expense per dollar has really been reduced. Two clerks now handle twice as much business as they did when they were idle much of the time. The customers get the benefit of the in-

crease in sales, and, reacting to the price reduction, feel more disposed to buy because they are getting more for their money.

Clerks are machinery, and vice versa. It is better for any plant to sell its capacity output at a low price per unit, than to sell only half of its capacity at two or three times that price per unit.

This is, in summary, what has happened to the Little Blue Books. It has been one experiment after another. I have always had to find out if it was possible to increase the distribution sufficiently to justify a reduction in the price. If the eight years from 1919 to 1926 inclusive have seemed to some readers a chaotic succession of last-minute sales, this is because eight years after all are not a very long time.

It was in 1922 that the first five-cent sale was advertised—when the series contained 300 titles. These Little Blue Books, to speak in general terms, cost so much apiece to produce, and at this time they were selling regularly for ten cents each. Of each dime received for each book a large part had to go to pay the advertising or selling expense—which is the expense of informing the prospective buyer that Little Blue Books are available at such and such a price and placing before him a list of the titles so that he can make his choice. When the books sold for ten cents apiece I was ready to spend five cents of each dime received for them to advertise and sell them.

My problem was just this: Could I attract more buyers at a five-cent price—enough more to enable me to spend

only two and a half cents to sell each book, and at the same time enough more to tax my plant's output to capacity and keep the manufacturing cost down? I thought I could. I was ready to try the experiment anyway.

If any of my readers have the impression that Little Blue Books—or any other product—will sell just by being advertised, it is time that they abandoned such a fantastic notion. This point can be reached only after constant repetition of persuasive advertising. A reputation must be built up; a product of wide appeal must be evolved; a sound economic ratio between the selling price and the cost of producing and selling must be reached. All these things require testing—it is inevitably a constant laboratory process of trial and error.

I have pointed out elsewhere that at first the ten-cent price—and then the five-cent price—was so sensational in itself that people bought the books, many books that later became poor sellers, just to get them at that price. From this, slowly but surely, I was to learn what the readers really want—and how to give it to them. The list of 1,260 Little Blue Books now, in 1928, being advertised without date-line persuasion, is the result of this evolution—it has taken almost ten years to bring into existence a series of such wide appeal, and with such a thoroughly established reputation, that the books will sell spontaneously on the mere announcement and printing of the list.

Advertising, to get back to my story, takes various forms—from actual display space in newspapers and magazines to all kinds of catalogues, circulars, letters, and so on—

but advertising of some kind is always necessary to place any product before the modern public and find the right market for it. Or even to find out whether the product has a market, and a big enough one to justify its manufacture. This advertising must, furthermore, attract attention—it must get attention and then focus this attention on the merits of the product. If the product is a new one, without a reputation, the attention must be secured by something besides the mere announcement of the product.

I had a ten-cent book to sell, and I wanted to sell the same book for five cents. The more people who knew of the Little Blue Books, the more sensational would any price relating to them become. I could attract attention by the nickel price; the next thing I had to do was to concentrate this attention on the books, and compel immediate action. I was looking ahead, even as far back as 1922, to the day when a Little Blue Book could be sold for five cents post-paid to any address in the world. But to announce this too early would have meant disaster. I could not simply mark down the price and sit back to wait for the public to grab the books for a nickel apiece. For, in the first place, the public would not do it; in the second place, the public would not do it enough.

There is a vast difference in the appeal of a choice of 500 titles, and a choice of 1,260 titles. Ten people could examine a list of 500 titles, and perhaps only five or six will find something to interest them enough to make them spend their money. But the same ten people can examine a

list of 1,260 titles, and perhaps as many as eight will find some books to interest them.

But to increase 500 titles to 1,260 is a task. I know, now that it is done, that it could not have been accomplished in the nine years just past without what some people like to call "sensational" advertising. I had my choice of doing it in nine or ten years, or doing it in twenty-five or thirty years. I chose the shorter time.

Incidentally, by 1,260 titles I do not mean just any titles that happen to come along. I mean 1,260 really popular titles. In the nine years of publishing Little Blue Books, nearly 2,000 titles have been in print at some time or other, if you add in all the books which were in print and later were withdrawn to be replaced by other books.

A buyer is phlegmatic when faced with a product which he does not recognize as something he needs. If he sees no reason to grab it, he will take his good time about making a purchase—if he makes one at all. If, in 1922, I had calmly advertised that after the first of February the Little Blue Books would be only five cents each, people would have read the announcement and most of them would have made a mental resolution to buy some one day soon. But how soon? And how many would remember to do it?

Instead of that, I announced a sale—an experimental sale to make a test of the five-cent price. Until a certain date—say March 31st—people could buy the Little Blue Books for five cents each, half price. After midnight of

March 31st the price would go back to ten cents, the usual price.

In this way I made certain that everyone really wanting to buy Little Blue Books for a nickel instead of a dime each would do so by the 31st of March. I also made sure just how many people would respond to each advertisement of the sale, and how soon they would respond—for sales advertising is substantially dead after the date-limit of the sale is passed.

By announcing a sale, with a definite date-limit, I was in effect holding a caucus. I was polling votes for and against the five-cent price for Little Blue Books. All votes had to be in by March 31st. The votes received were affirmative ones; the expense of polling the votes could be considered as standing for negative ones. It was thus a simple matter to figure the manufacturing cost of the books sold during the sale, plus the expense of handling and filling orders, plus the expense of selling whatever books were sold through the sales advertising.

The first five-cent sale of the Little Blue Books did not justify making the nickel a permanent basis for selling the books. On the expiration date the price did indeed go back to ten cents apiece, and in several subsequent sales, when the price was again advertised at five cents, when the volume of sales totals due to the date-line advertising was past, the price reverted of necessity to ten cents for each book.

By this sales policy and date-line advertising through eight experimental years, I galvanized the book-buyer

into immediate action. I said to him, in effect: "Here is a bargain—until a certain date you can have it for five cents. After that date the price will be ten cents." He has had to act by the date limit I set, or he has lost the opportunity to act at all.

No, some cynic is saying, he has not lost the opportunity forever—but only until the next sale comes around. My answer to that is that he did not have any assurance that there would ever be another sale. His decision to buy the books during a given sale must always be arrived at from the facts before him. He has an opportunity to buy books for a nickel each until May 30th. Perhaps there will be another opportunity six months later, but this is only speculation. Meanwhile, his attention sharply arrested by the sales copy, he pauses to look over the books. He finds some, probably, that he would like to have. If he orders them before May 30th they will cost five cents each; if he tarrys until after that date, he is told in very clear language that they will cost him twice as much. If he wants the books and has the money to buy them, the chances are much in favor of his sending his order before the closing date.

The five-cent price remained uncertain for nearly eight years. During a date-line sale the five-cent price would be justified, but as soon as business dwindled after the sale—as it always must, unless other advertising is sufficiently compelling to carry on the volume—the five-cent price would be expensive to maintain. Because I knew that somewhere there was the right ratio between selling price, cost of manufacturing and selling, and number of titles for

choice—and that it was my job to discover this ratio—I even tried a few sales with the price as low as four cents, and once as low as three cents. The increased business on these two lower prices, however, was not enough to indicate that they are feasible.

As a matter of fact, at one time—it was in the early summer of 1925—I came near to facing failure. The distribution for the year, to the first of May, was not enough to warrant continuing the Little Blue Books at five cents each; to go back to a higher price at that time, when I thought the permanent five-cent unit price was in sight, would have meant ruin. My only course was to go ahead—which meant to find out for certain if the Little Blue Books were doomed. If the five-cent price were not swiftly vindicated I would have to quit.

I know that many readers have not forgotten that I threatened to quit at that time. I said to them, through my advertising: “I shall stop publishing the Little Blue Books—unless you send me enough orders to prove to me that the books are still wanted. You have until June 30th to mail your order. Let me know your answer on or before that date.” These were not the words I used, but they are the gist of my announcement.

This sale was sincere enough. I either had to sell the books—or stop making them. I gave the public its choice—if the orders during the sale had not passed beyond a certain deadline, I would have kept my word and quit. Even as it was, I kept my word, for I found out that the orders passed far beyond the deadline, and that the clamor

was for the Little Blue Books to go on. This sale, indeed, put 1925 over with a distribution a little better than the previous year—I am proud that each year has been a little better than the last.

The sales headlines were true, and they did the work. People read these Little Blue Book advertisements and checked off the books they wanted—because they wanted to get them before they were all gone. These same people mailed their orders before the closing date, because they did not want to be left out. This was encouraging—for it showed that the time would yet come when the Little Blue Books could attract enough attention without "hurry-up" slogans and date-lines to keep on with mass production and a five-cent price.

The next sale was in the winter of 1925-1926, closing February 28, 1926. It was during 1925 that investigations showed that any classic, just because it was offered in a five-cent edition, would not sell in large quantities. I have described in the chapter entitled "The Hospital," and further in that called "The Morgue," how failing Little Blue Books were either saved or killed. But I did not like to withdraw those classics without giving Little Blue Book readers a chance to express an opinion on the change of policy—via orders for books they really wanted.

The reason for this sale was the change of policy implied in withdrawing certain books and replacing them with more popular titles. I did not advertise exactly which books were to be withdrawn—for I did not know myself. I knew that certain titles would have to go if the sale did

not improve their showing, but even I had to wait for the results of the sale before I could be sure.

The attention of the public was drawn to the advertising of this sale as though by a magnet. Date-line copy is sound sales psychology, beyond any possible doubt. If you have until February 28th to act, you will act before then if you really want to benefit by it. The entire list of Little Blue Books was printed during this sale, and it was announced that after February 28th many of them would be withdrawn, never to be reprinted. The avalanche of orders showed that people did not want Little Blue Books to be withdrawn, but—

This But is a big one. The public proved to my satisfaction that Little Blue Books were wanted, but the public, in making its selection from the complete list of books, proved also that it wanted what had already been shown to be the most popular books. Most of the titles which had failed during 1925 continued to lag behind in the sale. When given their choice, the people bought the books that my experience had taught me were of widest appeal.

I have withdrawn those books, as I said I would. This is shown by even a cursory comparison of my listings in January, 1926, with my new listings for January, 1928. The differences are wide and often drastic. More than 200 books have been withdrawn or in some way popularized during the two-year interval. More than 400 books have been altered at least in the title or the listing in the catalogue.

This 1925-1926 sale proved conclusively that a sale

justified by necessary revision or alteration of policy would make that policy even more desirable by confirming it. Though the people responded to the date-line sales advertising because they wanted to get the books that appealed to them *before any books whatever were withdrawn*, less than five percent of the people ordered any of the books actually slated to be killed (unless the new sales copy improved their showing). The sale told me what I wanted to know and I went ahead on that information. I should add, also, that by "popularizing" the series of Little Blue Books I have never meant lowering their standard or in any way vulgarizing the list.

Even during the eight experimental years I gave copy other than date-line sales copy a chance. I kept testing out straight advertising, copy without any sales feature as persuasion, but until the latter part of 1927 it never paid out. Until that time only imperative headlines, "hurry-up" copy, was sufficiently forceful to goad buyers into immediate action and keep the yearly turn-over of the Little Blue Books enough to justify their production for a nickel apiece. I say again that sales copy of this kind, insisting that the books had to be bought by a given date or not at all, is all that made possible 1,260 different titles in only nine years.

During the spring and summer of 1927 small (less than full pages) advertisements were used, listing books of certain classifications only, making special drives on their particular appeal. I shall discuss in another place the success of this form of sales promotion for the Little

Blue Books. What I wish to point out here is that no sales copy—no date-line—was used.

Then, when it became necessary to plan the advertising policy for the fall of 1927 and the winter of 1927-1928, a serious situation was revealed. Sales had dropped alarmingly during the late spring, compared with what the year should show if the Little Blue Books were to keep up the pace necessary to keep them alive. Something must be behind it—was I facing failure again?

The situation in the automobile market was a keynote to popular feeling. I thought that the people might also be weary of a standardized five-cent book, as they appeared to be of Henry Ford's Model T. It seemed that a more expensive book might be wanted—which is to say a *better looking* book, for the contents are as excellent as they can be now—and I thought that the time might have come for abandoning the Little Blue Books entirely in favor of a more expensive series.

The advertising policy was determined by these conditions. I embodied these general conclusions in the fall and winter advertising campaign. I had somewhat over six million books in my warehouse; those in the process of manufacture would bring this to over seven million. If I really had to start another series, I must first sell these books. Why not test the public's feelings in the matter? Why not ask people if they wanted these books?

So the advertising said that the Little Blue Books would be discontinued for a bigger and better looking series of

more expensive books. But here is the important fact about this advertising—it carried no date-line whatever. I said the Little Blue Books would be discontinued when they were sold out, but I did not give any date. I even *guaranteed* to fill every order received from this advertising. The readers were not persuaded by any dictatorial headlines as they had been in the past—but they were given their choice of the most popular Little Blue Books, while they might last.

The first returns from the early fall advertising were very encouraging. I began to suspect that the standardized five-cent book had not yet outlived its popularity. Later returns confirmed this—the response, finally, saved the Little Blue Books. Thousands of letters, besides the orders, poured in from all over the country and even from foreign lands protesting against the cessation of the series. "Start a new series," the usual recommendation was, "but let the Little Blue Books go on."

The significance of this latest advertising campaign is far-reaching. It means that the Little Blue Books have at last reached that happy ratio between selling price, manufacturing and selling cost, and scope of choice, which makes them alluring without date-lines and without any "hurry-up" sales feature.

In fact, the 1928 campaign began with straight copy—a complete list of 1,260 books, a catalogue printed on a full-sized newspaper page—and this copy is more than holding its own against the previous record of date-line

sales copy. Here are the figures for the Chicago *Tribune*, in which a full page, listing all the books, appeared Tuesday morning, January 10, 1928:

First Day returns from Jan. 10, 1928, no sales feature, \$320.

First Day returns from next best previous insertion, with date-line sales feature, \$265.

In keyed advertising such as I use for selling the Little Blue Books it can always be assumed that the first day's returns will indicate the general outcome of the entire run of returns from that advertisement. The preceding figures show that this 1928 page will surpass the result of any previous advertisement in the same paper.

This late 1927 campaign, indeed, was so successful that I quickly made the decision to go on with the Little Blue Books, and those titles selling out quickest were rushed to the presses again to fill the rush of orders. No one was disappointed. Now the first part of 1928 is busy largely with the preparation of new catalogues, of this new advertising copy without a date-line and without any sales feature—advertising that has shown itself to be the right kind at last. In the tenth year of the Little Blue Books they have reached their goal—more than 1,200 titles at five cents each post-paid to any address in the world.

I realize that my past policy of selling Little Blue Books through date-line sales was considered by many to be objectionable. I am sure, though, that those people did not grasp the experimental nature of the series during that time. They forgot that the books had been in existence

only five or six or seven years. They did not remember, in fact, that the series came into existence *after* the close of the World War. Surely so far-reaching an enterprise could have been considered experimental even for ten years, instead of slightly more than eight.

Another reason why my sales perhaps seemed to some people so constant is that, in number of agate lines (in which advertising is measured), according to actual figures, I do more national advertising every year than any other book publisher—and my product sells for the least per unit. These two facts explain much.

I can plead plenty of justification. I have already shown that the advertising has never been deceptive, and that it always represented the actual situation. I threatened to withdraw classical Little Blue Books because people did not want them: the people proved they did not want them and I withdrew them. I announced, as a change of policy, that the Little Blue Books would be discontinued to make way for another series: I was told, by the results, that the Little Blue Books were still wanted, and so they are continuing.

The answer to my announcement of this change of policy is even more convincing because the announcement carried no date-line. This told me at once that the time had really come to try "straight" advertising, on the appeal of the books themselves, at the established price of five cents each postpaid anywhere in the world. I am as glad as anyone that 1928 opens without a sales feature in Little Blue Book advertising. The goal has been reached, and it is

curious to note that it comes almost simultaneously with the sales total of 100,000,000 books in nine years.

In conclusion, I am not the only publisher who has used sales advertising with a date-line. I am willing to admit that I have used more of it, because my annual advertising runs into a larger figure. I use more mediums, that is. For example, the Little Blue Books have regularly used full-page space in newspapers throughout the country; I am the only publisher, indeed, who uses the tabloid newspapers to sell any books whatever of an educational and avowedly high literary standard. The success of the Little Blue Books in the tabloids is a triumph in itself.

I am sorry if the date-line sales have displeased some of the readers of Little Blue Books. I had to risk displeasing the few in order to reach the many—and thereby keep the Little Blue Books moving ever ahead toward the ultimate goal. That goal seems now to have been reached. I am grateful to the thousands of readers who have made it possible—and I hope that in this chapter I have given a clear exposition of why the sales were also necessary to reach this goal.

THE END

FATHER DAMIEN

No golden dome shines over Damien's sleep:
A leper's grave upon a leprous strand,
Where hope is dead, and hand must shrink from
hand,
Where cataracts wail toward a moaning deep,
And frowning purple cliffs in mercy keep
All wholesome life at distance, hath God planned
For him who led the saint's heroic band,
And died a shepherd of Christ's exiled sheep.
O'er Damien's dust the broad skies bend for
dome,
Stars burn for golden letters, and the sea
Shall roll perpetual anthem round his rest:
For Damien made the charnel-house life's home,
Matched love with death; and Damien's name
shall be
A glorious benediction, world-possest.

H. D. RAWNSLEY.

FOREWORD

With Mr. R. L. Stevenson's compliments. Father Damien. An open letter to the Reverend Dr. Hyde of Honolulu from Robert Louis Stevenson. Sydney, 1890.* Such is the title-page of a little pamphlet that was privately printed by its author for presentation only: nevertheless it has become part and parcel of English literature, and must be reckoned with.

Outside of what the Letter tells us of

*It was in 12mo. (Pp. 32) and privately printed for presentation only at Sydney, (N. S. W.), March 27, 1890. It appeared in the "*Scots Observer*," May 3 and 10, 1890. The second issue was a thin 4to, printed on Japan paper (of which only 30 copies were issued, with a portrait of Father Damien) by Messrs. Constable Co., Edinburgh. The third issue was a 12mo, brown paper wrappers, published at a shilling by Messrs. Chatto & Windus, London, 1890. (See Mr. E. D. North's "*A Biography of Robert Louis Stevenson*," in *The Bookman*, September, 1896.)

The disinterestedness of Stevenson was still further shown by a refusal to accept payment for his *Apologia*. It was concerning this third issue by the London firm that he wrote them: "The letter to Dr. Hyde is yours, or any man's. I will never touch a penny of remuneration. I do not stick at murder; I draw the line at cannibalism. I could not eat a penny roll that piece of bludgeoning had gained for me."

Father Damien would you know how he fared in the seventeen years given up to wretches forsaken of man,—almost forgotten of God? Is it not well to see this solitary priest as he was,—the single star of hope in a long night of human misery?*

Somehow, at the time, one fancies a sort of critical indifference; at best as who should say, why vex yourself over a *Dr. Hyde*? Have you not given us an imaginary *Mr. Hyde*? The lost souls of the imagination interest us vastly more than this obscure traducer and a far off leper colony. Besides your Letter reads like truth and who cares for,—indeed, what is Truth?

Perhaps it is one cause of our love for him that Robert Louis Stevenson *did* care for Truth. The despicable charges against Damien touched his soul to fine and fiery issues. Through him the world of living men first beheld this humble Belgian Priest ministering to untold suffering in such wise as he might until

*See Edward Clifford's little book, *Father Damien: A Journey from Cashmere, to his home in Hawati*, (London, 1889),

the night came wherein no man laboured more.*

In any age,—out of many lands, where find a greater sacrifice of self? Creeds pass; conduct alone endures. Stevenson saw the abiding spirit of God in Father Damien. Who would gainsay his wider vision?

*“Through such souls alone
God stooping shows sufficient of His
light
For us i’ the dark to rise by.”*

It may be interesting to note the circumstances under which Stevenson wrote his scathing rebuke on behalf of Father Damien. In 1889, Mr. and Mrs. Stevenson left San Francisco on the yacht *Casco* for an indefinite cruise in the Pacific. They stayed several months

*“There are not too many heroisms in the world: the earth, as Carlyle said, will not become too God-like. Obscure bigots who are never tired of proclaiming that they are Christians will take very good care of that. But to ignorant intolerance, which presumes to revile such a life as Damien’s because he is not this and he is not that, may be very decisively applied the crushing rebuke which the brother of the dead Ophelia addressed to the churlish priest in Hamlet. Archibald Bal-lantyne, in *Longman’s Magazine*, May, 1889.

in the Hawaiian Islands, and Stevenson had an opportunity to visit the leper colony on the Island of Molokai. Unfortunately at the time of his visit to the island Father Damien had been dead a little over a month. He describes it thus in a letter to Sidney Colvin:

I have seen sights that cannot be told, and heard stories that cannot be repeated: yet I never admired my poor race so much, nor (strange as it may seem) loved life more than in the settlement. A horror of moral beauty broods over the place: that's like bad Victor Hugo, but it is the only sense that lived with me all these days....Of old Damien, whose weaknesses and worse perhaps I heard fully, I think only the more. It was a European peasant: dirty, bigoted, untruthful, unwise, tricky, but superb with generosity, residual candour, and fundamental good-humour: convince him he had done wrong (it might take hours of insult) and he would undo what he had done and like his corrector better. A man, with all the grime and paltriness of mankind, but a saint and hero all the more for that. The place as regards scenery is grand, gloomy, and bleak. Mighty mountain walls descending sheer along the whole face of the island into a sea unusually deep; the front of the mountain ivied and furred with clinging forest, one viridescent cliff: about half-way from east to west, the low, bare, stony promontory edged in between the cliff and ocean; the two little towns (Kalawao and

Kalaupapa) seated on either side of it, as bare almost as bathing machines upon a beach; and the population—gorgons and chimaeras dire.

When the Stevensons left Honolulu, they started on a new cruise which ended in Samoa. There they resolved to make their home, but for the time being they continued on their way, and had reached Australia when Stevenson was overtaken by a serious illness. They had heard a rumor in Samoa to the effect that the plan to erect a monument to Father Damien had been given up, and in Sydney, the newspaper containing Dr. Hyde's letter of condemnation was among the first they opened.

Mrs. Stevenson says: "I shall never forget my husband's ferocity of indignation, his leaping stride as he paced the room, holding the offending paper at arm's length. . . ." He immediately disappeared to his own room, and she says she heard his chair pulled out from the table, and the sound of the inkstand being dragged towards him. In the afternoon he called his family together and read aloud his defense of Father Damien, "still red-hot from his indig-

nant soul." He felt the contents would justify Dr. Hyde in bringing action for libel against him, and would not take the risk of bringing possible ruin upon them without their knowledge and consent. "There was no dissenting voice," Mrs. Stevenson says; "How could there be?"

Stevenson wrote his mother:

I have struck as hard as I knew how; nor do I think my answer can fail to do away (in the minds of all who see it) with the effect of Hyde's incredible and villainous production. What a mercy I wasn't this man's *guest* in the *Morning Star*! I think it would have broken my heart.

The Damien letter was published without change or revision, and later Stevenson seems to have considered this a mistake. In a letter written in 1890, he writes:

It is always harshness that one regrets.... I regret also my letter to Dr. Hyde. Yes I do; I think it was barbarously harsh; if I did it now, I would defend Damien no less well, and give less pain to those who are alive. These promptings of good-humour are not all sound; the three times three, cheer boys, cheer, and general amiability business rests on a sneaking love of popularity, the most insidious

enemy of virtue. On the whole it was virtuous to defend Damien; but it was harsh to strike so hard at Dr. Hyde. When I wrote the letter, I believed he would bring an action, in which case I knew I could be beggared. And as yet there has come no action; the injured Doctor has contented himself up to now with the (truly innocuous) vengeance of calling me a "Bohemian Crank," and I have deeply wounded one of his colleagues whom I esteemed and liked.

Well, such is life.

FATHER DAMIEN

Remember what a martyr said
On the rude tablet overhead:
"I was born sickly, poor and mean,
A slave; no misery could screen
The holders of the pearl of price
From Cæsar's envy; therefore twice
I fought with beasts, three times I saw
My children suffer by his law;
At last my own release was earned;
I was some time in being burned,
But at the close a Hand came through
The fire above my head, and drew
My soul to Christ, whom now I see.
Sergius, a brother, writes for me
This testimony on the wall—
For me, I have forgot it all."

ROBERT BROWNING.

FATHER DAMIEN

AN OPEN LETTER TO THE REVEREND DR.
HYDE OF HONOLULU

Sydney, February 25, 1890.

Sir,—It may probably occur to you that we have met, and visited, and conversed; on my side, with interest. You may remember that you have done me several courtesies, for which I was prepared to be grateful. But there are duties which come before gratitude, and offences which justly divide friends, far more acquaintances. Your letter to the Reverend H. B. Gage is a document which, in my sight, if you had filled me with bread when I was starving, if you had sat up to nurse my father when he lay a-dying, would yet absolve me from the bonds of gratitude. You know enough, doubtless, of the process of canonisation to be aware that, a hundred years after the death of Damien, there will appear a man charged with the painful office of the *devil's advocate*. After that noble brother of mine, and

of all frail clay, shall have lain a century at rest, one shall accuse, one defend him. The circumstance is unusual that the devil's advocate should be a volunteer, should be a member of a sect immediately rival, and should make haste to take upon himself his ugly office ere the bones are cold; unusual, and of a taste which I shall leave my readers free to qualify; unusual, and to me inspiring. If I have at all learned the trade of using words to convey truth and to arouse emotion, you have at last furnished me with a subject. For it is in the interest of all mankind and the cause of public decency in every quarter of the world, not only that Damien should be righted, but that you and your letter should be displayed at length, in their true colours, to the public eye.

To do this properly, I must begin by quoting you at large: I shall then proceed to criticise your utterance from several points of view, divine and human, in the course of which I shall attempt to draw again and with more specification the character of the dead saint whom it has pleased you to vilify:

so much being done, I shall say farewell to you for ever.

"Honolulu, August 2, 1889.

"REV. H. B. GAGE.

"Dear Brother,—In answer to your inquiries about Father Damien, I can only reply that we who knew the man are surprised at the extravagant newspaper laudations, as if he was a most saintly philanthropist. The simple truth is, he was a coarse, dirty man, headstrong and bigoted. He was not sent to Molokai, but went there without orders; did not stay at the leper settlement (before he became one himself), but circulated freely over the whole island (less than half the island is devoted to the lepers), and he came often to Honolulu. He had no hand in the reforms and improvements inaugurated, which were the work of our Board of Health, as occasion required and means were provided. He was not a pure man in his relations with women, and the leprosy of which he died should be attributed to his vices and carelessness. Others have done much for the lepers, our own ministers, the government physicians, and so forth, but never with the Catholic idea of meriting eternal life.—Yours, etc.,

"C. M. HYDE."*

To deal fitly with a letter so extraordinary, I must draw at the outset on my private knowledge of the signatory and his sect. It may offend others; scarcely

*From the *Sydney Presbyterian*, October 26, 1889.

you, who have been so busy to collect, so bold to publish, gossip on your rivals. And this is perhaps the moment when I may best explain to you the character of what you are to read: I conceive you as a man quite beyond and below the reticences of civility: with what measure you mete, with that shall it be measured you again; with you, at last, I rejoice to feel the button off the foil and to plunge home. And if in aught that I shall say I should offend others, your colleagues, whom I respect and remember with affection, I can but offer them my regret; I am not free, I am inspired by the consideration of interests far more large; and such pain as can be inflicted by anything from me must be indeed trifling when compared with the pain with which they read your letter. It is not the hangman, but the criminal, that brings dishonour on the house.

You belong, sir, to a sect—I believe my sect, and that in which my ancestors laboured—which has enjoyed, and partly failed to utilise, an exceptional advantage in the islands of Hawaii. The first missionaries came; they found the

land already self-purged of its old and bloody faith; they were embraced, almost on their arrival, with enthusiasm; what troubles they supported came far more from whites than from Hawaiians; and to these last they stood (in a rough figure) in the shoes of God. This is not the place to enter into the degree or causes of their failure, such as it is. One element alone is pertinent, and must here be plainly dealt with. In the course of their evangelical calling, they—or too many of them—grew rich. It may be news to you that the houses of missionaries are a cause of mocking on the streets of Honolulu. It will at least be news to you, that when I returned your civil visit, the driver of my cab commented on the size, the taste, and the comfort of your home. It would have been news certainly to myself, had any one told me that afternoon that I should live to drag such matter into print. But you see, sir, how you degrade better men to your own level; and it is needful that those who are to judge betwixt you and me, betwixt Damien and the devil's advocate, should understand your letter

to have been penned in a house which could raise, and that very justly, the envy and the comments of the passers-by. I think (to employ a phrase of yours which I admire) it "should be attributed" to you that you have never visited the scene of Damien's life and death. If you had, and had recalled it, looked about your pleasant rooms, even your pen perhaps would have been stayed.

Your sect (and remember, as far as any sect avows me, it is mine) has not done ill in a worldly sense in the Hawaiian Kingdom. When calamity befell their innocent parishioners, when leprosy descended and took root in the Eight Islands, a *quid pro quo* was to be looked for. To that prosperous mission, and to you, as one of its adornments, God had sent at last an opportunity. I know I am touching here upon a nerve acutely sensitive. I know that others of your colleagues look back on the inertia of your Church, and the intrusive and decisive heroism of Damien, with something almost to be called remorse. I am sure it is so with

yourself; I am persuaded your letter was inspired by a certain envy, not essentially ignoble, and the one human trait to be espied in that performance. You were thinking of the lost chance, the past day; of that which should have been conceived and was not; of the service due and not rendered. *Time was*, said the voice in your ear, in your pleasant room, as you sat raging and writing; and if the words written were base beyond parallel, the rage, I am happy to repeat—it is the only compliment I shall pay you—the rage was almost virtuous. But, sir, when we have failed, and another has succeeded; when we have stood by, and another has stepped in; when we sit and grow bulky in our charming mansions, and a plain, uncouth peasant steps into the battle, under the eyes of God, and succours the afflicted, and consoles the dying, and is himself afflicted in his turn, and dies upon the field of honour—the battle cannot be retrieved as your unhappy irritation has suggested. It is a lost battle, and lost for ever. One thing remained to you in your defeat—some

rags of common honour; and these you have made haste to cast away.

Common honour; not the honour of having done anything right, but the honour of not having done aught conspicuously foul; the honour of the inert: that was what remained to you. We are not all expected to be Damiens; a man may conceive his duty more narrowly, he may love his comforts better; and none will cast a stone at him for that. But will a gentleman of your reverend profession allow me an example from the fields of gallantry? When two gentlemen compete for the favour of a lady, and the one succeeds and the other is rejected, and (as will sometimes happen) matter damaging to the successful rival's credit reaches the ear of the defeated, it is held by plain men of no pretensions that his mouth is, in the circumstances, almost necessarily closed. Your Church and Damien's were in Hawaii upon a rivalry to do well: to help, to edify, to set divine examples. You having (in one 'huge instance) failed, and Damien succeeded, I marvel it should not have occurred to you that

you were doomed to silence; that when you had been outstripped in that high rivalry, and sat inglorious in the midst of your well-being, in your pleasant room—and Damien, crowned with glories and horrors, toiled and rotted in that pigstye of his under the cliffs of Kalawao—you, the elect who would not, were the last man on earth to collect and propagate gossip on the volunteer who would and did.

I think I see you—for I try to see you in the flesh as I write these sentences—I think I see you leap at the word pigstye, a hyperbolical expression at the best. “He had no hand in the reforms,” he was “a coarse, dirty man;” these were your own words; and you may think it possible that I am come to support you with fresh evidence. In a sense, it is even so. Damien has been too much depicted with a conventional halo and conventional features; so drawn by men who perhaps had not the eye to remark or the pen to express the individual; or who perhaps were only blinded and silenced by generous admiration, such as I partly envy for my-

self—such as you, if your soul were enlightened, would envy on your bended knees. It is the least defect of such a method of portraiture that it makes the path easy for the devil's advocate, and leaves for the misuse of the slanderer a considerable field of truth. For the truth that is suppressed by friends is the readiest weapon of the enemy. The world, in your despite, may perhaps owe you something, if your letter be the means of substituting once for all a credible likeness for a wax abstraction. For, if that world at all remembers you, on that day when Damien of Molokai shall be named Saint, it will be in virtue of one work: your letter to the Reverend H. B. Gage.

You may ask on what authority I speak. It was my inclement destiny to become acquainted, not with Damien, but with Dr. Hyde. When I visited the lazaretto Damien was already in his resting grave. But such information as I have, I gathered on the spot in conversation with those who knew him well and long: some indeed who revered his memory; but others who had sparred

and wrangled with him, who beheld him with no halo, who perhaps regarded him with small respect, and through whose unprepared and scarcely partial communications the plain, human features of the man shone on me convincingly. These gave me what knowledge I possess; and I learnt it in that scene where it could be most completely and sensitively understood—Kalawao, which you have never visited, about which you have never so much as endeavoured to inform yourself: for, brief as your letter is, you have found the means to stumble into that confession. “*Less than one-half of the island,*” you say, “*is devoted to the lepers.*” Molokai—“*Molokai ahina,*” the “grey,” lofty, and most desolate island—along all its northern side plunges a front of precipice into a sea of unusual profundity. This range of cliff is, from east to west, the true end and frontier of the island. Only in one spot there projects into the ocean a certain triangular and rugged down, grassy, stony, windy, and rising in the midst into a hill with a dead crater: the

whole bearing to the cliff that overhangs it somewhat the same relation as a bracket to a wall. With this hint you will now be able to pick out the leper station on a map; you will be able to judge how much of Molokai is thus cut off between the surf and precipice, whether less than a half, or less than a quarter, or a fifth, or a tenth—or say, a twentieth; and the next time you burst into print you will be in a position to share with us the issue of your calculations.

I imagine you to be one of those persons who talk with cheerfulness of that place which oxen and wainropes could not drag you to behold. You, who do not even know its situation on the map, probably denounce sensational descriptions, stretching your limbs the while in your pleasant parlour on Beretania Street. When I was pulled ashore there one early morning, there sat with me in the boat two sisters, bidding farewell (in humble imitation of Damien) to the lights and joys of human life. One of these wept silently; I could not withhold myself from joining her. Had

you been there, it is my belief that nature would have triumphed even in you; and as the boat drew but a little nearer, and you beheld the stairs crowded with abominable deformations of our common manhood, and saw yourself landing in the midst of such a population as only now and then surrounds us in the horror of a nightmare—what a haggard eye you would have rolled over your reluctant shoulder towards the house on Beretania Street! Had you gone on; had you found every fourth face a blot upon the landscape; had you visited the hospital and seen the butt-ends of human beings lying there almost unrecognisable, but still breathing, still thinking, still remembering; you would have understood that life in the lazaretto is an ordeal from which the nerves of a man's spirit shrink, even as his eye quails under the brightness of the sun; you would have felt it was (even today) a pitiful place to visit and a hell to dwell in. It is not the fear of possible infection. That seems a little thing when compared with the pain, the pity, and the disgust of

the visitor's surroundings, and the atmosphere of affliction, disease, and physical disgrace in which he breathes. I do not think I am a man more than usually timid; but I never recall the days and nights I spent upon that island promontory (eight days and seven nights), without heartfelt thankfulness that I am somewhere else. I find in my diary that I speak of my stay as a "grinding experience": I have once jotted in the margin, "*Harrowing* is the word": and when the *Mokolii* bore me at last towards the outer world, I kept repeating to myself, with a new conception of their pregnancy, those simple words of the song—

"'Tis the most distressful country that ever yet was seen."

And observe: that which I saw and suffered from was a settlement purged, bettered, beautified; the new village built, the hospital and the Bishop-Home excellently arranged; the sisters, the doctor, and the missionaries, all indefatigable in their noble tasks. It was a different place when Damien came there, and made his great renuncia-

tion, and slept that first night under a tree amidst his rotting brethren: alone with pestilence; and looking forward (with what courage, with what pitiful sinkings of dread, God only knows) to a lifetime of dressing sores and stumps.

You will say, perhaps, I am too sensitive, that sights as painful abound in cancer hospitals and are confronted daily by doctors and nurses. I have long learned to admire and envy the doctors and the nurses. But there is no cancer hospital so large and populous as Kalawao and Kalaupapa; and in such a matter every fresh case, like every inch of length in the pipe of an organ, deepens the note of the impression; for what daunts the onlooked is that monstrous sum of human suffering by which he stands surrounded. Lastly, no doctor or nurse is called upon to enter once for all the doors of that gehenna; they do not say farewell, they need not abandon hope, on its sad threshold; they but go for a time to their high calling, and can look forward as they go to relief, to recrea-

tion; and to rest. But Damien shut to with his own hand the doors of his own sepulchre.

I shall now extract three passages from my diary at Kalawao.

A. "Damien is dead and already somewhat ungratefully remembered in the field of his labours and sufferings. 'He was a good man, but very officious,' says one. Another tells me he had fallen (as other priests so easily do) into something of the ways and habits of thought of a Kanaka; but he had the wit to recognise the fact, and the good sense to laugh at [over] it. A plain man it seems he was; I cannot find he was a popular."

B. "After Ragsdale's death" [Ragsdale was a famous Luna, or overseer, of the unruly settlement] "there followed a brief term of office by Father Damien which served only to publish the weakness of that noble man. He was rough in his ways, and he had no control. Authority was relaxed; Damien's life was threatened, and he was soon eager to resign."

C. "Of Damien I begin to have an

idea. He seems to have been a man of the peasant class, certainly of the peasant type: shrewd, ignorant and bigoted, yet with an open mind, and capable of receiving and digesting a reproof if it were bluntly administered; superbly generous in the least thing as well as in the greatest, and as ready to give his last shirt (although not without human grumbling) as he had been to sacrifice his life; essentially indiscreet and officious, which made him a troublesome colleague; domineering in all his ways, which made him incurably unpopular with the Kanakas, but yet destitute of real authority, so that his boys laughed at him and he must carry out his wishes by the means of bribes. He learned to have a mania for doctoring; and set up the Kanakas against the remedies of his regular rivals: perhaps (if anything matter at all in the treatment of such a disease) the worst thing that he did, and certainly the easiest. The best and worst of the man appear very plainly in his dealings with Mr. Chapman's money; he had originally laid it out" [intended to lay it out]

“entirely for the benefit of Catholics, and even so not wisely; but after a long, plain talk, he admitted his error fully and revised the list. The sad state of the boys’ home is in part the result of his lack of control; in part, of his own slovenly ways and false ideas of hygiene. Brother officials used to call it ‘Damien’s Chinatown.’ ‘Well,’ they would say, ‘your Chinatown keeps growing.’ And he would laugh with perfect good-nature, and adhere to his errors with perfect obstinacy. So much I have gathered of truth about this plain, noble human brother and father of ours; his imperfections are the traits of his face, by which we know him for our fellow; his martyrdom and his example nothing can lessen or annul; and only a person here on the spot can properly appreciate their greatness.”

I have set down these private passages, as you perceive, without correction; thanks to you, the public has them in their bluntness. They are almost a list of the man’s faults, for it is rather these that I was seeking: with his virtues, with the heroic profile of his life,

I and the world were already sufficiently acquainted. I was besides a little suspicious of Catholic testimony; in no ill sense, but merely because Damien's admirers and disciples were the least likely to be critical. I know you will be more suspicious still; and the facts set down above were one and all collected from the lips of Protestants who had opposed the father in his life. Yet I am strangely deceived, or they build up the image of a man, with all his weaknesses, essentially heroic, and alive with rugged honesty, generosity, and mirth.

Take it for what it is, rough private jottings of the worst sides of Damien's character, collected from the lips of those who had laboured with and (in your own phrase) "knew the man";—though I question whether Damien would have said that he knew you. Take it, and observe with wonder how well you were served by your gossips, how ill by your intelligence and sympathy; in how many points of fact we are at one, and how widely our appreciations vary. There is something

wrong here; either with you or me. It is possible, for instance, that you, who seem to have so many ears in Kalawao, had heard of the affair of Mr. Chapman's money, and were singly struck by Damien's intended wrong-doing. I was struck with that also, and set it fairly down; but I was struck much more by the fact that he had the honesty of mind to be convinced. I may here tell you that it was a long business; that one of his colleagues sat with him late into the night, multiplying arguments and accusations; that the father listened as usual with "perfect good-nature and perfect obstinacy;" but at the last, when he was persuaded—"Yes," said he, "I am very much obliged to you; you have done me a service; it would have been a theft." There are many (not Catholics merely) who require their heroes and saints to be infallible; to these the story will be painful; not to the true lovers, patrons, and servants of mankind.

And I take it, this is a type of our division; that you are one of those who have an eye for faults and failures; that

you take a pleasure to find and publish them; and that, having found them, you make haste to forget the overvailing virtues and the real success which had alone introduced them to your knowledge. It is a dangerous frame of mind. That you may understand how dangerous, and into what a situation it has already brought you, we will (if you please) go hand-in-hand through the different phrases of your letter, and candidly examine each from the point of view of its truth, its appositeness, and its charity.

Damien was *coarse*.

It is very possible. You make us sorry for the lepers who had only a coarse old peasant for their friend and father. But you, who were so refined, why were you not there, to cheer them with the lights of culture? Or may I remind you that we have some reason to doubt if John the Baptist were genteel; and in the case of Peter, on whose career you doubtless dwell approvingly in the pulpit, no doubt at all he was a "coarse, headstrong" fisherman! Yet

even in our Protestant Bibles Peter is called Saint.

Damien was *dirty*.

He was. Think of the poor lepers annoyed with this dirty comrade! But the clean Dr. Hyde was at his food in a fine house.

Damien was *headstrong*.

I believe you are right again; and I thank God for his strong head and heart.

Damien was *bigoted*.

I am not fond of bigots myself, because they are not fond of me. But what is meant by bigotry, that we should regard it as a blemish in a priest? Damien believed his own religion with the simplicity of a peasant or a child; as I would I could suppose that you do. For this, I wonder at him some way off; and had that been his only character, should have avoided him in life. But the point of interest in Damien, which has caused him to be so much talked about and made him at last the subject of your pen and mine, was that, in him, his bigotry, his intense and

narrow faith, wrought potently for good, and strengthened him to be one of the world's heroes and exemplars.

Damien was not sent to Molokai, but went there without orders.

Is this a misreading? or do you really mean the words for blame? I have heard Christ, in the pulpits of our Church, held up for imitation on the ground that His sacrifice was voluntary. Does Dr. Hyde think otherwise?

Damien did not stay at the settlement, etc.

It is true he was allowed many indulgences. Am I to understand that you blame the father for profiting by these, or the officers for granting them? In either case, it is a mighty Spartan standard to issue from the house on Beretania Street; and I am convinced you will find yourself with few supporters.

Damien had no hand in the reforms, etc.

I think even you will admit that I have already been frank in my description of the man I am defending; but

before I take you up upon this head, I will be franker still, and tell you that perhaps nowhere in the world can a man taste a more pleasurable sense of contrast than when he passes from Damien's "Chinatown" at Kalawao to the beautiful Bishop-Home at Kalau-papa. At this point, in my desire to make all fair for you, I will break my rule and adduce Catholic testimony. Here is a passage from my diary about my visit to the Chinatown, from which you will see how it is (even now) regarded by its own officials: "We went round all the dormitories, refectories, etc.—dark and dingy enough, with a superficial cleanliness, which he" [Mr. Dutton, the lay brother] "did not seek to defend. 'It is almost decent,' said he; 'the sisters will make that all right when we get them here.'" And yet I gathered it was already better since Damien was dead, and far better than when he was there alone and had his own (not always excellent) way. I have now come far enough to meet you on a common ground of fact; and I tell you that, to a mind not prejudiced by

jealousy, all the reforms of the lazaretto, and even those which he most vigorously opposed, are properly the work of Damien. They are the evidence of his success; they are what his heroism provoked from the reluctant and the careless. Many were before him in the field; Mr. Meyer, for instance, of whose faithful work we hear too little: there have been many since; and some had more worldly wisdom, though none had more devotion, than our saint. Before his day, even you will confess, they had effected little. It was his part, by one striking act of martyrdom, to direct all men's eyes on that distressful country. At a blow, and with the price of his life, he made the place illustrious and public. And that, if you will consider largely, was the one reform needful; pregnant of all that should succeed. It brought money; it brought (best individual addition of them all) the sisters; it brought supervision, for public opinion and public interest landed with the man at Kalawao. If ever any man brought reforms, and died to bring them, it was he. There

is not a clean cup or towel in the Bishop-Home, but dirty Damien washed it.

Damien was not a pure man in his relations with women, etc.

How do you know that? Is this the nature of the conversation in that house on Beretania Street which the cabman envied, driving past?—racy details of the misconduct of the poor peasant priest, toiling under the cliffs of Molo-kai?

Many have visited the station before me; they seem not to have heard the rumour. When I was there I heard many shocking tales, for my informants were men speaking with the plainness of the laity; and I heard plenty of complaints of Damien. Why was this never mentioned? and how came it to you in the retirement of your clerical parlour?

But I must not even seem to deceive you. This scandal, when I read it in your letter, was not new to me. I had heard it once before; and I must tell you how. There came to Samoa a man from Honolulu; he, in a public-house on the beach, volunteered the statement that Damien had “contracted the dis-

ease from having connection with the female lepers"; and I find a joy in telling you how the report was welcomed in a public-house. A man sprang to his feet; I am not at liberty to give his name, but from what I heard I doubt if you would care to have him to dinner in Beretania Street. "You miserable little——" (here is a word I dare not print, it would so shock your ears). "You miserable little——," he cried, "if the story were a thousand times true, can't you see you are a million times a lower——for daring to repeat it?" I wish it could be told of you that when the report reached you in your house, perhaps after family worship, you had found in your soul enough holy anger to receive it with the same expressions; ay, even with that one which I dare not print; it would not need to have been blotted away, like Uncle Toby's oath, by the tears of the recording angel; it would have been counted to you for your brightest righteousness. But you have deliberately chosen the part of the man from Honolulu, and you have played it with improvements of your

own. The man from Honolulu—miserable, leering creature—communicated the tale to a rude knot of beach-combing drinkers in a public-house, where (I will so far agree with your temperance opinions) man is not always at his noblest; and the man from Honolulu had himself been drinking—drinking, we may charitably fancy, to excess. It was to your “Dear Brother, the Reverend H. B. Gage,” that you chose to communicate the sickening story; and the blue ribbon which adorns your portly bosom forbids me to allow you the extenuating plea that you were drunk when it was done. Your “dear brother”—a brother indeed—made haste to deliver up your letter (as a means of grace, perhaps) to the religious papers; where, after many months, I found and read and wondered at it; and whence I have now reproduced it for the wonder of others. And you and your dear brother have, by this cycle of operations, built up a contrast very edifying to examine in detail. The man whom you would not care to have to dinner, on the one side: on the other, the Reverend Dr. Hyde and the Rever-

end H. B. Gage: the Apia bar-room, the Honolulu manse.

But I fear you scarce appreciate how you appear to your fellow-men; and to bring it home to you, I will suppose your story to be true. I will suppose—and God forgive me for supposing it—that Damien faltered and stumbled in his narrow path of duty; I will suppose that, in the horror of his isolation, perhaps in the fever of incipient disease, he, who was doing so much more than he had sworn, failed in the letter of his priestly oath—he, who was so much a better man than either you or me, who did what we have never dreamed of daring—he too tasted of our common frailty. “O, Iago, the pity of it!” The least tender should be moved to tears; the most incredulous to prayer. And all that you could do was to pen your letter to the Reverend H. B. Gage!

Is it growing at all clear to you what a picture you have drawn of your own heart? I will try yet once again to make it clearer. You had a father: suppose this tale were about him, and some informant brought it to you, proof in

hand: I am not making too high an estimate of your emotional nature when I suppose you would regret the circumstance? that you would feel the tale of frailty the more keenly since it shamed the author of your days? and that the last thing you would do would be to publish it in the religious press? Well; the man who tried to do what Damien did, is my father, and the father of the man in the Apia bar, and the father of all who love goodness; and he was your father too, if God had given you grace to see it.

FATHER DAMIEN

By A. C. Benson and H. F. W. Tatham.

(Note: This article was written in October, 1894.)

Joseph Damien was born at Treme-loos, a village near Louvain, in Belgium, on January 3rd, 1841. When a boy he seems to have learned to turn his hand to anything, for he is said to have been "doctor, nurse, carpenter, school-master, magistrate, painter, gardener, cook, and sometimes even undertaker and grave-digger" in his native village. But at the age of nineteen he was taken by his father to see his elder brother, who was then studying at Louvain for the priesthood, and Joseph made up his mind to follow the same vocation. Three years later his brother was to go as a missionary to the South Sea Islands; but he fell ill, and young Joseph—he was only twenty-two — was allowed, at his own earnest request, to take his place, and set off for the islands of the Pacific, where he followed ordinary mission work for ten years. But in the year 1873 he happened to be present when

the bishop was lamenting that he could not find a missionary to go to the lepers at Molokai, much less a pastor to reside there. Here was Damien's chance. 'Monseigneur,' said he, 'here are your new missionaries' (some young priests had recently arrived); 'one of them could take my district, and if you will be kind enough to allow it, I will go to Molokai and labor for the poor lepers, whose wretched state of bodily and spiritual misfortune has often made my heart bleed within me.' That same day he went to the leper island, in a boat that was taking some cattle there.

Molokai is one of the Sandwich Islands. These islands lie in the Pacific, about half-way between America and Australia, and were first discovered in 1778 by Captain Cook. But it was not till 1820 that any white man except traders and whalers visited them; and these only brought with them the curses of drink and other vices, carrying disease in their train; so that the number of native inhabitants has shrunk from 400,000 to 40,000.

But in 1820 the islands were Chris-

tianized, and the more easily because a great native king—Kamehameha I—had just effected a revolution, uniting all the islands under his own sway, and abolishing the system of caste, or ‘tabu,’ as it was called. ‘By this system,’ says a writer, Dr. Bartlett, ‘it was death for a man to let his shadow fall upon a chief, to enter his enclosure, or to stand if his name were mentioned in a song. No woman might eat with her husband, or eat fowl, pork, cocoanut, or bananas—things offered to the idols. ‘How did you lose your eye?’ a little girl was asked. ‘I ate a banana,’ replied the child.

But one day, as the missionaries from America found when they landed, Kamehameha had risen from his place at dinner, and walked across and sat down with his wives. This broke the ‘tabu’ and the system gave way everywhere. But Kamehameha was dead—apparently not a Christian, though on his death-bed he had felt a wish to become so. His reforms are perhaps more creditable to him for this reason, as they must have been actuated by his native good feeling

and good sense ; and we must remember that the only Christians he had seen were traders, whose example was hardly likely to commend their religion to anyone.

The new king, however, welcomed the missionaries. He had not yet become civilized enough to wear clothes, and it was only to please the missionaries that he consented to go so far as to put on a pair of silk stockings and a hat. He entertained them at royal feasts ; the staple joint appears to have been dog, of which animals as many as 200 were sometimes cooked for one meal ; and the dainty white men were cheated into eating them by the trick of serving up a roast dog with a pig's head attached. Christianity soon spread, partly owing to the example of a great chieftainess, who dared to go up the volcano to the lake of fire, and cast into it the sacred ohelo berries. This lake of fire was supposed to be the home of the terrible goddess Pele, and by this action—one of real courage, if we consider the circumstances—the chieftainess defied Pele to do her worst. As no harm followed, a

third of the people forsook Pele and turned to Christ.

The islands are all volcanic, but the fires have for the most part died out of them, beginning from the north in order, but in Hawaii, the largest and most southerly, they are still active. There is the lake of fire, filled with fountains of boiling lava, red by day, yellow by night; approached over three miles of the same substance, black and hardened, taking all kinds of fantastic shapes, and forming a crust sometimes as little as eight inches thick over the red-hot mass below. Molokai, however, the island with which we have to deal, is different. It is wedge-shaped; on the south shore the coast is low, and from it the land rises gradually to a height of 1,500 feet. From this height the northern coast is reached by a precipitous descent; the leper villages lying between the base of the precipices and the sea. Probably the whole island is an extinct volcano, tipped so that half the crater is under the sea, the villages lying really in the cup of this crater.

We have spoken of the leper villages;

but we have not yet explained how they came to be where they are, and to explain this we must go back a little.

Leprosy apparently comes from the East; but it is now so widespread that it is found in Iceland, in Sumatra, in Madeira, in Mexico, in Silesia, in Hindostan, in countless other places. It was perhaps introduced into Europe by the Crusaders returning from the East, though it is apparently traceable earlier; there having been two lazaret houses, or leper hospitals, in Canterbury during the reign of William the Conqueror.

It soon became fearfully prevalent; in the twelfth century there was scarcely a town or village in France without its leper hospital. In Great Britain every large town had a lazaret house, or a leper village near it, though separate. At Norwich there were six hospitals, at King's Lynn five.

Royal families did not escape. Both Henry III and Henry IV were suspected of being lepers. Robert Bruce and Baldwin, King of Jerusalem, died of leprosy. But the mediæval world was vigorous in stamping out the evil by isolating lepers

and separating the clean from the unclean, and it is in following this example that the Sandwich Islanders have created the leper villages in Molokai. Leprosy broke out there more than fifty years ago, apparently brought by a foreigner from Asia. It spread quickly; but no action was taken at once, as it should have been. The sociable and hospitable habits of the natives no doubt helped the spread. Leprosy, too, develops slowly, and a leper who has been really attacked for months or years may not have known it, for the symptoms perhaps have not made themselves evident. During all this time great mischief may be done, innocently enough.

At last the spread became so alarming that some action had to be taken. Segregation, that is, complete separation of the lepers from the rest of the community, was the only chance. But it was hard to carry it out. The natives who were lepers dreaded parting from their friends, and going into lifelong banishment; the healthy preferred to brave the risk of contagion to letting their dear ones go; for the Hawaiians

are a most affectionate people, and not afraid either of the disease or of death. The lepers were concealed and had to be taken by force; heart-rending scenes followed the captures. But it was the only chance for the rest of the nation. So the little lowland beneath the cliff of Molokai was secured, and the work of transportation began at once, about twenty years ago; and it must continue till the disease is stamped out from the kingdom. Let us see what an eye-witness says of the view of this lowland from the summit of the cliff above:

"Tearing our way through shrubs and vines, we came upon the brink, and looked down. . . . Far beneath us was a tongue of land thrust out into the sea; it was sunburnt and dust-coloured, blackened at the edges, where the rough lava rocks were uncovered, and fretted from end to end with tumbling breakers. Scarcely a tree was visible throughout its length and breadth; but it was divided and sub-divided by low stone walls into a thousand small plots of every conceivable shape. . . . no doubt under cultivation formerly, for Molokai was once densely populated . . . On one shore of the lowland was a little hamlet—a handful of tiny white cottages scattered in a green and sheltered spot. On the opposite shore, two miles away, was another and somewhat larger settle-

ment, with its cottages more scattered, and its garden spots less green. Both of these villages were nestling near the cliffs, one of them quite in the shadow. Between the two there were but few habitations, and at the farther end of the lowland, where it jutted into the sea, there were none at all." Now for the descent.

"We were dropping, slipping, scrambling down a sharp flank of the cliff that cut the air like a flying buttress. By a series of irregular steps we slowly descended, leaping from rock to rock when practicable, but often putting off our packs, sliding into the little ledge below, and then dragging the packs after us. . . . For two hours we continued to descend. Now and then we came upon the carcasses of cattle that had perished in this awful path—for herds are sometimes driven down the steep incline to supply the leper market, and there is always some loss of life in these cases.

"At intervals we threaded deliciously cool and shady groves, from under whose dense boughs we could look slantwise into the settlements and see men and women moving to and fro, and so at last we came out upon the treeless plain. . . .

"The first glimpse of Kalawao (about a mile and a half distant) might lead a stranger to pronounce it a thriving hamlet of perhaps five hundred inhabitants. Its single street is bordered by neat whitewashed cottages with numerous little gardens of bright flowers and clusters of graceful and decorative tropical trees. It lies so near the base of the mountain that not a few of the huge stones that were

loosened by the rains have come thundering down the heights and rolled almost to the fences that enclose the village suburbs. . . . By the roadside, on the edge of the village, between it and the sea, stood a little chapel. . . . The chapel door stood ajar; in a moment it was thrown open, and a young priest paused upon the threshold to give us welcome. His cassock was worn and faded, his hair tumbled like a schoolboy's, his hands stained and hardened by toil; but the glow of health was in his face, the buoyancy of youth in his manner; while his ringing laugh, his ready sympathy, and his inspiring magnetism, told of one who in any sphere might do a noble work, and who in that which he has chosen is doing the noblest of all works. This was Father Damien, the self-exiled priest, the one clean man in the midst of his flock of lepers."

This was ten years ago, in October, 1884. Let us look at the other side of the picture, drawn a few years later by another hand.

"He" (Father Damien) "is now forty-nine years old—a thick-set, strongly-built man, with black, curly hair and short beard turning gray. His countenance must have been handsome, with a full, well-curved mouth, and a short, straight nose; but he is now a good deal disfigured by leprosy, though not so badly as to make it anything but a pleasure to look at his bright, sensible face. His forehead is swollen and ridged, the eyebrows are gone, the nose is

somewhat sunk, and the ears are greatly enlarged; his hands and face look uneven . . . and his body also shows many signs of the disease."

Let us see what had happened in the five years intervening between these two pictures.

You may remember that Father Damien arrived at Kalawao in the year 1873. He found the place in a miserable condition. About eighty of the lepers were in hospital; the other lived where they could—many beneath frail roofs, made of branches of the castor-oil tree, under which all ages and sexes were often crowded together pell-mell, in a state of filth and rags, and in an atmosphere unbearable to a healthy man, even one like Father Damien, for more than a few minutes together. There were many people in the island ready to preach to any new-comer their old axiom, 'In this place there is no law.' Drink was another curse of Molokai. A plant called 'Ki' by the natives grows abundantly along the base of the cliffs, and from the root of this, cooked and fermented, can be made a drink which

is terribly intoxicating, producing a state akin to madness. It was nominally illegal to distil this spirit, but the law was constantly and openly broken. Father Damien, however, went round the settlement, at the risk of unpopularity, threatening and persuading, till at last he induced everyone to give up the vessels used for the preparation of the spirit. All this was only done in the teeth of a fierce opposition, but it was done at last, and one of the chief causes of the moral degradation of the lepers was removed.

Again, when he first arrived at Molokai there was no proper supply of water for the inhabitants. They had to fetch it from a distance on their shoulders; and the trouble of this naturally made them careless and dirty. But Father Damien found out that there was a natural reservoir up in the hills, full of ice-cold water, in a basin which had never dried in any drought. He obtained water-pipes, and with the help of the strongest of the lepers laid them down, so that pure water was conveyed

to the villages in plenty, for drinking and washing alike.

Then, about a year after he arrived, a strong south wind, called by the natives the 'cona,' sweeping up the slope of the island, and plunging over the northern cliffs, blew down most of the lepers' wretched houses, so that they had to sleep out in the wind and rain, without anything to cover them. But the Father made this an opportunity to get better houses for them. 'I at once,' he says himself, 'called the attention of our sympathizing agent to the fact, and very soon there arrived several schooner loads of scantling to build solid frames with, and lepers in distress received, on application, the necessary material for the erection of decent houses.'

Now, owing to the kindness of the King and Queen of Hawaii and the generosity of the government there, the cottages are all comfortable, and raised on trestles so as not to be in contact with the earth. There are five churches, and every person receives food regularly; meat, biscuits and other supplies. Besides all this there are, of course, the

hospitals, where the worst cases are nursed. But we must not suppose that all horrible sights are now concealed from the eye in Molokai. Listen to what Father Damien says himself in a letter written in 1880:

"MY DEAR BROTHER,

"Your kind letter of the 12th of November from Louvain reached me on the 2nd of January. Fancy, I have now been nearly seven years among the lepers! During that long period I have had the opportunity of closely observing, and as it were touching with my hand, human misery under its most terrible aspect. Half the people are like living corpses, which the worms have already begun to devour, at first internally, afterwards externally, until they make most loathsome wounds which very rarely heal."

An eye-witness has given a horrible description of what he saw in the hospitals; horrible to the last degree, but perhaps it ought to be quoted that we may realize as fully as we can what those who work in them have to go through.

"I remember," he says, "how, one day, as we were walking among the wards of the hospital at Kalawao, Father Damien turned suddenly to us, and said: 'Ah, here is something

I must show you!' We approached what seemed a little bundle of rags, or rubbish, half hidden under a soiled blanket; the curious doctors were about to examine it, when the good Father seized me, and cried excitedly: 'You must not look! You must not look!' I assured him that I was not at all afraid to see even the worst that could be shown me there; for my eyes had become accustomed to horrors, and the most sickening sights no longer affected me. A corner of the blanket was raised, cautiously; a breathing object lay beneath; a face, a human face, was turned slowly towards us—a face in which scarcely a trace of anything human remained. The dark skin was puffed out and blackened; a kind of moss, or mould, gummy and glistening, covered it; the muscles of the mouth, having contracted laid bare the grinning teeth; the thickened tongue lay like a fig between them; the eyelids, curled tightly back, exposed the inner surface, and the protruding eyeballs, now shapeless and broken, looked not unlike bursted grapes. It was a leprous child, who, within the last few days, had assumed that horrible visage; surely the grave knows nothing more frightful than this!"

Again, the weather in Molokai is not always what one naturally expects in a South Sea island. The cona wind often blows wildly for days together, sometimes with rain, sometimes without; and

at other times the damp heat is very exhausting.

There were in the island with Father Damien at the time of his death two other priests, two lay-brothers, and three sisters of charity, of the Franciscan order. There are five churches, and, of course, schools. Some of the boys' names are very odd; for instance, Jane Peter, Henry Ann, Sit-in-the-cold, The Rat-eater, A Fall-from-a-horse, The First Nose, The Dead-House, The Emetic. Some at Honolulu are even stranger; Mr. Scissors, The Fool, The Man who washes his Dimples, The tired Lizard, The Stomach, The great Kettle, Poor Pussy, The Pigsty.

When Father Damien went to Molokai there were eight hundred lepers: there are now more than a thousand, but improved in every way to a great extent, in comfort, in morals, one may even say in health; for though leprosy is probably incurable, its victims do not suffer much if properly tended. It was in 1883, after living among the lepers for ten years, that Damien began to have suspicions that he was a leper. But for

a long time the doctors told him that he need not alarm himself; and you may remember that the account given of him a year later describes him as 'the one clean man in the midst of his flock of lepers.' But at last one day he scalded himself on the foot, and to his surprise and alarm felt no pain. This anæsthesia, or want of feeling, in the extremities is a sure sign of one kind of leprosy. He went at once to the doctor. 'I cannot bear to tell you,' said he, after examining the patient, 'but what you say is true.'

'It is no shock to me,' said Damien, 'for I have long felt sure of it.'

He did not seem distressed, although henceforth the permission he had obtained to travel over the other islands was at once at an end, and he had to confine himself to Molokai. He felt himself on an equality with his people. Some with whom his first reforms had made him unpopular were only finally won over when he himself became a leper like them. Mr. Clifford, who has written a book about his visit to Molokai, paid that visit partly to induce Father

Damien to use a certain oil which had been introduced into Indian prisons for the treatment of leprosy, and for which he claimed a great success. He doubted, however, if it would do any good in Damien's case, partly because lepers are always naturally indisposed to take trouble for their own cure, and this oil had to be rubbed in for four hours a day, which could be enforced in the case of convicts in India, but not of free men; partly, too, because the leprosy had most probably by that time attacked the lungs. He was right; for though a temporary improvement in appearance took place up to January, 1889, the next month brought a change. On the 28th of February, Damien wrote a letter to Mr. Clifford, in which he says that it is only in heaven that he hopes to meet him again. The end was very near. The Second Sunday after Easter was the last Sunday that Father Damien spent on earth. The Gospel for that day is the same both in the English and the Roman Catholic services. It contains the words, 'I am the Good Shepherd; I lay down My life for the sheep.' And surely no

words could be more strangely appropriate to the case of the pastor who was even then about to leave the flock for which he had died. For the corruptible was soon to put on incorruption, and the mortal to put on immortality. One of the fathers who were with him on the island describes his last days.

"It was at the close of March," he writes, "that Father Damien felt his end approaching, and put his temporal affairs in order. On the 28th he took to his bed, and on the 30th began his direct preparation for death by a general confession and renewal of his vows. Next day he received the Holy Viaticum. 'You see my hands,' he said; 'all the wounds are healing, and the crust is becoming black. You know that is a sign of death. Look at my eyes, too; I have seen so many lepers die that I can't be mistaken. Death is not far off. I should have liked to see the Bishop again, but *le bon Dieu* is calling me to keep Easter with Himself. God be blessed!' On April 2nd Father Conradi gave him Extreme Unction. 'How good God is,' he said during the day, 'to have preserved me long enough to have two priests by my side at my last moments, and also to have the good Sisters of Charity at the Léproserie! That has been my Nunc Dimittis. The work of the lepers is assured, and I am no longer necessary, and so will go 'up yonder.' " "When you are up above, Father, you will not forget those

you leave orphans?" said Father Wendolen, one of his attendants.

"Oh no! If I have any credit with God, I will intercede for all in the Léproserie."

"I then begged him to leave me his mantle, like Elijah, in order that I might have his great heart. 'Why, what would you do with it?' he asked; 'it is full of leprosy!'" A few days of respite, even rallying and hope, followed. The good Sisters of Charity often visited him. Everybody admired his wonderful patience. "He so ardent, so lively, so robust, was thus nailed down in his miserable couch, yet without much pain. He was laid on the ground on a wretched mattress, like the poorest leper. We had the greatest difficulty to get him to accept a bed. And how poorly off he was! He who had spent so much money to relieve the lepers had so forgotten himself that he had not a change of linen or bed-clothes." On the 13th he had a bad relapse, and all hope was at an end. A little after midnight he received Holy Communion for the last time, and began occasionally to lose consciousness. The next day he still recognised his comrades, and could not speak, though from time to time he affectionately pressed their hands. On the 15th his agony began, and soon all was over. He died without any effort, as if going to sleep. After death all marks of leprosy disappeared from his face, and the wounds in his hands were quite dried. Strange to say, at his own request, he was buried under a large pandanus tree. When he first landed at Molekai he had

no dwelling, and was obliged to sleep for several nights under the shade of this tree, and for this reason he desired to be buried there.'

He was not fifty when he died, but he had done work in the last sixteen years of his life which few men could accomplish in a century. And neither for him nor for his work is it the end. His example has borne fruit already, and will bear it hereafter; and he himself is among those 'which came out of great tribulation, and have washed their robes and made them white in the blood of the Lamb. . . . They shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat. For the Lamb which is in the midst of the throne shall feed them, and shall lead them unto living fountains of waters; and God shall wipe away all tears from their eyes.'

ANATOLE FRANCE: THE MAN AND HIS WORK

I. THE PARADOX

"Had I been nature," said Anatole France, "I should have made men and women not to resemble the great apes, as they do, but on the model of the insects which, after a lifetime as caterpillars, change into butterflies, and for the brief final term of their existence have no thought but to love and be lovely. I should have set youth at the end of the human span . . . Then I should have arranged that man and woman, unfurling glittering wings, would live awhile on dew and desire and die in a rapturous kiss."¹

Perhaps that is just what nature did in the case of Anatole France. Most of us retreat from life into books, enshrining our timidity in an ivory tower; Anatole France grew out of books into life, and stepped out of a scholarly peace into the hazardous vicissitudes of action. Most of us begin as eloquent radicals and end as hushed conservatives; our interest in reform decreases as our interest in the bank grows. But Anatole France began with the deadliest conservatism, and persisted in it till fifty; then, at an age when most minds are dead, he turned his face toward the rising sun, and allied himself with liberal forces everywhere. At forty-four, when Spinoza died and Nietzsche went insane, Anatole France joined the staff of *Le Temps*, the most respectable journal in France; at fifty-two he was elected to the

French Academy as the conservative rival of a mildly liberal candidate; at seventy-four he joined the Communists, and gave his Nobel prize of 40,000 francs to Russian relief. He was an octogenarian at forty, and at eighty he had the rebellious optimism of youth. He lived again for a while on dew and desire; and refused to die until he was young.

How shall we explain this anomaly? Had this kind old man drunk at some mystic fountain of perpetual youth? How could the indolent sceptic of *La Vie litteraire* become the warrior of *The Church and the Republic*?—how could the indulgent humorist of *The Crime of Sylvestre Bonnard* become the audacious revolutionary of *Towards Better Times* and *On the White Stone*?—how could the secluded bookworm, entombed in the dust of libraries with the spirits of the ancient dead, come forth to battle against priest and soldier and imperialist for liberty and peace?

Let us study Anatole in his growth, through each stage of his development; perhaps thereby we shall come to understand the paradox of his genius, and the secret of his eternal youth.

II. THE MAN

Anatole Jacques Thibault was born on April 16, 1844.² He was a son of Paris, and took the pseudonym of France: nothing could better sum him up. He speaks of himself as "Parisian with all his soul and with all his body," and as loving Paris with "an immense love."³ He is the voice of the city of his birth: of Paris that has seen all and *nil admiratur*,

that has known every hope and suffered every defeat, that has tasted every philosophy and sipped at every sin; Paris the inheritor and focus of the culture and wisdom and beauty of the Western world.

"We were already so old when we were born," he says.⁴ And not by biological heredity only: behind him, ready to seep into his osmotic soul, lay all the wealth of his country's literature and art. "Our French culture is the noblest and most delicate thing in the world," he wrote,⁵ in one of those frequent passages of tender patriotism which made his country love him even when he denounced the leaders who manoeuvred it into war and kept it from reconciliation and peace. This French culture was the breast that nourished him; and he sucked it almost dry. No one knew that culture, or Latin culture in general, better than he. He knew little of German or English literature, and had nothing of what Renan called "the heavy hyperborean" about him. He was all French and Latin and Greek; like the memory in Bergson's philosophy, he carried the past with him and summed it up; and when he spoke it was the voice of France. In him we see the profound continuity of French culture: he had the broad laughter of Rabelais, the kindly humor of Montaigne, the subtle satire of Voltaire; in *The Rotisserie of the Reine Pedauque* he is Rabelais, in *La Vie litteraire* he is Montaigne, in *Penguin Isle* he is Voltaire, in *The Garden of Epicurus* he is Renan, in the Trublet of the *Comic History* we see the Graindorge of Taine, and in *Thais* we are in

the deserts of monastic Egypt with the Flaubert who wrote *The Temptation of St. Anthony*. There is in all these men a tender disillusionment, an urban sophistication, an appreciation of the subtleties and nuances of life, a pagan simplicity and unashamedness in joy, a refinement of artistic sensibility and touch, which make them an unrivaled dynasty in modern letters. And Anatole France is their inheritor, their reincarnation, and their sum.

He had a right, then, to the great name which he assumed; his real name will be lost forever in the glare of his pseudonym. The *nom-de-plume* came down to him from his father, François Noël Thibault, whose friends called him France for short. The father was a pious Catholic and an unrelenting royalist of Vendéen traditions, who had served in the guard of Charles X and fallen with his fall. He taught his son the Bourbon creed and retailed to him the unlovelier phases of the French Revolution; it took Anatole half a century to outgrow his influence, which lingers on in *The Gods Are Athirst* (1912). Different indeed was the paternal grandmother, neither pious nor royalist, but keen-witted, pagan, and Voltairean; "she had no more piety than a bird; clearly she belonged to the eighteenth century."⁶

It was difficult for the father to bring up the boy in the traditions, for he kept a bookshop on the Quai Malaquais, just across from the Louvre, and the boy grew up in the midst of books that sparkled with heresy. At Anatole's cradle worshipped all the genii of lit-

terature; and almost in his front yard the world had collected the masterpieces of its art. Everything had conspired to lay upon Anatole France the obligation to become a scholar, an artist, and a philosopher.

In his reminiscent volumes—*The Book of My Friend* (1885), *Pierre Noziere* (1899) and *Petit Pierre* (1915)—he has told the story of those boyhood days with delightful naïveté; perhaps he remained young because he was always refreshing his memories of youth. "My cosmography was immense. . . . The earth formed a large circle round my house. Every day I would meet, coming and going in the streets, people who seemed occupied with a strange and amusing game, the game of life. I decided that there were a great many of them, perhaps more than a hundred." After a time he went farther afield; his nurse took him to the Zoological Gardens, which he mistook for the Garden of Eden; for had not his mother described Eden as "a very pleasant place, with beautiful trees, and all the animals of creation in it?" The only difference was that here "the animals were confined behind iron bars as a result of the progress of civilization . . . and the angel who guarded the entrance with a flaming sword had given place to a soldier with red breeches."⁷

At a very tender age he was initiated into the arcana of sex by a little girl called Alphonsine. "I am grateful to Alphonsine for having vastly added, when I was but two years old, to my knowledge of human nature."⁸ He was an apt pupil, and maintained through-

out his life the advantages of this early start in the science of Eros. He represents himself, with proud exaggeration, as a very bad boy; once his mother caught him in some naughtiness; "her cheeks were flushed, and she looked at me askance, scanning my face to see whether she could detect the symptoms of incipient crime or madness."⁹ Apparently his greatest crime was curiosity; at six years of age, he tells us, "I was already tormented by that vast curiosity which was to become the trouble and the joy of my life, and which was to devote me to the quest of that which one never finds."¹⁰

He went to school, but he learnt less there than in the streets. "Of all the schools I ever went to, Dr. Truant's was the one in which I got on best and learned the most."¹¹ Next in value came the book-shops.

"I was brought up on the quays, where the old books form part of the landscape. . . . If the Seine is the river of glory, we may surely admit that the books ranged upon the quays made for it a fitting coronal. . . . When all is said and done I know of no sweeter, gentler pleasure than to go book-hunting along the quays of Paris. . . . From these lonely abodes you may evoke the spirits of the departed as with an enchanter's wand. . . . For my part I have found wisdom there. All those piles of paper begrimed with printer's ink have taught me the vanity of triumphs that fade, of glory which blossoms but to die. . . . O sordid old Jews, candid book-sellers of the quays, my masters, what gratitude I owe you! More than the professors of the University, . . . you spread before my delighted eyes the mysterious forms of a

past life, and every sort of precious monument of the thought of man."¹²

So we picture him "passing from book to book like bees among the flowers, while the indifferent pendulum of the clock kept chopping off the seconds of life calmly and precisely." It was in these shops and hours that he laid the basis of that astonishingly ecumenical learning which so modestly hides behind his perfect art. He led in those days "the quiet imaginative life of an only child;" books and women brought him up, making him a tender and sensitive bibliophile, almost an alien on the earth. His father objected to the boy's meditative habits: "Solitude," he said, "excites the imagination." It never occurred to him that nature had chosen out his son to be an artist of the imagination; and he forgot that activity dulls imagination as much as imagination dulls activity. Active boys seldom become geniuses, not even geniuses of action. And Anatole France had made up his mind to be a genius.

"At the very tenderest age I was possessed by a longing to win renown and to live eternally in the memory of mankind. . . . Had I been able, I would have gone forth to win glory on the battlefield. . . . But I had no horse, no uniform, no regiment, no enemies; and all these are essential to military glory. It therefore occurred to me that I would become a saint. The outfit is less elaborate than that required for a military career."¹³

This was the result, presumably, of a daily diet of hagiography, of being fed, unremittingly, on the lives of the saints; a more per-

manent result was that Anatole became an expert in medieval legend, and pained the priests with his erudition.—So one day he refused breakfast, gave away all his toys, ruined his best hat as self-mortification (whereupon his mother began to have some doubts about religion), and made himself a hair-shirt by stuffing the padding of an arm-chair down his back.

Like Renan and Lemaitre, he was sent to a Jesuit school—the College Stanislas; “in the Temple were forged the hammers which destroyed the Temple.”¹⁴ He liked the life there, except the weekly confession, which irked him because he had no sins to tell. He consulted the list of sins in the prayer-book, and found monstrous things like “simony,” “prevarication,” and “concupiscence”; he decided to accuse himself of these for lack of something milder; but at the last moment his courage failed him at the thought that the priest might ask him what these words meant. He was forced to admit, shamefacedly, that he had committed no sins at all.

In *The Flower of Life* (1920) he tells of a crucial point in his career at college, the “bifurcation” when the student was obliged to choose between the sciences and the classics. He asked the advice of the servant girl about this “bifurcation,” but he could not shake her conviction that this was either a wild beast or a terrible disease. He consulted his parents: and they, strange to say, let him make his own choice. “My mother had no doubt that whatever path I chose I should display my

ever-smouldering if sometimes hidden genius, while my father considered that in letters as in science I should never amount to anything." His own opinion was that the bifurcation was an absurdity. "No matter what choice we made, our minds were bound to suffer serious injury; for science isolated from letters remains mechanical and brutal, and letters without science are empty, since science is the substance of literature." He thought that our ruling bourgeoisie fail of statesmanship because their minds are trained in mechanisms only, not in the humanities; he believed that a little Greek and more Latin should be required at college; and he was sure that a man who had no acquaintance with classic culture was unfit for rule.

"I chose to take the arts, because they seemed to float along more easily. . . . Instinct did not altogether deceive me. In these sordid rooms Greece and Rome appeared to me; Greece which taught men science and beauty, and Rome which gave peace to the world. . . . You may call me a mandarin or an aristocrat, but I believe that six or seven years of literary culture give to the mind prepared to receive it a nobility, a force and a beauty which is not to be obtained by any other means."¹⁵

Perhaps it was this revelation of a polished pagan culture that undermined Anatole's faith in the dogmas of Catholicism, just as a similar revelation helped to paganize Renaissance Italy. Add to this that Taine and Bernard had made determinism and Darwinism the order of the day; that Anatole read Darwin and

Spencer and became a fiery evolutionist, making the Museum his temple and following there the transformations of life from mollusc to man.¹⁶ Now he took a passionate interest in science, worked his way through physics, astronomy, geology and anthropology, and founded upon them what he thought to be an unassailable system of philosophy. What with all this philosophy and science, the poet in him lost his wings; and after two volumes of verse he wrote his poetry in prose. Perhaps it was because he went through this poetic apprenticeship that he became the finest master of his language in his generation. One must be a poet to write good prose.

Meanwhile his transition from Catholicism to an agnostic Darwinism had not been quite smooth. In *The Desires of Jean Servien* (1882) he recalls something of the tortures of a soul caught in the ebb of faith; he describes the successive changes, each unconscious, by which Jean became a pagan: how on the day of his graduation his proud parents (who expected him to become a priest) treated him to an evening at the theatre, only to have him fall madly and naturally in love with the leading lady; how love and piety and doubt fought a desolating war for the soul of Jean Servien; how they led him to every manner of contradictory desires, to an almost Russian alternation of hope and despair, and at last to suicide. Like Goethe in *Werther*, Anatole France killed himself by proxy, and lived to tell the tale.

III. THE CONSERVATIVE

After graduation he was made librarian and reader for the publishing firm of Lemerre; and in 1876 he became librarian of the French senate. These occupations confirmed his scholastic habits, and addicted him still further to classic culture. Asked later why his own library contained so few modern authors, he replied that he seldom read his contemporaries, since what they could tell him he knew quite well himself, and through the more trustworthy medium of direct experience. In the quiet of these libraries and his home (he married in the eighties) he produced the four novels of what we shall call his first period: *Jocasta and the Famished Cat* (1879), *The Crime of Sylvestre Bonnard* (1881), *The Desires of Jean Servien* (1882), and *The Book of My Friend* (1885). The last is a picture of childhood, the second a picture of old age; each picture so intimate and real that the world could hardly believe that both portraits had been drawn by the same hand, almost at the same age.

Bonnard, the aged and honored member of the Institute, lives a life of modest research in his library, competing with his cat for the one comfortable chair. At times he wanders about Europe collecting scholarly antiquities, and modestly accepting as his equal in scientific dignity Mme. Trepoff, who collects match-boxes. We find him even as far from home as Sicily, buying watermelon-slices from a persuasive peddler who cries: "*Co tra calle vive, magna, e*

lava la faccia—"For three cents you eat drink, and wash your face."¹⁷ But in all these studies and these wanderings his mind is not quite on his manuscripts and his old editions; he cannot forget that the daughter of the dead woman whom, many years since, he had vainly but faithfully loved, is pining away friendless in an oppressive convent. He has no legal right to make himself the guardian of this girl; and it is his crime that he steals her away in the dark of night, and takes her to his home. Through many years he lavishes every fond care upon her. Then the inevitable wooer comes; and old Bonnard sees his prize slipping away from him, leaving him more solitary than before. He makes no complaint, but blesses the pair of lovers, and sells his only property—the library which he has spent a lifetime in collecting, and whose every book he loves—to provide the girl with a fit dowry. And when she is gone, old Bonnard, derelict of two passions, turns back empty-hearted to his empty study, only to find that his cat has taken his chair.

This was an unusual story, whose tenderness and delicacy sharply marked it off from other books in an age when French literature was experimenting with the sixth commandment, and every novel expounded adultery. At one step Anatole France became a classic; and the most powerful of Parisian newspapers, *Le Temps*, offered him irresistible inducements to write for it a weekly column of literary comment. These are the essays which have been gathered together as *La Vie litteraire* ("On

Life and Letters"),—volumes of frankly subjective, impressionistic criticism, full of delight for the lover of the literature of France. These four years with *Le Temps* (1888-92) made Anatole France the leader of French letters; and when, in 1892, Ernest Renan died, the new critic, already forty-eight years of age, succeeded unquestioned to the throne of the world of Latin culture.

It was an aristocratic, a disillusioned, and a somewhat dilettante culture. Anatole France recognized, at this time, only one sin: and that was lack of taste. "Without taste one shocks even those who have none";¹⁸ an error of style is more horrible than a violation of the criminal code. He condemned Zola for tastelessness, and in such unmeasured language as seldom mars his pages.¹⁹ His ideal at this period was *aequanimitas*—the motto of Spinoza, who practised it, and of Nietzsche, who did not. He liked to live in an almost monastic seclusion, and called himself "a philosophical monk who at heart belongs to the Abbey of Thelema."²⁰

The secret of tranquillity, he thought, was to live with the select souls of the past; and he described his critiques as the adventures of his soul among masterpieces. Yet he learned, from the endlessness of books, their near-futility. "Never do I turn over the contents of the penny-box" at the book-store (where are there penny-boxes now?), "but a calm and gentle melancholy steals into my heart, and I say, 'What avails it to add yet a few more pages to this mass of ink-stained paper? Surely it were better to write no more?'"²¹ His famous

story of the happy shirt preached an almost Rousseauian, simplicity: an unhappy king, told by a soothsayer that he can never regain bliss till he acquires the shirt of a happy man, sends his aides into every corner of his realm to find such a man; they seek among courtiers and financiers and lovers and generals and artists and philosophers, but are everywhere met with confessions of secret misery; and when at last they find a man who professes happiness, they discover that he is a hermit who lives in the woods on the natural growths of the soil, and has no shirt.

At last, like a grandson of Voltaire, Anatole France came to the gospel of *Candide*: "I believe it is wiser to plant cabbages than to write books. . . . Books are the opium of the West. They devour us. . . . Believe me when I tell you this, for I adore books, I long since gave myself unreservedly to them."²² And he described with envy the corn-threshers in the field:

"What is my task by the side of theirs? And how humble and petty I feel myself before them! What they do is necessary. And we, frivolous jugglers, vain flute-players! Happy the man and the ox who trace out their furrow straight! All the rest is madness, or at least uncertainty, a cause of trouble and cares. The workmen that I see from my window will today thresh three hundred trusses of corn, and then they will go to bed tired and satisfied, without doubting the goodness of their work. Oh, the joy of performing an exact and regular task! But I, shall I know this evening, when my ten pages are written, whether I have filled my

day well and earned my sleep? Shall I know whether I have carried the good grain into the barn? Shall I know if my words are the bread of life?"²³

Loving quiet and regular existence, he inclined by nature to the conservatism, the love of tradition, of the peasants whom he so admired (and who, no doubt, would have smiled at his supposition that they were free from trouble and care). He knew too much of the past to be easily excited about the future. Everything had been tried. The thing to be sought was not Utopia but stability; culture could flourish only under strong and stable governments. His friends at this time were all of the conservative ranks—priests and generals and diplomats; if later he described them well it was because he had known them well. When an anti-militaristic novel, *Le Cavalier Miserey*, was published, and some copies were bought by French soldiers, Anatole France quoted with approval the censorious edict of an army officer, that "every copy of *Le Cavalier Miserey* seized in the barracks should be burned on the dung-heap, and every soldier found with it should be punished with imprisonment." "It is not a very elegant phrase," said Anatole France; ". . . but I should be better pleased to have written it than to have written the four hundred pages of *Le Cavalier Miserey*. For I am sure that it is of infinitely greater value to my country."²⁴ One July 14th he described with enthusiasm the review of the troops on the national holiday, and ended his article with the patriotic phrase, "Vive l'armée!" Ten years later he was to

look on in bitterness and sorrow as the rabble of Paris, incited by the enemies of Dreyfus and Zola, stood before his house and shouted that phrase into his face.

IV. THE EPICUREAN

A long life was the salvation of Anatole France; it gave him a leisurely development through a half-century of adolescence. At an age when most creators have finished their life-work he turned suddenly from the orthodoxies and traditions, and began to produce one masterpiece after another. At forty-six he wrote his finest work, *Thaïs*; at forty-eight his finest short-story, "The Procurator of Judea" (in *Mother of Pearl*); at forty-nine his most enjoyable book, *The Rotisserie of the Reine Pédauque*; and at fifty his philosophic masterpiece, *The Garden of Epicurus*. Add to these *The Opinions of Jérôme Coignard* (1893), *The Red Lily* (1894), and *The Human Tragedy* (1895), and we may safely describe this second period, from 1890 to 1895, as marking the zenith of Anatole France's productivity and power.

Thaïs is the story of an actress and a saint. All Alexandria is talking about the dancing of *Thaïs*, even though it is the Alexandria of the second century A. D., burning with religious zeal, and echoing with monastic denunciations from the Thebaïd. Rich and poor alike are slaves to *Thaïs*' charms: the philosophers dispute about her beauty; "the porters, sweepers, and dock-laborers went without bread and garlic that they might pay for their places" when

she danced.²⁵ Meanwhile, in the desert, the holy monk Paphnutius, who had once loved Thaïs, cannot rid himself of the memory of her; his re-awakened desire rationalizes itself into an ambition to convert her to Christ and sanctity; and despite his abbot's warning, he leaves his cell and makes his way to Alexandria. It is Anatole's delight to show how piety can be the mask of lust, and how ecclesiastical codes and moral battlements fall before the insistence of natural desires.

Paphnutius finds Thaïs in the midst of her artistocratic admirers, whose subtle discussions offer a splendid intellectual foil to the emotionalism of the monk. The courtesan professes to despise his sermons, and like another Aphrodite to another Hippolytus, warns him of Venus' revenge for his scorn of love—is it not for love that man is born, and how else shall existence be redeemed? But Paphnutius, though his soul is parched with desire, pretends to scorn her charms; and the more he scorns her the more she secretly inclines to yield to his demand that she bury herself, for atonement, in a nunnery. As the man has followed beauty ("Surely," says Anatole, "beauty is the most powerful force in the world"), so the woman follows what she thinks is strength. She is tired of her slavish lovers and their stereotyped compliments; what a novelty it is to have a man whip her with commands! So she follows Paphnutius back into the desert and enters a convent, while the victorious monk returns to his cell.

But he has made the mistake of taking his

body with him; and now it torments him ceaselessly with sensual images and dreams. A spirit appears to him and reveals to him the truth which he has ignored: "You cannot escape me: I am the beauty of woman. Whither do you think to fly from me, senseless fool? You will find my likeness in the radiance of the flowers, and in the grace of the palm-trees; in the flight of pigeons, in the bounds of the gazelle, in the rippling of brooks, in the soft light of the moon; and if you close your eyes you will find me within yourself."²⁶ At last "the dream has more power than the reality;"²⁷ Paphnutius rushes out of his cell and across the desert, forces his way into the convent, only to find Thaïs dying a saintly death. He catches her in his arms, and discovers that he is holding a corpse. The holy nuns, scandalized by this resurrection of the flesh, drive him out into the desert, where he wanders through the night, mad.

Never in all literature had the triumph of the body over the soul, of the Epicurean and pagan spirit over the Stoic and Christian, been traced more subtly, or with such grace and melody of style. Here the artist is more than the philosopher, and the Epicurean creed is hinted at rather than professed. But in the other novels of this period—*The Rotisserie of the Reine Pédauque* and *The Opinions of Jérôme Coignard*—the sensual interest gets the upper hand over the artist, and for a time Anatole France revels Rabelaisianly. The Rotisserie of the Club-foot Queen is kept by the parents of Jacques Tournebroche; they

have marked him out for the priesthood, but instead he falls into the hands of Jérôme Coignard and two girls who have more beauty than virtue. The girls torture Jacques with their infidelity—"Do you suppose," the lovelier one asks him, "that it is so easy to be a pretty girl without causing unhappiness?";—while Coignard consoles him with philosophy. This jolly abbé is the most successful of all the portraits in Anatole France, barring, perhaps, M. Bergeret. He is a priest out of a job, whose perpetually falling trousers reflect (if trousers ever reflect) the looseness of his morals; his soul is torn between a sensual love for young women and an intellectual passion for old books. "What is woman compared with an Alexandrian papyrus?" he asks, the night before his love-affair with the sweetheart of his pupil. Against him stands the ascetic alchemist, d'Astarac, who scorns women and loves only science and salamanders. "Every union of the sexes, far from assuring immortality to lovers, is an evidence of death, and we should never know love if we were destined to live forever." And d'Astarac continues, Shavianly: "I have promised myself, with the help of science, notably to prolong human life, and to spread it over five or six centuries at least." He does not like the pleasures of the senses; eating is a deplorable bestiality, and "men's teeth are a sign of their ferocity."²³ "If in all the faculties a single doctor of chemistry and philosophy could be found, we should no longer be obliged to sit down to these disgusting orgies. He would prepare for us extracts of

meat, containing only what is in sympathy and affinity with our bodies. . . . Being no longer weighed down by the slow processes of digestion, men would become singularly agile, their sight would become wonderfully keen, and they would see ships gliding on the seas of the moon."²⁹ After this ethereal gospel the Abbé and his pupil Jacques get into a brawl over a girl, kill a lord, hide in the woods, and then kidnap Jaël, pretty daughter of the Jewish scholar Mosaïde. But Mosaïde pursues and stabs the Abbé to death; and thereby hangs the tale.

Across the centuries Anatole France sees essentially the same thing always—a man pursuing a maid. *The Red Lily* (1894) is another study of sense and sin, graced with the comments of that gentle Epicurean (formed, it would seem, on the matrix of Verlaine).—Choulette. Anatole believes that wisdom is a mixture of philosophy and love, and that the greater of these is love. "No one has been able to show me precisely the right way. . . . The feeling for the beautiful leads me. What man is certain of having found a better guide? . . . If I had to choose between beauty and truth I should not hesitate; it is beauty that I should keep. . . . There is nothing true in the world except beauty."³⁰ Sensuality is the basis of artistic sensibility, and makes three-quarters of the genius of great artists.³¹ So Anatole, in this stage of his development, is shamelessly Epicurean, naïvely sensual, like a child who finds Utopia in his thumb. He does not recognize sin, but only error; "Chris-

tianity has done much for love by making a sin of it."³² He quotes with zest "the prayer which a fine lass of the Genoese Riviera addressed to the Madonna: 'Holy Mother of God, who didst conceive without sin, grant me the grace of sinning without conceiving.'"³³ Nicias professes sensuality, Paphnutius is possessed with it without knowing it. Anatole admits that "everything is paid for in this world, and pleasure most of all;"³⁴ nevertheless, he "invariably advocates pleasure as superior to every kind of denial of nature, and he combats the theory that there is good in suffering."³⁵ "Let us not listen to the priests who teach the excellence of suffering" he tells a working-class audience: "for it is joy which is good. . . . Let us not fear joy, and when a beautiful thing or a smiling thought offers us pleasure, let us not refuse it."³⁶

Being an Epicurean in metaphysics as well as in morals, and believing with Epicurus that all things are composed of atoms variously arranged, he "highly approves of the arrangement of the atoms of which woman is composed."³⁷ It is true that he says almost the opposite occasionally: "I have noticed," says M. de Terremonde, "that well-made women . . ." "There are hardly any," says the Doctor. "Doctor, you remind me of my chiropodist. . . . 'If you were a chiropodist,' he says, 'you would take no stock in women.'"³⁸ Nevertheless Anatole is a willing slave to beauty, and regrets only that it has a tongue. In his little play, "The Man Who Married a Dumb Wife" (an elaboration of Rabelais) he tells of a

judge who finds, after much seeking, a surgeon who can restore to his wife her long-lost power of speech. "Bring my looking-glass," says the wife, on feeling her tongue loosened; and—"You old goose, you shall give me a new satin gown and a velvet-trimmed cape for my birthday."³⁹ And she enters upon such a Niagara of talk that the judge, to preserve his sanity, begs the surgeon to undo his operation; and when he is told that this would be illegal he arranges to have himself operated upon for the removal of his hearing.

It is difficult to discover just what has been Anatole France's fortune with the deadly sex: he has paid women the compliment of marrying twice; but some bitter disappointment lurks in such a sentence as—"To hope to leave a memory in the heart of a woman is to wish to stamp the imprint of a seal on the face of running water."⁴⁰ Perhaps, he says, women maltreat men rightly, revenging themselves because they are loved not for their own sake but for merely sensual satisfaction. "One must not be an egoist in love," Jaël warns Jacques; "that is what men do not well understand. But we teach them."⁴¹ And in his own person Anatole writes: "Woman forms the great educating influence for man; she it is who trains him in the gifts that charm—courtesy, discretion, and the pride that shudders to be self-assertive. She it is who teaches a few the art of pleasing, and all the useful art of not displeasing."⁴²

The ideal woman, he thinks, would be one who mystified and fascinated while her beauty shone, and then departed to a nunnery. Per-

haps woman was nappier under the sway of a supernatural religion than she can be in an age of science and scepticism. Anatole apostrophises woman:

"To make of you the fearful and wonderful thing you are today, to become the indifferent and sovereign cause of countless sacrifices and crimes, you still needed two things: civilization, which gave you veils, and religion, which gave you scruples. Since then your powers are perfected; you are now a mystery, and you are a sin. . . . Candidly, I do not think rationalism is good for you. In your place I should not be fond of the physiologists, who are so indiscreet, . . . who say you are sick when we think you are inspired. . . . That is not the way they speak of you in the Golden Legend; 'white dove,' 'lily of purity,' 'rose of love,' are the names they give you there. Surely this is more agreeable than to be dubbed hysterical, cataleptic, subject to hallucinations, as you are every day since science ruled the roost. . . . Take care, I say: already you have stripped off some particles of your mystery and your fascination."⁴³

V. THE SCEPTIC

Anatole France neglected Montaigne's warning: *Ne plus sapias quam necesse est, ne obstupescas*,—"Do not be wiser than is necessary, lest you become stupid." He studied almost everything, only to find out that he knew almost nothing. All education is a weakening of certainties; as soon as a man begins to reason the whole structure of belief begins to crack. "It is necessary to have sound views before having any views at all; for after that it is too late."⁴⁴ So Anatole doubts every-

thing; and Michaut properly calls *The Garden of Epicurus* "a manual for unbelievers." He goes beyond Taine and Renan, Gassendi and Montaigne; for whereas they believed nothing, he professes to accept all, and thinks that among all the philosophies and religions there is little to choose, and one may as well swallow them wholesale, as Hobbes advised. This is a bitterer scepticism than any doubt.

He loves Catholicism, as ones loves the place of his youth; but he has no delusions about its dogmas. The various creeds are only "very ancient systems of astrology and arithmetic, police regulations . . . cookery receipts and sanitary precepts, primitive agricultural maxims, and rudimentary rules of good behavior."⁴⁵ As for design, the universe astonishes him more by its incoherence than by its order and harmony. There may be a single chain that binds the world into a universe, but "in truth the rings of the chain are in places so entangled that the devil himself could not unravel them, logician though he be."⁴⁶ If there be a chain it is one of blind and ruthless determinism. In the story *La Muiron*, Anatole represents Napoleon as saying: "No man escapes his fate. Brutus, who was a mediocrity, believed in the power of the human will. A greater man does not harbor that illusion. He sees the necessity which limits him. . . . Children are rebellious. A great man is not. What is human life? The curve traced by a projectile."⁴⁷

We live on a drop of mud which revolves around a bubble of gas. Very probably

"there is no more repose in the spaces of the sky than on the earth; the same law of strife and struggle governs the infinitude of the universe. . . . To live is to destroy, to act is to injure. . . . The order of the universe is strife and murder, the blind interplay of hostile forces. She destroys herself; and the more I think of things, the more I am convinced that the universe is mad. . . . Nature, my only mistress, and my only instructress, offers me no suggestion to the effect that a man's life is of any value; on the contrary she teaches me in all kinds of ways that it has none. The sole end and object of living beings is to serve as food for other beings destined to the same end. . . . I would fain believe that organic life is an evil peculiar to this wretched little planet of ours. It is a ghastly idea that in the infinitude of heaven they eat and are eaten in endless succession."⁴⁸

In short, "the world is a tragedy, by an excellent poet."⁴⁹ He tells of a brute who, to win a wager of a bottle of wine, threw into the Seine the girl with whom he lived.⁵⁰ And in another story he mingles with his pessimism his distaste for literary inflation: A king, told that he has only a few more years to live, commissions a corps of savants to write for him the history of the world, that he may learn it before he dies; after a year, his illness having increased, he asks them to report, and is told that they are still engaged upon the history of pre-historic times; he begs them to concentrate their material and present it to him soon; but when, a few months later, he is near death, and asks for their results, he finds them still unprepared; at last, dying, he

begs the wisest of the historians to tell him briefly the history of the world; and the historian answers: "They were born, they suffered, and they died."

Anatole sees nothing to admire in nature and history except their unconscious humor. Nothing could be funnier than the hypocrisies, delusions and infatuations of men. We are food for the laughter of the gods. Surely, after making us, Jehovah must have looked at his work and seen that it was bad. "Never did artisan treat objects produced by his industry with more disgust and aversion. He thought of destroying them, and indeed he drowned the greater part of them in the flood, as they deserved."⁵¹ "We are nothing, my son, but animated pottery," says the Abbé Coignard. Indeed, seeing what a sorry world it is, the supreme joke is the unfailing industry with which men replace every death with one or more births, and follow every devastating war with renewed fertility. "It is certainly very unreasonable to bring little unfortunates into the world," says M. Bonnard to his housekeeper. "But the thing is done every day, my dear Therese, and all the philosophers on earth will never be able to reform the silly custom."⁵² (Our own philosopher had one child, the pretty Suzanne, who married a grandson of Ernest Renan, lost him in the War, and died in 1918.⁵³) And so, Anatole sadly concludes, it will continue till the sun ceases to give heat and the earth to give food; men will begin to starve; civilization will disappear; and "the last inhabitant of the earth will be as destitute

and ignorant, as feeble and dull-witted, as the first." Other species will supplant man as the lords of creation. There are invertebrates less sensitive to cold than man is. Who can foretell the future reserved for their activity and patience? Who knows if the earth may not become good for them when it has ceased to be habitable by us?⁵⁴

Everything is doomed to be superseded sooner or later; the law of death is written across the face of life. "I acquired a profound consciousness of the passing of things and the nothingness of it all. I divined that men were but changing images in the universal illusion, and from that day I was inclined to sadness, gentleness, and pity."⁵⁵ He says of Coignard—"tenderly he despised men."⁵⁶ And he repeats with affection his favorite formula: "Let us give to men, for their witnesses and judges, Irony and Pity."⁵⁶

His scepticism of science is as ruthless as his scepticism of theology. For scepticism is its own nemesis; to make a principle of doubt is to drive one's self back always to one's starting-point, and beyond. Anatole France, like Taine and Renan, had begun with faith in the mission and power of science to cleanse and reform the world; but that faith too he at last abandoned. "I hate science, for having loved it too much, after the manner of voluptuaries who reproach women with not having come up to the dreams which they formed of them."⁵⁷ Science deals with matter, space, and time: i. e., with unknowables, perhaps non-entities. We know only one reality—thought;

outside of man all is unknowable, and within him all is mystery; "we seek, and we only find ourselves."⁵⁸ Science is powerless because it cannot change human nature; and what is changed if that remains the same? Renan believed that science "would change the world because it can tunnel mountains. . . . He surrendered himself with smiling alacrity to the dream of a scientific morality."⁵⁹ But education does not increase goodness, it only increases cleverness. Since the development of universal education corruption and deceit have ruled the world.

And philosophy is just as impossible as science. "The systems constructed by the sages are only tales invented to amuse the eternal childhood of man. . . . After the example of the Greeks, I like stories, and take pleasure in what the poets and the philosophers say. Philosophy and literature are the Thousand and One Nights of the West."⁶⁰ As for Anatole, he scorns to make a system of his own; he prefers to tell the meandering story of some old scholar—some Bonnard, or Coignard, or Bergeret, or Trublet, or Brotteaux—and to put into their mouths his happy or unhappy thoughts. The story itself is nothing to him, the play of ideas is the thing. An editor confused the instalments of a book by Anatole France, and published them in wrong order: nobody noticed the error, not even the author.⁶¹ Such a method has the charm of *causerie*, and escapes the obligation of consistency. Anatole knows that there are contradictions in his thought; and makes no undue effort to resolve

them; on the contrary, "he contemplates in peace their eternal war,"⁶² as if his thought but faithfully mirrored the contradictoriness of things. "Each of us must be allowed to possess two or three philosophies at the same time; for unless you have created a doctrine, there is no reason for believing that any single one is good."⁶³ He thinks that the wisest of all utterances was Pilate's question about truth; and he does not think that men will answer it. Fra Giovanni, in *The Human Tragedy*, dreams of a many-colored disc that becomes white as it revolves; it is a symbol of truth, which is a composite of contradictions. Anatole believes with Montaigne that "to die for an idea is to set a pretty high value on conjectures."⁶⁴ "Theories are created and put into the world only to suffer from the facts which encounter them, only to be torn member from member, to be inflated, and at last to burst like a balloon."⁶⁵

"It is not by reflection and intellect but by feeling that one attains to the highest and the purest truths. . . . Thought is a frightful thing. It is the acid which dissolves the universe; and if all men were set to thinking at once, the world would immediately cease to exist. But this misfortune is not to be feared. . . . The truths discovered by the intellect remain sterile. . . . It is folly to try to move masses of men by reason. Prejudices, like laws and governments, can be destroyed only by forces blind, deaf, slow, and irresistible. . . . As a whole, the human race is possessed of an instinctive hatred of the intellect. It is engendered by the vague, deep-seated conviction that such hostility is

in its best interests. . . . The scientific verities which penetrate the average mind sink as though in a swamp, and drown. They cause no upheaval, and are powerless to destroy error and prejudice. Truths of the Laboratory, which hold sovereign sway over you and me, have no authority over the minds of the public. . . . Science has never harmed religion, and the absurdity of a religious practice may be clearly demonstrated without lessening the number of people who indulge in it. Scientific truths are not acceptable to the public. Nations live on mythology; from legends they draw all the ideas which are necessary to their existence. They do not need many, and a few simple fables suffice to gild millions of lives. In short, truth has no hold on mankind. . . . Truth has so many points of inferiority to falsehood as practically to be doomed to extinction. . . . Bernadotte of Lourdes has set countless pilgrims on the march and drawn thousands of millions to a mountain in the Pyrenees. And my revered friend Pierre Lafitte assures me that we have entered upon a period of positive philosophy. . . . The science of our day will bring forth superstitions. . . . Religions are coming into being under our very eyes. . . . They claim to found their beliefs on science. . . . Yet all things are possible—even the triumph of truth.”⁶⁶

Anatole concludes that “the joy of understanding is a sad joy.” Ignorance is a necessary condition of human happiness, and it must be admitted that in most cases we fulfill it well.”⁶⁷ The ancients wisely considered prophecy as a dark and fatal gift; and the unhappy Cassandra figured their belief. “If

it were possible for us to see what is to come, there would be nothing left for us but to die."⁶⁸ M. Bergeret, says Anatole, is to be pitied, for he thinks. "It is a great misfortune, especially in the country."⁶⁹ "God preserve you from thinking, my son," says Coignard to his pupil, "as he has preserved his greatest saints and the souls whom he loves with especial tenderness and destines to eternal felicity."⁷⁰

Nevertheless, Anatole France loves the pains of thought. "As believers who have attained a high moral perfection taste the joys of renunciation, so the savant, persuaded that all about us is but vain show and pretense, drinks deep of this philosophic sadness, and forgets himself in the delights of a calm despair—a profound and noble mournfulness, which those who have once tasted it would not exchange for all the frivolous gayeties and empty hopes of the vulgar herd."⁷¹ After all, it is so agreeable to philosophize! He repeatedly quotes the scholar who said that "we are weary of everything except the joys of understanding;" and he pronounces thought "the greatest of man's adventures."⁷² Thought is greater than action: "If Napoleon had been as intelligent as Spinoza he would have lived in a garret and written four books."⁷³ He translates lovingly a fragment of Epicurus: "Happy is he who possesses knowledge! He does not seek to usurp power from his fellow-citizens; he does not meditate an unjust act. Contemplating eternal nature, the unalterable order, the origin and the elements of things, his soul is stained by no shameful desire."⁷⁴ In truth, nothing is so

noble as thought. "The wonder is not that the field of the stars is so vast, but that man has measured it. . . . The earth is but a grain of sand in the barren infinity of worlds; yet if it is only on the earth that creatures suffer, it is greater than all the rest of the universe put together."⁷⁵

*The Human Tragedy*⁷⁶ is the record of Anatole France in this second period, the story of the rise and fall of his soul. He pictures the piety and happiness of the gentle Fra Giovanni; and tells how Satan destroyed this simple bliss by teaching the young monk how to think. "I will afflict these monks by telling them the truth," says His Nether Majesty, "and I will sadden them by pronouncing the discourses of reason. I will thrust thought like a sword into their hearts. And when they shall know the truth they will be unhappy. For there is no joy without illusion, and peace is to be found only in ignorance." So he introduces Giovanni to a worker who reveals to the youth the wrongs and sufferings involved in the economic arrangements of modern society. The soul of the monk is touched and fired, and he goes down into the cities to preach the new gospel of social justice. The next day he is in jail, brooding over civic liberties and economic slavery. The devil comes and talks theology with him, and Giovanni's arguments become warmer as his doubts increase. Suddenly his faith leaves him like a fallen garment, and he shivers in the cold air of denial with which Satan has surrounded him. He suffers, but with pride;

he is grateful for this bitter disillusionment; and as he follows Satan up the mountain-side he says to him: "Lo! I am a miserable man, because I have followed after you, Prince of men. . . . Through you I suffer, and I love you. I love you because you are my misery and my pride, my joy and my sorrow, the splendor and the cruelty of things; because you are desire and speculation. . . . I have tasted the fruit of knowledge of good and evil. . . . I love you because through you I am damned." And leaning on the Archangel's shoulder, he wept bitterly."

There is no doubt that Anatole France suffered some wounds of the spirit from his break with the creed of his youth. There was so much of the milk of human kindness in him, mingled with the lust for philosophy and meditation, that nature seemed to have formed him for a priest; and even to the end, despite his doubts, he had something of the Trappist monk about him, and called himself "a pawky Benedictine."⁷⁷ His home at the Villa Saïd had stained-glass windows, and his library was built like the interior of a chapel.⁷⁸ "He wore a long dressing-gown of clerical cut. . . . He always wore a skull-cap like the priests in chapel;" and sometimes he looked for all the world like a rabbi vowed to the Talmud. He was "an enthusiastic collector of religious objects. There was nobody in the world with more ecclesiastical tastes. . . . Pyxes, chalices, monstrances, patens and censers filled many cabinets to overflowing."⁷⁹ His ears could never forget the music of the old liturgy, nor

his eyes the splendor of the ancient ceremonies; Catholicism murmured in the depths of his soul like the bells of a sunken cathedral. He was still another of that line of great Frenchmen of whom Ste.-Beuve so aptly said that they would remain Catholics long after they had ceased to be Christians.

He had everything of religion except theology and the conviction of sin. He loved the old legends which his mother had poured into him, he liked nothing so much, apparently, as to revel in the esoteric subtleties of the theology which he condemned. "He adored the mysterious, though he did not believe in it;"³⁰ it was a relief to him from the banality of the real. He was always interrupting himself to tell the story of some saint,—as of "Aloysius Gonzaga, whose modesty was so great . . . that he could not remain alone in a room with his mother without blushing."³¹ It was part cause of his melancholy, no doubt, that these legends, which were so beautiful, were not also true. His feelings remained almost untouched by his thinking; in a sense he too, like another pagan, was *anima naturaliter Christiana*. Sometimes he spoke as if on slight temptation he would open up his heart again to the ancient faith.

"Far from being glad when I see some time-honored fallacy exploded, I think of the new one that will come and take its place; and I ask myself the question, Will it not perhaps be more inconvenient and dangerous than the other? On full and sufficient consideration, the old prejudices are less baneful than the new; time, by long usage, has

given them a polish, and made them almost innocent. . . . As long as man is suckled at a woman's breast, he will be consecrated in the temple and initiated into some mystery of the divine. He will have his dream. And what matter that the dream be false, provided it be fair? Is it not the destiny of man to sink in an everlasting illusion? And is not this illusion the very condition of life?"⁸²

VI. THE SOCIALIST

Behind this tender cynicism and this brilliant despair lay not only the uprooting of a cherished belief, but the apparent destruction of a beloved nation. No one is so patriotic as a Frenchman; and perhaps, on the side of culture, no one has better reason. Imagine a young man of twenty-seven, passionately devoted to his country and his city, hearing of the disaster at Sedan, watching the siege and capture of Paris, the despondent violence of the Communards, and their ruthless wholesale execution by the victorious bourgeoisie; imagine, again, the mature man of forty witnessing the decadence of French statesmanship, the corruption of French politics, the rise to power of an unlettered plutocracy, and the silent return of a religious reaction that had captured the army and the aristocracy, and through them threatened to capture the state: what an indecency optimism would have been in those unhappy days! They were, for France, years of atonement, of sober retrenchments in power and pride, and of dark-draped statues recalling a glory gone. It was too much to ask that a mind formed in that turbulent and

ignoble epoch should have risen to good cheer in politics or in philosophy.

Perhaps Anatole France had read too much history to be anything but a sceptic in politics. He smiled at men's hopes of democracy; men are still too near the brute to be the self-ruled freemen of a just society. The Abbé Coignard would not have signed the Declaration of the Rights of Man, "because of the sharply defined and unjust distinction made in it between man and the gorilla." "Whoever meddles with the government of mankind," says Anatole, gently, "should remember that they are monkeys." Says the Abbé again:

"Changing forms of government is the most frivolous and empty method of using one's intelligence. . . . Startling changes are merely displacements of particular men, and men taken in the mass are like one another, average in evil as well as in good. . . . I notice that after reforms men are as before—selfish, avaricious, cruel, cowardly, stupid, and frivolous by turns; and that there is always the same number of births, marriages, deceived husbands, and gallows-birds,—in which is made manifest the beautiful ordering of our society."⁸³

All progress, thinks Anatole, is slow and regular: "There will be no vast changes, and there never have been,—I mean rapid and sudden changes. All economic transformations have the kindly gradual operation characteristic of all natural forces."⁸⁴ The dependence of each condition of society upon its predecessor insures a graduation of development. He

compares this to Lyell's "unformitarian" theory in geology—that changes in the earth's surface come not by sudden eruptions but by slow erosion here and slow elevation there. "It strikes one what benefits this theory of subsisting causes would bring in its train, if it could be transferred from the physical to the moral" and political sphere. "The spirit of conservatism and the spirit of revolution would there find a common ground of reconciliation."⁸⁵ They found such reconciliation in his own philosophy, which was as radical as any in its advocacy of change, and as conservative as any in its condemnation of haste and violence.

The earlier mood, however, was almost entirely conservative. "A skeptic never revolts against the laws, for he has no hope that better ones can be made."⁸⁶ "Good and evil," says Nicias, "exist only in our opinion. The wise man has only custom and usage to guide him in his actions. I conform with all the prejudices of my time. That is why I pass for an honest man."⁸⁷ Anatole France believed, in those days, that the strong would forever exploit the weak, and that the weak would forever console themselves with heavens and Utopias. He protected himself, meanwhile, from his own ethical and esthetic sensibility by resolving to remain, as far as possible, rather a spectator of life than a warrior for such hopeless causes as freedom, justice, or truth. "I have always been inclined to regard life as a spectacle; I am a born sight-seer."⁸⁸ So he passed among human affairs like a tour-

ist through the Louvre; he told stories not as one interested in the issues, but as one sitting apart and at ease, looking down Olympially from some cloud or mountain-top, like an Epicurean god. He had achieved *aequanimitas* and *ataraxia*,—a peace of mind that could not be disordered or disturbed.

And then, in 1895, came the Dreyfus case. A Jewish officer in the French army had been charged with selling military secrets to Germany; had been condemned, degraded, and deported to Devil's Island, off French Guiana. Frenchmen who could be patriots without hating other peoples, investigated, and reported that in their judgment the incriminating papers had been forged. The courageous Zola braved all the powers of obscurantism and respectability by sharply challenging the forgers in "J'Accuse." Now Anatole France had in time past written very bitter criticism of Zola's novels; had said, for example, that it was better for Zola if he had never been born. But this was a matter in which Zola was right; and Anatole, who had more to lose than any writer in France, did not hesitate to come to Zola's support. On the morning after the publication of "J'Accuse," Paris was startled by the appearance of the "Protestation des Intellectuels" (1898); and it was amazed to find, high up among the signers, the name of Anatole France.

What had moved him to leap so suddenly from his ivory tower upon the battlefield? Partly, no doubt, his friendship with some of the leading Jewish writers and students of the day; but, more, his hatred of bigotry and in-

tolerance. He loved legends, but as legends; let the Church threaten to reassume its old prestige and despotism, and this apparently unconcerned spectator would not be too skeptical to fight. He saw behind the injustice to Dreyfus the control of the army by the Church, and an omen of the use of the army to restore the ancient regime. The Voltaire that had been dormant in him rose at the challenge, and once again the forces of superstition and reaction felt the sting of French satire and the bite of French wit. Anatole France now poured out books and pamphlets in a flood of wrath; he forged out of his gentle humor a relentless polemic, and out of his smooth pen a sword. In speech after speech he faced without fear the chauvinism of the mob; and though the crowd stood outside his house to jeer and denounce him, he fought on, with the others, till Dreyfus was retried, and acquitted, and reinstated, and the battle was won on every point. It was this test that revealed the man: behind the skeptic a believer with his own warm faith; behind the dilettante a warrior; behind the Epicurean a lover and a brother.

The *Histoire Contemporaine* is the record of his conversion, and of his development, in this third period, from an indolent spectator to an impassioned participant. *The Elm-Tree on the Mall* (1897), *The Wicker-Work Woman* (1898), *The Amethyst Ring* (1899), and *M. Bergeret a Paris* (1901) are the purposely aimless titles of this trilogy; in which the intrigues of the anti-Dreyfusards form the ephemeral scaffolding for the rival philosophies of a professor and his dog.

For M. Bergeret and his Riquet are the heroes of this intellectual Odyssey. The dog is perhaps the more illuminating thinker of the two, because he sees human affairs without human prejudice; and while M. Bergeret analyzes God and the state, Riquet quietly dissects M. Bergeret and man. In "The Thoughts of Riquet" we have the dog's philosophy:

"Men, animals, and stones grow larger as they approach me, and become enormous when they are quite close. It is not so with me. I remain the same size wherever I am. . . . The smell of a dog is a delicious smell. . . . I speak when I choose. From my master's mouth, too, issue sounds which have a kind of meaning. But their meaning is less plain than that which I express with my voice. Everything uttered by my voice means something. But from my master's mouth comes much nonsense."

Here is imagination and a delicately subtle shadowing of the prejudices of men. Observe, again, the sympathetic insight of the passage which describes Riquet's part in the transfer of M. Bergeret's belongings to Paris.

"During the days of the removal, Riquet roamed sadly through the devastated rooms . . . Strange, ill-clad, fierce and insulting men troubled his repose. . . . Chairs were taken from him as soon as he lay upon them, and carpets were abruptly dragged from beneath his persecuted body, so that in his own home he no longer knew where to lay his head."⁸⁹

Besides Riquet, M. Bergeret has a wife, who is less faithful to him. "'Tis only wise men

that are deceived," Fra Giovanni had said.⁹⁰ M. Bergeret, having found his wife comfortably seated in the lap of a friend, says nothing, and reduces her to despair by the unprecedented and inhuman trick of thereafter totally ignoring her existence. At last she chooses the interesting disgrace of a divorce in preference to this intolerable silence; and is replaced by the savant's sister, the virtuous and imperturbable Zoe.

Gradually, in these four volumes, M. Bergeret evolves like his creator from a leisurely conservative to an aroused rebel who is not above shouldering a musket—or at least grasping a pen—in the cause of righteousness. He still scorns democracy, and abhors revolution; but something has touched him into feeling.

"It is only the crazy and the ambitious who make revolutions. . . . To tell the truth, I do not attach any special importance to the form of the state. Changes of government make little change in the conditions of individuals. We do not depend on constitutions or on charters, but on instincts and morals. . . . No, I don't believe that men are naturally good. What I see is that they are emerging painfully and very slowly from their primitive barbarism, and that with great effort they are organizing a justice that is uncertain and a charity that is precarious. The time is yet far distant when they will be kind and gentle to one another. The time is yet far distant when they will not war upon one another, and when pictures representing battle-scenes will be hidden away as affording an immoral and shameful spectacle. . . . But I also believe that men

are least ferocious when they are least wretched, that in the long run the progress of industry will produce a certain softening of manners. . . . I anticipate that salvation will come from machinery itself. . . . The spark that flashed from the Leyden jar, the little subtle star that revealed itself in the eighteenth century to the wonder-stricken philosopher, will accomplish this miracle. . . . Science, not the people, possesses sovereign power; a stupidity repeated by 36,000,000 mouths does not for that reason cease to be stupid. Majorities, as a general rule, display a superior capacity for servitude. Among the weak weakness is multiplied in proportion to number. Mobs are always inert. They possess a little energy only when they are starving. . . . And how can we change the world? By the force of speech. . . . Nothing is more powerful. . . . It is an invincible weapon, without which the world would belong to armed brutes. What keeps them in abeyance? Merely thought, naked and weaponless. . . . It is thought which rules the world."⁹¹

In Paris M. Bergeret makes the acquaintance of the socialist and carpenter, Roupart, who comes to fix M. Bergeret's shelves and to tell him of the thousand-and-one varieties of radicals in Paris. "There aren't many socialists hereabouts," he says sadly, "and the few there are don't agree."⁹² He thanks the professor for coming to the defense of Dreyfus: "You did something quite out of the common; you cut your own class, and refused to have any truck with the brass hats and the sky pilots" (the army and the church). "I hate forgers, my

lad," says M. Bergeret; "surely that is permissible in a philologist?"⁹³

The entrance of Roupart was a symbol of the *union sacrée* of labor and the intellectuals in defense of Dreyfus; and it was a sign of Anatole's conversion to socialism. He had always sympathized with simple people; now he found his heart going out more and more, despite his skeptical head, to their apparently Utopian aspirations. He abandoned his notion of art for art's sake, and was happy to devote his genius to the cause of the oppressed. He took membership in the Socialist Party, which was to become, in the year of his death, the most powerful party in France; and he gave his services as speaker without stint or pride. Like William Morris in England, he let himself be taken to little out-of-the-way halls to speak to men and women tired and discouraged with toil and defeat. Perhaps there is nothing more beautiful in the history of literature than this picture of the great artist, the honored academician, coming down to the platforms of the people, and taking their side against the mighty. He met with the usual contumely: the Government sent *agents provocateurs* to his meetings, to discredit him with shouts of "Long live anarchism!"—but even that word could not frighten this scorner of all force. Paul Gsell describes him at this stage, when the old philosopher had become a political campaigner: "At a public meeting he has difficulty in finding words. He reads his speeches. He intones them in a nasal voice which is not lacking in solemnity. If he has to improvise

he stammers, and loses his head. The emotion itself is the most delicate compliment to the audience, which, proud of intimidating a man of genius, applauds him frantically."⁹⁴

He was not quite certain that the socialists were right in what they proposed, but he agreed with them heartily in what they condemned. He had long since denounced militarism, for example; and he looked upon conscription as perhaps the greatest of contemporary evils. He had made Choulette say:

"Conscription is a hideous invention of modern times. . . . To make killing an obligation on every man is the shame of emperors and republics, the crime of crimes. In ages which we call barbarous, towns and princes entrusted their defense to mercenaries who waged war with admirable prudence; there were perhaps some five or six men killed in a great battle. And when the knights went out to war, they were, at least, uncompelled; they had themselves killed for the pleasure of it; and undoubtedly they were not good for much else. No one, in the days of St. Louis, would have dreamed of sending to the front a man of learning and wisdom; nor would they have thought of snatching the laborer from the fields to force him into battle. But now we tell a man that it is an honor for him to be so conscripted; and if he does not like this kind of honor we shoot him. He yields because he is subject to fear; and because man is of all domestic animals the most timidly accommodating. . . . It is to be remarked that our clothes have great influence on our moral being. . . . It is enough to give a coward a bear-skin cap to make him go and

get his head broken in the king's service. . . . Civilized nations are like hunting-dogs. A perverted instinct drives them to destroy without profit or reason. . . . The truth is, that men of a common faith have no more urgent desire than to exterminate those who think differently, particularly if the difference is very slight."⁹⁵

Behind militarism is imperialism, the desire to establish imperial and autocratic authority over the lands and lives of simple peoples who have the misfortune of possessing valuable natural resources without an army or a navy.

"Fra Giovanni knew that the man who sells is the enemy of the man who buys, and that the art of trade is more mischievous, if possible, than the art of war. . . . The discovery of the West Indies, the exploration of Africa, the navigation of the Pacific Ocean, opened up vast territories to European greed. The white kingdoms joined issue over the extermination of the red, yellow, and black; and for a space of four centuries gave themselves up madly to the pillaging of three great divisions of the world. This is what is styled modern civilization."

Anatole calls it the White Peril.⁹⁶

His writings, during the first five years of the new century, were colored and heated with socialism. He spoke of a *préfet* who "felt before 'property' that kind of religious terror which the moon inspires in dogs;" he laughed bitterly at "the law," which "in its majestic equality, forbids the rich as well as the poor to sleep under bridges, to beg in the streets, and to steal bread;" and he made one of his shorter

masterpieces, *Crainquebille* (1902), a cameo of protest. An old street-peddler, too slow to move on at a gendarme's bidding, is arrested and falsely charged with having flung at the officer the war-cry of Parisian police-haters.—“Mort aux Vaches!” In court the officer lies so efficiently that Crainquebille wonders did he not say the thing after all? After serving a year in prison he comes out broken-hearted, and so poor in health that he can find no work that wants him; and other peddlers have long since captured his old customers. At last, in starving desperation, and hoping to find in jail the food that he cannot get outside of it, he confronts an officer and carefully pronounces in his face the cry that will surely bring him a sentence—“Mort aux Vaches!” But the policeman shrugs his shoulders scornfully, and passes on.

In *The White Stone* (1905) Anatole France offers us his Utopia. There is a “total suppression of private property” in the means of production. Mating and marriage are left quite free, and all children are supported by society. The entire continent of Europe is united under one socialist government; England alone stands aloof, but not untouched. “While having become socialistic she still retained her king, her lords, and even the wigs of her judges.”⁹⁷ Of course, there remains much room for progress: “there are still among us, as before, voracious and prodigal, industrious and idle, rich and poor, happy and miserable, contented and discontented, men. Yet all manage to exist, and that is already something.”⁹⁸

In such admissions the old skeptic betrayed himself as not quite submerged by the socialist; only Anatole France could smilingly inform us that even in Utopia there will be unhappy people. One suspects that this was not his real Eden; that in his heart he was an individualist; perhaps, in his gentle philosophic way, an anarchist. He loved to think "of that maker of pipes whom William Morris presents to us in that fine Utopian story of his, that simple-hearted craftsman who, in the city of the future, made pipes which surpassed all others in beauty, because he brought love to the making of them."⁹⁹ The same individuality which made him averse to system in philosophy and to dogma in science and religion made him doubtful of a paradise in which the government would be ubiquitous and supreme.

In his popular addresses he ignored difficulties and distinctions; one must take sides, as Voltaire said. But "when the ardor of battle began to cool, Anatole France returned very soon to his uncertainties, his beloved indecision. . . . He had not the forwardness, the front and mouth of brass, which are necessary to party-leaders."¹⁰⁰ He remained the student, unpolitical and impolitic, unwedded to any dogma, ready to survey friends and enemies alike with undeceivable eye, and to laugh at both of them,—as he does in *Penguin Isle* (1908).

This is his most sustained and powerful satire, whose modest scope is a symbolic history of France. An old missionary, Father Maël, comes upon some penguins whom he mistakes

for a new race of men; he preaches the Gospel to them, and touched by their attention, baptizes them. Thereupon all heaven is thrown into consternation, for it is against divine law to baptize any but men; a learned theological discussion ensues; and finally it is decreed that to save both the letter of the law and Father Maël's face, the penguins shall be changed into men, by a sort of divinely-accelerated Darwinism. Father Maël, after this concentrated evolution, gives the new citizens clothing, with dire results: all the males run after the first clothed female, and ignore the conservative and respectable ladies who are still naked. Possession in woman leads to possession in property; the males fight patriotically for mates and land, and set up laws and boundaries to protect their conquered property. St. Maël is horrified at the greed, jealousy and war which have followed upon his ministrations; but a fellow-monk assures him that the penguins are accomplishing the most august of functions—"they are creating law, they are founding property, they are establishing the bases of civilization." Out of this comes industrialism, which reaches its zenith in the United States. "Houses could never be built high enough; fifteen millions of men toiled in the giant city." One of the learned penguins arrives in New York.

"Having disembarked, he was waited upon by automatons in a hotel forty-eight stories high. Then he took the great railway that led to Gigantopolis, the capital of New Atlantic. In the train there were restaurants, gaming-rooms, athletic arenas, telegraphic,

commercial and financial offices, a Protestant church, and the printing office of a great newspaper. . . . The train passed along the banks of great rivers, through manufacturing cities which concealed the sky with the smoke from their chimneys, towns black in the day, towns red at night, full of noise by day and full of noise also by night.

" 'Here,' thought the doctor, 'is a people far too much engaged in industry and trade to make war.' . . . The doctor was brought into the hall of Congress, and cast his look upon the crowd of legislators who were sitting on cane chairs with their feet upon their desks. The president arose, and in the midst of general inattention, muttered. . . . : 'The war for the opening of the Mongol markets being ended to the satisfaction of the States, I propose that the accounts be laid before the finance committee. . . . Is there any opposition? . . . The proposal is carried. . . . The war for the opening of the markets of Third-Zealand being ended to the satisfaction of the States. . . . ' 'Have I heard aright?' asked Professor Obnubile. 'What? you an industrial people and engaged in all these wars!' 'Certainly,' answered the interpreter; 'these are industrial wars. . . . The number of wars necessarily increases with our productive capacity. . . . In Third Zealand we have killed two-thirds of the inhabitants in order to compel the remainder to buy our umbrellas and braces.' At that moment a fat man who was sitting in the middle of the assembly ascended the tribune. 'I claim,' said he, 'a war against the Emerald Republic, which insolently contends with our pigs for the hegemony of hams and sauces in all the markets of the universe.' 'Who is

that legislator?" asked Dr. Obnubile. 'He is a pig merchant.' . . . 'What?' asked Obnubile to the interpreter; 'you have voted a war with that rapidity and that indifference?' 'Oh! it is an unimportant war which will hardly cost eight million dollars.' 'And men? . . . ' 'The men are included in the eight million dollars.' Then Dr. Obnubile bent his head in bitter reflection. 'Since wealth and civilization admit of as many causes of poverty as war and barbarism, since the folly and wickedness of men are incurable, there remains but one good action to be done. The wise man will collect enough dynamite to blow up this planet. When its fragments fly through space an imperceptible amelioration will be accomplished in the universe, and a satisfaction will be given to the universal conscience. Moreover, this universal conscience does not exist.'"

In Book Six the *Affaire Pyrot* portrays the Dreyfus case, and here the great sceptic laughs even at himself. The story passes on to tell of the rise of organized labor, and the coming of a great revolution; but on the very last page the sceptic overwhelms the socialist, and, describing the rise of another master-class and another system of industrial exploitation, ends the book with an ominous repetition of the very words that had been used to depict the earlier slavery: "Houses could never be built high enough; fifteen millions of men toiled in the giant city."

The truth is, Anatole France had his doubts about revolution. There were two things which he hated as much as his gentle nature could hate anything—those twin evils, violence and intolerance. When Fra Giovanni is in jail,

arrested for a speech against the "Friends of Order," an anarchist prisoner invites him to join his party, saying: "My wish is to destroy the law by violence and compel the citizens to live henceforth in happy freedom. And know further that I have slain both judges and soldiers, and have committed many crimes for the public good." To which Fra Giovanni answers, passionately:

"Ill betide the violent!—for violence ever begets violence. Whoever acts like you is sowing the earth with hatred and fury, and his children shall tear their feet with the wayside briars, and serpents shall bite their heels. Ill betide you, for you have shed the blood of the unjust judge and the brutal soldier, and lo, you are become like the soldier and the judge yourself. Like them you bear on your hands the indelible stain. A fool the man who says, 'We will do evil in our turn, and our hearts shall be comforted. We will be unjust and it shall be the beginning of justice. . . .' If you disobey your masters, let it be by love. Neither fetter nor kill them, but tell them rather, 'I will never slay my brothers, nor throw them into chains.'"¹⁰¹

In *The Gods Are Athirst* (1912) the theme is again the uselessness and ultimate destructiveness of intolerance and violence. The scene is Paris in the days of the Terror; the protagonist is Evariste Gamelin, a Robespierriest who kills suspects with all the self-satisfaction of a Torquemada. Anatole France sees the Revolution red; it is not the oratory that remains with him most, but that quiet punctuator, the guillotine. At bottom, he thinks, the thirst of

the gods for human blood is the thirst of the mob; and Anatole, like every artist, distrusts the mob. He remarks of Georg Brandes that "he has flattered no one—not even the people."

The Revolt of the Angels (1914) is an allegory for every revolution. Satan revolts against God; it is freedom revolting against order, nature against restraint, the individual against society. Satan wins, and sets himself up as God, preaching the old dogmas, and retaining the pope as his vicegerent. "In thee I confirm the right and power to decide matters of doctrine, to regulate the use of the sacraments, to make laws, and to uphold the purity of morals. . . . Thou art infallible. Nothing is changed."¹⁰² Here in three words are the essence and formula of scepticism: Nothing is changed, even if revolution succeeds, even if Satan replaces God. The only note of hope comes in a speech of Satan to his defeated followers.

"Friends, if victory is denied us now, it is because we are neither worthy nor capable of victory. Let us determine wherein we have failed. Nature shall not be ruled, the sceptre of the universe shall not be grasped, except by knowledge alone. It is not blind courage (no one has shown more courage than you) which will win you the courts of heaven; but rather study and reflection. In these silent realms where we are fallen let us meditate, seeking the hidden causes of things; let us observe the course of nature; let us pursue here with compelling ardor and all-conquering desire; let us strive to penetrate her infinite grandeur, her infinite minuteness. . . . When she obeys us we shall be as gods."

VII. THE ARTIST

Anatole France was a philosopher; and the mellow subtlety of his thought, the universality of his interests, and the splendor of his learning have endeared him to those who pursue the elusive delights of speculation. But he was more than a philosopher, more than a scholar and a soldier in the war of human liberation; he was an artist. It is as an artist that he was supreme in his generation, and will be cherished for many centuries in the memory of the initiate.

He merely missed perfection. He was not a master of construction: whereas his shorter stories are of admirable technique, his novels lack unity, and tend to be loosely episodic; only in *Thaïs* did he find the unity of interest, the symmetry of structure, and the inevitability of development which make for faultless form. And he lacked originality of matter: his plots were taken anywhence, with as high a hand as Shakespeare's, and with as good excuse—that he adorned whatever he stole. All ideas, he held, are as old as thought, and belong to everybody; creation is in the form, not in the stuff. Yet *Thaïs* too much recalls Flaubert: and *The Garden of Epicurus* is touched with that fragrant pessimism which we associate with Renan. And lastly, his creations were almost exclusively introspections: he could not forget himself, he could not erect, by the power of his imagination, characters quite unlike his own, as Shakespeare did, or Balzac; no matter

what the name may be,—Servien or Bonnard, Bergeret or Coignard, Vence or Dechartre, Trublet or Brotteaux,—the men are as invariably Anatole as the heroes of Byron are Byron.

But if he lacked something of creative imagination (and he confessed this with admirable simplicity¹⁰³), he atoned for it by the rarity of his re-creative imagination. As if possessed of some miraculous Time-Machine, he moved at will into different epochs of the past, and through patient scholarship and delicate understanding filled those ancient ages with vivid life; through the lenses of his art distant periods grew, and moved up into the near and visible. He saw these alien centuries more clearly than most of us see our own; he described them with a sympathetic penetration which makes the realism of realists seem unfaithful and obscure. He delighted to enter into dead theologies and antique philosophies, and knew their esoteric minutiae as perhaps no other scholar of his time. He could be ruthless in revealing the actual perspective of history, as in "The Procurator of Judea"; but at the same time he felt the beauty of the ancient lore and could show it in his pages as if with the most transparent innocence of belief. He could mercilessly divest the story of Jeanne d'Arc of all miraculous content, and yet present her as the lovably simple girl whose visions stirred a defeated nation to courage and victory.

What he did always—on every page of every book—was to lavish love and care on every line. His religion consisted of an affection for

mankind and a passion for perfect prose. He did not admire, though perhaps he envied, the romantic type of genius which soars on the wings of song, and composes without effort and—without thought. He spent himself on achieving the finished form, believing that form held the secret of artistic immortality. "Form is the golden vase which preserves thought, whose essence is fleeting, for posterity. . . . One survives only by form. . . . To give a new form to a new idea is all of art, and the only creation possible to man."¹⁰¹

And so he wrote better than any Frenchman of his generation; and his style is a precious perfume that almost dulls the sense with its intoxicating charm. It is a fluid style, compounded of tenderness and disillusionment; as gentle as the dew and as clear as a day in June; a subdued style, quiet, soft, almost languorous and voluptuously beautiful. Take one example: he tells how, reading the Greek classics, "*il voyait des figures divines, des bras d'ivoire tombant sur des tuniques blanches; il entendait des voix plus belles que la plus belle musique, qui se lamentaient harmonieusement.*"—"He saw divine figures, with arms of ivory falling on tunics of pure white; he heard voices more beautiful than the sweetest music, raised in harmonious lamentation."¹⁰² He had that ear for music which seems indispensable for style; his words caress their subject, and his phrases fall of themselves into sombre and gentle harmonies.

His style, again, delights with its clarity and simplicity. French writers, he said, have three

great qualities: clearness, clearness, and clearness;¹⁰⁶ well, Anatole France had all three. "There is a means of attracting which is within the reach of the most humble, and that is naturalness."¹⁰⁷ He could be romantic when he wished, as in speaking of the fingers of a child's hand "like the rosy rays of a star;" but he rather shunned such colored metaphors. "Let us beware of writing too well," he warned; "it is the worst way there is to write."¹⁰⁸

But his was a simplicity that had absorbed complexity, as his clarity had been chiseled painfully out of obscurity. Behind his naïveté is the subtlest irony; his understatement is the shrewdest emphasis. He says of Renan: "If we may believe this amiable shepherd of souls, it is impossible for us to elude divine mercy, and we shall all enter Paradise—unless, indeed, there be no paradise, which is exceedingly probable;"¹⁰⁹ nothing could have better summarized Renan. He likes to build up an imposing paragraph and then, like Heine, to destroy it all with the last word, like some infant architect destroying his toy palaces with imperial nonchalance. Never even in the history of French literature has there been so delicate a poise between subtle thought and transparent phrase; one forgets that it is philosophy, because philosophy is so seldom dressed in such perfect art. This imperceptible union of matter and form, this wedding of wisdom and beauty, constitute the distinctive achievement of Anatole France. His soul was large enough to know the good, the beautiful, and

the true; and his skill sufficed to show them in all the splendor of their natural unity. He was a great artist.

VIII. THE LAST PHASE

When the war came, in 1914, Anatole France, age seventy, offered himself as a volunteer. Not that he loved peace less than before, but France a little more; he could not contemplate with his wonted equanimity the possible destruction of the fairest civilization in the modern world. "What you are defending," he told the soldiers of his country in 1915, "is our immortal patrimony, our mores, our customs, our laws, our habits, our beliefs, and our traditions; the work of our sculptors, our architects, our artists; the song of our musicians; the mother-tongue which for eight centuries has flowed unceasing from the lips of our poets, our writers, our historians, our philosophers. . . . What you are defending is the French genius, which gave the world light and brought the nations liberty."¹¹⁰ It was not the France of Viviani and Millerand and Poincaré that he defended; but the France of Montaigne and Voltaire and Victor Hugo and Renan; he could not bear to think that they should be forgotten, or that France should never again bear their like.

From his dream of a just peace and a united Europe, the Treaty of Versailles awakened him; it filled him almost with despair to see the same men who had brewed the poison on which Europe had gone mad, restored to of-

fice and empowered to prepare another holocaust. He greeted the Russian Revolution with gladness and thanksgiving; whatever its violence and its errors, he thought, this was a challenge in the face of which Western Europe would be compelled to cleanse and renew itself. His friends among the mighty were amazed to hear of his joining the Communists, but not more amazed and chagrined than he had been to see the leaders of his country ape the militarism of the defeated foe; it was his way of telling them that his heart was with the lowly whose blood had been shed, rather than with the great who calmly counted the losses in men and calculated the gains in gold. When, in 1921, he received the Nobel prize for literature, and, returning from Sweden, found that the French Academy had been so shocked by his new affiliations that it had abandoned its plans for tendering him a reception, he smiled with relief, and gathering his simpler friends about him, feasted unconstrained. The victory of the liberals in the year of his death gave new bloom to the hopes that sprang eternally in his young heart.

His splendid home at 5 Villa Saïd was the rendez-vous of Cabinet-members like Caillaux and Painlevé, of geniuses and workingmen. It was a temple of art and friendship, where the master conversed with his disciples, or brooded in solitude over his collected treasures of painting, statuary, and engraving. "With a reverent hand he took the little Cupid, and raising it to his eyes, almost to his lips, he caressed it tenderly."¹¹¹ When a Russian girl refugee

came to seek protection, she was frightened away by the wealth in which she found herself upon opening his door; she could not see that it was not wealth but beauty. Later, such troubled souls came to him unafraid, and sometimes perhaps too unabashed. "Here," said one young visitor, "is a bomb in two parts. Separated, nothing to fear. If the two halves are screwed together, the whole house blow up." "Do not screw them, please," said Anatole, gently. "And take my word for it, my young friend, as long as there are other means, we must have recourse to them. Remember this: homicidal justice, even when administered by a people struggling for freedom, can never be anything but a wretched substitute. It is not good to quench with blood the thirst of the gods."¹¹²

He had to die, as all things have to die. That we simpler souls should die, that nature should cast us back ruthlessly into the crucible of being and mould us into worthier stuff,—that perhaps we can understand and forgive. But that genius should die, that the creative heart should beat no more, and the creative hand lie forever still, how can we ever forgive that?

When he passed away, on October 12, 1924, his country became magically united by the generous influence of his name. President and Premier joined the line of people who, from morning to evening, filed by his coffin to bid farewell to the man who had upheld, in his generation, the supremacy of French letters. When he was taken to the cemetery at Neuilly,

the five miles of intervening streets were lined five and ten deep with patient thousands that had waited for hours to see the body pass. Not since Victor Hugo's death had France so mourned a son.

Shortly before his death an American magazine had sent to all prominent artists, writers, and critics of the United States a request for a list of the world's greatest geniuses, arranged in the order of their preference. When the replies were averaged the first in standing was Shakespeare. The second was Goethe. The third was Anatole France.

NOTES

(References are, in most cases, to the English translations in the Library Edition of Chapman and May, published by John Lane. Where French titles are given in Italics the reference is to the French edition.)

(1) The Garden of Epicurus, p. 47. (2) He was apparently of purely French ancestry, though some have claimed that there was in his parentage a strain of Jewish blood. (3) *La Vie litteraire*, vol. iii, p. 295. (4) Quoted by J. H. Robinson, *The Mind in the Making*, New York, 1921, p. 64. (5) *On Life and Letters*, vol. i, p. 247. (6) Quoted by Shanks, *Anatole France*, Chicago, 1919, p. 7. (7) *Pierre Noziere*, p. 19. (8) *Little Pierre*, p. 28. (9) *Ibid*, p. 134. (10) Quoted by G. Michaut, *Anatole France*, Paris, 1913, p. 48. (11) *Little Pierre*, p. 51. (12) *Pierre Noziere*, pp. 59, 72; Shanks, p. 22; Brandes, *Anatole France*, New York, 1908, p. 15. (13) *Book of My Friend*, p. 68. (14) *Elm-Tree on the Mall*, p. 13. (15) *The Flower of Life*, in *The Dial* for October, 1921. (16) Michaut, p. xii. (17) *Sylvestre Bonnard*, p. 35. (18) *La Vie litteraire*, vol. i, p. 17. (19) Zola might have returned the charge

by citing Anatole's fondness for women's underwear—e. g., *The Wicker-Work Woman*, p. 210; *The Amethyst Ring*, p. 221. (20) *On Life and Letters*, vol. i, p. viii. (21) *Pierre Noziere*, p. 72. (22) *On Life and Letters*, vol. i, pp. ix and xii. (23) *Ibid.*, vol. ii, p. 233. (24) *Ibid.*, vol. i, p. 70. (25) *Thais*, p. 83. Anatole liked to tell of the difficulty which Gollet had with this name in writing the libretto for Massenet's opera. "Gollet confided to me that he would not be able to retain the name of Paphnuce for my hero, because he had difficulty in making it rhyme with noble words. All he could find was *puce* (flea) and *prepuce* (foreskin); and he was not satisfied with that. So he chose another name, Athanael. Athanael rhymes with *ciel* (heaven), *autel* (altar), *irreel* (unreal), *miel* (honey), which are nice words fit for polite society." THE NATURE OF DREAMS.

THE DREAM WORLD.

It has been said that three main problems confronted the mind of primitive man. These were (1) The difference between living and lifeless bodies; (2) the nature of the figures seen in dreams; and (3) the fate of the individual soul after bodily death. Curiously enough, these three problems still remain with us—the first a biological problem, the second a psychological, and the third a problem for psychical research. The “dream people” will be discussed, briefly, in this little book, while the other problems will be found in the books devoted to Life and Psychical Research respectively.

Dreams have been the subject of study and speculation throughout the ages, but it is only within the past few years that a serious and systematic attempt has been made by psychological science to understand and interpret them. But when I say “interpret” them, it must not be thought that the ordinary popular Dream Book interpretation is accepted. An alphabetical list of dream-interpretations is scientifically impossible, because each dream differs, very largely, according to the individual case, and has to be interpreted differently. It is therefore useless to write, describing a vivid dream, and ask for its interpretation off-hand. Scien-

tific interpretations cannot be given in this manner, except in the most general terms. The dream must be carefully studied and analyzed, at first hand—and it often takes days and weeks of careful study to get at the root of a certain dream, and to ascertain its true causes. Dreams are symbolical, and can be interpreted; but this form of interpretation is a very different thing from a typical Dream Book alphabet!

Dreams are psychic phenomena which we all experience, and are consequently of interest to practically everyone. In our dreams, we enter a world all our own, which we share with no one, except perhaps the "people" of our dreams; but even then we are usually the central and dominating figure. Dreams are at any rate sufficiently universal to warrant a brief study of their causation and nature, from the point of view of psychological and also psychic science. This I have attempted in the present volume.

THE MYSTERY OF SLEEP.

Dreams (with the exception of so-called "day dreams") transpire in a very mysterious state known as sleep. Men, animals and even plants and vegetables sleep, but we do not know even yet the exact cause and nature of sleep.

All sorts of theories have been propounded to explain it. Some authorities have thought that an excess of blood in the brain is the cause of sleep; but it was afterwards proved that exactly the reverse of this is the case; there is much less blood in the brain during sleep than there is during waking hours. When we wake

THE NATURE OF DREAMS

up and begin to think, more blood flows into the brain.

Some have contended that sleep is a pathological condition; but this is disproved by its naturalness and universality. Others have advanced the view that an altered condition of the nervous system is the cause of sleep; but there is no direct proof of this, except in the cases of animals which have been narcotized; and this is not a natural condition.

The usual theory held is that sleep is due very largely to chemical (toxic) substances, which accumulate within the system and gradually poison it, during the day's activities; these slowly poison the body, and sleep is a period of rest required to throw off these poisons and restore a normal condition.

There is much to be said in favor of this view, and there is doubtless some truth in it. But it is not the whole truth. For, in the first place, sleep may be delayed by an effort of will; then, artificial sleep of a protracted character may be induced by means of hypnotism; again, most men and women seem to need about the same amount of sleep, no matter whether they do a great deal of work during the day or hardly any at all! All this ought not to be so, if the purely chemical theory were correct.

It is now believed that sleep is a time in which excessive blood-pressure is reduced to normal; this may be true, but it does not explain to us the nature of sleep, nor even its true cause.

The psychological factor is very important, as a cause of sleep. Dr. Boris Sidis conducted

a number of experiments upon animals, in which he covered up the eyes and ears of the animals with thick cloths, and the animals very soon fell asleep. Lack of external stimuli is therefore a great factor. Even in the case of man, when all the senses are cut off, there is a tendency to fall asleep. But this in itself is not a sufficient explanation of its cause, much less its inner nature.

Professor Claparède has advanced the view that sleep is a protective mechanism, adopted by Nature to prevent the body from becoming too exhausted. (This is a biological theory of sleep.) While this may be true, it does not explain to us the nature of this mysterious state.

My own theory is that sleep is a vital process, and that during the hours of rest and sleep the human brain and nervous system are in some way recharged by vital energy, in much the same way that a storage battery is recharged by electric energy. It is a period during which the vibrations of life become equalized and rendered harmonious. It is also the resting time of the mind and soul. This would perhaps explain to us the unique recuperative power of sleep; for we know that even a few moments sleep will at times completely refresh us,—which would be quite impossible on any of the orthodox theories.

But the exact nature of sleep is still a mystery—equally with dreams—which are the mental phenomena that take place during the apparent eclipse of consciousness in the state known to us as “sleep.”

SOMNAMBULISM.

Among the most curious phenomena presented during sleep are cases of somnambulism, in which the sleep-walker walks, talks, laughs, cries, etc., without waking up,—usually knowing nothing of his actions the next morning. There are two kinds of somnambulism: artificial and natural. Artificial somnambulism is induced by hypnotism, etc., while the so-called “natural” states occurs spontaneously, and is often observed in cases which appear to be, in every other respect, perfectly normal.

There are various kinds of somnambulism, the most common probably being that in which the subject arises from his bed, and walks about the house, or even out of doors, either in night-clothes or after completely dressing. In the latter case, the subject invariably undresses again, before getting back into bed—showing us the force of habit!

The somnambulist is, of course, acting out his dream, and his actions are governed by the character of that dream. The people whom he sees and addresses are dream people, and no attention is paid to real persons who speak to him. If conversation is carried on with real people, during an attack of somnambulism, it is because the real people have been temporarily endowed with the character and personality of the dream personage. The scenes which are perceived are also dream scenes, and not real ones, even though the eyes may be open. There are indications, however, that a certain amount of visual perception takes place, uncon-

sciously—enabling the somnambulist to avoid obstacles placed in his way, cross streets, etc. However, inasmuch as he is living in a dream, it is more due to luck than anything else that accidents to the sleep-walker are not more common than they are.

If the somnambulistic dream is broken off, there is always a tendency on the dreamer's part to go back and finish it, and the new dream begins just where the old one left off. There are cases on record where the dreamer has finished a word which was broken off in the middle, when the subject was purposely awakened.

It is often dangerous to awaken the somnambulist too suddenly. The shock to the heart and the whole nervous system is bad; and again the subject himself may suffer considerable fright on finding himself out of bed, and in some distant locality—particularly if this is one of his first experiences of the kind. Some somnambules have tied their ankles to the bed-posts, in order to prevent their nocturnal ramblings; but in a few cases known to the writer, the sleep-walker carefully untied all the knots before getting out of bed, and went roaming as usual. She knew nothing about it the next morning.

Laughing and crying in dreams usually indicate the character of the dream itself, the former representing a pleasurable and the latter an unhappy experience. Talking in dreams is very common among children, whose dreams are, as a rule, more vivid than the dreams of adults. In many cases an onlooker can enter

into conversation with the dreamer and obtain a good knowledge of the dream processes by a discussion or cross-examination of this kind.

Somnambulism, or sleep-walking, is to a certain extent an abnormal state, calling for treatment. Some hope, wish, or fear which is dormant in the sub-conscious, but not powerful enough to express itself during the waking life, may utilize the body and carry out its desires, during the sleeping state. Any wish or fear of this character, which is powerful enough to produce this effect, is in need of removal, and a suitable course of psycho-therapeutic treatment is advisable.

In somnambulism, the motor processes of the body are utilized, instead of the purely sensory processes, so that we act and move instead of merely seeing, hearing, etc., in the dream.

PECULIARITIES OF DREAMS.

The Ancient Greeks called the souls of those who had died "shades." They were supposed to dwell in some bleak, gloomy and cheerless sphere of activity, envying those yet alive. It is curious to note how closely this conception of an after-life coincides with our dreams; in fact, it has been suggested that their theological ideas were based upon their dreams—for in sleep the soul was thought to wander in this cheerless land also.

"When we fall asleep," says Mr. Havelock Ellis, "we enter a dim and ancient house of shadow, unillumined by any direct ray from

the outer world of waking life. We are borne about through its chambers, without conscious volition of our own; we fall down its mouldy and rotten staircases, we are haunted by strange sounds and odours from its mysterious recesses; we move among phantoms we cannot consciously control.

"As we emerge into the world of daily life again, for an instant the sunlight seems to flash into the obscure house before the door closes behind us we catch one glimpse of the chambers we have been wandering in, and a few more or less fragmentary memories come back to us of the life we have led there.

"But they soon fade away in the light of common day, and if a few hours later we seek to recall the strange experiences we have passed through, it usually happens that the visions of the night have already dissolved in memory into a few shreds of mist we can no longer reconstruct."

This curious characteristic of dreams has often been remarked—Viz. the subdued quality of the light. Very rarely do we see sunshine in our dreams. To be sure, there are exceptions to all rules; some people often dream of sunshine. But, in the majority of cases, brilliant light is rare; a dusk, smoke-colored, shadow world is ours. Bright colors are relatively infrequent. Most dreams are of one flat color—like smoke. Scarlets, greens and blues are rare indeed in our dream world.

Many persons, indeed, in reporting their dreams, have stated that they seem invariably to be in some night scene, but poorly illum-

inated. Others say they seem to be moving about in a dense fog. (From an occult point of view, there may be much truth in these statements, as we shall presently see.)

Another peculiarity of the dreams experienced by many individuals is that the people all seem to be *two-dimensioned*—that is to say they have length and breadth, but no thickness! They resemble people cut out of cardboard, like the little images constructed for the toy theatres played with by children. Others, again, assert that most of the people they see are transparent; while still others state that the people they see in their dreams are life-like, opaque and solid.

Which are yours, reader? And are your dreams colored or shadow-like? See if you can note and remember this when you go to sleep and dream tonight!

THE PSYCHOLOGY OF DREAMS.

How the mind works when it is dreaming is one of the most curious things in Nature. For millions of years men have dreamed; for years dreams have been studied, but even yet there is much to be learned concerning them. What causes our dreams? There are many factors at work, of which only a few can be touched upon here.

First of all, however, we know that physical stimuli or sensations will serve to induce them. Dr. Maury was one of the first to study this subject in detail. He found that, if he were

cold, he dreamed of ice and snow, or of being on the street naked. If he were too warm, he dreamed of tropical scenes, or even of fire!

He secured the assistance of a friend, who sat beside him quietly, as he slept, and conducted a number of experiments upon him. He tickled him with a feather, pinched his ear, pricked him with a pin, made faint noises, or held under his nose various odorous substances. All these sensations were carried to the brain of the sleeping man, and caused various dreams—clearly traceable to the stimulus employed.

The mind, however, does not merely record the sensation; it symbolizes and elaborates and dramatizes it. It weaves the external stimulus into a sort of story, which serves to make up the dream. This is one of the most extraordinary powers of the dream-consciousness.

Thus, if a door slammed, it was interpreted in the dream as a pistol shot. But not only that! The dreaming mind wove a complete romance of its own around this sound. For the subject dreamed that he met a man in a tavern with whom he quarreled; they agreed to a duel; they met on the dueling ground; details were arranged by their seconds; they paced off their distances, finally they both fired at one another. These shots coincided with the slamming of the door!

This incident also brings home to us one very remarkable point: that is, the enormous rapidity of dreams. For, between the slamming of the door and the waking-up, only a moment elapsed; the noise "woke" the man.

And yet that brief interval was long enough for the dream-mind to plot this long story, and to dramatize the sound, and weave about it a whole romance.

Some dreams, therefore, are very brief in their duration, and it has been proved that dreams which seem to us to consume whole hours actually take but a fraction of a second. This is a very significant fact, for it seems to show us that the human mind, when unencumbered by the material brain in the ordinary way, can think and function with enormous celerity.

VARIOUS TYPES OF DREAMS.

How many types of dreams are there? From one point of view, one might say that they were innumerable; from another, that they are very limited in aspect. The followers of Freud, for example, insist upon placing all dreams into two or three categories, of which they are merely symbolic.

Dr. Frederick van Eeden of Holland, a keen psychologist, who has lectured in America at Columbia University, kept a diary of his dream-life for more than a quarter of a century, and closely analyzed all his dreams. He came to the conclusion that there were, in his own case at least, *nine* types of dreams, several of which are not recognized at all by the Freudian school, or by orthodox psychology. He lists and classifies them as follows:—

(1) *Ordinary* dreams, indifferent in character, not vivid and not easily recalled. These probably occur all through ordinary sleep.

(2) *Very vivid* dreams, usually unpleasant, which occur when the recorder is nervously disturbed. Recollection of them is clear, they are rare, and wrong with regards the events of life.

(3) *Symbolic* or *mocking* dreams, demoniacal and erotic in character, which also occur, rarely, when sleep is disturbed. They left the sleeper with a feeling of shame, upon awakening.

(4) *General dream sensations*, not unpleasant, rare, not clearly recalled. Some of these seemed to be premonitory in character.

(5) *Lucid dreams*, highly pleasant, with floating or flying sensation, which always occurred between 5 and 8 a. m. Those only came in good health, were clearly remembered, frequent, and had beneficial effects upon the body.

(6) *Demon dreams*, so-called, not unpleasant, though demoniacal. They usually occurred after the last type of dreams. Body in good condition; recollection of them not quite complete; frequent; proved refreshing.

(7) "*Wrong waking up*," so-called, demoniacal in character. These dreams occurred near waking, when the health was good. Clearly remembered, though rare.

(8) *Initial dreams*, pleasant in character, occurring immediately after falling asleep. Occurred when tired; were clearly remembered and rare.

(9) *Pathological or abnormal* dreams, unpleasant in character, occurring at any time during sleep, when the health was bad. Not clearly remembered, and the effects were unpleasant.

It will be seen that this classification is very different from all others, but it is based upon many years of self-observation. With this "Dream Diary" before him, the reader might find it interesting to attempt a classification of his own dream life, and see how far it agrees with this list.

These dreams are all fairly well described by their names, except, perhaps, the "wrong waking-up" type. What is this? Dr. van Eeden thus defines it:—

"We have a sensation of waking-up in our ordinary sleeping room, and then we begin to realize that there is something uncanny around us; we see inexplicable movements or hear strange noises, and then we know that we are still asleep. In my first experience of this dream I was rather afraid and wanted nervously to wake up really. I think this is the case with most people who have it. They become frightened and nervous, and at last wake up with palpitations, and sweating brow and so on."

These dreams, it will be noted, are very similar to the "dream within a dream" variety, in which the dreamer dreams that he is dreaming. This is a curious type of dream, which will be explained more fully later on.

HOW DREAMS ARE ANALYZED.

Of late years, much attention has been paid to the subject of dreams, by reason of the wide publicity given to "psycho-analysis," and by general discussions of dream psychology. A brief exposition of this subject is therefore in place, in a book of this character.

Psycho-analysis is an attempt to get at the contents of the subconscious mind, in order to discover the underlying causes of certain mental and emotional disturbances which may be manifest. This is more readily done by means of dream-analysis than in any other manner, since dreams are constant and direct manifestations of the subconscious activities,—afterwards brought over into consciousness.

When we awaken in the morning, let us say, we remember a certain dream. But our memory of this dream is not complete. It is only partially remembered. What we remember of the dream is usually the so-called "manifest content" of the dream, and beneath this is the "latent content," which represents the "skimmed milk" of the dream, so to speak, while the manifest content is only the "cream" at the top. We want to get at this latent content, and the best way to do this is by means of psycho-analysis.

The subject is placed in an easy chair, in a quiet room, and asked to close the eyes, and recount the various scenes which rise before him, as he sits there,—beginning with the dream he remembers. No matter how dis-

connected and apparently unrelated these scenes or pictures are, they must be told, freely and frankly. These utterances are then recorded, and it will be found that more and more of the dream is thus disclosed, and a deeper and deeper penetration effected into its hidden mechanism and motive.

Most dreams are thus found to represent some *wish*, which is projected into the dream, in more or less symbolic form. Freud goes so far as to say that practically all dreams typify a desire which might be expressed in the sentence: "I would that—." The majority of dreams, when thus analyzed, are found to be consistent, rational, systematic, and to express some longing or wish, which has been repressed, but which is at least partially expressed in the dream. Many dreams are found to be fundamentally sexual in character.

Why do we not remember the whole dream, but only a part of it? The reply is that the greater portion of the dream is not allowed to rise into consciousness, but is retained in the subconsciousness; it cannot pass what is known as the "Censor," a sort of psychic Guardian, which permits only the more manifest or harmless portions of the dream to emerge. This Censor is supposed to be a semi-psychic entity, built-up within us by the force of our environment, and forces of civilization of which we are a part, and in which we are merged. But the subconscious mind is still primitive, is still savage, and expresses its thoughts and desires in dreams, freely and frankly; these thoughts are repressed by the

Censor, since we would not permit them free expression in our waking state.

By means of psycho-analysis, hidden "complexes" have been discovered—that is, clusters of thoughts, emotions, feelings and sentiments which have grouped themselves together about a certain feeling-thought. Not all these complexes are abnormal; in fact our educational processes are based largely upon their existence. But many of them are abnormal, especially those connected with some fear-thought, and, when this is the case, we have a sort of "psychic tumor" growing within the mind, which (as it were) presses upon it, in much the same way that a physical tumor presses upon some healthy organ in the body, interfering with its proper functionings. And, just as the physical tumor must be removed by means of a physical operation, so this psychic tumor (the abnormal complex) must be removed by means of a "psychic operation," that is, by means of psycho-analysis, which discloses the hidden complex; and, after it has been discovered, removes it by means of suitable psychotherapeutic measures—suggestion, and so forth.

Psycho-analysis has doubtless done much good, by unearthing our hidden fears and complexes, and has cured many people. But it has probably been over-done by enthusiasts in this field. The Psycho-analysts have a good thing, but they have run it to the ground. Not all dreams are to be accounted for by this means; and again, not all dreams are of the meaning and complicated character which they are said

to be. Nevertheless psycho-analysis has accomplished much good, and great progress has been made in the understanding of our dreams thereby. Because of this, psycho-analysis may be said to have greatly enriched science, and aided the understanding of our true selves.

THE SEVEN COMMON DREAMS.

It has been said that almost every person has dreamed, at one time or another, some or all of the following dreams. It is remarkable, in a way, that so many people should dream the same dreams, and yet they do, and I think my reader will agree that he, too, has experienced such dreams when he reads over the following list of the so-called "Seven Common Dreams." They are:

- 1.—The falling dream.
- 2.—The flying dream.
- 3.—The dream of inadequate clothing.
- 4.—The dream of not being able to get away from some beast, or injurious person or thing, that is pursuing.
- 5.—The dream of being drawn irresistibly to some dangerous place.
- 6.—The dream that some darling wish has been gratified.
- 7.—The dream of being about to go on a journey, and being unable to get your things into your trunks, etc.

These dreams are very frequent; there must therefore be some *law* at work, which operates, to produce these dreams so often. There

must be some uniformity of mental and physical conditions which give rise to these similar dreams in so many different persons.

What is this law?

Like causes produce like effects. This seems to be as true in the dream world as it is in our every day life. The effects are the dreams. What are the causes at work which produce them?

These differ in the different instances, and cannot all be explained here. The dream of inadequate clothing, for example, is almost invariably caused by too little bed-clothing; the surface of the body becomes chilled, and the dream consciousness naturally translates this feeling of insufficient clothing into an elaborate dream, with its usual dramatic imagery.

The falling and the flying dream are closely related, and in many instances the two are but variations of the same dream. But whereas falling is unpleasant, the flying dream is usually delightful. These feelings correspond with what we would feel in daily life.

One explanation of the falling dream is as follows: By lying too long in one position in bed the blood supply is cut off from the under surface of the body. Partial insensibility results; this in turn gives rise to the idea of non-support—since the bed can no longer be distinctly felt. But if you are not supported you fall; hence the falling dream!

This is one theory, based upon physiological data. Newer psychological theories have largely supplemented it. But it is of value so far as it goes.

FALLING AND LANDING IN DREAMS.

"It isn't the fall that hurts," remarked the Irishman, "but it's the sudden stop!" The same apt observation applies to dreams, for there are very few cases on record in which the dreamer has ever reached the bottom of his fall, in the typical falling dream. As a rule he seems to be somehow spirited-away in mid-air, or awakens with a start, just before the solid earth is reached; and it has, in fact, become the general belief that if anyone were to land or touch solid ground, at the end of his fall, he would immediately die in consequence.

This fear, however, universal as it may be, is doubtless unfounded, inasmuch as there are several cases on record in which the dreamer has actually touched bottom and lived to tell the tale! Thus, one correspondent writes—

"With regard to the falling dreams, the writer of these notes knows several people who have more than once reached the bottom in safety, though most dreamers wake with a start just before the end of the fall."

Another correspondent writes:—

You say you have never heard of anyone falling who has arrived at the bottom. I have arrived with a crash, have broken into pieces and then I—a sort of detached ego—have picked up the pieces and glued them together again!"

Another correspondent says that he has reached the bottom of his fall, but in an oblique, gliding fashion, and bounced-off several

times, like a flat stone on the surface of water. Here we see a certain connection between the falling and the flying dream.

There is no proof, therefore, that reaching the bottom at the conclusion of the falling dream is "sure death," and there is no proof that anyone has ever died in consequence. The idea has probably arisen from the fact that there is a certain nervous shock which results in consequence of the sudden termination of the dream-experience, which in turn corresponds to certain activities in the body.

There is undoubtedly a certain fear-element in all falling dreams. We are afraid of falling in daily life, and the same fear exists in our dreams. Fear, or any sudden emotion of this character, has an action upon the heart, and it is possible that the sudden start which we experience at such times may be due to the momentary stopping of the heart's normal functioning. Thus, one dreamer says:

"I always experience a cold terror while falling, and wonder at any lack of fear." There are, however, certain cases in which the dreamer seems to fall very slowly, and in such instances the dream fails to give rise to the old fear, and may even be somewhat enjoyed. The experience of Alice in Wonderland falling down the rabbit-hole, and thinking how brave the people at home would deem her at not being frightened, is typical.

Flying dreams are usually pleasant in character, and this may be due to the unexpressed desire in man's nature to fly, like the birds. There is also the inherent fear of falling and

the association of this idea with *evil*. Thus, one always speaks of "falling" into bad ways, into evil company, into the "slough of despond," etc.; but of "rising" to great heights of success, to some noble action, etc. Lucifer and the devils were said to fall from Heaven, but only the good angles fly!

Recent psychological investigations have shown us that falling dreams may also represent some internal fear or conflict, on the part of the dreamer, and that the idea of falling is merely a symbol employed by the dream in order to represent this idea. Thus, if the dreamer is afraid of falling into sin, etc., a falling dream may result in consequence. It is probable, however, that physical explanations are sufficient for the vast number of falling dreams.

NIGHTMARES.

Nightmares are probably among the most dreaded of childhood's experiences, and even adults are occasionally subject to them. Very frequently, the same nightmare will recur again, for years, and will only be outgrown with the oncoming of adolescence. The writer, for instance, had the same nightmare for years, when a small child. He dreamed that he was playing on the sands, by the sea, with his sister and nurse, and a witch, riding upon a broom-stick, would suddenly appear in the sky, soar down upon him, grasp him and carry him off with her into the sky. When there, she would drop him into the sea—and he would

awaken just as he touched the water! This nightmare continued on and off until the eighth or ninth year.

Nightmares are of various kinds, and vary greatly in intensity. Usually, we are either falling a great height, or are being pursued by some terrible creature, or are being tortured, or burned alive, or drowned, or are about to be eaten by cannibals, etc. In other words, our nightly terrors are, to a great extent, the very things of which we should be afraid in the day time.

The older theory of nightmare was that it was due to too much food, or an indigestible meal too late at night, or sleeping on the back, etc. Such causes are probably instrumental in a number of cases in producing nightmare. The generally-held view is that a too-full stomach, by pressing upon the blood-vessels in the abdomen, interferes with the flow of blood to the brain and other organs. Constipation, heart and kidney diseases, etc., are also said to be responsible for some nightmares. The physical health is doubtless a factor in many cases.

These older views are, however, largely given up, nowadays, in favor of "psychological" theories. These are based upon the belief that a dream, being a mental thing, is due to mental causes, and not physical ones. Many nightmares have been traced to repressed fears—certain things which we subconsciously fear during our waking lives, but which are graphically portrayed to us during our dreams.

Mental conflicts are responsible for many

nightmares. We strongly desire to do a certain thing, but we know that we must not, and we "repress" the idea. It is not really put out of the mind, but out of the conscious mind—and into the subconscious! There it stays, and we dwell upon it and brood about it. A sort of battle or "conflict" is thus created within ourselves, and this gives rise to nightmares,—the result of the battle going on within us.

It is indeed a problem:—Why we do not have nightmare all the time,—since these internal conflicts are strong enough to rise above the level of sleep, and to get past the "Censor" which strives its best to prevent the appearance of all unpleasant mental experiences of the kind.

The prevention of nightmare is often a difficult problem. If the cause be physical, it should be corrected. Late meals should be abolished, and the patient should avoid sleeping upon his back. However, many persons continue to have nightmare, no matter in what position they may be lying.

In such cases, the origin of the trouble is undoubtedly mental, and suitable treatment should be taken. The cause of the mental trouble should be discovered, and this can only be done by psycho-analysis, or by exploring the subconscious mind, in order to discover the hidden fear or conflict within. Only the best thoughts should be entertained just before going to sleep. If you are thinking strong and beautiful thoughts when you fall asleep, you will seldom have nightmare.

INSANITY AND DREAMS.

There are various interesting analogies which may be drawn between insanity and dreams. This need not alarm the reader, however, since insanity now-a-days has such a wide signifigance that it has lost its original meaning of a "raving maniac." We now no longer speak of insanity, but of *insanities*, and almost every human being might be said to be insane at certain moments, during his otherwise normal life. These mental and emotional swervings from the normal constitute a temporary insanity; but we return to normal, almost immediately.

Now, in dreams, we do all sorts of fantastic and weird things which do not surprise us in the least *while we are dreaming*. We perform absurd actions, but there is this interesting distinction between the two states, that, whereas the dreamer does these things only in his imagination, the insane person carries them out in his daily life in action.

In our dreams, we experience certain emotional changes which are not normal to us, and the same kind of changes are also very noticeable in insanity. There are profound and slight changes in the dream life, just as there are, all kinds of sleep, from the slumber of complete exhaustion to light, restless sleep, filled with dream-imagery. The absurdity of the ideas, the apparent incoherence of the mental pictures, the unsuitableness or impropriety of conduct which are so noticeable in dreams, are also to be observed in the case

of the insane person. In both instances the corrective influences of reflection and judgment are wanting.

Just as there are happy and depressing dreams, so there are cases of mental excitement and melancholia. Painful and anxious dreams, nightmares, etc., correspond to the "horrors," experienced by certain insane persons, or by the victims of habit-forming drugs.

Hallucinations and illusions are very common in both states,—that is to say, false interpretation of sense-impressions. Indeed, a dream might be considered one gigantic hallucination. The egotism of the lunatic is also well illustrated in our dreams, in which we are almost invariably the central figure and hero of the romance. In dreams, we wonder at nothing; be it ever so absurd or illogical we accept it as a fact. In like manner, the lunatic cannot see the absurdity of his own delusions, and accepts them without a question. He is unable to rid himself of his false premises and false deductions, so long as his diseased brain, which created them, remains diseased. But, with returning health, these morbid pictures of the mind fade away and vanish, as do dreams upon waking.

Both cases of temporary insanity and sleep represent alterations of consciousness and breaks from the normal mental life. In both instances the normal functioning of the central self ceases for the time being, and its place is usurped by another mind, which thinks and in some cases acts, in a manner completely at variance with that of the normal individual.

This other "mind" may of course, be quite harmless, and may even represent the dreamer in a truer light than he is in waking life. It has been said that a drunken man reveals his true self; and the dreamer often discovers his own inner desires and motives, which may be checked or "inhibited," during waking life, by the restraints put upon us by society and convention.

There are, it will be seen, many interesting analogies between dreams and certain types of insanity. Let this not worry the reader, however, since the mind of man is a complex and delicate mechanism, which is held together by our normal interests and activities. If the mental and physical health be sound, and the mind kept busily occupied with wholesome thoughts, it will *remain* normal, and is capable of withstanding great abuse, before becoming in any way "unbalanced" or diseased.

HOW TO CONTROL YOUR DREAMS.

Dreams take place in the subconscious mind, and over this mind we seem to have no control. Yet there are various practices which enable us to control it, to a considerable extent. We cannot enter into these measures now,—since the student must be far advanced to follow the necessary instructions,—but there are various simple measures which may be taken, enabling you to control your dreams to a certain extent, and one of these I give herewith. I may perhaps give it in the words of a lady

who learned to do this herself, and, in her interesting book, "Studies in Dreams," she tells us how she did this in her own case:—

"A suggestion that greatly helped me to cure morbid dreams came from an experience that is common to almost every one. Probably we have all at some time or another realized that our dream was 'only a dream' and not a waking reality. The idea contained in this very general experience made the point from which I succeeded in starting a successful experiment in dream control.

"On various occasions long ago, when a dream of grief or terror was becoming intolerably acute, the thought flashed into my sleeping mind, 'This is only a dream; if you wake, it will be over, and all will be well again.' If only we could ensure the realization of this fact directly bad dreams appeared, they would cease to have any terrors for us, for a way of escape would always be open.

"Therefore I tried repeating this formula to myself from time to time, during the day and on going to bed, always in the same words. You are to dream no longer,—until, I suppose, the suggestion that I wanted to impress upon the dream-mind became more definite and more powerful than the impression of any dream; so that when a dream of distress begins to trouble me, the oft-repeated formula is automatically suggested, and I say at once: "You know this is a dream; you shall dream no longer—you are to wake."

"For a time after this secret had been fully

learned, this would always awaken me at once; nowadays, the formula having been said, I do not have to wake, though I may do so, but the original fear-dream always ceases. It is simply 'switched off,' and a continuation of the dream, but without the disturbing element, takes its place and goes forward without a break."

In order to make this method operative, it would be best to repeat the required formula to oneself a number of times daily, at first, and preferably aloud, always in the same words. The idea is to sufficiently impress the subconscious mind with the suggestion that it takes root, so to say, and operates during the dreaming state.

This is one of the simplest methods of controlling your own dreams, and is one which every reader may try for himself. In view of the frequency of nightmares, and unpleasant dreams of various descriptions, it would be well worth trying by nearly everybody.

HOW TO REMEMBER YOUR DREAMS.

Many persons would be interested in recalling their dreams, but they find it extremely difficult to do so. Dreams are elusive things, and even vivid dreams leave less of an impression upon the mind, as a rule, than ordinary waking experiences. The reason is probably partly due to the fact that the nervous system is not so deeply impressed, and also because dreams are repressed by the mental "censor." One can learn to recall one's

dreams, however, by certain simple processes, which I may here enumerate.

To begin with, the first thought and immediate occupation of the mind on awakening must be the recollection of the dream. The mind must be quietly attentive, unhurried but watchful, as one who looks long and steadfastly into a still pool to see what is mirrored there. As it thus gazes, there will come back to it, one by one, the scenes of the late dream.

Mrs. Arnold-Forster, an "authority" on dreams, has given her own method, which she has found eminently successful is assisting her to recall her dreams. She says:

"The dream should first be allowed to unroll itself very quietly backwards in a series of slowly moving pictures, starting from the end and going back slowly through scene after scene to its beginning, until the whole dream has been seen.

"In order to get a complete record of a long dream, this process should be followed, and then, if possible, the reverse process should be carried out, and the dream retraced from its starting point to its ending.

"In this way the scenes, events and conversations that have made up the dream story can, when the habit of recollection has been acquired, be retraced."

The more you accustom yourself to recall your dreams, the easier will it become. You may not be enabled to recall anything for the first few mornings, but stick to it for a few days (say for five minutes, upon awakening) and very soon you will find that the dreams

of the previous night will begin to be recalled.

You should then get into the habit of writing down, at once, all that you remember of the dream. This will serve to fix it in the mind. Thus, you will begin to keep a diary of your dream life, just as you may be in the habit of keeping a diary of your usual daily life. You will find that you are living two lives instead of one! Much of interest will be added to your life in this way, and you will soon find that your night life is intensely interesting—just as interesting as the other.

In conclusion, however, a word of warning should, perhaps, be given. If you are highly emotional, highly-strung, imaginative, hysterical or nervous, it would not be a good plan to undertake this process, except under wise guidance. It will make your subconscious mind too active.

EMOTION IN DREAMS.

Dreams of beauty, of love and the so-called "tender emotions," are relatively rare; we seldom experience strong emotions in our dreams. The following dream is therefore interesting, as recorded by a woman of my acquaintance who has had some remarkable experiences during slumber.

"Never while I live shall I forget my first Dream Friend, or my profound astonishment, and still more profound delight when I discovered that my dream world was peopled," she wrote me.

"It revealed the possibilities of another life

as full of actual incident as any on the material plane.

"My dream friend came to me in a country lane. I was alone: I stopped near a bend in the lane. It was half fear, half anxiety which possessed me. Then overwhelming anticipation gripped me, for I heard the sound of a footstep coming toward me.

"For a moment the dream wobbled, shaken by excitement. Then, gathering myself together, with a violent effort, I steadied it again. I *must* know what—who—was coming toward me round that bend! Calmly and steadily the step advanced, and then a human figure; the human eyes met mine with a smile that gave me the most rapturous feeling of joy I had ever experienced in my life. Perfect love, perfect understanding, perfect friendship flooded my mind. No words were needed to cement it. All the real loneliness of my life seemed suddenly lifted.

"I felt no fear, and no restraint such as always hampers men and women in the material plane, and when my first Dream Friend held out his hand to me I eagerly placed mine in it. Then I played with his fingers, and my heart bounded with delight when I felt that they were like the fingers of a living man. I raised my eyes.

"'How do I know who you are?'" I said.

"'You can see me,' he answered.

"'But perhaps you are not real,' I argued in tremulous hurry to be convinced.

"'Touch my face,' he invited.

"Without the slightest hesitation, I laid my

fingers on his cheek, and felt the soft resistance of the flesh. He bent his head, and I ran my hand over his hair * * *

"'If your dream is true, I am true,' he said, 'and you love me.'

"'Yes, I love you earnestly, sincerely, more than I ever loved a human being. I feel that I—that I never knew what it was to love before. Only it seems different; it is not the way we love on earth.'

"'No'; he said gravely. 'Love there is gross; the human soul there is encased in a thick veil of matter. Only once in life, down there, is a glimpse of the love here vouchsafed to mortals. And that glimpse comes when in youth a man first falls in love with a woman, and only then if his mind is pure.'

"He laid his hand upon my brow, and at his touch I knew ecstasy of soul * * * I awoke, and it was dark. But a glow of great delight remained with me, illumining the work of another day. I felt if I could ever find my Dream Friend in another dream, that I would attain the deepest desire of my heart."

FAMOUS HISTORICAL DREAMS.

All through the pages of sacred and profane history dreams have played a prominent part. It is hardly necessary to remind the reader of the numerous dreams mentioned in the Bible, and the value which was attached to them in those days. Interpreters of dreams were in royal favor, and it was firmly believed that

many dreams were of prophetic and divine origin. For do we not read:

"In a dream, in a vision of the night, when sleep falleth upon men, in slumberings upon the bed, then he openeth the ears of men, and sealeth their instruction, that they may withdraw man from his purpose and hide pride from man."

On the interpretation of the dreams of Pharaoh rested the fate of the Children of Israel.

Jacopo Dante, son of the poet, was visited in a dream by his father, who conversed with and told him where to find the thirteen missing cantos of the "Commedia."

William Harvey, the discoverer of the circulation of the blood, used to relate that his life was saved by a dream. He was prevented from going aboard a vessel which was sunk in a severe storm.

Francis Bacon was warned in a dream of his father's approaching end, which occurred in a few days.

St. Cyprian and St. Colomba each foretold the date and manner of his own death as revealed to them in dreams.

Benvenuto Cellini, when in prison, had frequent dreams and visions of a young man who came to him and comforted him. On one occasion this Being saved his life (by preventing him from committing suicide).

James IV, of Scotland, after vespers in the chapel at Linlithgow, was warned in a dream against his intended expedition to England. He, however, proceeded, and was warned

again at Jedburgh, but, persisting, fell at the battle of Flodden Field.

King Charles I, when resting at Darentee on the eve of the battle of Naseby, twice dreamed of Lord Strafford, who warned him not to meet the Parliamentary army. He did so, however, and a disastrous defeat followed.

Queen Elizabeth was said to have been warned of her own death in a dream.

Catherine de Medicis had a dream-vision of the battle of Jarnac. (This is related by Margaret de Valois in her "Memoirs.")

The Emperor Trajan was saved during an earthquake by a warning received in a dream.

In our own day many men and women of letters and in the realms of science, politics, art, religion and practical life have had similar dreams, and they are to be found scattered throughout the records of human life and history.

THE DREAMS: "ALICE IN WONDERLAND" AND "THROUGH THE LOOKING GLASS."

Probably every reader of this book has read the two famous books of Lewis Carroll—"Alice in Wonderland," and "Through the Looking Glass." He may have read them when a child; but if he will reread them now, from the point-of-view of modern dream psychology and analysis, he will be surprised to find how accurate they are, and what a light they throw upon the whole dream problem.

Let us take just a few illustrations from

these famous books, by way of showing this. It will be at once evident that the author has chosen, for the material of his dream stories, just the sort of material with which a child's mind would be stocked. Cards, chessmen, a kitten, sheep, flowers, a dormouse, a caterpillar, a lion, a unicorn, a mock turtle, a griffin, etc., (the unreal being just true as the real to the childish mind)—these are the characters of the dream books. A mouse, a rabbit, etc., these are the opening events and personages whom Alice meets. As usual, Alice herself is the central and most important personage—the heroine—who observes and enacts all the principal events and roles, and around whom all the chief characters revolve.

In addition to this dream material, Lewis Carroll also introduced a number of imaginary characters and objects—extensions of nursery rhymes and superstitions—which every child would naturally know. Thus, Humpty Dumpty, the Mad Hatter, the March Hare, Tweedledum and Tweedledee (with their "nice new rattle") are all examples of this. Such well-known stories as "the lion and the unicorn fighting for the crown," the knave of hearts stealing the tarts, etc., are also utilized.

The influence of school life—"lessons"—is also very manifest. All through both books, the characters are constantly setting one another sums to figure out, problems and riddles to solve, questions to answer, etc., all of which we might expect to find in a child's mind, in which lessons occupy so prominent a place.

The manner in which scenes change and glide

one into another is also very characteristic of the dream world. Thus, the little shop is transformed into the boat on the river, and the knitting needles in Alice's hands into ours,—only to be retransposed into needles again later, at the time the river insensibly changes back again into the little dark shop. The egg changes, as she approaches it, to Humpty Dumpty. The heads of the red and white queens vanish from her lap without her knowing it—they are just "gone."

The rushes which Alice picked in the stream began to fade and vanish in her hands as soon as she had picked them—"these, being dream rushes, melted away almost like snow, as they lay in heaps at her feet, but Alice hardly noticed this, there were so many other curious things to think about." Even the looking-glass thinned and admitted her passage—when she tried to push her way through it. In this way she entered the looking glass world.

Nearly everything in the book is "personalized"—that is to say, is given life and personality by the dreamer, so much so that nearly everything talks! Even Time is personified: "If you knew Time as well as I do, you wouldn't talk about wasting it. It's *him*!" Similarly, the leg of mutton is introduced to Alice, and gets up and bows.

At various times, mention is made of running and flying at incredible speed through the air—the flying dream! When she falls down the rabbit hole, this is the falling dream. The Jabberwock poem is written backwards; the mirror world is all turned round. Sleeping,

dreaming, vanishing, etc., are often alluded to throughout the book.

These are only a few points which occur to the mind, showing us that a study of the "Alice" books, from the point of view of modern dream psychology, would be well worth while—since they are filled with suggestive and interesting material.

YOUR DREAM EYES.

What are your "dream eyes?" In other words, *with what* do you see in your dreams, and *what* do you see?

Have you ever thought of this problem? Certainly you do not see with your physical eyes, since your eyelids are closed and the eyeballs are turned upward, when you sleep. Your physical body is lying, an inert mass, upon the bed. And yet you see clearly, vividly, a series of scenes, and also people, with whom you occasionally converse. But if you do not see them with your physical eyes, with what do you see them? Here, reader, is a problem for you to ponder over!

Most dreams are visual in character, as I have before pointed out. We see far more often than we smell, taste or touch. This corresponds to our experiences in waking life, for our sight plays a far greater role than any of the other senses. Our imagination is mostly visual. When we imagine any series of events as taking place, these events usually float before the mind's eye in the form of a series of pictures—giving rise, probably, to the old expression "building castles

Spain." The mind, therefore, has somehow developed within itself this picture-forming faculty, and vividly depicts to itself a series of scenes, as in a mirror, which may be colored or shadow-like. This faculty is known as "visualization," and is so vivid in certain cases that the mental pictures take on the character of objective things, in which case they constitute what we call "Hallucinations."

Crystal visions are of this character, for the figures seen in the crystal ball do not, of course, exist in the ball, but in the mind of the seer. They are merely projected outwards, and are so vivid in character that they appear actually to exist in space—in such cases, in the ball.

This power of imagination is in itself a very extraordinary faculty, and it has been pointed out that it is a projection into the future, by the mind, just as memory is a projection into the past. We can imagine ourselves as enacting various scenes, and can even imagine various persons, who never actually existed, playing their varied roles in this little drama. This occurs in day-dreaming and also in the ordinary dreams of night.

If, however, the scenes which we perceive actually correspond with events which are happening at the time, we can then no longer dismiss them as "mere imagination," but if they are detailed enough, we must assume some telepathic or other super-normal agency at work. It has been suggested that imagination is really a play of the astral senses, and that when we "imagine" a certain thing, we really see that thing enacted on another plane of being. But

this, of course, is a purely occult theory, which is not accepted by orthodox psychology.

At all events, it is a most interesting problem which confronts us here. How we see in our dreams is part of a larger question: how the mind can build-up these mental pictures for itself in any case. This has never been satisfactorily explained, and, until this is done, we can have small hope that the lesser understood manifestations occurring in dreams will be explained either.

THE "OCCULT" THEORY OF DREAMS.

Many theories have been advanced, in the past, to account for dreams,—from the views entertained by savages to the most modern "psychological" views. Believers in psychical and occult phenomena have, naturally, theories of their own, to account for dreams—particularly vivid and striking dreams, which seem in some way to correspond with reality. We must see what they are.

It is held to be a truism in psychology that we cannot dream anything which we have not in some way experienced. Dreams are fabricated in the deeps of the subconscious mind, and whatever is in the subconscious must have got into it—say the psychologists—through the five senses. Dreams are compounds, made up of past mental and physical experiences.

Of course, in *one* sense, everyone knows this to be untrue. We dream of being in places we have never seen, of people we have

never met, or even of being upon the moon or some distant star. We have never experienced that! But the reply of the orthodox psychologist is that these dreams represent the mere extension, by the imagination, of ideas, images, etc., which are familiar to us in daily life. They are mere variations of these.

But there are many dreams which are certainly hard to account for on any ordinary theory, and these dreams psycho-analysis, for instance, cannot explain. These are the so-called "supernormal" dreams—telepathic, clairvoyant, prophetic, etc.—examples of which have already been given in this series. The only resort of materialistic science is to deny that they exist. An ostrich philosophy indeed!

Granting that they *do* exist, at times, what is their explanation? Occult science has advanced a theory for these dreams, which is profoundly interesting.

It is contended, to begin with, that whenever we lose consciousness for any reason—whenever we faint, go to sleep, take an anæsthetic, etc.—the living mind or consciousness leaves the physical body. That is what unconsciousness IS. In addition to the physical body, we are said to possess another, finer or more subtle body—an "astral" body—which corresponds in appearance to the physical body, but is composed of more subtle and finer matter. This body is the vehicle of the mind. It acts as a sort of connecting link between mind and body. It is the body of sensation and emotion, and it is with this body that we *feel*. That is why a corpse does not feel any pain, although its

nervous system is still intact. The astral or life-body has departed from it, carrying with it the soul of man. And that is why we do not feel any pain while under the influence of an anæsthetic, and the physical body can be cut up without sensation on our part. It is because the body of feeling has been removed completely from the physical body, and only connected with it by the finest of "threads," easily broken.

Now, in sleep, this body also leaves the physical body, but the connections are deeper and stronger—hence our ability to respond to bodily sensations to some extent during sleep. But the "astral" body is "out" of the physical body, hovering above it, subject to thought-streams and impressions from other minds, as well as fabricating thoughts of its own. Hence the confused jumble of dreams, which we find it hard to "bring back" into the physical brain, when we awaken. But, by suitable psychical and occult development, we can learn to make this severance more complete, and *control* the thoughts and motions of this "astral" body, and move about in it, and think, at will. When we have learned this, we become one of the so-called "invisible helpers." We are then as active and busy and conscious during our sleeping hours as we are during the waking life. This is the occult theory of dreams—which, it may be said, has many striking phenomena in its favor.

TELEPATHIC DREAMS.

Psychical science has proved that telepathy, or thought-transference, can operate just as readily, or even more readily, in sleep as it

does in walking hours. We can have "telepathic dreams," which may be instigated by the thoughts of distant living people, and in these dreams we get the thoughts of the absent person, and the danger in which he may happen to be at the time. The *form* of the dream is doubtless determined by the dreamer's own mind, but its *substance* is obtained from another, living mind—by telepathy.

The following case is a good example of this:

"Some years ago, I was the guest in the home of an intimate friend whose unmarried sister was away at the time. My hostess, whom I will call Mrs. J., was taken suddenly and seriously ill.

"The family doctor was summoned, but he was away, and a strange physician was called, and he was in attendance upon Mrs. J. when, at midnight, her own doctor arrived.

"Early the following morning I received a telegram from the absent sister, saying, 'Is anything wrong at home? Answer immediately.' I replied, and before the day was over a letter addressed to me, and mailed when the telegram was sent, came from the absent sister, saying:

"I have had a peculiar and impressive dream of home. I saw A. lying on the bed as if very ill; while in the dressing room, as if in consultation, were two doctors—Dr. L. (the family physician) and a stranger—a tall, dark man, whom Dr. L. addressed as Dr. Rice. So impressed am I that something is wrong, that I write to you, in order to know as soon as possible the meaning of this strange vision."

"Her dream was as vivid a portrayal of what

was actually occurring at her home during the night as I, personally present, could have given. She was almost correct as to the name of the strange doctor, whose real name was Dr. Reed. The absent sister had no cause for being worried about her sister—who had been quite well when last heard from. That the sick sister was thinking of the absent one, I *know*. . . . May she not, through her desires, have unconsciously thrown upon the mind of the absent one certain photographic revelations of what was actually occurring?"

The accuracy of this case was verified at the time by Dr. Richard Hodgson, Secretary of the American Society for Psychical Research.

This is but an example of the many so-called "telepathic dreams" which have been gathered in the past by investigators in this field. May we not suppose that, when the conscious mind is inactive, the doors of the soul are to some extent thrown open, and that telepathic messages may in this way be received—messages which the conscious mind would fail to notice, in the hustle and bustle of a busy, active life? The evidence certainly tends to prove this. For there are many thousands of cases that have been recorded similar to this one!

CLAIRVOYANT DREAMS.

Just as telepathy may operate in dreams, upon rare occasions, so may even more striking manifestations occur during sleep. These are probably more rare, but are far commoner than supposed, and a large number of them have been

collected by various researchers, and by the Society for Psychical Research.

In telepathic dreams, a direct transference seems to take place between the mind of the agent and the dream-consciousness of the subject. In clairvoyant dreams, on the contrary, a picture or image of the scene in which the agent is playing his part seems to have been somehow visioned by the dreamer's mind, and is, to some extent, at least, independent of any form of direct telepathy or thought-transference.

The following case is typical of this character of dream, and was reported to the Society by Mrs. Freese, and was confirmed in writing by her son.

"In September, 1881, I had another curious dream so vivid that I seemed to see it.

"My two boys of eighteen and sixteen were staying in the Black Forest. . . . I must say here that I always supposed the boys would go everywhere together, and I never should have supposed that, in that lonely country, so new to them, they would be out after dark. My husband and I were staying at St. Leonard's, and on Saturday night I awoke at about twelve o'clock, having just seen vividly a dark night on a mountain, and my eldest son lying on his back at the bottom of some steep place, his eyes wide open, and saying: 'Good-bye Mother and Father, I shall never see you again.'

"I woke with a feeling of anxiety, and the next morning when I told it to my husband, though we both agreed it was absurd to be anxious, yet he would write and tell the boys

we hoped they would never go out alone after dark. To my surprise my eldest boy, to whom I wrote the dream, wrote back expressing his great astonishment, for on that Saturday night he was coming home over the mountains, past eleven o'clock; it was pitch dark, and he slipped and fell down some twelve feet or so, and landed on his back, looking up to the sky. However he was not much hurt, and soon picked himself up and got home all right."

In this case, it will be seen, a fairly accurate reproduction of a distant scene was impressed upon the dreamer's mind. But the case is also instructive in that it shows us the play of the dreamer's sub-conscious mind. Her son was *not* much hurt, as a matter of fact, but, seeing him in this dangerous attitude, which was apparently the result of an accident, her dream-consciousness *inferred* the fact that he had been seriously hurt, and elaborated "on its own hook," as it were, the dying message "I shall never see you again," etc.

Clairvoyant dreams of this character seem to prove to us that there is a dweller in the bodily temple who sometimes looks abroad, and who is capable of severing its connection, for the time being, with the physical body known to us in daily life. Such dreams seem to show that the body is not, after all, the real person, but merely a *vehicle* through which this invisible dream personality usually manifests.

PROPHETIC DREAMS.

Just as telepathic impressions from distant minds may affect the mind of the sleeper, and cause telepathic dreams, so may the future be seen, apparently, in certain "prophetic dreams." The following are sample cases of this character. The first is reported by M. Camille Flammarion, the eminent French astronomer:

"I dreamed that I was on my vacation, at the place where I usually go, but the room which was given to me was different from my own, and behind a clothes-press I saw spreading flames. . . . Six months later I reached my destination. I was led into a very small summer house. Although I had never seen it before, I recognized this little corner which was meant for me. The clothes-press, in the same spot, recalled the fire. I spoke of it and they reassured me. For ten years no fire had harmed the neighborhood. . . .

"I had begun to lose my fear when, toward the fourth week, the tocsin sounded. An immense fire consumed a farm not far from my dwelling, and even licked the wall where the clothes-press stood."

The following case is recorded by Princess Emma Carolath, of Weisbaden:

"I had just fallen asleep, very anxious over the health of someone I loved, when I found myself carried in a dream to an unknown castle—into an octagonal cabinet, hung in red damask. There was a bed in which lay sleeping the person whose health disturbed me. A lamp, hanging from the arch of the canopy, flooded

with light the pale but smiling face, framed in thick masses of black hair.

"At the bed's head was a picture, the subject of which was so strongly engraved on my memory that on my awakening I could have drawn it: It was Christ crowned with roses by a heavenly spirit, with verses by Schiller, which I read.

"Two years later we went for a country visit to a castle in the depths of Hungary. I stopped, trembling, when I entered the apartment which had been set aside for us: I was in the octagonal cabinet, hung in red damask, before the bed and before the picture of Christ crowned with roses, with the verses of Schiller!

"This picture had never been copied or reproduced, and it was impossible that I should have seen it otherwise than in the dream—any more, for that matter, than I could have been in the octagonal cabinet. . . ."

In such cases, when the coincidence is so striking and detailed, it is absurd to talk of "chance." No! The future is sometimes revealed to us, in dream or vision; we see what is about to happen.

How can the future ever be revealed? That is a question which must be answered in another place.

EXPERIMENTALLY INDUCED DREAMS.

Dreams seem such vaporous things,—so uncontrolled, so spontaneous,—that it would appear at first sight impossible to control or induce them, either in one's self, or in another.

Nevertheless, this can be done, and *has* been done on various occasions. I shall leave for the present the question as to how to control your *own* dreams, and shall mention here certain cases in which the dreams of another, sleeping person, have, apparently, been induced at will.

These experiments were originally undertaken by Professor G. B. Ermacora, of Padua, Italy, and have since been reproduced with varying success by others. His original researches were reported in Volume XI of the "Proceedings" of the Society for Psychical Research.

Professor Ermacora had been experimenting with Miss Maria Manzini, who had the power of "automatic writing." Her little cousin, Angelina, aged 4 years, 3 months, came to live with her, and the child was destined to play an important part in these experiments.

Dr. Ermacora endeavored on a number of occasions to impress a certain dream upon little Angelina, sometimes alone, sometimes with the mental co-operation of Miss Manzini. Their object was to impress a scene, or a series of pictures, upon the child's sleeping consciousness, so that she would dream of these scenes, and recount them in the morning. This was to be done by means of telepathy—for thought-transference can operate even more effectually during sleep than during waking hours.

Thus, on one occasion, Dr. Ermacora placed Miss Manzini in a somnambulistic trance, and suggested to her that she, in trance, could in-

fluence little Angelina to dream of Venice—of gondolas, etc. The next morning, the child spontaneously stated that she had dreamed of Venice, and accurately described the various scenes which had been suggested to her. As usual, she stated that she was in company (in her dream) with a mysterious "blue child," who often accompanied her upon her dream travels.

This blue child, curiously enough, corresponds to a child-like personality which manifested itself through Miss Manzini, when in trance. Thus, the appearances are that this blue child ("Elvira"), left Miss Manzini, and journeyed to Angelina, appearing to her, and impressing upon her the dream images.

Thus, on one occasion, "Elvira" was told to impress upon the child a picture of herself, in company with Miss Manzini's mother, who would present Angelina with a large cake, which she would open. A little bird would then fly out, laughing.

The next morning, Angelina said that the blue child ("Elvira") had come to her, in company with Miss Manzini's mother, and had brought her a cake. When she cut open the cake, "something like a pigeon, only smaller" flew out—which was an obvious description of a small bird.

Such experiments as these seem to demonstrate beyond all question or doubt the ability to impress other sleeping minds by thought-transference, and to induce dreams therein experimentally. This is a fascinating line of

investigation which can be followed by any interested reader. It is my hope that some readers may be induced to try such experiments for themselves, and report their results.

HOW TO DREAM "TRUE."

Those of you who have read DuMaurier's "Peter Ibbetson," or have seen it played on stage or screen, will remember that the central theme of the book was based upon the idea of "dreaming true," that is to say, of being enabled to leave the body, during sleep, and to travel to distant places and visit and converse with other (dreaming) people who have similarly learned to leave their bodies during sleep, while retaining at the same time the full control of their conscious thinking faculties. Such individuals are usually enabled to remember all that has transpired during the sleeping hours and to recall it the next day.

DuMaurier, in his book, gives the formula for dreaming true. It is to lie flat on your back, cross the feet and clasp the hands beneath the head. This sounds simple, and in fact is actually *too* simple to work in practical life! There is, however, a formula which may be given for "dreaming true," and believing that it will interest my readers, I give it herewith.

First of all, you must begin to observe the process of going to sleep; observe your own consciousness while it is in process of passing into the dream state.

If you conduct experiments of this character upon yourself, you will be enabled gradually to keep conscious control of yourself up to the very last moment you fall asleep. This process of self-observation—the consciousness of going to sleep—is extremely interesting.

When you have learned to do that, then construct before yourself, mentally, a definite scene, which you must hold firmly in mind. Then, as you are falling to sleep, holding this scene before you, at the very last moment—before you fall to sleep—consciously transfer yourself into the scene—in other words, *step into that picture*; and, if you have developed yourself to the requisite point, you will be enabled to carry over an unbroken consciousness into the dream picture; and in that way you have a perfect continuity of thought. There is no break in consciousness; you step into the dream picture and go on dreaming consciously. That is the process of dreaming true, and after this dream is fully enacted, then you should remember perfectly all that has transpired during the sleep period.

This is said to be an excellent method of learning to “dream true.” By learning to control his dreams in this manner, a well-known Dutch scientist, Dr. Frederick Van Eeden, succeeded in mastering the process to the extent that he could consciously control his “dream body”—see with its eyes, touch with its hands, etc., and turn around and see his own physical body lying asleep upon the bed! He even saw things which were happening at the

time, and which actually did happen at the time, when he was asleep.

This, of course, touches upon the question of the projection of the "astral body," which we shall take up next.

THE DREAM BODY.

In your dreams, you seem to inhabit a *body* of your own, as solid and substantial, for the time being, as your ordinary physical body. At times, however, this dream body varies in density, size and general characteristics. It may appear thin, vaporous and tenuous, or it may be so dense that you can pinch it, and thus assure yourself (apparently) that it is "real." Again, it may take on the form of your own childish self; you may dream that you are back again at school, and a boy or a girl once more. At such times, you see yourself in a childish dream body, which also appears real to you for the time being.

Now, how are we to account for such oddities, for such behaviour on the part of a vehicle we seem to inhabit during sleep? Of what is this dream body composed? Is it a real, semi-physical thing, or is it merely a mental picture? Do you really see a picture of yourself, as a sort of hallucination?

Doubtless, in the majority of cases, we merely see ourselves as we see anything else. And yet there is this difficulty in accepting such a simple view of the case altogether. If we see ourselves walking about our old school, for instance, we somehow feel *apart* from the child-

ish figure which is thus sight-seeing. Who is this *onlooker*, who observes; and who is the form walking about? There seems to be a curious *doubling* of the self here, which is not easily accounted for on ordinary theories.

Some people seem to see themselves very clearly, in dreams, and some only "feel" themselves, without ever knowing what they look like. When the self is seen, here is another curious thing, for we have only a vague idea of what we really look like, as a matter of fact. We never really see ourselves as we really look to others, unless we happen to look into the angle of two mirrors, which are placed at right angles to one another. Looking into an ordinary mirror gives you your own image reversed—the right hand being where the left really is, and vice versa. How, then, is it that we have such an accurate and vivid picture of ourselves in the dream world, when we do not in waking life?

There is some respectable evidence, it may be said, in favor of the idea that we actually inhabit a sort of semi-objective dream body in at least *some dreams*. (I have explained this idea in the article on "The Occult Theory of Dreams.") The following narrative is typical of this class of dreams:

"On the night of January 19, I dreamt that I was lying in the garden before the windows of my study, and saw the eyes of my dog through the glass pane. I was lying on my chest and observing the dog very keenly. At the same time, however, I knew with perfect certainty that I was dreaming and lying on my back

in my bed. And then I resolved to wake up slowly and carefully and observe how my sensation of lying on my chest would change into the sensation of lying on my back.

"And I did so, slowly and deliberately, and the transition—which I have since undergone many times—is most wonderful. It is like the feeling of slipping from one body into another, and there is definitely a *double* recollection of the two bodies. I remember what I felt in my dream, lying on my chest; but returning into the day life, I remembered also that my physical body had been quietly lying on its back all the while. This observation of a double memory I have had many times since. It is so indubitable it leads almost unavoidably to the conception of a *dream body*."

Cases such as these make one pause and wonder whether or not there may not be a sort of "body" of sleep, after all—one which we inhabit at such times, at least on occasion? If so, it is a profoundly interesting thought, for might not this be the body which we inhabit after death, as taught by nearly all religions? Do dreams give us proof of the future?

DREAM PEOPLE.

When we are asleep and dreaming we frequently meet "people" with whom we have long conversations. Indeed, there are cases on record in which the dreamer has had a debate with one of these dream personalities, and has been worsted in the argument!

Who are these dream people? Are they real,

objective beings, which exist before the dream began and who continue to exist after it is ended? Or are they mere creations of our own subconscious imagination? And, if the latter how does it come about that they answer us so unexpectedly, and often say and do things which seem to us, at the time, not only independent of ourselves but even cleverer than the things which we could do or say?

This is a very interesting question which has never been adequately answered. Many psychic and occult students believe that the personalities we meet in dreams are real beings like ourselves—"thought forms," built up for the time being, but nevertheless real and objective while the dream lasts.

There is some evidence to show that, in certain instances at least, some such theory as this may be correct.

The ordinary psychological theory is that the active subconscious, dream-like self somehow constructs, by its imagination, these various personages, and endows them with life, by a process of dramatic play peculiar to this dream-like consciousness.

Thus we can, for example, close the eyes and imagine to ourselves any fictitious character, such as Mr. Pickwick. If we happen to be good at "visualizing," as it is called (that is to say, the power of building up or constructing mental images by the power of the imagination), we can mentally see Mr. Pickwick and perhaps imagine that we ourselves are talking to him, and carry on a mental dialogue in this manner while yet awake.

This same power of the mind is extremely active during the dream state, and it is doubtless true that the majority of our "dream people" are mere figments of the imagination, thus built up or constructed within ourselves.

In certain instances, however, these dream people have told the dreamer certain things which afterwards turned out to be true, but which the dreamer himself did not know. We can only assume, in such cases, that the dream personage was actually "there" in some way, or that the sub-conscious mind of the dreamer had acquired these facts by some process of telepathy, and that this was displayed or brought to the surface in the dream itself.

Here, then, is a problem upon which the reader may ponder, and upon which his own dream experiences may throw some light.

IS LIFE ALL A DREAM?

The question has often been asked "Is Life All a Dream?" Shall we one day wake up into a world of reality, and find that we have been dreaming, and that what seems to us so real here is, after all, a mere mental shadow?

The Hindus believe this. They believe that this life is a dream, and that our dreams are also dreams. When we die we wake up and find that we have been dreaming in both states!

Plato also held some such view. He drew the analogy of men chained in a dark cave with their faces fixed in one direction. Above

their heads were real beings, walking, who threw their shadows on that side of the cave which its inhabitants faced. Perceiving only these shadows, they mistook them for realities, and thought that these *were* real human beings.

The average common-sense man, upon hearing such a view for the first time, would probably say "Oh, well, I can pinch myself; thus I can show that I am really here! It hurts." But, if you have attained a certain control over your dreams, and in your dream state you say "Now, to prove that I am really here, and that this life is a fact, I am going to pinch myself,"—in your dream you will find that you can pinch yourself and that it hurts; so that this test is fulfilled!—Every test that you can think of, as applied to the dream-body, is the same as if applied to the physical body, so that it is impossible, from this point of view, to distinguish between the two, and establish reality.

That being the case, the question arises: How do we know that this life is not all a dream?

You will remember that, in "Alice in Wonderland," Alice encountered Tweedledee and Tweedledum in the forest. Together they saw the red king asleep there. Tweedledum said, "What do you suppose he is dreaming about?" Alice replied "How could I know that?"

"Why," replied Tweedledee, he is dreaming about *you*, of course."

Alice said, "How do you know that?"

Tweedledum replied, "Well, you are here;

that shows that you are being dreamed about. You are just a thing in his dream. If he stopped dreaming about you, you would go out just like a candle flame!"

Alice has no reply to this, and all she could say was, "I know they're talking nonsense."

So, to the practical man, the idea that life is all a dream is just as much nonsense as that idea was to Alice, but he would have as great difficulty in disproving it as she did, because every test that he would apply to show that life was a reality could also be applied to show that the dreamer really existed while he was dreaming! So there is something to be said in favor of this view after all.

CONCLUSION.

We have now given a rapid summary of the main problems and phenomena connected with dreams. The subject is so vast that it has been impossible to do more than touch lightly upon its various aspects,—almost any one of which might be expanded into a book in itself. An excellent little booklet on Psycho-Analysis has, however, already been published in this series, by William J. Fielding (No. 190), and to this the reader is referred for a more extended treatment of this aspect of the dream-problem. Those of my readers who may wish to follow any other particular branch of this fascinating subject at greater length, are referred to the Bibliography which follows:

POOR RICHARD'S ALMANAC

THE BIRTH AND LIFE OF POOR RICHARD AND HIS ALMANAC

Benjamin Franklin, famed perpetrator of hoaxes, concealed his authorship of the world-renowned Poor Richard's Almanac under the pseudonym of Richard Saunders. The life of the author is therefore the life of Franklin, which he has told himself in his literary masterpiece, the *Autobiography*, or which is very ably set forth in the *Life of Franklin*, by John W. Gunn (Little Blue Book No. 523).

The Almanac, which has degenerated today into an advertising booklet for soap or for patent medicines, played a vastly more important part in the lives of the colonial inhabitants of America. Often the yearly issue was the only reading matter in a family circle save the Bible. Yet it contained little of a literary interest, comparatively speaking: each page was devoted to a month of the year, with very precise and confident predictions as to the weather and the attendant circumstances of the planets. Though the compiler, or philomath, was probably as often wrong as right, his readers gave him their utmost confidence, and tended to regard him with some awe as a being communing with supernatural powers—for how else could he foretell coming events? When the legitimate matter of the Almanac

failed to fill out the pages, various poems, anecdotes, sayings, historical facts, and verbal flotsam and jetsam such as is used to fill out the columns of newspapers, were inserted—sometimes original, sometimes quoted, sometimes quite baldly stolen.

Being purchased and read so widely, the Almanac comprised the chief venture of the early American publisher: it was the one sure work, if compiled by a reputable philomath, of a year. And thus matters stood, with the Almanac the favorite of literary forms, when B. Franklin and H. Meredith set up their printing office in 1728, in Philadelphia, "near the Market." Naturally, they could not do without an Almanac, and for three years they published one prepared by a certain Thomas Godfrey, and the work was reasonably profitable. But young Ben became involved, through the machinations of Mrs. Godfrey, in an affair with a young relative, which was broken off when Franklin demanded a specified dowry, and the Godfreys departed, Thomas giving his Almanac to a rival printer.

B. Franklin, with Yankee resourcefulness and youthful courage, set about compiling his own Almanac—but, knowing that his own name would carry no weight, he ascribed the authorship to one Richard Saunders, a name borrowed from an early English philomath. The title of the Almanac itself, *Poor Richard*, was likewise borrowed from the English *Poor Robin*, or very likely so, and with this start on the road to prosperity, the enterprise was undertaken.

Franklin did not stop with this venture, but introduced the decided innovation of advertising it in *The Pennsylvania Gazette* at some length. This was the chief cause of the Almanac's phenomenal sale: once it was read and known, its superior qualities enabled it to sell itself. A second edition was necessary within two weeks after first publication, and a third edition but a week after that. The next year, 1733⁴, Franklin repeated his advertising, with a longer notice, and adopted the ruse of ridiculing his rival philomaths in passages of satire, irony, and humor, in one of which Poor Richard had the audacity to predict the early death of one such rival⁵. His rivals, furiously incensed, retorted with hard and angry words in their own Almanacs, giving Poor Richard just the advertising Franklin desired, for whosoever read of Poor Richard forthwith desired and obtained a copy, and Franklin's achievements were such that "once a reader, always a reader" held true with astonishing regularity. And yet not so astonishing, for the Almanac has spread its fame through all the civilized countries of the globe.

Probably the chief cause of Poor Richard's fame were (and are) the various Proverbs interspersed through the available spaces in the Almanac: homely aphorisms, not always original, but nearly always altered or in some way touched and tinted by the original caprice of Franklin's rugged wit. Yet, too, judged by

⁴Almanacs were printed several months in advance—this was for the issue of 1734.

⁵Titan Leeds.

present-day standards, this Almanac was poorly printed, contained much that was ordinary and dull, together with poems and anecdotes that bore the rough coarseness of eighteenth century literature and would be in exceedingly bad taste in the twentieth century. But the grain, if mingled with chaff, was nevertheless in sufficient abundance to make the sifting of the mass worthwhile, and in 1758 Franklin himself performed such a sifting, summarizing the best of the proverbs in the issue of that year.

In 1748, due to the death of Jacob Taylor, Franklin's leading rival, Poor Richard became Poor Richard Improved⁶, with an increase from twenty-four to thirty-six pages, the better to gain and keep the new patrons Taylor so involuntarily relinquished to Franklin. The new form proved immensely popular. Indeed, during the last fourteen years of Poor Richard's existence, the sales reached the grand and awesome total of 141,257 copies, representing a sum, paid in purchase prices, in excess of two thousand pounds in colonial currency!

For twenty-five merry years Poor Richard lived and thrived, and, in 1758, as has been mentioned, a grand summary was published in the form of a preface to the issue of that year. It contains most of the knowledge which the world possesses concerning Poor Richard, and it is alone responsible for the world-wide familiarity with the name and matter of Franklin's almanac. For very few of the earlier issues have survived: an Almanac was literally

⁶See second Title Page.

read to pieces; and, with the coming of the new year's edition, the tatterdemalion booklet that was the "old" issue was very properly thrown away.

This preface of 1758 has appeared in countless guises, under such titles as *Father Abraham's Speech* and *The Way to Wealth*. "Seventy editions of it have been printed in English, fifty-six in French, eleven in German, and nine in Italian. It has been translated into Spanish, Danish, Swedish, Welsh, Polish, Gaelic, Russian, Bohemian, Dutch, Catalan, Chinese, Modern Greek, and Phonetic writing. It has been printed at least four hundred times, and is today as popular as ever." The foregoing statement was written by Paul Leicester Ford in 1889—the increase in his figures since that date, with thirty-five years to propagate, is probably not as large as might be expected, but it is no doubt an imposing tribute to the still wide popularity of Poor Richard.

John T. More, Jr., has described the contemporary significance of Poor Richard in colonial America, contemporary, that is, with its author: "Poor Richard was the revered and popular schoolmaster of a young nation during its period of tutelage. His teachings are among the powerful forces which have gone to shaping the habits of Americans. His terse and picturesque bits of the wisdom and the virtue of this world are familiar in our mouths today; they molded our great-grandparents and their children; they have informed our popular traditions; they still influence our actions, guide our ways of thinking, and estab-

lish our points of view, with the constant control of acquired habits which we little suspect."

The present edition begins with the preface of 1758 complete, followed by various excerpts from the earlier issues. For the sake of ease in reading, the spelling and punctuation, where necessary, have been modernized. This sacrifices the atmosphere of antiquity in some measure, but it is hoped that the spirit of Franklin is kept in his often quaint phraseology, and in his use of capitals, which has been preserved intact (in the preface of 1758).

POOR RICHARD'S ALMANAC

PREFACE TO THE ISSUE OF THE YEAR 1758

Extract from Benjamin Franklin's *Autobiography*: "In 1732 I first published⁷ my Almanac, under the name of *Richard Saunders*; it was continued by me about twenty-five years, commonly called *Poor Richard's Almanac*. I endeavored to make it both entertaining and useful; and, it accordingly came to be in such demand, that I reaped considerable profit from it, vending annually near ten thousand. And observing that it was generally read, scarce any neighborhood in the province being without it, I considered it as a proper vehicle for conveying instruction among the common people, who bought scarcely any other books; I therefore filled all the little spaces that occurred between the remarkable days in the calendar with proverbial sentences, chiefly such as inculcated industry and frugality as the means of procuring wealth, and thereby securing virtue; it being more difficult for a man in want to act always honestly, as, to use here one of those proverbs, *it is hard for an empty sack to stand upright*.

"These proverbs, which contained the wisdom of many ages and nations, I assembled and formed into a connected discourse prefixed to

⁷For the year 1733.

the Almanac of 1757,⁸ as the harangue of a wise old man to the people attending an auction. The bringing all these scattered counsels thus into a focus enabled them to make greater impression. The piece, being universally approved, was copied in all the newspapers of the Continent; reprinted in Britain on a broadside, to be stuck up in houses; two translations were made of it in French, and great numbers bought by the clergy and gentry, to distribute gratis among their poor parishioners and tenants. In Pennsylvania, as it discouraged useless expense in foreign superfluities, some thought it had its share of influence in producing that growing plenty of money which was observable for several years after its publication."

Courteous Reader.

I have heard that nothing gives an Author so great Pleasure as to find his Works respectfully quoted by other learned Authors. This pleasure I have seldom enjoyed. For though I have been, if I may say it without vanity, an *eminent* Author of *Almanacs* annually, now a full quarter of a century, my Brother Authors in the same Way, for what Reason I know not, have ever been very sparing in their Applauses; and no other Author has taken the least notice of me: so that did not my Writings produce me some solid *Pudding*, the great Deficiency of *Praise* would have quite discouraged me.

I concluded at length that the People were the best Judges of my Merit, for they buy

⁸Dated 1758.

my Works; and besides, in my Rambles, where I am not personally known, I have frequently heard one or other of my Adages repeated, with "*as Poor Richard says!*" at the end of it. This gave me some Satisfaction, as it showed not only that my Instructions were regarded, but disclosed likewise some Respect for my Authority; and I own that to encourage the practice of remembering and repeating those wise Sentences, I have sometimes *quoted myself* with great gravity.

Judge, then, how much I must have been gratified by an Incident I am going to relate to you. I stopped my Horse lately where a great Number of people were collected at a Sale of Merchant Goods. The Hour of Sale not being come, they were conversing on the Badness of the Times, and one of the Company called to a plain clean old Man, with white Locks, "Pray, Father Abraham, what think you of the Times? Won't these heavy Taxes quite ruin the Country? How shall we *be ever* able to pay them? What would you advise us to?" Father Abraham stood up, and replied, "If you'd have my Advice, I'll give it to you in short, for a *Word to the Wise is enough, and many Words won't fill a Bushel*, as *Poor Richard* says." They joined in desiring him to speak his Mind, and gathering round him, he proceeded as follows:

"Friends and Neighbors, the Taxes are indeed very heavy, and if those laid on by the Government were the only Ones we had to pay, we might more easily discharge them; but we have many others, and much more grievous to some of us. We are taxed twice as much by our

Idleness, three times as much by our *Pride*, and four times as much by our *Folly*, and from these Taxes the Commissioners cannot ease or deliver us by allowing an Abatement. However, let us hearken to good Advice, and something may be done for us. *God helps them that help themselves*, as *Poor Richard* says in his Almanac of 1733.

"It would be thought a hard Government that should tax its People one-tenth Part of their *Time*, to be employed in its Service. But *Idleness* taxes many of us much more, if we reckon all that is spent in absolute *Sloth*, or doing nothing, with that which is spent in idle Employments or Amusements, that amount to nothing. *Sloth*, by bringing on Diseases, absolutely shortens Life. *Sloth*, like *Rust*, consumes faster than Labor wears, while the used Key is always bright, as *Poor Richard* says. But dost thou love Life? Then do not squander Time, for that is the Stuff Life is made of, as *Poor Richard* says.

How much more than is necessary do we spend in Sleep! forgetting that *the Sleeping Fox catches no Poultry*; and that *there will be sleeping enough in the Grave*, as *Poor Richard* says. If Time be of all Things the most precious, *wasting of Time must be*, as *Poor Richard* says, *the greatest Prodigality*; since, as he elsewhere tells us, *Lost Time is never found again*; and what we call *Time enough!* always proves little enough. Let us then be up and doing, and doing to the Purpose: so, by Diligence, shall we do more with less Perplexity. *Sloth makes all things difficult, but Industry all things easu.*

as *Poor Richard* says; and *He that riseth late, must trot all Day, and shall scarce overtake his Business at night. While Laziness travels so slowly that Poverty soon overtakes him, as we read in Poor Richard; who adds, Drive thy Business! Let not it drive thee! and*

*Early to Bed, and early to rise,
Makes a Man healthy, wealthy, and wise.*

“So what signifies wishing and hoping for better times. We may make these Times better if we bestir ourselves. *Industry need not wish, as Poor Richard says, and he that lives upon Hope will die fasting. There are no Grains without Pains; then Help Hands, for I have no Lands, or if I have they are smartly taxed. And as Poor Richard likewise observes, He that hath a Trade hath an Estate, and He that hath a Calling hath an Office of Profit and Honor; but then the Trade must be worked at, and the Calling well followed, or neither the Estate, nor the Office, will enable us to pay our Taxes.*

“If we are industrious we shall never starve; for as *Poor Richard* says, *At the working Man's House Hunger looks in, but dares not enter. Nor will the Bailiff or the Constable enter, for Industry pays Debts while Despair increaseth them, says Poor Richard.*

“What though you have found no Treasure, nor has any rich Relative left you a Legacy, *Diligence is the Mother of Good Luck, as Poor Richard says, and God gives all things to Industry. Then*

*Plow deep, while Sluggards sleep,
And you shall have Corn to sell and to keep,*

says *Poor Dick*. Work while it is called *Today*, for you know not how much you may be hindered *Tomorrow*; which makes *Poor Richard* say, *One Today is worth two Tomorrows*; and farther, *Have you something to do Tomorrow, do it Today*. If you were a Servant, would you not be ashamed that a good Master should catch you idle? Are you then your own Master? *Be ashamed to catch yourself idle*, as *Poor Dick* says. When there is so much to be done for yourself, your Family, your Country, and your gracious King, be up by Peep of Day. *Let not the Sun look down and say, Inglorious here he lies*. Handle your Tools without Mittens; remember that *the Cat in Gloves catches no Mice*, as *Poor Richard* says.

"'Tis true there is much to be done, and perhaps you are weak-handed, but stick to it steadily, and you will see great Effects, for *constant Dropping wears away Stones*, and by *Diligence and Patience, the Mouse ate in two the Cable*; and *little Strokes fell great Oaks*, as *Poor Richard* says in his Almanac, the Year I cannot just now remember.

"Methinks I hear some of you say, 'Must a Man afford himself no Leisure?'

"I will tell thee, My Friend, what *Poor Richard* says: *Employ thy Time well if thou meanest to gain Leisure*; and, *since thou art not sure of a Minute, throw not away an Hour*. Leisure is Time for doing something useful; this Leisure the diligent man will obtain, but the lazy man never; so that, as *Poor Richard* says, *Trouble springs from Idleness, and grievous*

Toil from needless Ease. Many without Labor would live by their Wits only, but they break for want of stock. Whereas, Industry gives Comfort, and Plenty, and Respect. Fly Pleasures and they'll follow you. The diligent Spinner has a large Shift;⁹ and now I have a Sheep and a Cow, everybody bids me Good morrow—all which is well said by Poor Richard.

"But with our Industry, we must likewise be steady, settled, and careful, and oversee our own Affairs with our own Eyes, and not trust too much to others; for, as Poor Richard says,

I never saw an oft removed Tree,

Nor yet an oft removed Family,

That throve so well as those that settled be.

And again, Three Removes¹⁰ is as bad as a Fire; and again, Keep thy Shop, and thy Shop will keep thee; and again, If you would have your Business done, go; if not, send. And again,

He that by the Plow must thrive,

Himself must either hold or drive.

And again, The Eye of a Master will do more Work than both his Hands; and again, Want of Care does us more Damage than Want of Knowledge; and again, Not to oversee Workmen, is to leave them your Purse open. Trusting too much to others' Care is the Ruin of many; for, as the Almanac says, In the Affairs of this World, Men are saved, not by Faith, but by the Want of it; but a Man's own Care is profitable, for, saith Poor Dick, Learning is to

⁹A garment.

¹⁰Removals: change of location

the Studious, and Riches to the Careful, as well as Power to the Bold, and Heaven to the Virtuous. And, farther, If you would have a faithful Servant, and one that you like, serve yourself. And again, he adviseth Circumspection and Care, even in the smallest Matters, because sometimes a little Neglect may breed great Mischief, adding,

For want of a Nail, the Shoe was lost;

For want of a Shoe, the Horse was lost;

And for want of a Horse, the Rider was lost,
being overtaken and slain by the Enemy, all for want of care about a Horse-shoe Nail.

“So much for Industry, my Friends, and Attention to one’s own Business. But to these we must add *Frugality*, if we would make our *Industry* more certainly successful. A man may, if he knows not how to save as he gets, *Keep his Nose all his Life to the Grindstone*, and die not worth a *Groat*¹¹ at last. *A fat Kitchen makes a lean Will*, as *Poor Richard* says; and

Many Estates are spent in the Getting,
Since Women for Tea forsook Spinning and Knitting,
And Men for Punch forsook Hewing and Splitting.

If you would be wealthy, says he, in another Almanac, *think of Saving as well as of Getting: The Indies have not made Spain rich, because her Outgoes are greater than her Incomes. Away then with your expensive Follies, and you will not have so much cause to complain of hard*

¹¹An old English silver coin: fourpence.

Times, heavy Taxes, and chargeable Families;
for, as *Poor Dick* says,

*Women and Wine, Game and Deceit,
Make the Wealth small and the Wants great.*

And farther, *What maintains one Vice would bring up two Children.* You may think perhaps that a *little Tea* or a *little Punch* now and then, Diet a *little* more costly, Clothes a *little* finer, and a *little* Entertainment now and then, can be no *great Matter*; but remember what *Poor Richard* says: *Many a Little makes a Mickle*;¹² and farther, *Beware of little Expenses; a small Leak will sink a great Ship*; and again, *Who Dainties love shall Beggars prove*; and moreover, *Fools make Feasts and wise Men eat them.*

“Here you are all got together at this Sale of *Fineries* and *Knicknacks*. You call them *Goods*, but if you do not take Care, they will prove *Evils* to some of you. You expect they will be sold *cheap*, and perhaps they may for less than they cost; but if you have no Occasion for them, they must be *dear* to you. Remember what *Poor Richard* says: *Buy what thou hast no Need of, and ere long thou shalt sell thy Necessaries.* And again, *At a great Pennyworth pause a while.* He means that perhaps the Cheapness is *Apparent* only, and not *real*; or that the Bargain, by straitening¹³ thee in thy Business, may do thee more Harm than Good. For in another Place he says, *Many have been ruined by buying good Pennyworths.*

¹²Scotch for abundance.

¹³Pinching—distressing.

Again *Poor Richard* says, *'Tis foolish to lay out Money in a Purchase of Repentance*; and yet this Folly is practised every Day at Sales, for want of minding the Almanac. *Wise Men*, as *Poor Richard* says, *learn by others' Harms, Fools scarcely by their own*; but *Felix quem faciunt aliena Pericula cautum*.¹⁴ Many a one, for the Sake of Finery on the Back, has gone with a hungry Belly, and half starved his Family—*Silks and Satins, Scarlet and Velvets*, as *Poor Richard* says, *put out the Kitchen Fire*. These are not the *Necessaries of Life*; they can scarcely be called the *Conveniences*; and yet, only because they look pretty, how many *want to have them*. The *artificial Wants of Mankind* thus become more numerous than the *natural*; and, as *Poor Dick* says, *For one poor Person there are an hundred indigent*. By these, and other Extravagances, the Genteel are reduced to Poverty, and forced to borrow of those whom they formerly despised, but who, through *Industry and Frugality*, have maintained their Standing. In which case, it appears plainly that a *Plowman on his Legs is higher than a Gentleman on his Knees*, as *Poor Richard* says. Perhaps they have had a small Estate left them, which they knew not the Getting of,—they think *'tis Day and will never be Night*; that a little to spend out of so much is not worth minding; (a *Child and a Fool*, as *Poor Richard* says, *imagine Twenty Shillings and Twenty Years can never be spent*) but, *always taking out of the Meat-tub, and never putting in, soon*

¹⁴“Happy is he that takes caution from others” (whom others’ dangers make cautious).

comes to the Bottom. Then, as Poor Dick says, When the Well's dry, they know the Worth of Water. But this they might have known before, if they had taken his Advice: If you would know the Value of Money, go and try to borrow some, for he that goes a borrowing goes a sorrowing; and, indeed, so does he that lends to such People, when he goes to get it in again.

"Poor Dick further advises, and says,

*Fond Pride of Dress is sure a very Curse;
Ere Fancy you consult, consult your Purse.*

and again, Pride is as loud a Beggar as Want, and a great deal more saucy. When you have bought one fine Thing you must buy ten more, that your appearance may be all of a Piece; but Poor Dick says, 'Tis easier to suppress the first Desire, than to satisfy all that follow it. And 'tis as truly Folly for the Poor to ape the Rich, as for the Frog to swell, in order to equal the Ox.

*Great Estates may venture more,
But little Boats should keep near Shore.*

'Tis, however, a Folly soon punished, for Pride that dines on Vanity sups on Contempt, as Poor Richard says. And in another Place, Pride breakfasted with Plenty, dined with Poverty, and supped with Infamy. And, after all, of what Use is this Pride of Appearance, for which so much is risked, so much is suffered! It cannot promote Health, or ease Pain; it makes no increase of Merit in the Person, creates Envy, and hastens Misfortune.

*What is a Butterfly? At best
He's but a Caterpillar dressed.
The gaudy Fop's his Picture just,*

as *Poor Richard* says.

"But what Madness must it be to run in Debt for these Superfluities! We are offered by the Terms of this Sale Six Months of Credit, and that perhaps has induced some of us to attend it, because we cannot spare the ready Money, and hope now to be fine without it. But, ah, think what you do when you run in Debt: *You give to another Power over your Liberty*. If you cannot pay at the Time, you will be ashamed to see your Creditor; you will be in Fear when you speak to him; you will make poor, pitiful, sneaking Excuses, and by Degrees come to lose your Veracity, and sink into base downright lying; for, as *Poor Richard* says, *The second Vice is Lying, the first is running in Debt*. And again, to the same Purpose, *Lying rides upon Debt's back*. Whereas a freeborn Englishman ought not to be ashamed or afraid to see or speak to any Man living, Poverty often deprives a Man of all Spirit and Virtue. 'Tis hard for an empty Bag to stand upright, as *Poor Richard* truly says.

"What would you think of that Prince, or that Government, who should issue an Edict forbidding you to dress like a Gentleman, or a Gentlewoman, on Pain of Imprisonment or Servitude! Would you not say, that you are free, have a Right to dress as you please, and that such an Edict would be a Breach of your Privileges, and such a Government tyrannical? And yet you are about to put yourself under that

Tyranny when you run in Debt for such Dress! Your Creditor has Authority at his Pleasure to deprive you of your Liberty, by confining you in Jail for Life, or to sell you for a Servant, if you should not be able to pay him! When you have got your Bargain, you may, perhaps, think little of Payment! But *Creditors, Poor Richard* tells us, *have better Memories than Debtors*; and in another Place he says, *Creditors are a superstitious Sect, great Observers of set Days and Times*. The Day comes round before you are aware, and the Demand is made before you are prepared to satisfy it. Or, if you bear your Debt in Mind, the Term, which at first seemed so long, will, as it lessens, appear extremely short. Time will seem to have added Wings to his Heels as well as Shoulders. *Those have a short Lent*, saith *Poor Richard*, *who owe Money to be paid at Easter*. Then, since he says, *The Borrower is a Slave to the Lender, and the Debtor to the Creditor*, disdain the Chain, preserve your Freedom, and maintain your Independence. Be *industrious and free*; be *frugal and free*. At present, perhaps, you may think yourself in thriving Circumstances, and that you can bear a little Extravagance without Injury, but,

*For Age and Want save while you may;
No Morning Sun lasts a whole Day,*

as *Poor Richard* says.

"Gain may be temporary and uncertain, but ever, while you live, Experience is constant and certain; and 'tis easier to build two Chimneys than to keep one in Fuel, as *Poor Richard* says.

So rather go to Bed supperless than rise in Debt.

*Get what you can, and what you get, hold:
'Tis the stone that will turn all your Lead into Gold,*

as *Poor Richard* says. And when you have got the Philosopher's Stone, surely you will no longer complain of the bad Times, or the Difficulty of paying Taxes.

"This Doctrine, my Friends, is Reason and Wisdom; but, after all, do not depend too much on your own Industry, and Frugality, and Prudence, though excellent Things, for they may all be blasted without the Blessing of Heaven; and therefore ask that Blessing humbly, and be not uncharitable to those that at present seem to want it, but comfort and help them. Remember, Job suffered and was afterwards prosperous.

"And now to conclude: *Experience keeps a dear School, but Fools will learn in no other, and scarce in that; for 'tis true, we may give Advice, but we cannot give Conduct, as Poor Richard* says. However, remember this: *They that won't be counseled, can't be helped, as Poor Richard* says; and farther, *If you will not hear Reason, she'll surely wrap your Knuckles.*"

Thus the old Gentleman ended his Harangue. The People heard it, and approved the Doctrine, and immediately practised the contrary, just as if it had been a common Sermon. For the Sale opened, and they began to buy extravagantly, notwithstanding all his Cautions, and their own Fear of Taxes.

I found the good Man had thoroughly studied my Almanacs, and digested all I had dropped on those Topics during the Course of Five-and-Twenty Years. The frequent mention he made of me must have tired anyone else, but my Vanity was wonderfully delighted with it, though I was conscious that not a tenth Part of this Wisdom was my own which he ascribed to me, but rather the Gleanings I had made of the Sense of all Ages and Nations. However, I resolved to be the better for the Echo of it; and though I had at first determined to buy Stuff for a new Coat, I went away resolved to wear my old one a little longer. Reader, if thou wilt do the same, thy Profit will be as great as mine.

I am, as ever, Thine to serve thee,

RICHARD SAUNDERS.

July 7. 1757.

SELECTED EXCERPTS FROM EARLIER
ALMANACS OF POOR RICHARD

Visits should be short, like a winter's day,
Lest you're too troublesome, hasten away.

Kings and bears often worry their keepers.

Light purse, heavy heart.

He's a fool that makes his doctor his heir.

Great talkers, little doers.

Where bread is wanting, all's to be sold.

If you ride a horse, sit close and tight;
If you ride a man, sit easy and light.

Beauty and folly are old companions.

Where there's a marriage without love, there
will be love without marriage.

He that cannot obey, cannot command.

An egg today is better than a hen tomorrow.

He does not possess wealth: it possesses him.

Approve not of him who commends all you
say.

Two dry sticks will burn a green one.

Haste makes waste.

Paintings and fightings are best seen at a distance.

Great spenders are bad lenders.

Epitaph on a Scolding Wife by her Husband:

Here my poor Bridget's corpse doth lie:
She is at rest,—and so am I.

Many a long dispute among Divines may be thus abridged: "It is so!" "It is not so!" "It is so!" "It is not so!"

Tugend bestehet wen alles vergehet (Virtue remains when all else is lost).

Ill company is like a dog who dirties those most that he loves best.

When man and woman die, as poets sung,
His heart's the last part moves,—her last,
the tongue.

Time is an herb that cures all diseases.

Read much, but not too many books.

The worst wheel of the cart makes the most noise.

Love and Lordship hate companions.

The use of money is all the advantage there is in having money.

Mary's mouth costs her nothing, for she never opens it but at others' expense.

The rotten apple spoils its companion.

Do not do that which you would not have known.

It is better to take many injuries than to give one.

Three may keep a secret, if two of them are dead.

A little house well filled,
A little field well tilled,
And a little wife well willed,
Are great riches.

If you would have guests merry with cheer,
Be so yourself, or so at least appear.

He that waits upon fortune is never sure of a dinner.

Do good to thy friend to keep him, to thy enemy to gain him.

Hope of gain lessens pain.

The heart of the fool is in his mouth, but
the mouth of the wise man is in his heart.

Men and melons are hard to know.

He that lieth down with dogs shall rise up
with fleas.

The proof of gold is fire; the proof of woman,
gold; the proof of man, a woman.

Eat to live, and not live to eat.

Ne'er take a wife till thou hast a house (and
a fire) to put her in.

My love and I for kisses played,

She would keep stakes, I was content,

But when I won, she would be paid,

This made me ask her what she meant:

Quoth she, "Since you are in this wrang-
ling vein,

Here, take your kisses—give me mine
again."

Nothing dries sooner than a tear.

Anger warms the Invention, but overheats
the Oven.

He that would catch Fish must venture his
Bait.

Men take more pains to mask than to mend.

Work as if you were to live one hundred years; pray as if you were to die tomorrow.

The royal crown cures not the headache.

The tongue offends, and the ears get the cuffing.

Many dishes, many diseases; many medicines, few cures.

Take this remark from Richard, poor and lame, Whate'er's begun in anger, ends in shame.

Don't think to hunt two hares with one dog.

Who pleasures gives, shall joy receive.

Teach your child to hold his tongue—he'll learn fast enough to speak.

Marry your son when you will, but your daughter when you can.

The poor man must walk to get meat for his stomach, the rich man to get a stomach to his meat.

Necessity never made a good bargain.

Be slow in choosing a friend, and slower in changing.

Pain wastes the body, pleasures the understanding.

Poverty wants some things, luxury many things, avarice all things.

A lie stands on one leg, truth on two.

An old young man will be a young old man.

Fish and visitors smell in three days.

Wealth is not his that has it, but his that enjoys it.

'Tis easy to see, hard to foresee.

In a discreet man's mouth, a public thing is private.

He that takes a wife takes care.

Why does the blind man's wife paint herself?

None preaches better than the ant, and it says nothing.

He that speaks much is much mistaken.

Forewarned, forearmed.

Let him who scatters thorns not go barefoot.

He that would live in peace and at ease,
Must not speak all he knows, nor judge all
he sees.

He that can compose himself is wiser than he
that composes books.

After crosses and losses, men grow humbler
and wiser.

There are no ugly loves, nor handsome
prisons.

Don't misinform your doctor nor your lawyer.

"Tomorrow I'll reform," the fool does say;
Today itself's too late: the *wise* did yesterday.

He that pursues two hares at once does not
catch one and lets the other go.

To whom thy secret thou dost tell,
To him thy freedom dost thou sell.

Tell a miser he's rich and a woman she's old,
and you'll get no money of one, nor kindness
of the other.

Women are books, and men the readers be,
Who sometimes in those books erratas see;
Yet oft the reader's raptured with each line,

Fair print and paper, fraught with sense divine;
 Though some, neglectful, seldom care to read,
 And faithful wives no more than Bibles heed.
 "Are women books?" says Hodge, "Then would
 mine were
 An Almanac, to change her every year."

The noblest question in the world is, "What
 good may I do in it?"

There are three faithful friends: an old
 wife, an old dog, and ready money.

Who has deceived thee so oft as thyself?

If you would not be forgotten, as soon as
 you are dead and rotten, either write things
 worth the reading, or do things worth the
 writing.

Let thy vices die before thee.

Keep your eyes wide open before marriage—
 half shut afterwards.

If you do what you should not,
 You must hear what you would not.

Reading makes a full man—meditation a
 profound man—discourse a clear man.

These lines may be read either backward or forward:

Joy, Mirth, Triumph, I do defie:
 Destroy me, death, fain would I die;
 Forlorn am I, love is exiled,
 Scorn smiles thereat, hope is beguiled;
 Men banished bliss, in woe must dwell,
 Then joy, mirth, triumph, all farewell.

None but the well-bred man knows how to confess a fault, or acknowledge himself in error.

There is much difference between imitating a good man, and counterfeiting him.

Wink at small faults. Remember thou hast great ones.

Eat to please thyself, but dress to please others.

Search others for their virtues, thyself for thy vices.

When death puts out our flame, the snuff will tell

If we are wax or tallow by the smell.

Trust thyself, and another shall not betray thee.

Historians relate not so much what is done, as what they would have believed.

Thou canst not joke an enemy into a friend,
but thou may'st a friend into an enemy.

He that falls in love with himself will have
no rivals.

Blessed is he that expects nothing, for he
shall never be disappointed.

Let thy discontents be secrets.

Hear no ill of a friend, nor speak any of an
enemy.

Epitaph on a talkative Old Maid:

Beneath this silent stone is laid,
A noisy, antiquated maid,
Who, from her cradle talked till death,
And ne'er before was out of breath.

Whither she's gone we cannot tell,
For if she talks not, she's in —;
If she's in —, she's there unblessed,
Because she hates a place of rest.

Sin is not hurtful because it is forbidden,
but it is forbidden because it is hurtful.

A cure for poetry:

Seven wealthy towns contend for Homer dead,
Through which the living Homer begged his
bread.

Lend money to an enemy and thou'lt gain him,
to a friend and thou'lt lose him.

At twenty years of age the will resigns; at
thirty the wit; at forty the judgment.

An open foe may prove a curse,
But a pretended friend is worse.

The poor have little—beggars none—
The rich too much—enough not one.

Fear not death; for the sooner we die, the
longer we shall be immortal.

● When you speak to a man, look on his eyes;
when he speaks to thee, look on his mouth.

Marry above thy match, and thou'lt get a
master.

When befriended, remember it;
When you befriend—forget it.

A flatterer never seems absurd;
The flattered always takes his word.

If you would keep your secret from an
enemy, tell it not to a friend.

Death takes no bribes.

Quarrels never could last long,
If on one side only lay the wrong.

Strange! that a man who has wit enough to
write a satire should have folly enough to pub-
lish it.

The painful¹⁵ preacher, like a candle bright,
Consumes himself in giving others light.

Ill customs and bad advice are seldom for-
gotten.

When knaves fall out, honest men get their
goods; when priests dispute, we come at the
truth.

One good husband is worth two good wives;
for the scarcer things are, the more they are
valued.

He that speaks ill of the mare will buy her.

To err is human, to repent divine, to persist
devilish.

Money and man a mutual friendship show:
Man makes false money; money makes man so.

How few there are who have courage enough
to own their faults, or resolution enough to
mend them!

¹⁵ i.e., palmetto-bug.

Content and riches seldom meet together;
Riches take thou, contentment I had rather.

What you would seem to be, be really.

Make haste slowly.

The same man cannot be both Friend and
Flatterer.

Those who are feared are hated.

A soft tongue may strike hard.

Wars bring scars.

He's a fool that cannot conceal his wisdom.

You may talk too much on the best of sub-
jects.

Old young and old long.

There are no fools so troublesome as those
that have wit.

'Tis easier to prevent bad habits than to
break them.

He that whines for Glass without G
Takes away L and that's he.

A quarrelsome man has no good neighbors.

Women and wine,
Game and deceit,
Make the wealth small
And the wants great.

Virtue and Happiness are Mother and Daughter.

Good sense is a thing all need, few have,
and none think they want.

The tongue is ever turning to the aching tooth.

The sting of a reproach is the truth of it.

Mad kings and mad bulls are not to be held
by treaties and packthread.

A truly great man will never trample on a
worm nor sneak to an emperor.

Half-hospitality opens his door and shuts up
his countenance.

Strive to be the greatest man in your country,
and you may be disappointed; strive to
be the best and you may succeed. He may
well win the race that runs by himself.

'Tis a strange forest that has no rotten wood
in't,
And a strange kindred that all are good in't.

There is no man so bad but he secretly respects the good.

We are not so sensible of the greatest health as of the least sickness.

A good example is the best sermon.

Better is a little with content than much with contention.

A slip of the foot you may soon recover,
But a slip of the tongue you may never get over.

It is wise not to seek a secret and honest not to reveal it.

A mob's a monster—heads enough, but no brains!

He that cannot bear with other people's passions, cannot govern his own.

Knives and nettles are akin: stroke them kindly, yet they'll sting.

Liberality is not giving much, but giving wisely.

Suspicion may be no fault, but showing it may be a great one.

POOR RICHARD'S ALMANAC

If Jack's in love, he's no judge of Jill's beauty.

Most fools think they are only ignorant.

Pardoning the bad is injuring the good.

The end of passion is the beginning of repentance.

Words may show a man's wit, but actions his meaning.

Many foxes grow gray, but few grow good.

If passion drives, let reason hold the reins.

Drink does not drown care, but waters it, and makes it grow faster.

A man has no more goods than he gets good by.

Different sects, like different clocks, may be all near the matter, though they don't quite agree.

Having been poor is no shame, but being ashamed of it, is.

All would live long, but none would be old.

Neglect kills injuries, revenge increases them.

Doing an injury puts you below your enemy;
revenging one makes you but even with him;
forgiving it sets you above him.

Many a man thinks he is buying pleasure,
when he is merely selling himself a slave to it.

He that spills the rum loses that only; he
that drinks it loses often both that and him-
self.

Though modesty is a virtue, bashfulness is a
vice.

The Golden Age never was the present Age.

Today is Yesterday's pupil.

'Tis great confidence in a friend to tell him
your faults—greater to tell him his.

A great talker may be no fool, but he is one
that relies on him.

He that is of the opinion that money will do
everything may well be suspected of doing
everything for money.

Danger is sauce for prayers.

Dick told his spouse, he durst be bold to swear
Whate'er she prayed for, Heav'n would thwart
her prayer:

"Indeed!" says Nell, "'tis what I'm pleased to
hear,
For now I'll pray for your long life, my dear."

The bell calls others to church, but itself
never minds the sermon.

Friendship cannot live with ceremony, nor
without civility.

He that would travel much should eat little.

Where there is hunger the law is not regard-
ed; and where the law is not regarded there
will be hunger.

There was never a good knife made of bad
steel.

Love your enemies, for they tell you your
faults.

Be civil to all; sociable to many; familiar
with few; friend to one; enemy to none.

Laws too gentle are seldom obeyed; too se-
vere, seldom executed.

A false friend and a shadow attend only while
the sun shines.

* Laziness travels so slowly that Poverty soon
overtakes him.

* When a Friend deals with a Friend,
Let the bargain be well penned,
That they may continue Friends to the End.

Act uprightly and despise calumny; dirt may
stick to a mud wall, but not to polished marble.

When you're an Anvil, hold you still;
When you're a Hammer, strike your fill.

Half the truth is often a great lie.

The honey is sweet, but the bee has a sting.

Bad commentators spoil the best of books,
So God sends meat (they say), the devil cooks.

Sam had the worst wife that a man could have,
Proud, lazy sot, could neither get nor save;
Eternal scold she was, and what is worse,
"The devil burn thee," was her common curse.
"Forbear," quoth Sam, "that fruitless curse so
common,
He'll not hurt me, who've married his kins-
woman."

Rob not God, nor the poor, lest thou ruin thyself; the eagle snatched a coal from the altar, but it fired her nest.

If what most men admire, they would despise,
'Twould look as if mankind were growing wise.

Men often mistake themselves, seldom forget themselves.

One mend-fault is worth two find-faults, but one find-fault is better than two make-faults.

Don't throw stones at your neighbors' windows, if your own are glass.

Whimsical Will once fancied he was ill,
The doctor called, who thus examined Will:
"How is your appetite?" "O, as to that,
I eat quite heartily, you see I'm fat."
"How is your sleep o' nights?" "'Tis sound and good;
I eat, drink, sleep as well as e'er I could."
"Will," says the doctor, clapping on his hat,
"I'll give you something shall remove all that."

If you desire many things, many things will seem but a few.

A penny saved is two pence clear.
A pin a day is a groat a year.
Save and have.

A nymph and a swain to Apollo once prayed,
The swain had been jilted, the nymph been be-
trayed;

They came for to try if his oracle knew
E'er a nymph that was chaste, or a swain that
was true.

Apollo stood mute, and had like t' have been
posed;

At length he thus sagely the question disclosed:
"He alone may be true in whom none will con-
fide,

And the nymph may be chaste that has never
been tried."

Love, cough, and a smoke can't well be hid.

* Well done is better than well said.

Certainly these things agree: the priest, the
lawyer, and death, all three;

Death takes both the weak and the strong,
The lawyer takes from both right and wrong,
And the priest from the living and dead has
his fee.

Let the letter stay for the post, and not the
post for the letter.

Keep conscience clear, then never fear.

Content is the Philosopher's Stone, that turns
all it touches into gold.

On his death-bed poor Lubin lies;
 His spouse is in despair;
 With frequent sobs and mutual cries
 They both express their care.
 "A different cause," says Parson Sly,
 "The same effect may give.
 Poor Lubin fears that he shall die;
 His wife that he may live."

The way to see by Faith is to shut the eye
 of Reason.

Who is wise? He that learns from everyone.
 Who is powerful? He that governs the passions.
 Who is rich? He that is content.
 Who is that? Nobody.

Dick's wife was sick, and posed the doctors'
 skill,
 Who differed how to cure th' inveterate ill.
 "Purging," the one prescribed. "No," quoth an-
 other,
 "That will do neither good nor harm, my
 brother;"
 "Bleeding's the only way," 'twas quick replied,
 "That's certain death, but e'en let Dick decide."
 "I'se no great skill," quo' Richard, "by the
 rood,¹⁶
 But I think bleeding's like to do most good."

As we must account for every idle word, so
 must we for every idle silence.

¹⁶The cross.

A doubtful meaning:

The female kind is counted ill:
And is indeed: the contrary:
No man can find: that hurt they will:
But everywhere: show charity:
To nobody: malicious still:
In word or deed: believe you me.

Giles Jolt, as sleeping in his cart he lay,
Some pilfering villains stole his team¹⁷ away;
what?

Giles wakes and cries, "What's here? a dickens,
Why, how now? Am I Giles? or am I not?
If he, I've lost six geldings, to my smart;
If not, odds buddikins,¹⁸ I've found a cart."

He that best understands the world, least
likes it.

Many have quarreled about religion that
never practised it.

Grace thou thy house, and let not that grace
thee.

Let thy child's first lesson be obedience, and
the second will be what thou wilt.

* A man of knowledge, like a rich soil, feeds,
If not a world of corn, a world of weeds.

¹⁷I.e., his horses.

¹⁸A disguised oath—"God's bodykins"—originally
signifying the wafer or bread used in the sacrament
of the Lord's Supper.

Thus with kind words, Squire Edward cheered
his friend:

"Dear Dick! thou on my friendship may'st de-
pend;

I know thy fortune is but very scant,
But, be assured, I'll ne'er see Dick in want."
Dick's soon confined,—his friend no doubt
would free him;

His word he kept: in want he ne'er would see
him.

Pollio, who values nothing that's within,
Buys books as men hunt beavers—for their skin.

Thirst after desert, not reward.

Industry need not wish.

My sickly spouse, with many a sigh,
Once told me: "Dicky, I shall die."
I grieved, but recollected straight,
'Twas bootless to contend with fate:
So resignation to Heaven's will
Prepared me for succeeding ill;
'Twas well it did, for on my life,
'Twas Heaven's will to spare my wife.

Happy that nation, fortunate that age, whose
history is not diverting.

A wolf eats sheep, but, now and then,
Ten thousands are devoured by men.

Man's tongue is soft, and bone doth lack,
Yet a stroke therewith may break a man's back.

Tricks and treachery are the practice of fools
that have not wit enough to be honest.

No wood without bark.

Don't overload gratitude; if you do, she'll
kick.

Says Roger to his wife, "My dear,
The strangest piece of news I hear!
A law, 'tis said, will quickly pass,
To purge the matrimonial class:
Cuckolds, if any such we have here,
Must to a man be thrown i' the river."
She, smiling, cried, "My dear, you seem
Surprized! Pray, ha'n't you learned to swim?"

Can grave and formal pass for wise
When men the solemn owl despise?

Learn of the skilful: he that teaches him-
self hath a fool for a master.

Anger and folly walk cheek by jowl; repent-
ance treads on both their heels.

If evils come not, then our fears are vain;
And if they do, fear but augments the pain.

Rob not for burnt offerings.

Bis dat, qui cito dat [He who gives promptly,
gives twice as much].

Ben beats his pate, and fancies wit will come;
But he may knock, there's nobody at home.

Speak and speed: the close mouth catches no
flies.

Hope and a red rag are baits for men and
mackerel.

As honest Hodge, the farmer, sowed his field,
Cheered with the hope of future gain 'twould
yield,

Two upstart Jacks in office, proud and vain,
Come riding by, and thus insult the swain:
"You drudge and sweat, and labor here, old
boy,

But we the fruit of your hard toil enjoy."
"Belike you may," quoth Hodge, "and but your
due,

For, gentlemen, 'tis *hemp* I'm sowing now."

Here comes a Glib Tongue, who can out-flat-
ter a Dedication, and lie like ten Epitaphs.

'Tis easy to frame a bold resolution,
But hard is the task that concerns execution.

A parrot is for prating prized,
 But prattling women are despised;
 She who attacks another's honor
 Draws every living thing upon her.
 Think, madam, when you stretch your lungs,
 That all your neighbors, too, have tongues;
 One slander fifty will beget,
 The world with interest pays the debt.

Let all men know thee, but no man know
 thee thoroughly: men freely ford that see the
 shallows.

If you'd lose a troublesome visitor, lend him
 money.

Keep thou from the opportunity, and God
 will keep thee from the sin.

The things which hurt, instruct.

As often as we do good, we sacrifice.

Celia's rich sideboard seldom sees the light,
 Clean is her kitchen, and her spits are bright;
 Her knives and spoons, all ranged in even rows,
 No hands molest, nor fingers discompose:
 A curious jack, hung up to please the eye,
 Forever still, whose fliers never fly:
 Her plates unsullied shining on the shelf;
 For Celia dresses nothing, but *herself*.

Vanity backbites more than malice.

He who buys
 Had need have one hundred eyes;
 But one's enough
 For him that sells the stuff.

One man may be more cunning than another,
 but not more cunning than everybody else.

Pride and the gout are seldom cured through-
 out.

Despair ruins some, presumption many.

A quiet conscience sleeps in thunder, but rest
 and guilt live far asunder.

Craft must be at charge for clothes, but truth
 can go naked.

Write injuries in dust, benefits in marble.

The heathen, when they died, went to bed
 without a candle.

Life with fools consists in drinking;
 With the wise man, living's thinking.

To Friend, Lawyer, Doctor, tell plain your
 whole case,

Nor think on bad matters to put a good face:
 How can they advise, if they see but a part?
 'Tis very ill driving black hogs in the dark.

Content makes poor men rich; discontent
makes rich men poor.

Nine men in ten are suicides.

Clean your finger, before you point at my
spots.

Hide not your talents—they for use were
made? What's a sun-dial in the shade?

What signifies knowing the names, if you
know not the natures of things?

'Tis a shame that your family is an honor
to you! You ought to be an honor to your
family.

Glass, china, and reputation are easily
cracked, and never well mended.

Pray don't burn my house to roast your eggs.

Prosperity discovers vice, adversity virtue.

Friendship increases by visiting friends, but
by visiting seldom.

If worldly goods cannot save me from death,
they ought not to hinder me from eternal life.

"Daphnis," says Clio, "has a charming eye;
 What pity 'tis her shoulder is awry?
 Aspasia's shape, indeed—but then, her air,
 'Twould ask a conj'rer to find beauty there."
 Without a *but*, Hortensia she commends,
 The first of women, and the best of friends;
 Owns her in person, wit, fame, virtue, bright:
 But how comes this to pass? She died last night.

The proud hate pride—in others.

If man could have half his wishes, he would
 double his troubles.

Sudden power is apt to be insolent, sudden
 liberty saucy; that behaves best which has
 grown gradually.

A pair of good ears will drain dry a hundred
 tongues.

Gifts much expected are paid, not given.

Love your neighbor, but don't pull down your
 hedge.

Willows are weak, but they bind the faggot.

To be intimate with a foolish friend is like
 going to bed to a razor.

Friends are the true scepters of princes.

The doors of wisdom are never shut.

Luke, on his dying bed, embraced his wife,
And begged one favor: "Swear, my dearest life,
Swear, if you love me, never more to wed,
Nor take a second husband to your bed."
Anne dropped a tear. "You know, my dear,"
says she,

"Your least desires have still been laws to me;
But from this oath, I beg you'd me excuse—
For I'm already promised to J——n H——s."

When you taste honey, remember gall.

It is ill manners to silence a fool, and cruelty
to let him go on.

THE SECRET OF OSCAR WILDE

Oscar Wilde was born in 1852 or 1854. There seems to be some doubt as to the year of his birth. He died in 1900. Wilde was sentenced to prison in 1895; to immortality, hardly three decades later. For, before the first quarter of the twentieth century was rounded out, sober American critics acclaimed him as "the youngest of the classics." They could not salute him as "the oldest of the moderns." He belongs to the past by temperament as well as by tradition.

Compared with Browning and Hardy, Wilde is distinctly old-fashioned. He graduates from an older school of thought that took its philosophy and its morality ready-made. In his heart of hearts, he believed in the old moralities. Oscar Wilde, stripped of pretence and paradox, was a moralist. That is his tragedy and his secret.

Glittering paradoxes fail to conceal the conscience of Oscar Wilde, writhing in the conflict between accepted standards of morality and the forbidden things in his nature. An eager desire to justify himself is responsible for his excursions into so many fields of art. He experiments with the essay, with poetry, with romance, with comedy and with tragedy, obsessed by the longing to prove himself a—man.

His inferiority complex, evolved from the consciousness of his own bi-sexuality and unrelieved by any clear understanding of its

biological basis, compelled him to exert himself in letters and in life. It made him the most brilliant conversationalist, the most sparkling epigrammatist, of his period. It is the source of his impudence and of his genius.

Oscar Wilde's conceit is a mask to conceal his weakness. His paradoxes are an oblique compliment to the established order. When that order falls, their edge will be dulled. They will be almost incomprehensible. The man who attacks a law is still its slave, as much as the man who defends it. The nimble-witted Chesterton comprehends the truth of this assertion. In "The Ball and the Cross," the orthodox Catholic and the devout atheist are eager to fight a duel over the existence or non-existence of God. They are the only men in all London who take their religion seriously enough to stake their lives on their convictions!

Wilde, it may be urged, preached that art was essentially "unmoral." Nevertheless, his very preachments belie his faith. The man who turns a truth or a truism upside down merely renders homage to its validity. The man who shouts his virtue from the housetops is certain to be a rake. The poet who, after reaching maturity, constantly toys with sin, who boldly announces that he is a very wicked man, is a moralist in disguise.

Scratch the Aesthete, and you will find the moralist. Oscar Wilde, both in his works and in his life, exemplifies a Puritan conscience which he wants to conceal from the world and from himself. He protests too much. His

protestations at no time convince us because he has not smothered his conscience.

"Dorian Gray" is the story of a conscience. When the hero stabs his conscience he dies. Wilde, with uncanny premonition, foretold his own doom. When, after his release from prison, some fatal discovery (perhaps a knowledge of the new psychology, conveyed to him by friends from the laboratory of German science or from the researches of Havelock Ellis), destroyed his consciousness of sin, he perished as an artist. The Scarlet Letter ceased to be a distinction. Sin had ceased to be splendid and scarlet; it was sin no longer.

In "De Profundis" Wilde, repentant, is still capable of the delusion of his own sinfulness. His repentance is sincere. He needs the penitential mood for his creative purpose. When this penitential mood and the consciousness of sin disappear together, the well of his creative imagination runs dry.

In his plays, despite parlor chatter, there is no attempt to uproot old conventions. Wilde prides himself on being a gentleman; accepting the standards of his generation. He is no rebel like Ibsen; no minter of a new moral coinage.

"Salome" is pervaded by the consciousness of sin. "Salome", as well as his poem, "The Sphinx", depicts the desires, against which the poet battles vainly, in his own bosom. The soldiers who smother under their shields, Salome, daughter of Herodias, Princess of Judea, execute the verdict of the poet's own outraged

moral sense. "The Sphinx" rings out with an invocation to the Crucifix—

Whose pallid burden, sick with pain, watches the
world with wearied eyes,
And weeps for every soul that dies, and weeps for
every soul in vain.

"The Sphinx", probably Wilde's greatest lyrical effort, his finest accomplishment as a poet (with the exception of "The Ballad of Reading Gaol") is the symbol of lust. Poe's "ungainly fowl" and Wilde's "curious cat are foils. What melancholy was to Poe, the consciousness of sin was to Wilde. Both moods are mysteriously rooted in sex. The psychological reaction involved made both men immortal after death and doomed both to mortal agony in the flesh.

Poe confesses somewhere:

I could not love except where Death
Was mingling his with Beauty's breath—
Or Hymen, Time, and Destiny
Were stalking between her and me.

Wilde, like Poe, could neither love nor create, except when he was spurred by a sense of the forbidden. If he could not be a saint, he would at least be a magnificent sinner. His "splendid, scarlet sins" helped him to overcome a feeling of constitutional inferiority.

To us, Wilde does not seem a sinner, but an individual with a paradoxal sexual constitution, fairly common in all climes and races of men. Biologically man is a bi-sexual animal.

Like Swinburne and Gautier, Wilde is fascinated by "loves double blossomed", but, in spite of his pose of brazen effrontery, this "king of

life," this "lord of language," lacks the splendid impudence of his masters in the treatment of passiona~~l~~ themes. Passion in Wilde is never unashamed. Not in his verse, not in his prose. We shall not cite here his cautious denials on the witness stand, for there, caught in the trap of an antiquated and hypocritical law, his sole business was to disentangle his feet ensnared by the cunning of his foes and the imprudence of his friends.

In the soul of Oscar Wilde (a result perhaps of psychic shocks suffered in childhood) physical passion was never divorced from infantile taboos. Even in the "Sphinx" where his language is boldest and where, for once, he speaks in the first person singular, his Muse does not bravely face the sensual phantasmagoria of his subconscious mind, but squints at them lascivously through her fingers.

In most cases he conceals his propensities under the ambiguous cloak of pedantic allegory, religious contrition and classical learning. Psychic exhibitionism, which is perhaps the ultimate spring of all artistic creation, constantly battles in him with a profoundly British sense of propriety.

When, in "De Profundis," he says that the perverse became to him in the sphere of passion what the paradox was to him in the sphere of the intellect, he is still playing with terms, without real insight into the basic quality of his nature.

The public proclamation of his idiosyncrasy at the trial and his own confession in "De Profundis," must have been an immense

psychic relief, but he either was no longer able to rebuild his defences against his own sense of inferiority upon which his creative instinct so largely depended, or he was robbed of his sense of shame that delectable consciousness of sin, without which his Muse was sterile.

Unable to glory in flesh without a stab of conscience Wilde was neither a Pagan nor a Greek. He was an Irishman molded by the atmosphere of Nineteenth Century England. He would have been utterly out of place in the Athens of Alcibiades. He could, not like Whitman, sing the body electric.

The Sphinx, call it consciousness of sin, call it lust or taboo, like the Raven that haunted Poe, hovers forever in the nethermind of the poet. Its shadow never leaves him. At last emasculation seems the only escape.

What snake-tressed fury fresh from Hell, with uncouth gestures and unclean,
Stole from the poppy-drowsy queen and led you to a student's cell?

What songless tongueless ghost of sin crept through the curtains of the night,
And saw my taper burning bright, and knocked, and bade you enter in.

Are there not others more accursed, whiter with leprosies than I?
Are Abana and Pharpar dry that you come here to slake your thirst?

Get hence, you loathsome mystery! Hideous animal, get hence!

You wake in me each bestial sense, you make me what I would not be.

You make my creed a barren sham, you wake foul dreams of sensual life,
And Atys with his blood-stained knife were better than the thing I am.

No Greek could have written "The Harlot's House." Walt Whitman could not have written it. Through the mincing music of the poet's lines, we hear the agony of his twisted soul:

Sometimes a horrible marionette
Came out, and smoked its cigarette
Upon the steps like a live thing.

Then, turning to my love, I said,
"The dead are dancing with the dead,
The dust is whirling with the dust."

But she—she heard the violin,
And left my side, and entered in:
Love passed into the house of lust.

There is always in Wilde a sense of loss and futile regret. The sonnet, "Helas," which he prefixes to his poems, is his creed and confession.

To drift with every passion till my soul
Is a stringed lute on which all winds can play,
Is it for this that I have given away
Mine ancient wisdom, and austere control?

Never has Wilde stated his own case more clearly and more poetically than in the tell-tale lines:

lo! with a little rod
I did but touch the honey of romance—
And must I lose a soul's inheritance?

The same note appears in "Bitter Sweet Love".

Had my lips been smitten into music by the kisses
that but made them bleed,
You had walked with Bice and the angels on the
verdant and enamelled mead.

I had trod the road which Dante treading saw the
suns of seven circles shine,

Ay! perchance had seen the heavens opening, as
they opened to the Florentine.

I have made my choice, have lived my poems, and,
though youth is gone in wasted days,

I have found the lover's crown of myrtle better
than the poet's crown of bays.

But he is not convincing. The choice we feel
is not final. The poet whistles to keep up his
courage:

But surely it is something to have been

The best beloved for a little while,

To have walked hand in hand with Love, and seen

His purple wings flit once across thy smile.

Ay! though the gorged asp of passion feed

On my boy's heart, yet have I burst the bars,

Stood face to face with Beauty, known indeed

The Love which moves the Sun and all the stars!

He calls the poem "Apologia." Poor Oscar
always apologizes! Swinburne, Catullus, Sappho,
never apologize.

Ah! had'st thou liked me less and loved me more,

Through all those summer days of joy and rain,

I had not now been sorrow's heritor,

Or stood a lackey in the House of Pain.

But the poet is sorrow's heritor. He *stands*
in the House of Pain, luxuriating both in his
sin and in his sorrow. In "Taedium Vitae," he
protests against the hoarse cave of strife" where
his white soul first kissed the mouth of sin, but
it is only sin that makes him articulate. Even
the "Ballad of Reading Gaol" is inspired by a
murderer who killed the thing he loved:

Yet each man kills the thing he loves,

By each let this be heard. . . .

Gruesomely the poet identifies himself with the young soldier, condemned to the halter:

A prison wall was round us both,
Two outcast men we were:
The world had thrust us from its heart,
And God from out His care:
And the iron gin that waits for Sin
Had caught us in its snare.

Could any one paraphrase more beautifully the old saw that the wages of sin is death?

"Oho!" they cried, "The world is wide,
But fettered limbs go lame!
And once, or twice, to throw the dice
Is a gentlemanly game,
But he does not win who plays with Sin
In the Secret House of Shame."

Can morality be more insistent?

Other poets with a bi-sexual complex have been candid enough. Shakespeare makes no secret of his devotion to Mr. W. H., the youth whose blonde slimness pervades the Sonnets. Michael Angelo was not afraid to proclaim his Hellenic affection. Douglas wrote "Two Loves" and his "Hymn to Physical Beauty". Wilde refers only surreptitiously to that which moves him most; usually in connection with some classical allusion. In "Dorian Gray," he feeds us on innuendo. Only once, in "The Portrait of Mr. W. H.," does he frankly approach the problem.

We must search for an obscure passage in one of his longer poems, "The Burden of Itys," to find Wilde's description of the secret of his own dual nature in his poetic characterization of Salmacis—

Who is not boy or girl and yet is both,
Fed by two fires and unsatisfied,
Through their excess, each passion being loth
For love's own sake to leave the other's side
Yet killing love by staying. . . .

Wilde's sense of sin explains his religious moods.

Great Pan is dead, and Mary's son is king.

Wilde accepts Mary's son. Pan would make him free from the sense of sin. He prefers salvation by way of Calvary. The fates granted his wish. If, however, in his singing days, Pan had purged his soul and cleansed his flesh, or if Jesus had come down from heaven with the divine assurances of forgiveness, song would have perished on his lyre, paradox paled on his lips.

The duality of his sexual constitution, wedded to a consciousness of sin, for better or for worse, made Wilde a poet. His genius was a compensation for his sense of inferiority. To justify himself, he appreciably enriched both the prose and the verse of his time. It is useless to speculate upon what he would have been without a consciousness of sin and without an inferiority complex. A commonplace Irishman, perhaps, chasing social butterflies in London; or the supreme poet of his generation!

GEORGE SYLVESTER VIERECK.

Note—To understand "The Harlot's House and Other Poems," this volume should be read in conjunction with "Panthea and Other Poems", with the "Ballad of Reading Gaol", with "Oscar Wilde in Outline" and with "The Tragic Story of Oscar Wilde." All these books appear in the Little Blue Books.)

HELAS

To drift with every passion till my soul
Is a stringed lute on which all winds can play,
Is it for this that I have given away
Mine ancient wisdom, and austere control?
Methinks my life is a twice-written scroll
Scrawled over on some boyish holiday
With idle songs for pipe and virelay,
Which do but mar the secret of the whole.
Surely there was a time I might have trod
The sunlit heights, and from life's dissonance
Struck one clear chord to reach the ears of
God:

Is that time dead? lo! with a little rod
I did but touch the honey of romance—
And must I lose a soul's inheritance?

THE HARLOT'S HOUSE

We caught the tread of dancing feet
We loitered down the moonlit street,
And stopped beneath the harlot's house.

Inside, above the din and fray,
We heard the loud musicians play
The "Treues Liebes Herz" of Strauss.

Like strange mechanical grotesques,
Making fantastic arabesques,
The shadows raced across the blind.

We watched the ghostly dancers spin
To sound of horn and violin,
Like black leaves wheeling in the wind.

Like wire-pulled automatons,
Slim silhouetted skeletons
Went sidling through the slow quadrille.

They took each other by the hand,
And danced a stately saraband;
Their laughter echoed thin and shrill.

Sometimes a clockwork puppet pressed
A phantom lover to her breast
Sometimes they seemed to try to sing.

Sometimes a horrible marionette
Came out, and smoked its cigarette
Upon the steps like a live thing.

Then, turning to my love, I said,
"The dead are dancing with the dead,
The dust is whirling with the dust."

But she—she heard the violin,
And left my side, and entered in:
Love passed into the house of lust.

Then suddenly the tune went false,
The dancers wearied of the waltz,
The shadows ceased to wheel and whirl.

And down the long and silent street,
The dawn, with silver-sandalled feet,
Crept like a frightened girl.

APOLOGIA

Is it thy will that I should wax and wane,
Barter my cloth of gold for hodden grey,
And at thy pleasure weave that web of pain
Whose brightest threads are each a wasted
day?

Is it thy will—Love that I love so well—
That my Soul's House should be a torture
spot
Wherein, like evil paramours, must dwell
The quenchless flame, the worm that dieth
not?

Nay, if it be thy will I shall endure,
And sell ambition at the common mart,
And let dull failure be my vestiture,
And sorrow dig its grave within my heart.

Perchance it may be better so—at least

I have not made my heart a heart of stone,
Nor starved my boyhood of its goodly feast,
Nor walked where Beauty is a thing unknown.

Many a man hath done so; sought to fence

In straitened bonds the soul that should be free,

Trodden the dusty road of common sense,
While all the forest sang of liberty.

Not marking how the spotted hawk in flight

Passed on wide pinion through the lofty air,
To where some steep untrodden mountain height

Caught the last tresses of the Sun-God's hair.

Or how the little flower he trod upon,

The daisy, that white-feathered shield of gold,
Followed with wistful eyes the wandering sun
Content if once its leaves were aureoled.

But surely it is something to have been

The best beloved for a little while,
To have walked hand in hand with Love, and seen

His purple wings flit once across thy smile.

Ay, though the gorged asp of passion feed

On my boy's heart, yet have I burst the bars,
Stood face to face with Beauty, known indeed
The Love which moves the Sun and all the stars!

QUIA MULTUM AMAVI

Dear Heart I think the young impassioned
priest

When first he takes from out the hidden
shrine

His God imprisoned in the Eucharist,
And eats the bread, and drinks the dreadful
wine,

Feels not such awful wonder as I felt
When first my smitten eyes beat full on thee,
And all night long before thy feet I knelt
Till thou wert wearied of Idolatry.

Ah! had'st thou liked me less and loved me
more,

Through all those summer days of joy and
rain,

I had not now been sorrow's heritor,
Or stood a lackey in the House of Pain.

Yet, though remorse, youth's white-faced
seneschal,

Tread on my heels with all his retinue,

I am most glad I loved thee—think of all
The suns that go to make one speedwell blue!

BITTER SWEET LOVE

Sweet, I blame you not for mine the fault was,
had I not been made of common clay
I had climbed the higher heights unclimbed yet,
seen the fuller air, the larger day.

From the wildness of my wasted passion I had
struck a better, clearer song,
Lit some lighter light of freer freedom, battled
with some Hydra-headed wrong.

Had my lips been smitten into music by the
kisses that but made them bleed,
You had walked with Bice and the angels on
that verdant and enamelled mead.

I had trod the road which Dante treading saw
the suns of seven circles shine,
Ah! perchance had seen the heavens opening,
as they opened to the Florentine.

And the mighty nations would have crowned
me, who am crownless now and without
name,

And some orient dawn had found me kneeling
on the threshold of the House of Fame.

I had sat within that marble circle where the
oldest bard is as the young,

And the pipe is ever dropping honey, and the
lyre's strings are ever strung.

Keats had lifted up his hymenæal curls from
out the poppy-seeded wine,

With ambrosial mouth had kissed my forehead,
clasped the hand of noble love in mine.

And at spring tide, when the apple-blossoms
brush the burnished bosom of the dove,

Two young lovers lying in an orchard would
have read the story of our love.

Would have read the legend of my passion,
known the bitter secret of my heart.
Kissed as we have kissed, but never parted as
we two are fated now to part.

For the crimson flower of our life is eaten by
the canker-worm of truth,
And no hand can gather up the fallen withered
petals of the rose of youth.

Yet I am not sorry that I loved you—ah! what
else had I a boy to do,—
For the hungry teeth of time devour, and the
silent-footed years pursue.

Rudderless, we drift athwart a tempest, and
when once the storm of youth is past,
Without lyre, without lute or chorus, Death
the silent pilot comes at last.

And within the grave there is no pleasure, for
the blind-worm battens on the root,
And Desire shudders into ashes, and the tree of
Passion bears no fruit.

Ah! what else had I to do but love you, God's
own mother was less dear to me,
And less dear the Cytheræan rising like an
argent lily from the sea.

I have made my choice, have lived my poems,
and, though youth is gone in wasted days,
I have found the lover's crown of myrtle better
than the poet's crown of bays.

THEORETIKOS

This mighty empire hath but feet of clay:
Of all its ancient chivalry and might
Our little island is forsaken quite:
Some enemy hath stolen its crown of bay,
And from its hills that voice hath passed away
Which spake of Freedom: O come out of it,
Come out of it, my Soul, thou art not fit
For this vile traffic-house, where day by day
Wisdom and reverence are sold at mart,
And the rude people rage with ignorant cries
Against an heritage of centuries.
It mars my calm: wherefore in dreams of
Art
And loftiest culture I would stand apart,
Neither for God, nor for his enemies.

REQUIESCAT

Tread lightly, she is near
Under the snow,
Speak gently, she can hear
The daisies grow.

All her bright golden hair
Tarnished with rust,
She that was young and fair
Fallen to dust.

Lily-like, white as snow,
She hardly knew
She was a woman, so
Sweetly she grew.

Coffin-board, heavy stone,
Lie on her breast,
I vex my heart alone,
She is at rest.

Peace, Peace, she cannot hear
Lyre or sonnet,
All my life's buried here,
Heap earth upon it.

Avignon.

SAN MINIATO

See, I have climbed the mountain side
Up to this holy house of God,
Where once that Angel-Painter trod
Who saw the heavens opened wide,

And throned upon the crescent moon
The Virginal white Queen of Grace,—
Mary! could I but see thy face
Death could not come at all too soon.

O crowned by God with thorns and pain!
Mother of Christ! O mystic wife!
My heart is weary of this life
And over-sad to sing again.

O crowned by God with love and flame!
O crowned by Christ the Holy one!
O listen ere the searching sun
Show to the world my sin and shame.

SONNET ON HOLY WEEK

I wandered through Scoglietto's far retreat
The oranges on each o'erhanging spray
Burned as bright lamps of gold to shame the
day,
Some startled bird with fluttering wings and
fleet
Made snow of all the blossoms, at my feet
Like silver moons the pale narcissi lay:
And the curved waves that streaked the
great green bay
Laughed i' the sun, and life seemed very sweet.
Outside the young boy-priest passed singing
clear,
"Jesus the Son of Mary has been slain,
O come and fill his sepulchre with flowers."
Ah, God! Ah, God! those dear Hellenic hours
Had drowned all memory of Thy bitter pain,
The Cross, the Crown, the Soldiers, and the
Spear.

ROME UNVISITED

I

The corn has turned from grey to red,
Since first my spirit wandered forth
From the drear cities of the north,
And to Italia's mountains fled.

And here I set my face towards home,
For all my pilgrimage is done,
Although, methinks, yon blood-red sun
Marshals the way to Holy Rome.

O Blessed Lady, who dost hold
Upon the seven hills thy reign!
O Mother without blot or stain,
Crowned with bright crowns of triple gold!

O Roma, Roma, at thy feet
I lay this barren gift of song!
For, ah! the way is steep and long
That leads unto thy sacred street.

II

And yet what joy it were for me
To turn my feet unto the south,
And journeying towards the Tiber mouth
To kneel again at Fiesole!

And wandering through the tangled pines
That break the gold of Arno's stream,
To see the purple mist and gleam
Of morning on the Apennines.

By many a vineyard-hidden home,
Orchard, and olive-garden grey,
Till from the drear Campagna's way
The seven hills bear up the dome!

III

A pilgrim from the northern seas—
What joy for me to seek alone
The wondrous Temple, and the throne
Of Him who holds the awful keys!

When, bright with purple and with gold,
Come priest and holy Cardinal,
And borne above the heads of all
The gentle Shepherd of the Fold.

O joy to see before I die
The only God-anointed King,
And hear the silver trumpets ring
A triumph as He passes by!

Or at the brazen-pillared shrine
Holds high the mystic sacrifice,
And shows his God to human eyes
Beneath the veil of bread and wine.

IV

For lo, what changes time can bring!
The cycles of revolving years
May free my heart from all its fears,
And teach my lips a song to sing.

Before yon field of trembling gold
Is garnered into dusty sheaves,
Or ere the autumn's scarlet leaves
Flutter as birds adown the wold,

I may have run the glorious race,
And caught the torch while yet aflame,
And called upon the holy name
Of Him who now doth hide His face.

Arona.

E TENEBRIS

Come down, O Christ, and help me! reach thy
hand,

For I am drowning in a stormier sea
Than Simon on thy lake of Galilee:
The wine of life is spilt upon the sand,
My heart is as some famine-murdered land
Whence all good things have perished utterly,
And well I know my soul in Hell must lie
If I this night before God's throne should
stand.

"He sleeps perchance, or rideth to the chase,
Like Baal, when his prophets howled that
name
From morn till noon on Carmel's smitten
height."

Nay, peace, I shall behold before the night,
The feet of brass, the robe more white than
flame,
The wounded hands, the weary human face.

VITA NUOVA

I stood by the unvintageable sea
Till the wet waves drenched face and hair
with spray,
The long red fires of the dying day
Burned in the west; the wind piped drearily;
And to the land the clamorous gulls did flee:
"Alas!" I cried, "my life is full of pain,
And who can garner fruit or golden grain,
From these waste fields which travail cease-
lessly!"

My nets gaped wide with many a break and
flaw

Nathless I threw them as my final cast
Into the sea, and waited for the end.

When lo! a sudden glory! and I saw
From the black waters of my tortured past
The argent splendour of white limbs ascend!

MADONNA MIA

A Lily-Girl, not made for this world's pain,
With brown, soft hair close braided by her ears,
And longing eyes half veiled by slumberous
tears

Like bluest water seen through mists of rain:
Pale cheeks whereon no love hath left its
stain,

Red underlip drawn in for fear of love,
And white throat, whiter than the silvered
dove,

Through whose wan marble creeps one purple
vein.

Yet, though my lips shall praise her without
cease,

Even to kiss her feet I am not bold,
Being o'ershadowed by the wings of awe,
Like Dante, when he stood with Beatrice
Beneath the flaming Lion's breast, and
saw

The seventh Crystal, and the Stair of Gold.

WASTED DAYS

(From a Picture Painted by Miss V. T.)

A fair slim boy not made for this world's pain,
With hair of gold thick clustering round his
ears,

And longing eyes half veiled by foolish tears
Like bluest water seen through mists of rain;
Pale cheeks whereon no kiss hath left its stain,
Red under-lip drawn in for fear of Love,
And white throat whiter than the breast of
dove—

Alas! alas! if all should be in vain.

Corn-fields behind, and reapers all a-row
In weariest labour, toiling wearily,
To no sweet sound of laughter, or of lute;
And careless of the crimson sunset-glow
The boy still dreams: nor knows that night
is nigh:
And in the night-time no man gathers fruit.

IMPRESSION DU MATIN

The Thames nocturne of blue and gold
Changed to a Harmony in grey:
A barge with ochre-coloured hay
Dropt from the wharf: and chill and cold

The yellow fog came creeping down
The bridges, till the houses' walls
Seemed changed to shadows, and S. Paul's
Loomed like a bubble o'er the town.

Then suddenly arose the clang
Of waking life: the streets were stirred
With country waggons: and a bird
Flew to the glistening roofs and sang.

But one pale woman all alone,
The daylight kissing her wan hair,
Loitered beneath the gas lamps' flare,
With lips of flame and heart of stone.

THEOCRITUS

A Villanelle

O Singer of Persephone!
In the dim meadows desolate
Dost thou remember Sicily?

Still through the ivy flits the bee
Where Amaryllis lies in state;
O singer of Persephone!

Simaetha calls on Hecate
And hears the wild dogs at the gate;
Dost thou remember Sicily?

Still by the light and laughing sea
Poor Polypheme bemoans his fate:
O singer of Persephone!

And still in boyish rivalry
Young Daphnis challenges his mate:
Dost thou remember Sicily?

Slim Lacon keeps a goat for thee,
For thee the jocund shepherds wait,
O singer of Persephone!
Dost thou remember Sicily?

THE GRAVE OF KEATS

Rid of the world's injustice, and his pain,
He rests at last beneath God's veil of blue:
Taken from life when life and love were new
The youngest of the martyrs here is lain,

Fair as Sebastian, and as early slain.
No cypress shades his grave, no funeral yew,
But gentle violets weeping with the dew
Weave on his bones an ever-blossoming chain.
O proudest heart that broke for misery!
O sweetest lips since those of Mitylene!
O poet-painter of our English Land!
Thy name was writ in water—it shall stand:
And tears like mine will keep thy memory
 green,
As Isabella did her Basil-tree.
Rome.

THE GRAVE OF SHELLEY

Like burnt-out torches by a sick man's bed
Gaunt cypress-trees stand round the sun-
 bleached stone;
Here doth the little night-owl make her
 throne,
And the slight lizard show his jewelled head.
And, where the chaliced poppies flame to red,
In the still chamber of yon pyramid
Surely some Old-World Sphinx lurks darkly
 hid,
Grim warder of his pleasaunce of the dead.

Ah! sweet indeed to rest within the womb
Of Earth, great mother of eternal sleep,
But sweeter far for thee a restless tomb
In the blue cavern of an echoing deep,
Or where the tall ships founder in the gloom
Against the rocks of some wave-shattered
 steep.
Rome.

CAMMA

As one who poring on a Grecian urn
Scans the fair shapes some Attic hand hath
made,
God with slim goddess, goodly man with
maid,
And for their beauty's sake is loth to turn
And face the obvious day, must I not yearn
For many a secret moon of indolent bliss,
When in the midmost shrine of Artemis
I see thee standing, antique-limbed, and stern?

And yet—methinks I'd rather see thee play
That serpent of old Nile, whose witchery
Made Emperors drunken,—come, great Egypt,
shake
Our stage with all thy mimic pageants! Nay,
I am grown sick of unreal passions, make
The world thine Actium, me thine Antony!

THE DOLE OF THE KING'S DAUGHTER

(Breton)

Seven stars in the still water,
And seven in the sky;
Seven sins on the King's daughter,
Deep in her soul to lie.

Red roses are at her feet,
(Roses are red in her red-gold hair)
And O where her bosom and girdle meet
Red roses are hidden there.

Fair is the knight who lieth slain
Amid the rush and reed,
See the lean fishes that are fain
Upon dead men to feed.

Sweet is the page that lieth there,
(Cloth of gold is goodly prey,)
See the black ravens in the air
Black, O black as the night are they.

What do they there so stark and dead?
(There is blood upon her hand)
Why are the lilies flecked with red?
(There is blood on the river sand.)

There are two that ride from the south and
east,
And two from the north and west,
For the black raven a goodly feast,
For the King's daughter rest.

There is one man who loves her true,
(Red, O red, is the stain of gore!)
He hath duggen a grave by the darksome yew.
(One grave will do for four.)

No moon in the still heaven,
In the black water none,
The sins on her soul are seven.
The sin upon his is one

AMOR INTELLECTUALIS

Oft have we trod the vales of Castaly
And heard sweet notes of sylvan music blown
From antique reeds to common folk un-
known:

And often launched our bark upon that sea
Which the nine Muses hold in empery,
And ploughed free furrows through the wave
and foam
Nor spread reluctant sail for more safe home
Till we had freighted well our argosy.
Of which despoiled treasures these remain,
Sordello's passion, and the honied line
Of young Endymion, lordly Tamburlaine
Driving his pampered jades, and, more than
these,
The seven-fold vision of the Florentine,
And grave-browed Milton's solemn harmonies.

SANTA DECCA

The Gods are dead: no longer do we bring
To grey-eyed Pallas crowns of olive-leaves!
Demeter's child no more hath tithe of
sheaves,
And in the noon the careless shepherds sing,
For Pan is dead, and all the wantoning
By secret glade and devious haunt is o'er:
Young Hylas seeks the water-springs no
more;
Great Pan is dead, and Mary's Son is King.
And yet—perchance in this sea-tranced isle,
Chewing the bitter fruit of memory,
Some God lies hidden in the asphodel.
Ah Love! if such there be then it were well
For us to fly his anger: nay, but see
The leaves are stirring: let us watch a-while.
Corfu.

BY THE ARNO

The oleander on the wall
Grows crimson in the dawning light,
Though the grey shadows of the night
Lie yet on Florence like a pall.

The dew is bright upon the hill,
And bright the blossoms overhead,
But ah! the grasshoppers have fled,
The little Attic song is still.

Only the leaves are gently stirred
By the soft breathing of the gale,
And in the almond-scented vale
The lonely nightingale is heard.

The day will make thee silent soon,
O nightingale, sing on for love!
While yet upon the shadowy grove
Splinter the arrows of the moon.

Before, across the silent lawn
In sea-green vest the morning steals,
And to love's frightened eyes reveals
The long white fingers of the dawn

Fast climbing up the eastern sky
To grasp and slay the shuddering night,
All careless of my heart's delight,
Or if the nightingale should die.

IMPRESSION

Le Reveillon

The sky is laced with fitful red,
The circling mists and shadows flee,
The dawn is rising from the sea,
Like a white lady from her bed.

And jagged brazen arrows fall
Athwart the feathers of the night,
And a long wave of yellow light
Breaks silently on tower and hall,

And spreading wide across the wold
Wakes into flight some fluttering bird,
And all the chestnut tops are stirred,
And all the branches streaked with gold.

AT VERONA

How steep the stairs within Kings' houses are
For exile-wearied feet as mine to tread,
And O how salt and bitter is the bread
Which falls from this Hound's table,—better far
That I had died in the red ways of war,
Or that the gate of Florence bare my head,
Than to live thus, by all things comraded
Which seek the essence of my soul to mar.

“Curse God and die: what better hope than
this?

He hath forgotten thee in all the bliss
Of his gold city, and eternal day”—
Nay, peace: behind my prison's blinded bars
I do possess what none can take away,
My love, and all the glory of the stars.

SILENTIUM AMORI

As oftentimes the too resplendent sun
Hurries the pallid and reluctant moon
Back to her sombre cave, ere she hath won
A single ballad from the nightingale,
So doth thy Beauty make my lips to fail,
And all my sweetest singing out of tune.

And as at dawn across the level mead
On wings impetuous some wind will come,
And with its too harsh kisses break the reed
Which was its only instrument of song,
So my too stormy passions work me wrong,
And for excess of Love my Love is dumb.

But surely unto Thee mine eyes did show
Why I am silent, and my lute unstrung;
Else it were better we should part, and go,
Thou to some lips of sweeter melody,
And I to nurse the barren memory
Of unknissed kisses, and songs never sung.

HER VOICE

The wild bee reels from bough to bough
With his furry coat and his gauzy wing,
Now in a lily-cup, and now
Setting a jacinth bell a-swing,
In his wandering;
Sit closer love: it was here I trow
I made that vow,

Swore that two lives should be like one
As long as the sea-gull loved the sea,

As long as the sunflower sought the sun,—
It shall be, I said, for eternity
'Twixt you and me!
Dear friend, those times are over and done,
Love's web is spun.

Look upward where the poplar trees
Sway and sway in the summer air,
Here in the valley never a breeze
Scatters the thistledown, but there
Great winds blow fair
From the mighty murmuring mystical seas,
And the wave-lashed leas.

Look upward where the white gull screams
What does it see that we do not see?
Is that a star? or the lamp that gleams
On some outward voyaging argosy,—
Ah! can it be
We have lived our lives in a land of dreams!
How sad it seems.

Sweet, there is nothing left to say
But this, that love is never lost,
Keen winter stabs the breasts of May
Whose crimson roses burst his frost,
Ships tempest-tossed
Will find a harbour in some bay,
And so we may.

And there is nothing left to do
But to kiss once again, and part,
Nay, there is nothing we should rue,
I have my beauty,—you your Art,
Nay, do not start,
One world was not enough for two
Like me and you.

MY VOICE

Within this restless, hurried, modern world
We took our heart's full pleasure—You and I
And now the white sails of our ship are furled,
And spent the lading of our argosy.

Wherefore my cheeks before their time are
wan,
For very weeping is my gladness fled,
Sorrow has paled my young mouth's vermilion,
And Ruin draws the curtains of my bed.

But all this crowded life has been to thee
No more than lyre, or lute, or subtle spell
Of viols, or the music of the sea
That sleeps, a mimic echo, in the shell.

TO MY WIFE

With a Copy of My Poems
I can write no stately proem
As a prelude to my lay;
From a poet to a poem
I would dare to say.

For if of these fallen petals
One of you seem fair,
Love will waft it till it settles
On your hair.

And when wind and winter harden
All the loveless land,
It will whisper of the garden,
You will understand.

LOTUS LEAVES

There is no peace beneath the noon.

Ah! in those meadows is there peace
Where, girdled with a silver fleece,
As a bright shepherd, strays the moon?

Queen of the gardens of the sky,
Where stars like lilies, white and fair,
Shine through the mists of frosty air,
Oh, tarry, for the dawn is nigh!

Oh, tarry, for the envious day
Stretches long hands to catch thy feet.
Alas! but thou art over-fleet,
Alas! I know thou wilt not stay.

Up sprang the sun to run his race,
The breeze blew fair on meadow and lea;
But in the west I seemed to see
The likeness of a human face.

A linnet on the hawthorn spray
Sang of the glories of the spring,
And made the flow'ring copses ring
With gladness for the new-born day.

A lark from out the grass I trod
Flew wildly, and was lost to view
In the great seamless veil of blue
That hangs before the face of God.

The willow whispered overhead
That death is but a newer life,
And that with idle words of strife
We bring dishonour on the dead.

I took a branch from off the tree,
And hawthorn-blossoms drenched with dew,
I bound them with a sprig of yew,
And made a garland fair to see.

I laid the flowers where He lies,
(Warm leaves and flowers on the stone);
What joy I had to sit alone
Till evening broke on tired eyes:

Till all the shifting clouds had spun
A robe of gold for God to wear,
And into seas of purple air
Sank the bright galley of the sun.

.

Shall I be gladdened for the day,
And let my inner heart be stirred
By murmuring tree or song of bird,
And sorrow at the wild wind's play?

Not so: such idle dreams belong
To souls of lesser depth than mine;
I feel that I am half divine;
I know that I am great and strong.

I know that every forest tree
By labour rises from the root;
I know that none shall gather fruit
By sailing on the barren sea.

IMPRESSIONS

I

Le Jardin

The lily's withered chalice falls
Around its rod of dusty gold,
And from the beech-trees on the wold
The last wood-pigeon coos and calls.

The gaudy leonine sunflower
Hangs black and barren on its stalk,
And down the windy garden walk
The dead leaves scatter,—hour by hour.

Pale privet-petals white as milk
Are blown into a snowy mass:
The roses lie upon the grass
Like little shreds of crimson silk.

II

La Mer

A white mist drifts across the shrouds,
A wild moon in this wintry sky
Gleams like an angry lion's eye
Out of a mane of tawny clouds.

The muffled steersman at the wheel
Is but a shadow in the gloom;—
And in the throbbing engine room
Leap the long rods of polished steel.

The shattered storm has left its trace
Upon this huge and heaving dome,
For the thin threads of yellow foam
Float on the waves like ravelled lace.

UNDER THE BALCONY

O beautiful star with the crimson mouth!

O moon with the brows of gold!

Rise up, rise up, from the odorous south!

And light for my love her way,

Lest her little feet should stray

On the windy hill and the wold!

O beautiful star with the crimson mouth!

O moon with the brows of gold!

O ship that shakes on the desolate sea!

O ship with the wet, white sail!

Put in, put in, to the port to me!

For my love and I would go

To the land where the daffodils blow

In the heart of a violet dale!

O ship that shakes on the desolate sea!

O ship with the wet, white sail!

O rapturous bird with the low, sweet note!

O bird that sings on the spray!

Sing on, sing on, from your soft brown throat!

And my love in her little bed

Will listen, and lift her head

From the pillow, and come my way!

O rapturous bird with the low, sweet note!

O bird that sits on the spray!

O blossom that hangs in the tremulous air!

O blossom with lips of snow!

Come down, come down, for my love to wear!

You will die on her head in a crown,

You will die in a fold of her gown,

To her little light heart you will go!

O blossom that hangs in the tremulous air!

O blossom with lips of snow!

LE JARDIN DES TUILERIES

This winter air is keen and cold,
And keen and cold this winter sun,
But round my chair the children run
Like little things of dancing gold.

Sometimes about the painted kiosk
The mimic soldiers strut and stride,
Sometimes the blue-eyed brigands hide
In the bleak tangles of the bosk.

And sometimes, while the old nurse cons,
Her book, they steal across the square,
And launch their paper navies where
Huge Triton writhes in greenish bronze.

And now in mimic flight they flee,
And now they rush, a boisterous band—
And, tiny hand on tiny hand,
Climb up the black and leafless tree.

Ah! cruel tree! if I were you,
And children climbed me, for their sake
Though it be winter I would break
Into spring blossoms white and blue!

DECORATIVE PHANTASIES

I

LE PANNEAU

Under the rose-tree's dancing shade
There stands a little ivory girl,
Pulling the leaves of pink and pearl
With pale green nails of polished jade.

The red leaves fall upon the mould,
The white leaves flutter, one by one,
Down to a blue bowl where the sun,
Like a great dragon, writhes in gold.

The white leaves float upon the air,
The red leaves flutter idly down,
Some fall upon her yellow gown,
And some upon her raven hair.

She takes an amber lute and sings,
And as she sings a silver crane
Begins his scarlet neck to strain,
And flap his burnished metal wings.

She takes a lute of amber bright,
And from the thicket where he lies
Her lover, with his almond eyes,
Watches her movement in delight.

And now she gives a cry of fear,
And tiny tears begin to start:
A thorn has wounded with its dart
The pink-veined sea-shell of her ear.

And now she laughs a merry note:
There has fallen a petal of the rose
Just where the yellow satin shows
The blue-veined flower of her throat.

With pale green nails of polished jade,
Pulling the leaves of pink and pearl,
There stands a little ivory girl
Under the rose-tree's dancing shade.

CANZONET

I have no store
Of gryphon-guarded gold;
Now, as before,
Bare is the shepherd's fold.
Rubies, nor pearls,
Have I to gem thy throat;
Yet woodland girls
Have loved the shepherd's note.

Then, pluck a reed
And bid me sing to thee,
For I would feed
Thine ears with melody,
Who art more fair
Than fairest fleur-de-lys,
More sweet and rare
Than sweetest ambergris.

What dost thou fear?
Young Hyacinth is slain,
Pan is not here,
And will not come again.
No horned Faun
Treads down the yellow leas,
No God at dawn
Steals through the olive trees.

Hylas is dead,
Nor will he e'er divine
Those little red
Rose-petalled lips of thine.
On the high hill
No ivory dryads play,
Silver and still
Sinks the sad autumn day.

SYMPHONY IN YELLOW

An omnibus across the bridge
Crawls like a yellow butterfly,
And, here and there, a passer-by
Shows like a little restless midge.

Big barges full of yellow hay
Are moved against the shadowy wharf,
And, like a yellow silken scarf,
The thick fog hangs along the quay.

The yellow leaves begin to fade
And flutter from the Temple elms,
And at my feet the pale green Thames
Lies like a rod of rippled jade.

IN THE FOREST

Out of the mid-wood's twilight
Into the meadow's dawn,
Ivory limbed and brown-eyed,
Flashes my Faun!

He skips through the copses singing,
And his shadow dances along,
And I know not which I should follow,
Shadow or song!

O Hunter, snare me his shadow!
O Nightingale, catch me his strain!
Else moonstruck with music and madness
I track him in vain!

TAEDIUM VITAE

To stab my youth with desperate knives, to
wear

This paltry age's gaudy livery,
To let each base hand filch my treasury,
To mesh my soul within a woman's hair,
And be mere Fortune's lackeyed groom,—I
swear

I love it not! these things are less to me
Than the thin foam that frets upon the sea,
Less than the thistle-down of summer air

Which hath no seed: better to stand aloof
Far from these slanderous fools who mock my
life

Knowing me not, better the lowliest roof
Fit for the meanest hind to sojourn in,
Than to go back to that hoarse cave of strife
Where my white soul first kissed the mouth
of sin.

THE NEW REMORSE

The sin was mine; I did not understand.

So now is music prisoned in her cave,
Save where some ebbing desultory wave
Frets with its restless whirls this meagre
strand.

And in the withered hollow of this land

Hath summer dug herself so deep a grave,
That hardly can the leaden willow crave
One silver blossom from keen winter's hand.
But who is this who cometh by the shore?

(Nay, love, look up and wonder!) Who is this
Who cometh in dyed garments from the
South?

It is thy new-found Lord, and he shall kiss
The yet unravished roses of thy mouth,
And I shall weep and worship, as before.

THE SPHINX

In a dim corner of my room for longer than
my fancy thinks
A beautiful and silent Sphinx has watched me
through the shifting gloom.

Inviolatè and immobìle she does not rise, she
does not stir
For silver moons are naught to her and naught
to her the suns that reel.

Red follows grey across the air, the waves of
moonlight ebb and flow
But with the Dawn she does not go and in the
night-time she is there.

Dawn follows Dawn and Nights grow old and
all the while this curious cat
Lies couching on the Chinese mat with eyes
of satin rimmed with gold.

Upon the mat she lies and leers and on the
tawny throat of her
Flutters the soft and silky fur or ripples to her
pointed ears.

Come forth my lovely seneschal! so somnolent,
so statuesque!
Come forth you exquisite grotesque! half wom
an and half animal!

Come forth my lovely languorous Sphinx! and
put your head upon my knee!
And let me stroke your throat and see your
body spotted like the Lynx!

And let me touch those curving claws of yellow ivory and grasp
The tail that like a monstrous Asp coils round
your heavy velvet paws!

* * *

A thousand weary centuries are thine while
I have hardly seen
Some twenty summers cast their green for
Autumn's gaudy liveries.

But you can read the Hieroglyphs on the great
sandstone obelisks,
And you have talked with Basilisks, and you
have looked on Hippogriffs.

O tell me, were you standing by when Isis
to Osiris knelt?
And did you watch the Egyptian melt her union
for Antony

And drink the jewel-drunken wine and bend
her head in mimic awe
To see the huge proconsul draw the salted tunny
from the brine?

And did you mark the Cyprian kiss white Adon
on his catafalque?
And did you follow Amenalk, the god of Heliopolis?

And did you talk with Thoth, and did you hear
the moon-horned Io weep?
And know the painted kings who sleep beneath
the wedge-shaped pyramid?

* * *

Lift up your large black satin eyes which are
like cushions where one sinks!
Fawn at my feet fantastic Sphinx! and sing
me all your memories!

Sing to me of the Jewish maid who wandered
with the Holy Child,
And how you led them through the wild, and
how they slept beneath your shade.

Sing to me of that odorous green eve when
couching by the marge
You heard from Adrian's gilded barge the
laughter of Antinous

And lapped the stream and fed your drouth and
watched with hot and hungry stare
The ivory body of that rare young slave with
his pomegranate mouth!

Sing to me of the Labyrinth in which the twy-
formed bull was stalled!
Sing to me of the night you crawled across the
temple's granite plinth

When through the purple corridors the scream-
ing scarlet Ibis flew
In terror, and a horrid dew dripped from the
moaning Mandragoras,

And the great torpid crocodile within the tank
shed slimy tears,

And tare the jewels from his ears and staggered
back into the Nile,

And the priests cursed you with shrill psalms
as in your claws you seized their snake

And crept away with it to slake your passion
by the shuddering palms.

* * *

Who were your lovers? who were they who
wrestled for you in the dust?

Which was the vessel of your Lust? What
Leman had you, every day?

Did giant Lizards come and crouch before you
on the reedy banks?

Did Gryphons with great metal flanks leap on
you in your trampled couch?

Did monstrous hippopotami come sidling to-
ward you in the mist?

Did gilt-scaled dragons writhe and twist with
passion as you passed them by?

And from the brick-built Lycian tomb what
horrible Chimaera came

With fearful heads and fearful flame to breed
new wonders from your womb?

* * *

Or had you shameful secret quests and did
you harry to your home

Some Nereid coiled in amber foam with curi-
ous rock crystal breasts?

Or did you treading through the froth call to
the brown Sidonian
For tidings of Leviathan, Leviathan or Behe-
moth?

Or did you when the sun was set climb up the
cactus-covered slope
To meet your swarthy Ethiop whose body was
of polished jet?

Or did you while the earthen skiffs dropped
down the grey Nilotic flats
At twilight and the flickering bats flew round
the temple's triple glyphs

Steal to the border of the bar and swim across
the silent lake
And slink into the vault and make the Pyra-
mid your lupanar

Till from each black sarcophagus rose up the
painted swathed dead?
Or did you lure unto your bed the ivory-horned
Tragelaphos?

Or did you love the god of flies who plagued
the Hebrews and was splashed
With wine unto the waist? or Pasht, who had
green beryls for her eyes?

Or that young god, the Tyrian, who was more
amorous than the dove
Of Ashtaroth? or did you love the god of the
Assyrian

Whose wings, like strange transparent talc,
rose high above his hawk-faced head,
Painted with silver and with red and ribbed
with rods of Oreichalch?

Or did huge Apis from his car leap down and
lay before your feet
Big blossoms of the honey-sweet and honey-
coloured nenuphar?

* * *

How subtle-secret is your smile! Did you love
none then? Nay, I know
Great Ammon was your bedfellow! He lay with
you beside the Nile!

The river-horses in the slime trumpeted when
they saw him come
Odorous with Syrian galbanum and smeared
with spikenard and with thyme.

He came along the river-bank like some tall
galley argent-sailed,
He strode across the waters, mailed in beauty,
and the waters sank.

He strode across the desert sand: he reached
the valley where you lay:
He waited till the dawn of day; then touched
your black breasts with his hand.

You kissed his mouth with mouths of flame:
you made the horned god your own:
You stood behind him on his throne: you called
him by his secret name.

You whispered monstrous oracles into the caverns of his ears:

With blood of goats and blood of steers you taught him monstrous miracles.

White Ammon was your bedfellow! Your chamber was the steaming Nile!

And with your curved archaic smile you watched his passion come and go.

* * *

With Syrian oils his brows were bright: and widespread as a tent at noon

His marble limbs made pale the moon and lent the day a larger light.

His long hair was nine cubits' span and coloured like that yellow gem

Which hidden in their garment's hem the merchants bring from Kurdistan.

His face was as the must that lies upon a vat of new-made wine:

The seas cou'd not insapphirine the perfect azure of his eyes.

His thick soft throat was white as milk and threaded with thin veins of blue:

And curious pearls like frozen dew were broidered on his flowing silk.

* * *

On pearl and porphyry pedestalled he was too bright to look upon:

For on his ivory breast there shone the wondrous ocean-emerald,

That mystic moonlit jewel which some diver of
the Colchian caves
Had found beneath the blackening waves and
carried to the Colchian witch.

Before his gilded galiot ran naked vine-
wreathed corybants,
And lines of swaying elephants knelt down to
draw his chariot,

And lines of swarthy Nubians bare up his litter
as he rode
Down the great granite-paven road between the
nodding peacock-fans.

The merchants brought him steatite from Sidon
in their painted ships:
The meanest cup that touched his lips was
fashioned from a chrysolite.

The merchants brought him cedar-chests of
rich apparel bound with cords:
His train was borne by Memphian lords: young
kings were glad to be his guests.

Ten hundred shaven priests did bow to Am-
mon's altar day and night,
Ten hundred lamps did wave their light
through Ammon's carven house—and now

Foul snake and speckled adder with their
young ones crawl from stone to stone
For ruined is the house and prone the great
rose-marble monolith!

Wild ass or trotting jackal comes and couches
in the mouldering gates:

Wild satyrs call unto their mates across the
fallen fluted drums.

And on the summit of the pile the blue-faced
ape of Horus sits

And gibbers while the figtree splits the pillars
of the peristyle,

* * *

The god is scattered here and there: deep hid-
den in the windy sand

I saw his giant granite hand still clenched in
impotent despair.

And many a wandering caravan of stately
negroes silken-shawled,

Crossing the desert, halts appalled before the
neck that none can span.

And many a bearded Bedouin draws back his
yellow-striped burnous

To gaze upon the Titan thews of him who was
thy paladin.

* * *

Go, seek his fragments on the moor and wash
them in the evening dew,

And from their pieces make anew thy mutilated
paramour!

Go, seek them where they lie alone and from
their broken pieces make

Thy bruised bedfellow! And wake mad passions
in the senseless stone!

Charm his dull ear with Syrian hymns! he
loved your body! oh, be kind,
Pour spikenard on his hair, and wind soft rolls
of linen round his limbs!

Wind round his head the figured coins! stain
with red fruits those pallid lips!
Weave purple for his shrunken hips! and
purple for his barren loins!

* * *

Away to Egypt! have no fear. Only one God
has ever died.
Only one God has let His side be wounded by
a soldier's spear.

But these, thy lovers, are not dead. Still by
the hundred-cubit gate
Dog-faced Anubis sits in state with lotus-lilies
for thy head.

Still from his chair of porphyry gaunt Memnon
strains his lidless eyes
Across the empty land, and cries each yellow
morning unto thee.

And Nilus with his broken horn lies in his
black and oozy bed
And till thy coming will not spread his waters
on the withering corn.

Your lovers are not dead, I know. They will
rise up and hear your voice
And clash their cymbals and rejoice and run
to kiss your mouth! And so,

Set wings upon your argosies! Set horses to
your ebon car!
Back to your Nile! Or if you are grown sick of
dead divinities

Follow some roving lion's spoor across the cop-
per-coloured plain,
Reach out and hale him by the mane and bid
him be your paramour!

Couch by his side upon the grass and set your
white teeth in his throat
And when you hear his dying note lash your
long flanks of polished brass

And take a tiger for your mate, whose amber
sides are flecked with black,
And ride upon his gilded back in triumph
through the Theban gate.

And toy with him in amorous jest, and when
he turns, and snarls, and gnaws,
O smite him with your jasper claws! and
bruise him with your agate breasts!

* * *

Why are you tarrying? Get hence! I weary of
your sullen ways,
I weary of your steadfast gaze, your somnolent
magnificence.

Your horrible and heavy breath makes the light
flicker in the lamp,
And on my brow I feel the damp and dreadful
dews of night and death.

Your eyes are like fantastic moons that shiver
in some stagnant lake,
Your tongue is like a scarlet snake that dances
to fantastic tunes,

Your pulse makes poisonous melodies, and your
black throat is like the hole
Left by some torch or burning coal on Sarace-
nic tapestries.

Away! The sulphur-coloured stars are hurrying
through the Western gate!
Away! Or it may be too late to climb their
silent silver cars!

See, the dawn shivers round the grey gilt-
dialled towers, and the rain
Streams down each diamonded pane and blurs
with tears the wannish day.

What snake-tressed fury fresh from Hell, with
uncouth gestures and unclean,
Stole from the poppy-drowsy queen and led you
to a student's cell?

* * *

What songless tongueless ghost of sin crept
through the curtains of the night,
And saw my taper burning bright, and knocked,
and bade you enter in.

Are there not others more accursed, whiter
with leprosies than I?
Are Abana and Pharpar dry that you come here
to slake your thirst?

Get hence, you loathsome mystery! Hideous
animal, get hence!

You wake in me each bestial sense, you make
me what I would not be.

You make my creed a barren sham, you wake
foul dreams of sensual life,
And Atys with his blood-stained knife were
better than the thing I am.

False Sphinx! False Sphinx! By reedy Styx
old Charon, leaning on his oar,
Waits for my coin. Go thou before, and leave
me to my crucifix,

Whose pallid burden, sick with pain, watches
the world with wearied eyes,
And weeps for every soul that dies, and weeps
for every soul in vain.

* * *

TO MILTON

Milton! I think thy spirit hath passed away
From these white cliffs, and high-embattled
towers;

This gorgeous fiery-coloured world of ours
Seems fallen into ashes dull and grey,
And the age changed unto a mimic play
Wherein we waste our else too-crowded
hours:

For all our pomp and pageantry and powers
We are but fit to delve the common clay,
Seeing this little isle on which we stand,
This England, this sea-lion of the sea.

By ignorant demagogues is held in fee,
Who love her not: Dear God! is this the land
Which bare a triple empire in her hand
When Cromwell spake the word Democracy!

LOUIS NAPOLEON

Eagle of Austerlitz! where were thy wings
When far away upon a barbarous strand,
In fight unequal, by an obscure hand,
Fell the last scion of thy brood of kings!

Poor boy! thou shalt not flaunt thy cloak of
red,
Or ride in state through Paris in the van
Of thy returning legions, but instead
Thy mother France, free and republican,

Shall on thy dead and crownless forehead place
The better laurels of a soldier's crown,
That not dishonoured should thy soul go
down
To tell the mighty Sire of thy race

That France hath kissed the mouth of Liberty,
And found it sweeter than his honied bees,
And that the giant wave Democracy
Breaks on the shores where Kings lay couched
at ease.

QUANTUM MUTATA

There was a time in Europe long ago
When no man died for freedom anywhere,
But England's lion leaping from its lair
Laid hands on the oppressor! it was so
While England could a great Republic show.

Witness the men of Piedmont, chiefest care
Of Cromwell, when with impotent despair
The Pontiff in his painted portico

Trembled before our stern ambassadors.
How comes it then that from such high estate
We have thus fallen, save that Luxury
With barren merchandise piles up the gate
Where noble thoughts and deeds should enter
by:

Else might we still be Milton's heritors.

SONNET

On the Massacre of the Christians in Bulgaria

Christ, dost thou live indeed? or are thy bones
Still straitened in their rock-hewn sepulchre?
And was thy Rising only dreamed by Her
Whose love of thee for all her sin atones?
For here the air is horrid with men's groans,
The priests who call upon thy name are slain,
Dost thou not hear the bitter wail of pain
From those whose children lie upon the stones?
Come down, O Son of God! incestuous gloom
Curtains the land, and through the starless
night

Over thy Cross a Crescent moon I see!
If thou in very truth didst burst the tomb
Come down, O Son of Man! and show thy
might,
Lest Mahomet be crowned instead of Thee!

LIBERTATIS SACRA FAMES

Albeit nurtured in democracy,
And liking best that state republican
Where every man is Kinglike and no man

Is crowned above his fellows, yet I see,
Spite of this modern fret for Liberty,
Better the rule of One, whom all obey,
Than to let clamorous demagogues betray
Our freedom with the kiss of anarchy.
Wherefore I love them not whose hands profane
Plant the red flag upon the piled-up street
For no right cause, beneath whose ignorant reign
Arts, Culture, Reverence, Honour, all things
fade,
Save treason and the dagger of her trade,
Or Murder with his silent bloody feet.

AVE MARIA GRATIO PLENA

Was this His coming! I had hoped to see
A scene of wondrous glory, as was told
Of some great God who in a rain of gold
Broke open bars and fell on Danae:
Or a dread vision as when Semele
Sickening for love and unappeased desire
Prayed to see God's clear body, and the fire
Caught her brown limbs and slew her utterly:
With such glad dreams I sought this holy place,
And now with wondering eyes and heart I
stand
Before this supreme mystery of Love:
Some kneeling girl with passionless pale face,
An angel with a lily in his hand,
And over both the white wings of a Dove.
Florence.

INTRODUCTION

It has long been recognized that letters, memoirs, and above all, faithfully reported conversations of eminent writers afford us the deepest insight, not only into their personality and character, but also into the secret springs of their literary productions. Among Goethe's many conversations with men of various ranks and stations of life, which have come down to us, and which are now collected in five large volumes, those of Johann Peter Eckermann have always been considered the richest and most varied in content, as well as the most genuine and accurate in the expression of Goethe's thought. After their publication in 1836, many persons who had known Goethe intimately averred that they heard Goethe speaking while perusing the volumes.

Johann Peter Eckermann (1792-1854) was a self-made man in the best sense of the word. In the introduction to the Conversations with Goethe, he tells us himself how he was born and raised in extreme poverty, how, in spite of the greatest obstacles, he managed to acquire a liberal education, and began to write poetry and critical essays, and how, finally, after having sent a copy of his poems to Goethe, who replied encouragingly, he walked from Hanover to Weimar to obtain an interview with the great poet. Goethe recognized at once the excellent qualities of the quiet, discreet, well-informed and highly receptive young man,

asked him to become his private secretary, and finally, after a long and faithful service, appointed him his literary executor.

It was due to these qualities that Eckermann in the intimate intercourse with Goethe, during the last nine years of the latter's life, became more to the poet than a mere amanuensis. With great skill and fine tact, he knew how to induce Goethe to take up and complete some of his half-finished works, such as Faust, or to engage the poet in conversations during which the latter, otherwise noted for his taciturnity, opened the inmost recesses of his mind and heart. It is the unpremeditated flow of thought in these conversations which constitute both their value and their exquisite charm. So great was Eckermann's reverence for his benefactor, and so pronounced was the objectiveness of observation which he had absorbed from his master, that the records which he made daily of the latter's utterances, could not be otherwise than absolutely truthful.

The present little book presents only extracts from the three volumes of conversations published by Eckermann; but a mere glance at the headings under which the editor has assembled these extracts may give the reader an idea of the importance of the subjects discussed by Goethe.

It is interesting to note that it was a distinguished American woman, who first recognized the value of these conversations, and first translated them into English: Margaret Fuller, the foremost early interpreter of Goethe

in America.* In the remarkable introduction to her translation, a spirited defense of Goethe against the attacks of Puritan bigotry, she characterizes the conversations as follows:

"The book before us has merits which Goethe's correspondence with men infinitely greater than Eckermann do not possess. It paints Goethe to us as he was in the midst of his family and in the most careless and weary hours. Under such circumstances, whatever may be thought of his views, his courteous grace, his calm wisdom, and reliance on the harmony of his faith with his nature, must be felt, by the unprejudiced reader, to be beautiful and rare."

GOETHE'S CONVERSATIONS WITH ECKERMANN

AUTOBIOGRAPHICAL

"When I look back to the earlier and middle periods of my life, and now in my old age think how few are left of those who were young with me, I always think of a summer residence at a bathing-place. When you arrive, you make acquaintance and friends of those who have already been there some time, and who leave in a few weeks. The loss is painful. Then you turn to the second generation, with which you live a good while, and become most intimate. But this goes also, and leaves us alone with the third, which comes just as we are going away, and with which we have, properly, nothing to do.

"I have ever been esteemed one of Fortune's chiefest favourites; nor will I complain or find fault with the course my life has taken. Yet, truly, there has been nothing but toil and care; and I may say that, in all my seventy-five years, I have never had a month of genuine comfort. It has been the perpetual rolling of a stone, which I have always had to raise anew. My annals will render clear what I now say. The claims upon my activity, both from within and without, were too numerous.

"My real happiness was my poetic meditation and production. But how was this disturbed, limited, and hindered by my external position! Had I been able to abstain more from public business, and to live more in solitude, I should have been happier, and should have accomplished much more as a poet. But,

soon after my 'Goetz' and 'Werther,' that saying of a sage was verified for me—"If you do anything for the sake of the world, it will take good care that you shall not do it a second time.'

"A wide-spread celebrity, and elevated position in life, are good things. But, for all my rank and celebrity, I am still obliged to be silent as to the opinions of others, that I may not give offence. This would be but poor sport, if by this means I had not the advantage of learning the thoughts of others without their being able to learn mine." * * * * *

"Friends, such as Schiller and I, intimate for years, with the same interests, in habits of daily intercourse, and under reciprocal obligations, live so completely into one another, that it is hardly possible to decide to which of the two the particular thoughts belong.

"We have made many distiches together; sometimes I gave the thought, and Schiller made the verse; sometimes the contrary was the case; sometimes he made one line and I the other. What matters the mine and thine? One must be a thorough Philistine, indeed, to attach the slightest importance to the solution of such questions."

"Something similar," said I "often happens in the literary world, when people, for instance, doubt the originality of this or that celebrated man, and seek to trace out the sources from whence he obtained his cultivation."

"That is very ridiculous," said Goethe; "we might as well question a strong man about the oxen, sheep, and swine which he has eaten, and which have given him strength."

"We are indeed born with faculties; but we owe our development to a thousand influences of the great world, from which we appropriate to ourselves what we can, and what is suitable to us. I owe much to the Greeks and French; I am infinitely indebted to Shakespeare, Sterne, and Goldsmith; but in saying this I do not show the sources of my culture; that would be an endless as well as an unnecessary task. What is important is to have a soul which loves truth, and receives it wherever it finds it.

"Besides, the world is now so old, so many eminent men have lived and thought for thousands of years, that there is little new to be discovered or expressed. Even my theory of colours is not entirely new. Plato, Leonardo da Vinci, and many other excellent men, have before me found and expressed the same thing in a detached form; my merit is, that I have found it also, that I have said it again, and that I have striven to bring the truth once more into a confused world.

"The truth must be repeated over and over again, because error is repeatedly preached among us, not only by individuals, but by the masses. In periodicals and cyclopedias, in schools and universities; everywhere, in fact, error prevails, and is quite easy in the feeling that it has a decided majority on its side."

"Human nature possesses wonderful powers," said Goethe, "and has something good in readiness for us when we least hope for it. There have been times in my life when I have fallen asleep in tears; but in my dreams the most charming forms have come to console and to

cheer me, and I have risen the next morning fresh and joyful.

"There is something more or less wrong among us old Europeans; our relations are far too artificial and complicated, our nutriment and mode of life are without their proper nature, and our social intercourse is without proper love and good will. Every one is polished and courteous; but no one has the courage to be hearty and true, so that an honest man, with natural views and feelings, stands in a very bad position. Often one cannot help wishing that one had been born upon one of the South Sea Islands, a so-called savage, so as to have thoroughly enjoyed human existence in all its purity, without any adulteration.

"If in a depressed mood one reflects deeply upon the wretchedness of our age, it often occurs to one that the world is gradually approaching the last day. And the evil accumulates from generation to generation! For it is not enough that we have to suffer for the sins of our fathers, but we hand down to posterity these inherited vices increased by our own."

"Similar thoughts often occur to me," answered I; "but, if, at such time, I see a regiment of German dragoons ride by me, and observe the beauty and power of these young people, I again derive some consolation, and say to myself, that the durability of mankind is after all not in such desperate plight."

"Our country people," returned Goethe, "have certainly kept up their strength, and will, I hope, long be able not only to furnish us with

good horsemen, but also to secure us from total decay and destruction. The rural population may be regarded as a magazine, from which the forces of declining mankind are always recruited and refreshed. But just go into our great towns, and you will feel quite differently. Just take a turn by the side of a second *Diable boiteux*, or a physician with a large practice, and he will whisper to you tales which will horrify you at the misery, and astonish you at the vice with which human nature is visited, and from which society suffers.” * * * * *

“But, in fact, we are all collective beings, let us place ourselves as we may. For how little *have* we, and *are* we, that we can strictly call our own property? We must all receive and learn both from those who were before us, and from those who are with us. Even the greatest genius would not go far if he tried to owe everything to his own internal self. •But many very good men do not comprehend that; and they grope in darkness for half a life, with their dreams of originality. I have known artists who boasted of having followed no master, and of having to thank their own genius for everything. Fools! as if that were possible at all; and as if the world would not force itself upon them at every step, and make something of them in spite of their own stupidity. Yes, I maintain that if such an artist were only to survey the walls of this room, and cast only a passing glance at the sketches of some great master, with which they are hung, he would necessarily, if he had any

genius at all, quit this place another and a higher man. And, indeed, what is there good in us, if it is not the power and the inclination to appropriate to ourselves the resources of the outward world, and to make them subservient to our higher ends. I may speak of myself, and may modestly say what I feel. It is true that, in my long life, I have done and achieved many things of which I might certainly boast. But to speak the honest truth, what had I that was properly my own, besides the ability and the inclination to see and to hear, to distinguish and to choose, and to enliven with some mind what I had seen and heard, and to reproduce with some degree of skill. I by no means owe my works to my own wisdom alone, but to a thousand things and persons around me, who provided me with material. There were fools and sages, minds enlightened and narrow, childhood, youth, and mature age—all told me what they thought, how they lived and worked, and what experiences they had gained; and I had nothing further to do than to put out my hand and reap what others had sown for me.

"It is, in fact, utter folly to ask whether a person has anything for himself, or whether he has it from others; whether he operates by himself, or whether he operates by means of others. The main point is to have a great will, and skill and perseverance to carry it out."

* * * * *

Goethe showed me an elegant green elbow chair, which he had lately bought at an auction.

"However," said he, "I shall use it but little,

or not at all; for all kinds of commodiousness are against my nature. You see in my chamber no sofa; I always sit in my old wooden chair, and never till a few weeks ago have I had a leaning-place put for my head. If surrounded by convenient furniture, my thoughts are absorbed, and I am placed in an agreeable but passive state. Unless we are accustomed to them from early youth, splendid chambers and elegant furniture are for people who neither have nor can have any thoughts." * * * * *

"I never had much respect for mere princely rank as such, when there was not behind it sound human nature, and sound human worth. Nay, I felt so satisfied with myself, that if I had been made a prince I should not have thought the change so very remarkable. When the diploma of nobility was given me, many thought that I should feel elevated by it; but, between ourselves, it was nothing to me—really nothing! We Frankfort patricians always considered ourselves equal to the nobility; and when I held the diploma in my hands I had nothing more, in my own opinion, than I had possessed long ago." * * * * *

"People were never thoroughly contented with me, but always wished me otherwise than it has pleased God to make me. There were also seldom contented with my productions. When I had long exerted my whole soul to favour the world with a new work, it still desired that I should thank it into the bargain for considering the work endurable. If any one praised me, I was not allowed, in self-congratulation, to receive it as a well-merited tribute;

but people expected from me some modest expression, humbly setting forth the total unworthiness of myself and my work. However, my nature opposed this; and I should have been a miserable hypocrite if I had so tried to lie and dissemble. Since I was strong enough to show myself in my whole truth, just as I felt, I was deemed proud, and am considered so to the present day.

"In religious, scientific, and political matters, I generally brought trouble upon myself, because I was no hypocrite, and had the courage to express what I felt.

"I believed in God and in Nature, and in the triumph of good over evil; but this was not enough for pious souls; I was also required to believe other points, which were opposed to the feeling of my soul for truth; besides, I did not see that these would be of the slightest service to me." * * * * *

"That undisturbed, innocent, somnambulatory production, by which alone anything great can thrive, is no longer possible. Our talents at present lie before the public. The daily criticisms which appear in fifty different places, and the gossip that is caused by them amongst the public, prevent the appearance of any sound production. In the present day, he who does not keep aloof from all this, and isolate himself by main force, is lost. Through the bad, chiefly negative, aesthetical and critical tone of the journals, a sort of half culture finds its way into the masses; but to productive talent it is a noxious mist, a dropping poison, which destroys the tree of creative power, from the

ornamental green leaves, to the deepest pith and the most hidden fibres.

"And then how tame and weak has life itself become during the last two shabby centuries. Where do we now meet an original nature? and where is the man who has the strength to be true, and to show himself as he is? This, however, affects the poet, who must find all within himself, while he is left in the lurch be all without." * * * * *

"That divine enlightenment, whence everything proceeds, we shall always find in connection with youth and productiveness, as in the case of Napoleon, who was one of the most productive men that ever lived.

"Yes, yes, my good friend, one need not write poems and plays to be productive; there is also a productiveness of deeds, which in many cases stands an important degree higher. The physician himself must be productive, if he really intends to heal; if he is not so, he will only succeed now and then as if by chance; but, on the whole he will be only a bungler."

"You appear," added I, "in this case, to call productiveness that which is usually called genius."

"One lies very near the other," returned Goethe. 'For what is genius but that productive power by which deeds arise that can display themselves before God and nature, and are therefore permanent, and produce results. All Mozart's works are of this kind; there lies in them a productive power which operates upon generation after generation, and still is not wasted or consumed.

It is the same with other great composers and artists. What an influence have Phidias and Raphael had upon succeeding centuries, and Duerer and Holbein also. He who first invented the forms and proportions of the old German architecture, so that in the course of time a Strassburg minster and a cathedral of Cologne were possible, was also a genius; for his thoughts have a power continually productive, and operate even to the present hour. Luther was a genius of a very important kind; he has already gone on with influence for many a day, and we cannot count the days when he will cease to be productive in future ages. Lessing would not allow himself the lofty title of a genius; but his permanent influence bears witness against him. On the other hand, we have, in literature, other names and those of importance, the possessors of which, whilst they lived, were deemed great geniuses, but whose influence ended with their life, and who were therefore less than they and others thought. For, as I said before, there is no genius without a productive power of permanent influence; and furthermore, genius does not depend upon the business, the art, or the trade which one follows, but may be alike in all. Whether one shows oneself a man of genius in science, like Oken and Humboldt, or in war and statesmanship, like Frederick, Peter the Great, and Napoleon, or whether one composes a song like Beranger, it all comes to the same thing; the only point is, whether the thought, the discovery, the deed, is living and can live on.

"Then I must add, it is not the mass of cre-

ations and deeds which proceed from a person, that indicates the productive man. We have, in literature, poets who are considered very productive, because volume after volume of their poems has appeared. But, in my opinion, these people ought to be called thoroughly unproductive; for what they have written is without life and durability. Goldsmith, on the contrary, has written so few poems that their number is not worth mentioning; but, nevertheless, I must pronounce him to be a thoroughly productive poet, and, indeed, even on that account, because the little that he has written has an inherent life which can sustain itself."

* * * * *

"Every *Entelecheia** is a piece of eternity, and the few years during which it is bound to the earthly body does not make it old. If this *Entelecheia* is of a trivial kind, it will exercise but little sway during its bodily confinement; on the contrary, the body will predominate, and when this grows old the *Entelecheia* will not hold and restrain it. But if the *Entelecheia* is of a powerful kind, as is the case with all men of natural genius, then with its animating penetration of the body it will not only act with strengthening and ennobling power upon the organization, but it will also endeavor with its spiritual superiority to confer the privilege of perpetual youth, thence it comes that in men of superior endowments, even during their old age, we constantly perceive fresh epochs of singular productiveness; they seem constantly to grow young again for a time, and that is

*Readers who do not know Greek may best translate this term with the word "soul."

what I call a repeated puberty. Still youth is youth, and however powerful an *Entelecheia* may prove, it will never become quite master of the corporeal, and it makes a wonderful difference whether it finds in the body an ally or an adversary.

"There was a time in my life when I had to furnish a printed sheet every day, and I accomplished it with facility. I wrote my "Geschwister" (Brother and Sister) in three days; my "Clavigo," as you know, in a week. Now it seems I can do nothing of the kind, and still can by no means complain of want of productiveness even at my advanced age. But whereas in my youth I succeeded daily and under all circumstances, I now succeed only periodically and under certain favourable conditions. When ten or twelve years ago, in the happy time after the war of independence, the poems of the "Divan" had me in their power, I was often productive enough to compose two or three in a day, and it was all the same to me whether I was in the open air, in the chariot, or at an inn. Now, I can only work at the second part of my "Faust" during the early part of the day, when I feel revived by sleep, and have not been perplexed by the trifles of daily life. And after all what is it I achieve? Under the most favourable circumstances, a page of writing, but generally only so much as one could write in the space of a hand-breadth, and often, when in an unproductive humour, still less."

* * * * *

"No productiveness of the highest kind, no remarkable discovery, no great thought which

bears fruit and has results, is in the power of any one; but such things are elevated above all earthly control. Man must consider them as an unexpected gift from above, as pure children of God, which he must receive and venerate with joyful thanks. They are akin to the demon, which does with him what it pleases, and to which he unconsciously resigns himself, whilst he believes he is acting from his own impulse. In such cases, man may often be considered as an instrument in a higher government of the world,—as a vessel found worthy for the reception of a divine influence. I say this, whilst I consider how often a single thought has given a different form to whole centuries, and how individual men have, by their expressions, imprinted a stamp upon their age, which has remained uneffaced, and has operated beneficially upon succeeding generations.

“There is, however, a productiveness of another kind subjected to earthly influences, and which man has more in his power, although he here also finds cause to bow before something divine. Under this category I place all that appertains to the execution of a plan, all the links of a chain of thought, the ends of which already shine forth; I also place there all that constitutes the visible body of a work of art.

“Thus, Shakespeare was inspired with the first thought of his Hamlet, when the spirit of the whole presented itself to his mind as an unexpected impression, and he surveyed the several situations, characters, and conclusion, in an elevated mood, as a pure gift from above, on which he had no immediate influence, al-

though the possibility of conceiving such a thought certainly presupposed a mind such as his. But the individual scenes, and the dialogue of the characters, he had completely in his power, so that he might produce them daily and hourly, and work at them for weeks if he liked. And, indeed, we see in all that he has achieved constantly the same power of production; and in all his plays we never come to a passage of which it could be said 'this was not written in the proper humour, or with the most perfect faculty'. Whilst we read him, we receive the impression of a man thoroughly strong and healthy, both in mind and body.

"Supposing, however, that the bodily constitution of a dramatic poet were not so strong and excellent, and that he were, on the contrary, subject to frequent illness and weakness, the productiveness necessary for the daily construction of his scenes would very frequently cease, and would often fail him for whole days. If now, by some spirituous drink, he tried to force his failing productiveness, and supply its deficiencies, the method would certainly answer, but it would be discoverable in all the scenes in which he had written under such an influence, to their great disadvantage. My counsel is, therefore, to force nothing, and rather to trifle and sleep away all unproductive days and hours, than on such days to compose something which will afterwards give one no pleasure."

LITERATURE AND ART

"The poet," said Goethe, "should seize the Particular, and he should, if there be anything

sound in it, thus represent the Universal. The English History is excellent for poetry, because it is something genuine, healthy, and therefore universal, which repeats itself over and over again. The French history, on the contrary, is not for poetry, as it represents an era that cannot come again. The literature of the French, so far as it is founded on that era, stands as something of merely particular interest, which must grow old with time.

"The present era of French literature," said Goethe afterwards, "cannot be judged fairly. The German influence causes a great fermentation there, and we probably shall not know for twenty years what the result will be."

We then talked of the aesthetic writers, who labour to express the nature of poetry and the poet in abstract definitions without arriving at any clear result.

"What need of much definition?" said Goethe. "Lively feeling of situations, and power to express them, make the poet." * * * * *

I went to Goethe about 5 o'clock. I had not seen him for some days, and passed a delightful evening. I found him sitting in his working-room, and talking, during the twilight, with his son and Hofrath Rehbein, his physician, I seated myself at the table with them. We talked a while in the dusk; then lights were brought in, and I had the happiness to see Goethe looking perfectly fresh and cheerful.

As usual, he inquired with interest what had happened to me of late, and I replied that I had made the acquaintance of a poetess. I was able at the same time to praise her uncommon

talent, and Goethe, who was likewise acquainted with some of her productions, agreed with my commendation.

"One of her poems," said he, "in which she describes the country near her home, is of a highly peculiar character. She has a good tendency towards outward objects, and is besides not destitute of valuable internal qualities. We might indeed find much fault with her; but we will let her alone, and not disturb her in the path which her talent will show her."

The conversation now turned on poetesses in general; Hofrath Rehbein remarked that the poetical talent of ladies often seemed to him as a sexual instinct of the intellect. "Hear him," said Goethe, laughing, and looking at me; "sexual instinct, indeed! how the physician explains it!"

"I know not," said Rehbein, "whether I express myself right; but it is something of the sort. Usually, these beings have not been fortunate in love, and they now seek compensation in intellectual pursuits. Had they been married in time and borne children, they would never have thought of poetical productions."

"I will not inquire," said Goethe, "how far you are right in this case; but as to the talents of ladies in other departments, I have always found that they ceased on marriage. I have known girls who drew finely; but so soon as they became wives and mothers it was all over: they were busy with their children, and never touched a pencil.

"But our poetesses," continued he, with much

animation, "might write and poetize as they pleased if only our men would not write like women. This it is that does not please me. Look at our periodicals and annuals; see how all becomes weaker and weaker. Were a chapter of Cellini now printed in the 'Morgenblatt,' what a figure it would make!" * * * * *

Dined at Goethe's, and enjoyed some cheerful conversation. Mention was made of a young beauty belonging to the Weimar society, when one of the guests remarked that he was on the point of falling in love with her, although her understanding could not exactly be called brilliant.

"Pshaw," said Goethe, laughing, "as if love had anything to do with the understanding. The things that we love in a young lady are something very different from the understanding. We love in her beauty, youthfulness, playfulness, trustingness, her character, her faults, her caprices, and God knows what 'je ne sais quoi' besides; but we do not love her understanding. We respect her understanding when it is brilliant, and by it the worth of a girl can be infinitely enhanced in our eyes. Understanding may also serve to fix our affections when we already love; but the understanding is not that which is capable of firing our hearts, and awakening a passion." * * * * *

I remarked that mere motives excited in me such lively emotions, that I felt as if I were reading the poems themselves, and had no desire for the details.

"You are quite right," said Goethe, "so it is; and here you see the great importance of mo-

tives, which no one will understand. Our women have no notion of it. 'That poem is beautiful,' they say, and by this they mean nothing but the feelings, the words, the verses. No one dreams that the true power of a poem consists in the situation,—in the motives. And for this very reason, thousands of poems are written, where the motives are nothing at all, and which merely through feeling and sounding verse reflect a sort of existence. Dilettanti, and especially women, have very weak ideas of poetry. They usually think, if they could but get quit of the technical part, they would have the essential, and would be quite accomplished; but they are much mistaken."

"I am more and more convinced," Goethe continued, "that poetry is the universal possession of mankind, revealing itself everywhere, and at all times, in hundreds and hundreds of men. One makes it a little better than another, and swims on the surface a little longer than another—that is all. Herr von Matthisson must not think he is the man, nor must I think that I am the man; but each must say to himself, that the gift of poetry is by no means so very rare, and that nobody need think very much of himself because he has written a good poem.

"But, really, we Germans are very likely to fall too easily into this pedantic conceit, when we do not look beyond the narrow circle that surrounds us. I therefore like to look about me in foreign nations, and advise every one to do the same. National literature is now rather an unmeaning term; the epoch of World litera-

ture is at hand, and every one must strive to hasten its approach. But, while we thus value what is foreign, we must not bind ourselves to anything in particular, and regard it as a model. We must not give this value to the Chinese, or the Servian, or Calderon, or the Nibelungen; but if we really want a pattern, we must always return to the ancient Greeks, in whose works the beauty of mankind is constantly represented. All the rest we must look at only historically, appropriating to ourselves what is good, so far as it goes." * * * * *

"The idea of the distinction between classical and romantic poetry, which is now spread over the whole world, and occasions so many quarrels and divisions, came originally from Schiller and myself. I laid down the maxim of objective treatment in poetry, and would allow no other; but Schiller, who worked quite in the subjective way, deemed his own fashion the right one, and to defend himself against me, wrote the treatise upon 'Naive and Sentimental Poetry'. He proved to me that I myself, against my will, was romantic, and that my 'Iphigenia,' through the predominance of sentiment, was by no means so classical and so much in the antique spirit as some people supposed.

"The Schlegels took up this idea, and carried it further, so that it has now been diffused over the whole world; and every one talks about classicism and romanticism—of which nobody thought fifty years ago." * * * * *

We then came to the newest French poets, and the meaning of the terms "classic" and "romantic".

"A new expression occurs to me," said Goethe, "which does not ill define the state of the case. I call the classic healthy, the romantic sickly. In this sense, the 'Nibelungenlied' is as classic as the Iliad, for both are vigorous and healthy. If we distinguish 'classic' and 'romantic' by these qualities, it will be easy to see our way clearly."

* * * * *

"The Germans are, certainly, strange people. By their deep thoughts and ideas, which they seek in everything and fix upon everything, they make life much more burdensome than is necessary. Only have the courage to give yourself up to your impressions, allow yourself to be delighted, moved, elevated, nay, instructed and inspired for something great; but do not imagine all is vanity, if it is not abstract thought and idea.

"Then they come and ask, 'What idea I meant to embody in my Faust' as if I knew myself and could inform them. From heaven, through the world, to hell, would indeed be something; but this is no idea, only a course of action. And further, that the devil loses the wager, and that a man, continually struggling from difficult errors towards something better, should be redeemed, is an effective, and to many, a good enlightening thought; but it is no idea which lies at the foundation of the whole, and of every individual scene. It would have become a fine thing, indeed, if I had strung so rich, varied, and highly diversified a life as I have brought to view in Faust upon the slender string of one pervading idea.

"It was, in short," continued Goethe, "not in

my line, as a poet, to strive to embody anything abstract. I received in my mind impressions, and those of a sensual, animated, charming, varied, hundredfold kind, just as a lively imagination presented them; and I had, as a poet, nothing more to do than artistically to round off and elaborate such views and impressions, and by means of a lively representation so to bring them forward that others might receive the same impression in hearing or reading my representation of them.

"If I still wished, as a poet, to represent any idea, I would do it in short poems, where a decided unity could prevail, and where a complete survey would be easy, as, for instance, in the *Metamorphosis of Animals*, that of the plants, the poem 'Bequest' (*Vermaechtnis*); and many others. The only production of greater extent, in which I am conscious of having laboured to set forth a pervading idea, is probably my 'Wahlverwandschaften.' This novel has thus become comprehensible to the understanding; but I will not say that it is therefore better. I am rather of the opinion, that the more incommensurable, and the more incomprehensible to the understanding, a poetic production is, so much the better it is."

* * * * *

We conversed upon some subjects of natural science; particularly upon the imperfection and insufficiency of language, by which errors and false views which afterwards could not easily be overcome were spread abroad. "The case is simply this," said Goethe. "All languages have arisen from surrounding human necessities, human occupations, and the general feel-

ings and views of man. If, now, a superior man gains an insight into the secret operations of nature, the language which has been handed down to him is not sufficient to express anything so remote from human affairs. He ought to have at command the language of spirits to express adequately his peculiar perceptions. But as this is not the case, he must, in his views of the extraordinary in nature, always grasp at human expressions, with which he always falls too short, lowering his subject, or even injuring and destroying it."

"If you say this," said I, "you who always pursue your subjects very closely, and, as an enemy to phrases, can always find the most fitting expressions for your higher perceptions, there is something in it. But I should have thought that, generally, we Germans might be contented. Our language is so extraordinarily rich, elaborated, and capable of progress, that even if we are obliged sometimes to have recourse to a trope, we can still arrive pretty nearly at the proper expression. The French are at a great disadvantage when compared with us. With them the expression for some higher view of nature by a trope, generally borrowed from a technicality, is at once material and vulgar, so that it is by no means adequate to a higher view."

"How right you are," said Goethe, "has appeared to me lately, on the occasion of the dispute between Cuvier and Geoffrey de St. Hilaire. Geoffrey de St. Hilaire is a man who has certainly a great insight into the spiritual workings of nature; but his French language,

so far as he is constrained to use traditional expressions, leaves him quite in the lurch. And this not only in mysteriously spiritual, but also in visible, purely corporeal subjects and relations. If he would express the single parts of an organic being, he has no other word but *materialien*; thus, for instance, the bones, which, as homogeneous parts, form the organic whole of an arm, are placed upon the same scale of expression as the stones and planks with which a house is built.

"In the same inappropriate manner," continued Goethe, "the French use the expression *composition*, in speaking of the productions of nature. I can certainly put together the individual parts of a machine made of separate pieces, and, upon such a subject, speak of a *composition*; but not when I have in my mind the individual parts of an organic whole, which produce themselves with life, and are pervaded by a common soul."

"It appears to me," added I, "that the expression *composition* is also inappropriate and degrading to genuine productions of art and poetry."

"It is a thoroughly contemptible word," returned Goethe, "for which we have to thank the French, and of which we should endeavour to rid ourselves as soon as possible. How can one say, Mozart has *composed* (*componirt*) Don Juan! Composition! As if it were a piece of cake or biscuit, which had been stirred together out of eggs, flour, and sugar! It is a spiritual creation, in which the details, as well as the whole, are pervaded by *one* spirit, and by the

breath of one life; so that the producer did not make experiments, and patch together, and follow his own caprice, but was altogether in the power of the dæmonic spirit of his genius, and acted according to his orders."

HISTORY

Goethe then turned his thoughts backward into history, and talked much of the Prussian army in the Seven Years' War, which, accustomed by Frederic the Great to constant victory grew careless, so that, in after days, it lost many battles from over-confidence. All the minutest details were present to his mind, and I had reason to admire his excellent memory.

"I had the great advantage," said he, "of being born at a time when the greatest events which agitated the world occurred, and such have continued to occur during my long life; so that I am a living witness of the Seven Years' War, of the separation of America from England, of the French Revolution, and of the whole Napoleon era, with the downfall of that hero, and the events which followed. Thus I have attained results and insight impossible to those who are born now and must learn all these things from books which they will not understand.

"What the next years will bring I cannot predict; but I fear we shall not soon have repose. It is not given to the world to be contented; the great are not such that there will be no abuse of power; the masses not such that, in hope of gradual improvement, they will be contented with a moderate condition. Could

we perfect human nature, we might also expect a perfect state of things; but, as it is, there will always be a wavering hither and thither; one part must suffer while the other is at ease; envy and egotism will be always at work like bad demons, and party strife will be without end.

"The most reasonable way is for every one to follow his own vocation to which he has been born, and while he has learned, and to avoid hindering others from following theirs. Let the shoemaker abide by his last, the peasant by his plough, and let the king know how to govern; for this is also a business which must be learned, and with which no one should meddle who does not understand it."

Returning to the French papers, Goethe said,—"The liberals may speak, for when they are reasonable we like to hear them; but with the royalists, who have the executive power in their hands, talking comes amiss—they should act. They may march troops, and behead and hang—that is all right; but attacking opinions, and justifying their measures in public prints, does not become them. If there were a public of kings, they might talk.

"For myself," he continued, "I have always been a royalist. I have let others babble, and have done as I saw fit. I understand my course, and know my own object. If I committed a fault as a single individual, I could make it good again; but if I committed it jointly with three or four others, it would be impossible to make it good, for among others there are many opinions." * * * * *

We talked of the tragic idea of Destiny among the Greeks.

"It no longer suits our way of thinking," said Goethe; "it is obsolete, and is also a contradiction with our religious views. If a modern poet introduces such antique ideas into a drama, it always has an air of affectation. It is a costume which is long since out of fashion, and which, like the Roman toga, no longer suits us.

"It is better for us moderns to say with Napoleon, 'Politics are Destiny.' But let us beware of saying, with our latest literati, that politics are poetry, or a suitable subject for the poet. The English poet Thomson wrote a very good poem on the Seasons, but a very bad one on Liberty, and that not from want of poetry in the poet, but from want of poetry in the subject."

"If a poet would work politically, he must give himself up to a party; and so soon as he does that, he is lost as a poet; he must bid farewell to his free spirit, his unbiased view, and draw over his ears the cap of bigotry and blind hatred.

"The poet, as a man and citizen, will love his native land; but the native land of his poetic powers and poetic action is the good, noble, and beautiful, which is confined to no particular province or country, and which he seizes upon and forms wherever he finds it. Therein is he like the eagle, who hovers with free gaze over whole countries, and to whom it is of no consequence whether the hare on

which he pounces is running in Prussia or in Saxony.

"And, then, what is meant by love of one's country? what is meant by patriotic deeds? If the poet has employed a life in battling with pernicious prejudices, in setting aside narrow views, in enlightening the minds, purifying the tastes, ennobling the feelings and thoughts of his countrymen, what better could he have done? how could he have acted more patriotically?

"To make such ungrateful and unsuitable demands upon a poet is just as if one required the captain of a regiment to show himself a patriot by taking part in political innovations, and thus neglect his proper calling. The captain's country is his regiment, and he will show himself an excellent patriot by troubling himself about political matters only so far as they concern him, and bestowing all his mind and all his care on the battalions under him, trying so to train and discipline them, that they may do their duty if ever their native land should be in peril.

"I hate all bungling like sin, but most of all bungling in state affairs, which produces nothing but mischief to thousands and millions.

"You know that on the whole I care little what is written about me; but yet it comes to my ears, and I know well enough that, hard as I have toiled all my life, all my labors are as nothing in the eyes of certain people. To please such people I must have become a member of a Jacobin club, and preached bloodshed and murder. However, not a word more upon

this wretched subject, lest I become unwise in railing against folly." * * * * *

We then spoke of the unity of Germany, and in what sense it was possible and desirable.

"I am not uneasy," said Goethe, "about the unity of Germany; our good high roads and future railroads will of themselves do their part. But, above all, may Germany be *one* in love! and may it always be *one* against the foreign foe! May it be *one*, so that German dollars and groschen may be of equal value throughout the whole empire! *one*, so that my travelling-chest may pass unopened through all the six-and-thirty states! May it be *one*, so that the town passport of a citizen of Weimar may not be considered insufficient, like that of a mere foreigner, by the frontier officer of a large neighboring state! May there be no more talk about inland and outland among the German states! In fine, may Germany be *one* in weight and measure, in trade and commerce and a hundred similar things which I will not name!

"But if we imagine that the unity of Germany consists in this, that the very great empire should have a great capital, and that this one great capital would conduce to the development of great individual talent, or to the welfare of the great mass of the people, we are in error.

"A state has been justly compared to a living body with many limbs, and thus the capital of a state may be compared to the heart, from which life and prosperity flow to the individual members near and far. But if the members be very distant from the heart, the

life that flows to them will become weaker and weaker. A clever Frenchman, I think Dupin, has sketched a chart of the state of culture in France, and has exhibited the greater or less enlightenment of the different departments by a lighter or darker colour. Now, some departments, particularly in the southern provinces remote from the capital, are represented by a perfectly black colour, as a sign of the great darkness which prevails there. But would that be the case if la belle France, instead of one great focus, had ten foci, whence life and light might proceed?

“Whence is Germany great, but by the admirable culture of the people, which equally pervades all parts of the kingdom? But does not this proceed from the various sets of government, and do not these foster and support it? Suppose, for centuries past, we had had in Germany only the two capitals, Vienna and Berlin, or only one of these, I should like to see how it would have fared with German culture, or even with that generally diffused opulence which goes hand in hand with culture. Germany has about twenty universities distributed about the whole empire, and about a hundred public libraries similarly distributed. There is also a great number of collections of art, and collections of objects belonging to all the kingdoms of nature; for every prince has taken care to bring around him these useful and beautiful objects. There are gymnasia and schools for arts and industry in abundance,—nay, there is scarcely a German village without its school. And how does France stand with respect to this last point!

"Then look at the quantity of German theatres, the number of which exceeds seventy, and which are not to be despised as supporters and promoters of a higher cultivation of the people. In no country is the taste for music and singing, and the practice of it so widely spread, as in Germany; and even that is something!

"And now think of such cities as Dresden, Munich, Stuttgart, Cassel, Brunswick, Hanover, and the like; think of the great elements of life comprised within these cities; think of the effect which they have upon the neighboring provinces; and ask yourself if all this would have been the case if they had not for a long time been the residences of princes?

"Frankfort, Bremen, Hamburg, and Luebeck, are great and brilliant; their effect upon the prosperity of Germany is incalculable. But would they remain what they are, if they lost their own sovereignty and became incorporated with any great German kingdom as a provincial town? I see reason to doubt this." * * * * *

"It is true that I could be no friend to the French Revolution; for its horrors were too near me, and shocked me daily and hourly, whilst its beneficial results were not then to be discovered. Neither could I be indifferent to the fact that the Germans were endeavoring, artificially, to bring about such scenes here, as were in France, the consequence of a great necessity.

"But I was as little a friend to arbitrary rule. Indeed, I was perfectly convinced that a great revolution is never a fault of the people, but of the government. Revolutions are utterly

impossible as long as governments are constantly just and constantly vigilant, so that they may anticipate them by improvements at the right time, and not hold out until they are forced to yield by the pressure from beneath.

"Because I hated the Revolution, the name of the 'Friend of the powers that be' was bestowed upon me. That is, however, a very ambiguous title, which I would beg to decline. If the 'powers that be' were all that is excellent, good, and just, I should have no objection to the title; but, since with much that is good there is also much that is bad, unjust, and imperfect, a friend of the 'powers that be' means often little less than the friend of the obsolete and bad.

"But time is constantly progressing, and human affairs wear every fifty years a different aspect; so that an arrangement which, in the year 1800, was perfection, may, perhaps, in the year 1850 be a defect.

"And, furthermore, nothing is good for a nation but that which arises from its own core and its own general wants, without apish imitation of another; since what to one race of people, of a certain age, is a wholesome nutriment, may perhaps prove a poison for another. All endeavours to introduce any foreign innovation, the necessity for which is not rooted in the core of the nation itself, are therefore foolish; and all premeditated revolutions of the kind are unsuccessful; for they are without God, who keeps aloof from such bungling. If, however, there exists an actual necessity for a great reform amongst a people, God is

with it, and it prospers. He was visibly with Christ and his first adherents; for the purification of the doctrine corrupted by the priests was no less a necessity. Neither of the great powers whom I have named was, however, a friend of the permanent; much more were both of them convinced that the old leaven must be got rid of, and that it would be impossible to go on and remain in the untrue, unjust, and defective way."

NAPOLEON

We spoke about the History of Napoleon by Walter Scott. "It is true," said Goethe, "that the author may be reproached with great inaccuracy and equally great partiality, but even these two defects give to his work particular value in my eyes. The success of the book, in England, was great beyond all expectation and hence we see that Walter Scott, in this very hatred for Napoleon and the French, has been the true interpreter and representative of the English popular opinion and national feeling. His book will not be by any means a document for the history of France, but it will be one of the history of England. At all events, it is a voice which could not be wanting in this important historical process:

"It is generally agreeable to me to hear the most contrary opinions of Napoleon. I am now reading the work by Bignon, which appears to me to possess particular merit."

* * * * *

"Napoleon was the man! Always enlightened, always clear and decided, and endowed at every hour with sufficient energy to carry into effect whatever he considered advantage-

ous and necessary. His life was the stride of a demi-god, from battle to battle, and from victory to victory. It might well be said of him, that he was found in a state of continual enlightenment. On this account, his destiny was more brilliant than any the world had seen before him, or perhaps will ever see after him."

* * * * *

"Does the productiveness of genius," said I, "lie merely in the mind of an important man, or does it also lie in the body?"

"The body has, at least," said Goethe, "the greatest influence upon it. There was indeed a time when, in Germany, a genius was always thought of as short, weak, or hunch-backed; but commend me to a genius who has a well-proportioned body.

"When it was said of Napoleon that he was a man of granite, this applied particularly to his body. What was it, then, which he could not and did not venture? From the burning sands of the Syrian deserts, to the snowy plains of Moscow, what an incalculable amount of marches, battle and nightly bivouacs did he go through? And what fatigues and bodily privations was he forced to endure? Little sleep, little nourishment and yet always in the highest mental activity. After the awful exertion and excitement of the eighteenth Brumaire, it was midnight, and he had not tasted anything during the whole day, and yet, without thinking of strengthening his body, he felt power enough in the depth of the night to draw up the well-known proclamation to the French people. When one considers what he accomplished and endured, one might imagine

that when he was in his fortieth year not a sound particle was left in him; but even at that age he still occupied the position of a perfect hero.

"But you are quite right: The real focus of his lustre belongs to his youth. And it is something to say that one of obscure origin, and at a time which set all capacities in motion, so distinguished himself as to become, in his seven-and-twentieth year, the idol of a nation of thirty millions! Yes, yes, my good friend, one must be young to do great things. And Napoleon is not the only one!"

PHILOSOPHY

"Meyer," said Goethe, laughing, "always says, 'If thinking were not so hard.' And the worst is, that all the thinking in the world does not bring us to thought; we must be right by nature, so that good thoughts may come before us like free children of God, and cry, 'Here we are!'" * * * * *

I asked Goethe which of the new philosophers he thought the highest.

"Kant," said he, "beyond a doubt. He is the one whose doctrines still continue to work, and have penetrated most deeply into our German civilization. He has influenced even you, although you have never read him; now you need him no longer, for what he could give you, you possess already. If you wish by and by to read something of his, I recommend to you his 'Critique on the Power of Judgment,' in which he has written admirably upon rhetoric, tolerably upon poetry, but unsatisfactorily on plastic art."

"Has your excellency ever had any personal connection with Kant?"

"No," he replied; "Kant never took any notice of me, though from my own nature I went a way like his own. I wrote my 'Metamorphosis of Plants' before I knew anything about Kant; and yet it is wholly in the spirit of his doctrine. The separation of subject from object, and further, the opinion that each creature exists for his own sake, and that cork trees do not grow merely that we may stop our bottles—this Kant shared with me, and I rejoiced to meet him on such ground. Afterwards I wrote my 'Doctrine of Experiment,' which is to be regarded as criticism upon subject and object, and a mediation of both.

"Schiller was always wont to advise me against the study of Kant's philosophy. He usually said Kant could give me nothing; but he himself studied Kant with great zeal; and I have studied him too, and not without profit."

* * * * *

Hegel is here, whom Goethe personally esteems very highly, though he does not much relish some of the fruits produced by his philosophy. Goethe gave a tea-party in honor of him this evening, at which Zelter was also present, who intended to make his departure again tonight.

A great deal was said about Hamann, with respect to whom Hegel was chief spokesman, displaying a deep insight into this extraordinary mind, such as could only have arisen from a most earnest and scrupulous study of the subject.

The discourse then turned upon the nature

of dialectics. "They are, in fact," said Hegel, "nothing more than the regulated, methodically-cultivated spirit of contradiction which is innate in all men, and which shows itself great as a talent in the distinction between the true and the false."

"Let us only hope," interposed Goethe, "that these intellectual arts and dexterities are not frequently misused, and employed to make the false true, and the true false."

"That certainly happens," returned Hegel; "but only with people who are mentally diseased."

"I therefore congratulate myself," said Goethe, "upon the study of nature, which preserves me from such disease. For here we have to deal with the infinitely and eternally true, which throws off as incapable every one who does not proceed purely and honestly with the treatment and observation of his subject. I am also certain that many a dialectic disease would find a wholesome remedy in the study of nature."

ETHICS

The conversation then turned upon the "Antigone" of Sophocles, and the high moral tone prevailing in it; and, lastly, upon the question—how the moral element came into the world?

"Through God himself," returned Goethe, "like everything else. It is no product of human reflection, but a beautiful nature inherent and inborn."

"It is, more or less, inherent in mankind generally, but to a high degree in a few eminently

gifted minds. These have, by great deeds or doctrines, manifested their divine nature; which, then by beauty of its appearance, won the love of men, and powerfully attracted them to reverence and emulation."

"A consciousness of the worth of the morally beautiful and good could be attained by experience and wisdom inasmuch as the bad showed itself in its consequences as a destroyer of happiness, both in individuals and the whole body, while the noble and right seemed to produce and secure the happiness of one and all. The morally beautiful could become a doctrine and diffuse itself over whole nations as something plainly expressed."

"I have lately read somewhere," answered I, "the opinion that the Greek tragedy had made moral beauty a special object."

"Not so much morality," returned Goethe, "as pure humanity in its whole extent; especially in such positions where, by falling into contact with rude power, it could assume a tragic character. In this region, indeed, even the moral stood as a principal part of human nature."

"The morality of Antigone, besides, was not invented by Sophocles, but was contained in the subject, which Sophocles chose the more readily, as it united so much dramatic effect with moral beauty."

Goethe then spoke about the characters of Creon and Ismene, and on the necessity for these two persons for the development of the beautiful soul of the heroine.

"All that is noble," said he, "is in itself of a quiet nature, and appears to sleep until it is

aroused and summoned forth by contrast. Such a contrast is Creon, who is brought in, partly on account of Antigone, in order that her noble nature and the right which is on her side may be brought out by him, partly on his own account, in order that his unhappy error may appear odious to us.

"But, as Sophocles meant to display the elevated soul of his heroine even before the deed, another contrast was requisite by which her character might be developed; and this is her sister Ismene. In this character, the poet has given us a beautiful standard of the commonplace, so that the greatness of Antigone, which is above such a standard, is the more strikingly visible."

The conversation then turned upon dramatic authors in general, and upon the important influence which they exerted, and could exert, upon the great mass of the people.

"A great dramatic poet," said Goethe, "if he is at the same time productive, and is actuated by a strong noble purpose, which pervades all his works, may succeed in making the soul of his pieces become the soul of the people. I should think that this was something well worth the trouble. From Corneille proceeded an influence capable of forming heroes. This was something for Napoleon, who had need of an heroic people; on which account he said of Corneille, that if he were still living, he would make a prince of him. A dramatic poet who knows his vocation, should therefore work incessantly at its higher development, in order that his influence in the people may be noble and beneficial.

"One should not study contemporaries and competitors, but the great men of antiquity, whose works have, for centuries, received equal homage and consideration. Indeed, a man of really superior endowments will feel the necessity of this, and it is just this need for an intercourse with great predecessors, which is the sign of a higher talent. Let us study Moliere, let us study Shakespeare, but above all things, the old Greeks, and always the Greeks."

"For highly endowed natures," remarked I, "the study of the authors of antiquity may be perfectly invaluable; but in general, it appears to have little influence upon personal character. If this were the case, all philologists and theologians would be the most excellent of men. But this is by no means the case; and such connoisseurs of the ancient Greek and Latin authors are able people or pitiful creatures, according to the good or bad qualities which God has given them, or which they have inherited from their father and mother."

"There is nothing to be said against that," returned Goethe; "but it must not, therefore, be said that the study of the authors of antiquity is entirely without effect upon the formation of character. A worthless man will always remain worthless, and a little mind will not, by daily intercourse with the great minds of antiquity, become one inch greater. But a noble man, in whose soul God has placed the capability for future greatness of character, and elevation of mind, will, by a knowledge of, and familiar intercourse with, the elevated natures of ancient Greeks and Romans, every day make a visible approximation to similar greatness."

IMMORTALITY

Goethe was in excellent spirits today. He showed me Frau von Spiegel's album, in which he had written some very beautiful verses. A place had been left open for him for two years, and he rejoiced at having been able to perform at last an old promise. After I had read the "Poem to Frau von Spiegel," I turned over the leaves of the book, in which I found many distinguished names. On the very next page was a poem by Tiedge, written in the very spirit and style of his "Urania." "In a saucy mood," said Goethe, "I was on the point of writing some verses beneath those; but I am glad that I did not. It would not have been the first that, by rash expression, I had repelled good people, and spoiled the effect of my best works.

"However," continued Goethe, "I have had to endure not a little from Tiedge's 'Urania'; for, at the time, nothing was sung and nothing was declaimed but this same 'Urania.' Wherever you went, you found 'Urania' on the table. 'Urania' and immortality were the topics of every conversation. I would by no means dispense with the happiness of believing in a future existence, and, indeed, would say, with Lorenzo de Medici, that those are dead even for this life who hope for no other. But such incomprehensible matters lie too far off to be a theme of daily meditation and thought-distracting speculation. Let him who believes in immortality enjoy his happiness in silence, he has no reason to give himself airs about it. The occasion of Tiedge's 'Urania' led me to observe that piety, like nobility, has its aris-

tocracy. I met stupid women, who plumed themselves on believing, with Tiedge, in immortality, and I was forced to bear much dark examination on this point. They were vexed by my saying I should be well pleased if, after the close of this life, we were blessed with another, only I hoped I should hereafter meet none of those who had believed in it here. For how should I be tormented! The pious would throng around me, and say, 'Were we not right? Did we not predict it? Has not it happened just as we said?' And so there would be ennui without end even in the other world.

"This occupation with the ideas of immortality," he continued, "is for people of rank, and especially ladies, who have nothing to do. But an able man, who has something regular to do here, and must toil and struggle and produce day by day, leaves the future world to itself, and is active and useful in this. Thoughts about immortality are also good for those who have not been very successful here; and I would wager that, if the good Tiedge had enjoyed a better lot, he would also have had better thoughts." * * * * *

In the meanwhile, we had gone round the thicket (the Webicht), and had turned by Tiefurt into the Weimar road, where we had a view of the setting sun. Goethe was for a while lost in thought; he then said to me, in the words of one of the ancients—

Untergehend sogar ist's immer dieselbige Sonne.

"Still it continues the self-same sun, e'en while it is sinking."

"At the age of seventy-five," continued he,

with much cheerfulness, one must, of course, think sometimes of death. But this thought never gives me the least uneasiness, for I am fully convinced that our spirit is a being of a nature quite indestructible, and that its activity continues from eternity to eternity. It is like the sun, which seems to set only to our earthly eyes, but which, in reality, never sets, but shines on unceasingly." * * * * *

"I have continued to read Schubart," said Goethe. "He is, indeed, a remarkable man, and he says much that is excellent, if we translate it into our own language. The chief tendency of his book is to show that there is a point of view beyond the sphere of philosophy,—namely, that of common-sense; and that art and science, independently of philosophy, and by means of a free action of natural human powers, have always thriven best. This is grist for our mill. I have always kept myself free from philosophy. The common-sense view was also mine; and hence Schubart confirms what I myself have been saying and doing all my life.

"The only thing I cannot commend in him is this that he knows certain things better than he will confess, and does not therefore go quite honestly to work. Like Hegel, he would bring the Christian religion into philosophy, though it really has nothing to do with it. Christianity has a might of its own, by which dejected, suffering humanity is re-elevated from time to time, and when we grant it this power, it is raised above all philosophy, and needs no support therefrom. Neither does the philosopher need the countenance of religion to prove cer-

tain doctrines; as, for instance, eternal duration. Man should believe in immortality; he has a right to this belief; it corresponds with the wants of his nature, and he may believe in the promises of religion. But if the philosopher tries to deduce the immortality of the soul from a legend, that is very weak and inefficient. To me, the eternal existence of my soul is proved from my idea of activity; if I work on incessantly till my death, nature is bound to give me another form of existence when the present one can no longer sustain my spirit."

* * * * *

I told Goethe of a person now travelling through Weimar, who had heard a lecture of Hegel's on the proof of the existence of a God. Goethe agreed with me that the time for such lectures was gone by.

"The period of doubt," said he, "is past; men now doubt as little the existence of a God as their own, though the nature of the divinity, the immortality, the peculiarities of our own souls, and their connection with our bodies, are eternal problems, with respect to which our philosophers take us no farther. A French philosopher, of the most recent times, begins his chapter confidently thus:

"It is acknowledged that man consists of two parts, body and soul; accordingly, we will begin with the body, and then speak of the soul.'"

"Fichte went a little farther, and extricated himself somewhat more cleverly from the dilemma, by saying—'We shall treat of man regarded as a body, and of man regarded as a soul.' He felt too well that a so closely combined whole could not be separated. Kant has

unquestionably done the best service, by drawing the limits beyond which human intellect is not able to penetrate, and leaving at rest the insoluble problems. What a deal have people philosophized about immortality—and how far have they got? I doubt not of our immortality, for nature cannot dispense with the *entelecheia*. But we are not all, in like manner, immortal; and he who would manifest himself in future as a great *entelecheia*, must be one now."

RELIGION

'It is natural to man," said Goethe, "to regard himself as the final cause of creation, and to consider all other things merely in relation to himself so far as they are of use to him. He makes himself master of the vegetable and animal world, and while he claims other creatures as a fitting diet, he acknowledges his God, and praises His goodness in this paternal care. He takes milk from the cow, honey from the bee, wool from the sheep; and while he gives these things a purpose which is useful to himself, he believes that they were made on that account. Nay, he cannot conceive that even the smallest herb was not made for him, and if he has not yet ascertained its utility, he believes that he may discover it in future.

"Then, too, as man thinks in general, so does he always think in particular, and he does not fail to transfer his ordinary views from life into science, and to ask the use and purpose of every single part of our organic being.

"This may do for a time, and he may get on so for a time in science, but he will soon come to phenomena, where this small view will not

be sufficient, and where, if he does not take a higher stand, he will soon be involved in mere contradictions.

"The utility-teachers say that oxen have horns to defend themselves: but I ask, why is the sheep without any—and when it has them, why are they twisted about the ears so as to answer no purpose at all?

"If, on the other hand, I say the ox defends himself with his horns because he has them, it is quite a different matter.

"The question as to the purpose—the question *Wherefore* is completely unscientific. But we get on farther with the question *How*? For if I ask how has the ox horns, I am led to study his organization, and learn at the same time why the lion has no horns, and cannot have any.

"Thus, man has in his skull two hollows which are never filled up. The question wherefore could not take us far in this case, but the question how informs me that these hollows are remains of the animal skull, which are found on a larger scale in inferior organization, and are not quite obliterated in man, with all his eminence.

"The teachers of utility would think that they lost their God if they did not worship Him who gave the ox horns to defend itself. But I hope I may be allowed to worship Him who, in the abundance of His creation, was great enough, after making a thousand kinds of plants, to make one more, in which all the rest should be comprised; and after a thousand kinds of animals, a being which comprises them all—a man.

"Let people serve Him who gives to the beast his fodder, and to man meat and drink as much as he can enjoy. But I worship Him who has infused into the world such a power of production, that, when only the millionth part of it comes out into life, the world swarms with creatures to such a degree that war, pestilence, fire, and water cannot prevail against them. That is my God!"

* * * * *

"If," continued Goethe, "when the truth was once found, people would not again pervert and obscure it, I should be satisfied; for mankind requires something positive, to be handed down from generation to generation, and it would be well if the positive were also the true. On this account, I should be glad if people came to a clear understanding in natural science, and then adhered to the truth, not transcending again after all had been done in the region of the incomprehensible. But mankind cannot be at peace, and confusion always returns before one is aware of it.

"Thus they are now pulling to pieces the five books of Moses, and if an annihilating criticism is injurious in anything, it is so in matters of religion; for here everything depends upon faith, to which we cannot return when we have once lost it."

* * * * *

Frau and Herr von Goethe came in, and we sat down to dinner. The lively topics of the day, such as the theatre, balls and the court, were lightly discussed; but soon we came to more serious matters, and found ourselves deeply engaged in conversation on the religious doctrines of England.

"You ought, like me," said Goethe, "to have studied Church history for fifty years, to understand how all this hangs together. On the other hand, it is highly remarkable to see with what doctrines the Mahometans commence the work of education. As a religious foundation, they confirm their youth in the conviction that nothing can happen to man, except what was long since decreed by an all-ruling divinity. With this they are prepared and satisfied for a whole life, and scarce need anything further.

"I will not inquire what is true or false, useful or pernicious, in this doctrine; but really something of this faith is held in us all, even without being taught. 'The ball on which my name is not written, cannot hit me,' says the soldier in the battle-field; and, without such a belief, how could he maintain such courage and cheerfulness in the most imminent perils? The Christian doctrine, 'No sparrow falls to the ground without the consent of our Father,' comes from the same source, intimating that there is a Providence, which keeps in its eye the smallest things, and without whose will and permission nothing can happen.

"Then the Mahometans begin their instruction in philosophy, with the doctrine that nothing exists of which the contrary may not be affirmed. Thus they practise the minds of youth, by giving them the task of detecting and expressing the opposite of every proposition; from which great adroitness in thinking and speaking is sure to arise.

"Certainly, after the contrary of any proposition has been maintained, doubt arises as to which is really true. But there is no perman-

ence in doubt; it incites the mind to closer inquiry and experiment, from which, if rightly managed, certainty proceeds, and in this alone can man find thorough satisfaction.

"You see that nothing is wanting in this doctrine; that with all our systems, we have got no further; and that, generally speaking, no one can get further."

"You remind me of the Greeks," said I, "Who made use of a similar mode of philosophical instruction, as is obvious from their tragedy, which, in its course of action, rests wholly upon contradiction, not one of the speakers ever maintaining any opinion of which the other cannot, with equal dexterity, maintain the contrary."

"You are perfectly right," said Goethe; "and that doubt is brought in which is awakened in the spectator or reader. Thus, at the end, we are brought to certainty by fate, which attaches itself to the moral, and espouses its cause."

* * * * *

Frau von Goethe, young Goethe, and Fraeulein Ulrica now came in, and we sat down to table. The conversation was gay and varied, the pietists of some cities in Northern Germany being a subject to which we often reverted. It was remarked that these pietistical separations had destroyed the harmony of whole families.

"I was able to give an instance of the kind, having nearly lost an excellent friend because he could not convert me to his opinions. He, as I stated, was thoroughly convinced that good works and one's own merits are of no avail, and that man can only win favour with the divinity by the grace of Christ.

"A female friend," observed Frau von Goethe, "said something of the sort to me; but even now I scarcely know what is meant by grace and what by good works."

"According to the present course of the world, in conversing on all such topics," said Goethe, "there is nothing but a medley; and perhaps none of you know whence it comes. I will tell you. The doctrine of good works—namely, that man, by good actions, legacies, and beneficent institutions, can avoid the penalty of sin, and rise in the favours of God—is Catholic. But the reformers, out of opposition, rejected this doctrine, and declared, in lieu of it that man must seek solely to recognize the merits of Christ and become a partaker of his grace; which indeed leads to good works. But, nowadays, all this is mingled together, and nobody knows whence a thing comes."

I remarked, more in thought than openly, that difference of opinion in religious matters had always sown dissension among men, and, made them enemies; nay, that the first murder had been caused by a difference in the mode of worshipping God. I said that I had lately been reading Byron's "Cain," and had been particularly struck by the third act, and the manner in which the murder is brought about.

"It is indeed admirable," said Goethe. "Its beauty is such as we shall not see a second time in the world."

"Cain," said I, "was at first prohibited in England; but now everybody reads it, and young English travellers usually carry a complete Byron with them."

"It was folly," said Goethe; "for, in fact,

there is nothing in the whole of Cain which is not taught by the English bishops themselves."

GOD

We then spoke upon religious subjects, and the abuse of the divine name. "People treat it," said Goethe, "as if that incomprehensible and most high Being, who is even beyond the reach of thought, were only their equal. Otherwise they would not say the *Lord God*, the *dear God*, the *good God*. This expression becomes to them, especially to the clergy, who have it daily in their mouths, a mere phrase a barren name, to which no thought is attached whatever. If they were impressed by His greatness they would be dumb and through veneration unwilling to name Him."

* * * * *

"Without my attempts in natural science, I should never have learned to know mankind such as it is. In nothing else can we so closely approach pure contemplation and thought, so closely observe the errors of the senses and of the understanding, the weak and the strong points of character. All is more or less pliant and wavering, is more or less manageable; but nature understands no jesting; she is always true, always serious, always severe; she is always right, and the error and faults are always those of man. Him, who is incapable of appreciating her she despises; and only to the apt, the pure, and the true, does she resign herself, and reveal her secrets.

"The understanding will not reach her; man must be capable of elevating himself to the highest Reason to come into contact with the

Divinity, which manifests itself in the primitive phenomenon (*Urphaenomenen*), which dwells behind them, and from which they proceed.

"The divinity works in the living not in the dead; in the becoming and changing, not in the become and the fixed. Therefore reason, with its tendency towards the divine, has only to do with the becoming, the living; but understanding with the become, the already fixed, that it may make use of it."

* * * * *

Before dinner, while walking in the Erfurt road, I met Goethe, who stopped me and took me into his carriage. We went a good way by the fir-wood, and talked about natural history.

The mountains and hills were covered with snow, and I mentioned the great delicacy of the yellow, observing that at a distance of nine miles, with some density intervening, a dark surface rather appeared blue than a white one yellow. Goethe agreed with me, and we then spoke of the high significance of the primitive phenomena, behind which we believe the Deity may directly be discerned.

"I ask not," said Goethe, "whether this highest Being has reason and understanding, but I feel that He is Reason, is Understanding itself. Therewith are all creatures penetrated; and man has so much of it that he can recognize parts of the Highest."

* * * * *

We talked of the Theory of Colours, and among other things about drinking glasses, the dull figures on which appear yellow against the light, and blue against the dark, and therefore

allow the observation of a primitive phenomenon.

"The highest which man can attain in these matters," said Goethe, on this occasion, "is astonishment; if the primary phenomenon causes this, let him be satisfied; more it cannot bring; and he should forbear to seek for anything further behind it: here is the limit. But the sight of a primitive phenomenon is generally not enough for people; they think they must go still further; and are thus like children who, after peeping into a mirror, turn it round directly to see what is on the other side."

* * * * *

This evening for an hour with Goethe, talking of various interesting subjects. I had bought an English Bible, in which I found, to my great regret, that the apocryphal books were not contained. They had been rejected, because they were not considered genuine and of divine origin. I greatly missed the noble Tobias, that model of a pious life, the Wisdom of Solomon, and Jesus Sirach,—all writings of such high mental and moral elevation, that few others equal them. I spoke to Goethe of my regret at the very narrow view by which some of the writings of the Old Testament are looked upon as immediately proceeding from God; while others, equally excellent, are not so. As if there could be anything noble and great which did not proceed from God, and which was not a fruit of his influence.

"I am thoroughly of your opinion," returned Goethe. "Still, there are two points of view from which biblical subjects may be contemplated. There is the point of view of a sort of

primitive religion, of pure nature and reason, which is of divine origin. This will always be the same, and will last and prevail as long as divinely endowed beings exist. It is, however, only for the elect, and is far too high and noble to become universal. Then there is the point of view of the Church, which is of a more human nature. This is defective and subject to change; but it will last, in a state of perpetual change, as long as there are weak human beings. The light of unclouded divine revelation is far too pure and brilliant to be suitable and supportable to poor weak man. But the Church steps in as a useful mediator, to soften and to moderate, by which all are helped, and **many** are benefited. Through the belief that the Christian Church, as the successor of Christ, can remove the burden of human sin, it is a very great power. To maintain themselves in this power and in this importance, and thus to secure the ecclesiastical edifice, is the chief aim of the Christian priesthood.

"This priesthood, therefore, does not so much ask whether this or that book in the Bible greatly enlightens the mind, and contains doctrines of high morality and noble human nature. It rather looks upon the books of Moses, with reference to the fall of man and the origin of a necessity for a Redeemer; it searches the prophets for repeated allusion to Him, the Expected One, and regards, in the Gospels, His actual earthly appearance, and His death upon the cross, as the atonement for our human sins. You see, therefore, that for such purposes, and weighted in such a balance, neither the noble Tobias nor the Wisdom of Solomon, nor the

sayings of Sirach, can have much weight. Still, with reference to things in the Bible, the question whether they are genuine or spurious is odd enough. What is genuine but that which is truly excellent, which stands in harmony with the purest nature and reason, and which even now ministers to our highest development! What is spurious but the absurd and the hollow, which brings no fruit—at least, no good fruit! If the authenticity of a biblical book is to be decided by the question,—whether something true throughout has been handed down to us, we might on some points doubt the authenticity of the Gospels, since those of Mark and Luke were not written from immediate presence and experience, but, according to oral tradition, long afterwards; and the last, by the disciple John, was not written till he was of a very advanced age. Nevertheless, I look upon all the four Gospels as thoroughly genuine; for there is in them the reflection of a greatness which emanated from the person of Jesus, and which was of as divine a kind as ever was seen upon earth. If I am asked whether it is in my nature to pay Him devout reverence, I say—certainly! I bow before Him as the divine manifestation of the highest principle of morality. If I am asked whether it is in my nature to revere the Sun, I again say—certainly! For he is likewise a manifestation of the highest Being, and indeed the most powerful which we children of earth are allowed to behold. I adore in him the light and the productive power of God; by which we all live, move, and have our being—we, and all the plants and animals with us. But if I am asked

—whether I am inclined to bow before a thumb-bone of the apostle Peter or Paul, I say—‘Spare me, and stand off with your absurdities!’

“‘Quench not the spirit,’ says the apostle. There are many absurdities in the propositions of the Church; nevertheless, rule it will, and so it must have a narrow-minded multitude, which bows its head and likes to be ruled. The high and richly-endowed clergy dread nothing more than the enlightenment of the lower orders. They withheld the Bible from them as long as it was possible. Besides, what can a poor member of the Christian Church think of the princely magnificence of a richly-endowed bishop, when he sees in the Gospels the poverty and indigence of Christ, who, with his disciples, travelled humbly on foot, whilst the princely bishop rattles along in his carriage drawn by six horses!

“We scarcely know,” continued Goethe, “what we owe to Luther, and the Reformation in general. We are freed from the fetters of spiritual narrow-mindedness; we have, in consequence of our increasing culture, become capable of turning back to the fountain head, and of comprehending Christianity in its purity. We have, again, the courage to stand with firm feet upon God’s earth, and to feel ourselves in our divinely-endowed human nature. Let mental culture go on advancing, let the natural sciences go on gaining in depth and breadth, and the human mind expand as it may, it will never go beyond the elevation and moral culture of Christianity as it glistens and shines forth in the gospel!

“But the better we Protestants advance in

our noble development, so much the more rapidly will the Catholics follow us. As soon as they feel themselves caught up by the ever-extending enlightenment of the time, they must go on, do what they will, till at last the point is reached where all is but one.

"The mischievous sectarianism of the Protestants will also cease, and with it the hatred and hostile feeling between father and son, sister and brother; for as soon as the pure doctrine and love of Christ are comprehended in their true nature, and have become a vital principle, we shall feel ourselves as human beings, great and free, and not attach especial importance to a degree more or less in the outward forms of religion. Besides, we shall all gradually advance from a Christianity of words and faith, to a Christianity of feeling and action."

CHRIST

I have been reading the New Testament, and thinking of a picture which Goethe lately showed me, where Christ is walking on the water, and Peter coming towards him, on the waves, begins to sink, in a moment of faint-heartedness.

"This," said Goethe, "is one of the most beautiful legends, and one which I love better than any. It expresses the noble doctrine that man, through faith and hearty courage, will come off victor in the most difficult enterprises, while he may be ruined by the least paroxysm of doubt." * * * * *

The conversation turned upon the great men who had lived before Christ, among the Chinese, the Indians, the Persians, and the Greeks;

and it was remarked, that the divine power had been as operative in them as in some of the great Jews of the Old Testament. We then came to the question how far God influenced the great natures of the present world in which we live?

"To hear people speak," said Goethe, "one would almost believe that they were of opinion that God had withdrawn into silence since those old times, and that man was now placed quite upon his own feet, and had to see how he could get on without God, and his daily invisible breath. In religious and moral matters, a divine influence is indeed still allowed, but in matters of science and art it is believed that they are merely earthly, and nothing but the product of human powers.

"Let any one only try, with human will and human power, to produce something which may be compared with the creations that bear the names of *Mozart*, *Raphael*, or *Shakespeare*. I know very well that these three noble beings are not the only ones, and that in every province of art innumerable excellent geniuses have operated, who have produced things as perfectly good as those just mentioned. But if they were as great as those, they rose above ordinary human nature, and in the same proportion were as divinely endowed as they.

"And after all what does it all come to? God did not retire to rest after the well-known six days of creation, but, on the contrary, is constantly active as on the first. It would have been for Him a poor occupation to compose this heavy world out of simple elements, and to keep it rolling in the sunbeams from year

1

to year, if He had not had the plan of founding a nursery for a world of spirits upon this material basis. So He is now constantly active in higher natures to attract the lower ones."

Goethe was silent. But I cherished his great and good words in my heart.

GOETHE'S END

The morning after Goethe's death, a deep desire seized me to look once again upon his earthly garment. His faithful servant, Frederic, opened for me the chamber in which he was laid out. Stretched upon his back, he reposed as if asleep; profound peace and security reigned in the features of his sublimely noble countenance. The mighty brow seemed yet to harbour thoughts. I wished for a lock of his hair; but reverence prevented me from cutting it off. The body lay naked, only wrapped in a white sheet; large pieces of ice had been placed near it, to keep it fresh as long as possible. Frederic drew aside the sheet, and I was astonished at the divine magnificence of the limbs. The breast was powerful, broad, and arched; the arms and thighs were full, and softly muscular; the feet were elegant, and of the most perfect shape; nowhere, on the whole body, was there a trace either of fat or of leanness and decay. A perfect man lay in great beauty before me and the rapture which the sight caused made me forget for a moment that the immortal spirit had left such an abode. I laid my hand on his heart—there was a deep silence—and I turned away to give free vent to my suppressed tears.

THE ANTICHRIST

FRIEDRICH NEITZSCHE

**INTRODUCTION BY
E. HALDEMAN-JULIUS**

**HALDEMAN-JULIUS PUBLICATIONS
GIRARD, KANSAS**

INTRODUCTION

E. HALDEMAN-JULIUS

There have been many great attacks upon Christianity, strong and effective in their different ways, and one hesitates to distinguish any one of them by the superlative "greatest": but if I were to use this superlative—especially with respect to sheer blasting force of inspired denunciation—I should apply it to *The Antichrist* of Friedrich Nietzsche. In this great essay—in this great pamphlet—in this great battlecry, Nietzsche is uncompromisingly the fighter. He delivers smashing blows, stinging slaps, piercing thrusts, prodigious kicks, world-resounding hoots and cries of cultured scorn. One is not only impressed intellectually, but one is thrilled and moved to the depths by the splendid, sweeping fervor of this attack. Nietzsche, who is indeed a very Hercules of intellectual combat, communicates to the reader the very spirit of his own Herculean antagonism, reinforced by a profound, four-square conviction of the just necessity of the cause. Like Nietzsche, one is sure that one is standing on the highest ground of culture and humanity, that one is fighting in the strongest position intellectually, and that one is assailing not simply an idea, not simply a religion, not simply an unattractive or untrue way of looking at life, but (inclusive of all these aspects) a serious enemy of civilization.

One is aware that it is not merely a theory, viewed in cool and remote detachment, which engages Nietzsche's combative ardor. It is not an argument in the abstract about supernaturalism. It is not an argument of pure reason about dogmas which do not impinge upon life. It is because Christianity is deadly-hostile to all true and fine human values that Nietzsche sends forth his trumpet blast against it—against its ideas and sentiments—against its history and ethics—against all its works and influences. Christianity—Nietzsche repeats the charge again and again and it is the central theme of his magnificent super-pamphlet—is at heart and utterly the foe of civilization.

It is a joy to read such invigorating, such frankly destructive criticism: criticism, moreover, which is destructive of a *destroying* influence. It takes no great thought, after all, to understand that in this great attack Nietzsche is himself the constructive mind arguing for civilization against an institution and an ideal that degrades and would defeat life. Fundamentally, in his philosophic attitude, Nietzsche hates Christianity because it says "No" to life; and the whole of Nietzsche's conviction is that we should say "Yes" to life. One need not agree uncritically with every idea and every line of this

sublime, forceful thinker—indeed, a valuable lesson which he enforces is that of courage and independence in thinking—to realize that the sum of his thought, of his culture, and of his powerful pronouncement in the present instance is civilized and constructive. He loved “noble values” and his mind comprehended the loftiest interests and aims of life. He was infinitely superior to Christianity (and of course no individual Christian could intellectually or culturally compare with him) in his allegiance to the spirit of truth, of freedom, and of progress.

It was his belief in the worthiness and the fair possibilities of life that engendered hatred of Christianity in the mind of Nietzsche. (For he *hated* Christianity, with the hatred of high-minded conviction, and the reasons for his hatred justify what was in truth a noble emotion of affirmation in behalf of all that is best in life, at once a noble hatred and a noble scorn and superiority. He had indeed a profound contempt for Christianity; but it was not contempt alone that dictated those devastating phrases, those thundering words, those scorching images and comparisons. He was inspired by an active hatred, and naturally so, inasmuch as he had to deal with an active force, a force too that was visibly and insolently more powerful in his day than it is in our day: although it is clear enough that the tremendous blows of Nietzsche are still useful, are still needed, against this historic and, in our day, still blustering and scheming and thwarting enemy of the civilized among mankind.

Nietzsche hated Christianity, then, because he was very close to it—it confronted him directly as an enemy—and, as he himself confesses, he had personally felt its acrid, cramping influence. And the justification of his hatred, aside from the personal feeling that any intelligent man would have in the presence of anything so ignoble, was that the Christian religion was poisonous to philosophy, poisonous to ethics, poisonous to all culture. In a word, a genuine and free and strong culture could not be developed save as Christianity should be destroyed to make way for it.

Science? Religion was, as its very nature necessitated, the sworn foe of science: for science came with the instruments and point of view and mighty factual structure of knowledge which must shatter the shams of religion. Literature? The really great in literature was feared and denounced by the priests of this religion of narrow-mindedness, this religion, too, which essentially was inspired by a hatred of the hearty, fine realities of life: a free literature is inevitably pagan, curious, joyous, and blasphemous: literary culture must be the very opposite of Christian “culture.”

And indeed Nietzsche says that the science and art of reading, the knowing of words and their meaning and their true use in the expression of ideas, is the most effective means of showing up the false pretensions of religion. The very terms upon which religion depends—its words such as God, Devil, spirit, soul, immortality, sin, salvation, and the like—reveal its essential character of bunk. (Bunk, by the way, is a word that Nietzsche would have delighted to use;

short and vigorous words, more truthful than polite, abound in *The Antichrist*: he could be blunt, as he could be sharp and subtle, according to the impression which it was important to convey.) Religion uses throughout an unreal language, a set of words that do not correspond to any images or purposes of reality: and it is a good test of intelligence whether one detects the nature of this illusory word pattern, which is of no use whatever save to deceive the victims of priestly craft and ambition, to deceive these victims about the character of life.

There are tremendous implications in the simple remark of Nietzsche that the ancient Romans had developed to the stage of civilization where they *knew how to read*. Words, in their minds, created pictures that were realistic: they were skeptical and did not read incuriously and credulously: they brought an attitude of familiar thoughtfulness to their reading: they had a culture which was carefully and clearly expressed. Of course, the perspicacious reader understands that this knowing how to read did not with the pagans, and does not with civilized persons today, apply solely to books: it is in the broadest sense *knowing how to read life*, how to observe things as they are, how to interpret rationally the real forces of nature and the relations, the impulses, and the aspirations of man. All men of ripe and reflective culture appreciate this importance of knowing how to read, which most men confuse with the simple training of literacy.

There is nothing more common than the habit of reading without understanding. And when a man does not, in the first place, have a clear realistic attitude toward life, how can he possibly find an intelligent, true, living picture of things in what he reads? He misunderstands the simplest words; phrases elude him; the thought which animates the page is beyond his detection; the very allusions, the very images and illustrations, the very basic implications of thought which are necessarily found in intelligent writing are foreign and meaningless to the man who, being literate and able to spell out words, nevertheless does not know how to read.

But the Romans, says Nietzsche, had learned how to read. They had evolved a wonderful organization of powerful, realistic, cultured life. And Christianity was an evil, corrupting agent in the downfall of this splendid ancient civilization. Is it any wonder that Nietzsche—in the degree that he admired that ancient civilization and truly loved the very spirit, the very words, the very outlook of civilization—hated Christianity! Who that appreciates the pagan civilization, which had achieved so much and promised in its sound development so much more, could—facing the record of Christian “civilization” for centuries after the downfall of pagan Rome—intelligibly be a Christian?

We of today, who have reached the stage of scientific, complete rationalism, say that Nietzsche was right in every syllable of his indictment of Christianity. He is supported by the facts of history, by the facts of science, by the facts and the implications and the

essential, underlying spirit of all culture. Civilization and culture have had to gain their triumphs in opposition to the degrading, confusing, altogether evil influence of Christianity; and as culture and civilization have claimed the allegiance of men, Christianity has receded in their regard and certainly, as a theory of life or as a way of life, it is no longer believed by intelligent people. (Sadly must this statement be accompanied by the confession that there are still many people who are not intelligent, although the wisdom of the ages and especially the scientific learning of the past few centuries is at their command if they but learn, as the pagans had learned, *how to read*.)

Neither Christianity as an organized religion, with its churchly dogmas and its claim to control and guide life according to a "spiritual" theory of life which is discredited by the very fundamentals of modern knowledge, nor Christianity in the very academic sense of the supposed personality and "message" of Jesus is reconcilable with a realistic scheme of life. Dogmatically, Christianity has asserted what is false; it has arrogated to itself, without the slightest basis of real knowledge, the position of explaining life (and, more important in the Christian view, the "beyond life" to which it would have life be miserably, falsely subservient): it has been at once the most vicious engine of tyrannical worldly power and the most corrupting source of anti-worldly, anti-human "spiritual" bunk. There has been no consistency in Christianity: but in both of its main characteristics it has been antagonistic to the best interests of mankind.

Jesus, of course, is but a name and a myth employed spectacularly, though not logically, in the service of this inconsistent religion. One understands what Nietzsche means when he says that the last Christian died on the cross—the only Christian: for obviously the complete ascetic ideal of Jesus, the strange and morbid psychology which (in the most coherent picture we can make of this little known or one may say unknown figure) dominated him could not long and actively serve as the official teaching of a religion. Even granting that some men have attempted to follow in the way of Jesus and that they have considerably succeeded in this attempt (a kind of success which must in its very nature be a failure or a denial of life), it is apparent that a really Jesus-inspired Christianity would be impossible.

But Paul had the asceticism of Jesus, only in Paul it was less a renunciation of life than a hatred of life. And Christianity, while its politics have certainly been far removed from the mild, renunciatory, "kingdom-of-heaven-within" gospel ascribed to Jesus, nevertheless has been poisoned with the pretenses of "spirituality" and with the futile, puritanical "nay-saying" of the Jesus legend. It must be said in all candor that the chief blame for mankind's self-torturing and fear and shame with regard to sex, for example, rests upon the despicably distorting influence of Christianity. It seems clear enough that without the confusions and the cruel denials of what is natural and sane which have been maintained by the Christian doctrines of purity and "spirituality" and godliness—or, in short, by the Christian

emphasis upon a "life to come" which discouraged a true consideration of the hopes and needs and problems of this life—mankind would today have a more intelligent, happy attitude toward sex, as they would be far more sensibly adjusted to all the realities of life.

The dual roles, as it were, that Christianity has played in history—its politics of power and its philosophy of "spiritual" negation of life (negation of reality and culture)—explain what at first glance may appear a contradiction in Nietzsche's criticism. He speaks of the Christian attitude of envy and suspicion and hatred toward superior, powerful, great men and ideas and events: Christianity, he says, is the religion of weakness in contrast with the gospel of greatness and power which Nietzsche would wish mankind to honor. But the contradiction is only apparent: power such as that wielded by barbaric Popes and Kings, power without culture or vision, power utterly indifferent to the future of humanity on this earth—that was not the sort of power that Nietzsche, in a spirit of poetry and prophecy that looked a long way ahead, conceived as admirable or desirable.

The power of Christianity was a power meanly obtained and meanly used; it was, moreover, a power which was exercised to beat down and cruelly discourage the appearance of all the fine values which Nietzsche loved; Nietzsche at times speaks recklessly of the will-to-power as something worthy in itself, yet it is after all the sum of his philosophy that power should be something of large human vision and thoughtfulness and culture. The mere power of exploitation and tyranny and conquest was, after all, opposed to the values which Nietzsche envisaged in his poetic, prophetic way as brilliantly justifying his rather fanciful (yet, if one brings it down to a realistic scale, inspiring) ideal of "the Superman."

And thus Christianity, whether in its manifestations of bigoted power, fighting all the aims of culture and civilization, or in its influence of a life-denying, truth-denying, nature-and-man-hating "spiritual" philosophy is truthfully indicted by Nietzsche. It is true, as he asserts, that Christianity has trampled upon all that is good and natural and sane in life. It is true that noble and superior things, which Nietzsche elevates in his regard, have been ever suspected and persecuted by Christianity: and that Christian power has been employed principally to keep humanity, to keep the culture and the progress of human society, from becoming powerful. It is true that Christianity, as a philosophy of life or as a religion or as an engine of power, has been foolish and mean and base. It is true that with the burden of Christianity fully upon them mankind could never have progressed to the point from which Nietzsche surveyed the world, nor beyond that to the scientific modernism which we, more fortunately placed in time, see about us. Consistently, and as by the force of a natural law of progress, the upbuilding of culture and civilization has necessitated a tearing down of Christianity. As Nietzsche says with his rude, right realism, Christianity (like other religions) has in its practical character been a scheme of priestly power, duping and dopping the masses of mankind with a "spiritual" philosophy of

submission, futility, anti-humanness: a philosophy from which proceeds also a poor, mean hatred of what is good and what is noble and what is earthfully forward-looking in life.

One may add, too, that the so-called "gentler virtues"—pity, meekness, non-resistance and the like—which Nietzsche wrongly identified as Christian in practice have, in Christian preaching, appeared as poor, mean "virtues": at the best, when sincerely preached as Christianity, they have been futile in their remoteness from life and have, as Nietzsche truly says, been the reflection of weak natures: at the worst, it must be said that Christianity has been pitiless, arrogant, and violent (with a ghastly, barbaric will-to-power indeed!) in enforcing itself upon mankind. There has been much unreal, sickly sentimentalism in Christian preaching though not in Christian practice: but Christianity has been far removed from even the understanding of true humanitarianism—the kind of humanitarianism which Nietzsche, after all, featured in the noble sum and symmetry of his thought.

The Antichrist

Friedrich Nietzsche

Let us face one another. We are Hyperboreans. We know well enough that we dwell apart—"Thou wilt find the way to the Hyperboreans," said Pindar, "neither by water nor by land." This much about us at least was known to him. Further than the north, beyond the ice, beyond death, is our abode and our happiness. We have explored the happy dwelling-place; we know the way there. After thousands of years in the labyrinth we found the way out—and has anybody else found it? Has modern man?—"I do not know where I am," he moans. "I am utterly without knowledge of whence I came or whither I am going"—and this modernity made us feel sick: with its stagnant contentedness, its cowardly compromising, and all the virtuous dirtiness of its modern yes-and-no. The kind of toleration and broad-mindedness that "forgives" all when it "understands" all, is a sirocco to us. Far better to live amidst the ice-floes than in modern virtues and other south-winds! . . . It was not our courage that failed: we spared neither ourselves nor others but we knew not where our courage was most needed. We became sombre and men called us fatalists; but our fatalism was the accumulation, and the tautening, and the storing of energy. We were eager for thunderings and action; we shunned the weakling's joy—resignation . . . A storm was in our air; the sky above us grew dark; at that time we had not found our way. Formula of our happiness: a yes, a no, a straight line, an objective . . .

II

What is good—everything that increases the feeling of power, the will to power, and power itself, in men. What is evil?—everything based in weakness. What is joy?—the emotion of power increasing, of a resistance overcome. Not contentedness, but more power! Not peace at any price, but war! Not "goodness," but more ability! ("Goodness" in the Renaissance-idiom is "virtue," free of moral taint.) The weak and the misbegotten shall sink to the ground: this is our humanitarian slogan: and they should be helped to sink.

What is the most harmful vice?—pity shown to the misbegotten and the feeble—Christianity.

III

The problem I state here is not what will replace man in the evolution of species (for man is an end in himself); but what type of man shall be evolved, shall be willed, as having the highest value, as being the most worthy to live and the best guarantor of the future? Already this higher type of man has appeared occasionally; but always by a stroke of luck, exceptionally, never as the result of an act

of will. On the contrary, far from being desired, he has always been greatly feared; he has inspired a supreme terror—and out of that terror of the higher type of man there arose the desire to evolve or to breed or to achieve the opposite type: the tame beast, the mob-animal, the sick brute-man—the Christ-type . . .

IV

Mankind does not show any evolution toward a better or a stronger or a higher level, as these terms are understood today. "Progress" is merely a modern idea. Hence of course a false idea. The European of today, in his sense of values, falls far below the European of the Renaissance: evolution by no means implies a raising of standards, a step upwards, a strengthening of the species. It does succeed, however, at times, in producing a higher type, in varying civilizations and in isolated cases: and compared to the average man, such types are undoubtedly a kind of beyond-man. The possibility of luck in successfully producing this type has always been present, and perhaps will always be present; and even whole races, tribes and peoples may exemplify such a fortuitously happy achievement.

V

There is no need to deck out Christianity in fine trappings: for it has waged war to the death against this higher type of man; it has laid a ban upon all the basic instincts of this type, it has distilled evil and the voice of evil out of those very instincts, rebuking the strong man as a wrong-doer. Christianity has taken sides with all the feeble, the base, and the misbegotten; it has found its ideal in opposing the instincts which maintain life in a healthy condition: it has even corrupted the reasoning power of strong intelligences by making out that the highest intellectual values are sinful, misleading, and a temptation. As a superb example of this, consider the disruption of Pascal, who believed his reasoning ability was perverted by original sin; whereas it was merely worm-eaten by Christianity!

VI

It is a distressing, a painful spectacle that appears before me: I have drawn back the curtain which conceals the putrescence of mankind. This word, as I use it, at least cannot be suspected of implying any moral stigma. It is, I must again insist, free of moral taint: so much so that I detect the putrescence in question precisely where there has hitherto been most aspiration toward "goodness" and "Godliness." I define putrescence, as may be supposed, in the sense of decadence. My contention is simply that all the values now regarded as most desirable are nothing but decadence-values.

I define an animal, a species, or an individual as decadent when it loses its instincts; when it adopts and when it even prefers what is injurious to itself. A history of the "better feelings," of "Humanity's ideals"—and I may have to write this—would almost explain why mankind is so putrescent. In my view life is essentially an instinct towards development, towards survival, towards the conserva-

tion of energies, towards power: degeneration occurs when the will to power fails. My contention is, that all the values now regarded as most desirable are lacking in this will; and that values of degeneration and nihilism hold sway under the holiest of names.

VII

Christianity is known as the religion of pity—and pity stands in opposition to the tonic emotions which stimulate the feeling of being alive: it is a depressant. A man loses power when he pities. Pity intensifies the drain upon strength which suffering already adds to life. Pain itself becomes infectious through pity; in certain cases it may lead to a total sacrifice of life and living energy absurdly out of proportion to the occasion (such as at the death of the Nazarene). That is the first view of it; but there is another still more important. Measuring pity by the value of the reactions it sets up, its destructive effect upon life becomes much more evident. Pity interferes profoundly with the law of development which is the law of selection. It preserves what is ripe for decay, it lends its aid to the disinherited and to those condemned by life. By keeping life in all kinds of misbegotten wretches, it even makes life itself seem a questionable, gloomy affair. Pity has been impertinently described as a virtue (in any decent moral code it is a sign of weakness): going still further, it has even been described as the supreme virtue, the root and fountain-head of all the virtues—but let us not forget that this was from the standpoint of a philosophy of nihilism, which inscribed on its shield the rejection of life. Schopenhauer was within his rights on this point: that by means of pity life is rejected and made more worth rejecting. Pity is the praxis of nihilism. I repeat, this depressing and contagious impulse frustrates the instincts which tend to exalt life and enhance its value. By perpetuating suffering and by multiplying suffering it is the supreme instigator of increasing decadence. Pity leads to nothing! It is a guide to annihilation, though annihilation is not the usual term. Usually they say “the beyond,” or “God,” or “the true way of life,” or nirvana, or salvation, or blessedness . . . Oh, this simple-rhetorical language of the kingdom of religion and morals! It is a good deal less innocent when one realizes that the impulse hiding behind a mantle of wordy sublimity is none other than the impulse of hostility to life. Schopenhauer was hostile to life: therefore he made pity into a virtue . . . Aristotle, as is well known, regarded pity as a sickly and dangerous condition which needed clearing out of the system every now and then by means of a purgative; and he regarded tragedy as a purgative. If we are to preserve the instinct to live we must certainly find some method of lancing the pus-accumulation of pity which is chronic in Schopenhauer (and unfortunately, in the whole literary decadence from St. Petersburg to Paris, from Tolstoi to Wagner): we must puncture the boil till it bursts . . . Nothing is more pathological in our pathological modernity than this disease of Christian pity. To be doctors here, to be inexorable, to wield the knife here—that is our task and

our humanitarian duty; that's what makes us philosophers, we hyerboreans!

VIII

It is necessary to state exactly whom we regard as our opponents: the theologians, and all who have theological blood in their veins—our whole philosophy, this. A man needs to have had his nose close to the malady, or better still, to have been infected with it, almost to have succumbed to it, before he can realize that it is no joke (what seems funny to me is the apathy of our friends the scientists and physiologists: they have no passion in these matters, they have not had the complaint). The infection extends further than people think: I find theological proud flesh extending wherever men profess and call themselves "idealists"—wherever, thanks to inspiration from on high, a man claims the right to rise above actuality and look upon it with suspicion . . . The idealist, like the priest, has all kinds of big ideas in his hand (and elsewhere!) with which he very benevolently bludgeons "the understanding," "sense-perceptions," "a sense of honor," "a sense of decency," "empirical knowledge"—he regards such things as beneath him, as pernicious and seductive forces, above which the "soul" soars ever so purely: as though humility, Christianity, poverty—in one word, holiness—had not already wrought more harm to life than every kind of forbidden horror and wickedness. The pure spirit is a pure lie . . . So long as the priest, that professional negator, slanderer and poisoner of life, is regarded as a superior type of human being, there cannot be any answer to the question: what is truth? Truth has been turned upside down already if the firm advocates of annihilation and negation are accepted as apostles of light . . .

IX

Against this theological instinct I declare war: I find its spoor everywhere. Whoever has theological blood in his veins is naturally shifty and dishonorable in all things. The sickly condition ensuing is called faith: which means wilfully turning the eyes away from self to avoid the painful sight of an incurable mendacity. Thus vision is warped, and in the distorted prospect a virtue, a morality and a holiness is constructed: good conscience is derived from bad sight: and it is claimed that no other kind of vision has value any more, since this one has been made sacrosanct with the names of "God," "salvation," and "eternity." I dig up the traces of this theological instinct in all kinds of places. It is the most widely-occurring and also the most subtly-concealed form of subterranean deceit to be found on the earth. Whatever a theologian regards as true must of necessity be false—this almost provides a criterion of truth, for it is the theological deep-seated instinct of self-protection which prevents actuality from ever being held in esteem, which even prevents it from being defined. Wherever the theological influence reigns value-judgments are inverted, and the concepts "true" and "false" change places automatically: everything most harmful to life is called "true," and whatever exalts life, intensifies it, glories in it, and makes it

triumphant, is called "false" . . . Whence it follows that, whenever the theologians, working upon the "consciences" of princes (or of peoples), stretch out their hands for power, there is never any doubt what fundamental result would follow: the will to end life would begin to operate, the nihilistic will to power . . .

X

Germans will immediately understand me when I say that theological blood is the ruin of philosophy, for the Protestant pastor is the grandfather of German philosophy; and Protestantism is its original sin (a definition of Protestantism:—partial paralysis of Christianity, total paralysis of reason). A mere mention of the words "Tubigen school" is enough to explain that German philosophy is at heart only a form of theology. The Swabians are the best liars in Germany; for they lie without knowing it . . . Why all the rejoicing with which Kant's appearance was greeted by the whole learned world of Germany—of which three-fourths consists of parsons' and schoolmasters' sons? Why the German opinion, which still has an echo, that with Kant there came a change for the better? It was the theological instinct of German scholars which made them realize what had again become possible—a backstairs to the old ideal had been constructed. By means of a cunning semblance of scepticism the old concepts of the "true world" and of morality as the essence of being were shown to be at least not refutable, even if not demonstrable . . . Reason and the prerogative of reason does not govern this territory! Reality was sublimated into "experience," and an utterly false world (of "being") was sanctified as reality . . . The success of Kant was purely a theological success, nothing more. Like Leibnitz and Luther, Kant was one more check upon the German sense of righteousness, which was beginning to wobble . . .

XI

Now to deal with Kant as a moralist. A virtue must be our own invention, our own personal defense and need; otherwise it is harmful, for a foreign body not essential to our organism is always noxious to it. A virtue arising purely from respect for the concept "virtue," as Kant would have it, is noxious . . . "Virtue," "duty," "pure goodness," goodness with the character of impersonality or universal validity—these are not concepts but phantasms; they express the decline and the final enervation of life, the Chinese religion of Konigsberg. Exactly the opposite principle is required if life is to expand and develop: that each man should find his own virtue, his own categorical imperative. A race is sinking downwards when it confounds its own special duty with the concept of duty-in-general. Nothing is more intrinsically ruinous than "impersonal" duties, and in fact all offerings before the Moloch of abstraction . . . To think that Kant's categorical imperative has not yet been recognized as a noxious irritant in living bodies! . . . Only the theological instinct gave it a welcome . . . Any action arising in the instinct to live has its justification in the satisfaction or pleasure it brings: in joy it is

established as a right action. But that nihilist with the guts of a Christian dogmatist actually considered pleasure to be an objection! What destroys a man quicker than to work and think and feel without inner necessity—as a mere automaton of “duty”? This is veritably the recipe for decadence, and, yes, for idiocy. Kant fell into imbecility. And this was in Goethe’s life-time! A spinner of fate’s cobwebs was taken to be the supreme German philosopher—he still is! I refrain from saying what I think about the Germans after that . . . Did Kant not see in the French revolution a transition from the inorganic to the organic form of society? Did he not ask himself whether there was any event which might possibly be explained on other grounds than as a moral impulse of mankind? So that he could demonstrate finally man’s “tendency toward goodness”? Kant would reply, “But that is revolution!”—the instinct to be wrong everywhere and in everything, the instinct to deny nature, German decadence as a philosophy—there you have Kant in a nutshell!

XII

Apart from a few skeptics, the decent types in the history of philosophy, the rest are strangers to the first principles of intellectual honesty. They act just like women, these great gushing prodigies—they mistake “beautiful feelings” for arguments, they look upon the “heaving bosom” as a bellows of divinity, and conviction as the test of truth. In the end, Kant, with typical German ingeniousness, even tried to give a scientific dress to this particular kind of corruption and lack of intellectual scruple. With the aid of his concept of “practical reason,” he produced a special kind of reason, for use on occasions when reason cannot function: namely, when the sublime command, “Thou shalt,” resounds. And when it is recalled that the philosopher is merely a development from the priest, such a self-deception, such a heritage from priestliness, is not so amazing. When a man has a holy task before him, for example to uplift, save or deliver his fellows; when he carries divinity in his bosom and is the mouthpiece of commands from on high, naturally with such a mission he is above the mere imperatives of ordinary reason. He feels that he is a man apart, sanctified by his task, a celestial being almost! What does a priest care for science? He is superior to it! And hitherto it is the priest who has held sway! It is the priest who has defined the concepts “true” and “not true”!

XIII

There is one fact we should not under-estimate: we ourselves—we free spirits—are already a “reversal of all values,” a living declaration of war against all the old concepts of “true” and “untrue,” and a triumph over them. The most valuable intuitions are those which come late; and the most valuable of all is that of method. All the methods, all the elementary procedure of our modern scientific knowledge, were held in contempt for centuries: anybody who dabbled in them was excluded from “respectable” company, was looked upon as an “enemy of God,” as a mocker of truth and as

"possessed by the devil." A man with a scientific character was classed with Chandala outcasts . . . We have had the whole pathetic opinion of mankind against us—their notion of what should be true and what should take the place of truth was thrust upon us; and their every "thou shalt" was brought into action against us . . . Our motives and our procedure, and our calm, cautious, untrustful way of looking at things, were all vilified and condemned. Perhaps it may be urged with some justification that it was an esthetic impulse which kept men in blindness so long. They wanted truth to seem picturesque. From the learned they demanded an appeal to their senses. It was our moderation which repelled men so long . . . But oh, how well the turkey-cocks of God understood all this!

XIV

We have restated our knowledge. In advancing facts we have become more moderate. No longer do we derive man from the "spirit" or from "God." We have placed him back amongst the beasts. We classify him as the strongest of the animals, because he is the craftiest (hence his spirituality!) But even here we are careful to avoid a delusion which might seem attractive, namely that man is the driving purpose behind evolution in the animal kingdom. He is anything but the crown of creation. Every living creature is comparatively as well developed—even this statement needs a reservation, for man is actually the most ill-adapted of animals, the sickliest, the one which has strayed farthest from its instincts: though withal he is easily the most interesting! Concerning animals, Descartes was the first to postulate, with admirable insight, the mechanism of beasts; and now all our physiology is directed toward proving his theory. Moreover, we do not put man in a class by himself, as Descartes did. We regard him also as mechanistic, nowadays. Once upon a time he was endowed with a "free will," the gift of powers from above: nowadays we call in question even the existence of the will itself, in the sense that there is no longer any need to postulate such a faculty. The word "will" in its old use has come to mean merely the effect of an individual reaction which must necessarily follow upon a series of partly unrelated and partly harmonized stimuli—the "will" is no longer a cause, no longer a "motive" . . . Formerly it was held that the man's mind, his "spirit," was a proof of his divine origin. To achieve perfection he was recommended to benumb his senses like the tortoise, to have no truck with earthly things, or to cast off his mortal frame, so that the best part of him, his "pure spirit," would remain . . . We have thought of a better explanation than this: we regard soulfulness, or the "spirit," as a mark of relative imperfection in an organism, as a piece of fumbling guesswork, as a laborious error, as an unnecessary using-up of nervous energy. We deny that anything can be done perfectly by taking thought. The "pure spirit" is a pure humbug. Take away the nervous system and the senses, take away the "mortal frame"—and if anything remains over, it is a miscalculation: that is all!

XV

Neither as an ethical code nor as a religion has Christianity any point of contact with things as they actually are. It is concerned with purely fantastic causes ("God," "the soul," "the self," "the spirit," "freewill"—even "unfree" will); and it is concerned with purely fantastic effects ("sin," "salvation," "grace," "punishment," "forgiveness of sin"). It communes with fantastic creatures ("God," "ghosts," and "souls"); it professes a fantastic science (anthropocentric, with no conception of natural causes); a fantastic psychology (a pure self-deception, which misinterprets feelings, pleasant and unpleasant of, for example, the *nervus sympatheticus*, in terms of religious and moral symbolism—such as "repentance," "conscience," "possession by the devil," "the voice of God," "the last judgment," and "everlasting life")—this world of pure fantasy is to be differentiated, to its disadvantage, from the world of dreams; for the dream-world at least reflects actuality, whereas the other falsifies, slanders, and denies actuality. Once the concept "nature" is regarded as opposed to the contrary concept "God," the word "natural" has necessarily to take on a meaning of "abominable." The whole Christian fantasy-world is based in an aversion from what is natural (from actuality!)—it is a vote of no-confidence in life as it actually exists . . . Ah, but this explains everything . . . Who would have a reason for escaping from actuality?—the man who suffers from it! And if he suffers from actuality a man must be a misfit in the world as it actually is. A predominance of pain over joy is the explanation of this religion and ethic of escape: just as in the same way a predominance of pain over joy is the formula of decadence . . .

XVI

We are led to a similar conclusion by examining the Christian concept of God. Any nation that believes in itself will hold fast to its own God. In him it honors its own virtues and the qualities which enable it to develop. Such a people projects its own desire, its feeling or power, into a being that consequently has some claim to be honored. To this God the rich will give of their wealth: a dignified nation needs a God, for sacrifices . . . Thus viewed, religion is a kind of gratitude. A man owes gratitude to himself; therefore he requires a God. Such a God must be able to confer benefits, and also to inflict injuries, must be both a friend and a foe. He is marvelous in both good and evil—but the unnatural castration of a God, making him merely good, passes all comprehension. An evil God is quite as necessary as a good God. Surely existence does not derive merely from divine toleration and humanitarianism; what is the use of a God who knows nothing of passion, revenge, envy, scorn, cunning and violence?—who had perhaps never known the rapturous ardors of victory and of destruction? Such a God would not be comprehensible; why should he be needed? Admittedly, when a people is on the downward path, when they feel that their belief in the future, their hope of freedom, is disappearing; when capitulation

seems necessary and submission is advisable in the interests of self-protection; then they have to modify their God! He then becomes a timid and obsequious crawler. He counsels "peace-at-any-price," "hate-no-more," "compromise," and even "love" towards friend and foe alike. He is always moralizing. He creeps into the core of every private virtue. He becomes a God for everybody, he retires from active service, he goes abroad for a trip and becomes a cosmopolitan . . . Formerly he stood for a nation, for all that was ascendant and powerful in the heart of a people: but now he is merely the good God above. For there is only one alternative for Gods: they are either the will to power, in which case they are national-Gods; or they are impotent, and then they must be good . . .

XVII

When the will to power breaks down at some point, the result is invariably a physiological enfeebling, a state of decadence; and this decadence deified (divinity shorn of all manly virtues and passions), naturally takes the form of a God of physical debilitation, a God of the feeble . . . But they don't call themselves the feeble, they call themselves "the good" . . . A wink is as good as a nod to indicate just at what point in history the dualistic fiction of a good and an evil God first became possible. It is the instinct of a people cowed into subjection which compels them to degrade their God into "pure goodness"; and the same instinct prompts them to depreciate the qualities of strength in their conquerors' God. (The good God and the Devil as well; both are abortions conceived by decadence.) Christian theologians claim that the evolution of the idea of God from the "God of Israel," a tribal God, to the Christian God, a concept of universal goodness, is an advance. Why do we make such a concession to simple-mindedness as to grant them this? Yet Renan does—as if Renan had any right to be simple-minded! The contrary is obvious. When all that is strong, and brave, and masterful, and haughty is eliminated from the idea of God; and step by step he has become a staff for the weary, a straw for the drowning; when he has become a poor-box God, a sinner's God, and a God of Gods for invalids; when his highest mark of divinity is that he "redeems" and "saves": then what does the change mean? What is implied in such a lowering of Godly status? Admittedly, the "kingdom of God" by these means extends its boundaries. Once upon a time he ruled only his own people, his "chosen" people; but since then he has gone wandering into foreign lands, just like his chosen people, and he has lost his settled place of abode. Finally he came to feel at home anywhere and everywhere, he became the great cosmopolitan and he got "the greatest number" on his side, half the earth in fact. But the God of the great majority, the democrat amongst Gods, did not hereupon become proud like a heathen God: he remained a Jew, a God of back streets, God of dark holes and corners, God of all the world's slums! His earthly kingdom is still in the underworld, still an "Alsatia," still a tenement area, a ghetto still . . . And he himself

has become so pallid and so rickety, and so decadent . . . Even the palest of the pale can now master him; even the Albinos of intellect—our metaphysicians! They spun their webs about him so long that in the end he was hypnotized, he became a spinner himself, God become a metaphysician. Then he began again spinning the world out of his own innards—Spinoza fashion—he became thinner and paler etc., he became “ideal,” “the pure spirit,” “the absolute,” he actually became the “thing-in-itself” . . . Oh, what a collapse of God—he became a “thing-in-itself”!

XVIII

The Christian idea of God—God as a deity of the sick, God as a spinner of cobwebs, God as a Ghost—is one of the most corrupt ideas that has ever been generated on earth: it is probably low-water-mark in the ebbing evolution of the God-type—God degraded into the negation of life instead of being its glorification and eternal affirmation! This God declares war upon life, upon natural existence, and upon the will to live! This God is the formula for slandering “this world,” and for lying about the “next”! In this God annihilation is deified and the desire to be annihilated is made holy!

XIX

The fact that the virile races of northern Europe have not rejected the Christian God, does little credit to their religious ability; not to mention their good taste. They should have been able to deal with such a sickly and decrepit offshoot of decadence. But because they did not, a curse lies upon them: they have added sickness, decrepitude and a self-division to their instincts—and they have not been able to create any more new Gods! Two thousand years have gone by without even one new God! Instead we still have with us—apparently established by right as the ultimate possible achievement of the God-building trade, the “creator spiritus” in man—this pitiable God of Christian monotono-theism! We still have with us a hybrid dilapidated creature, built from no thinking and subject to no changes of thought: and in him every impulse of decadence, cowardice and weariness of soul finds its sanction!

XX

In my attack upon Christianity I must avoid an injustice to a somewhat similar religion—which has an even greater following—Buddhism. Both are nihilistic religions, religions of decadence, but there is an extraordinary difference between them; and it is owing to the work of Indian scholars that a critic of Christianity can make the study in comparison.

Buddhism is a hundred times more realistic than Christianity. It has the ingrained habit of facing problems objectively and coolly, for it has sprung from hundreds of years of deep philosophical reflection: the idea of God it has disposed of long ago. Buddhism is the only really positive religion known to history; even in its epistemology (which is a strict phenomenalism) it avoids speaking of the “struggle against sin,” and refers, more realistically, to the “struggle against

pain." In sharp contradistinction to Christianity, it avoids the self-deception of ideas of morality—it stands, as I phrase it, "beyond good and evil." The two philosophical facts upon which it is based and upon which it focuses attention are: firstly, a keen sensibility, which takes the form of a refined intuition of pain; and secondly, an excessive spirituality, an undue preoccupation with problems of thought and logical procedure, which causes the personal instincts to be subordinate to the "impersonal." (Both of these states of mind will be familiar to certain of my readers, the "objective" ones, who, like myself, know them in experience.) The genesis of these mental states is in physical depression; which Buddha sought to counteract by rules of hygiene. To cure it, he prescribed life in the open air, a life of travel; moderation and care in the choice of foods; a caution against spirituous liquors; and likewise against all passions which create bile and heat the blood; and no worry, either about oneself or for others. He encourages all ideas which bring peace of mind or cheerfulness, and seeks ways of overcoming other kinds of thoughts. He defines goodness, or being good, as the promotion of health. Prayer is eschewed, and so is asceticism; there is no categorical imperative, no discipline of any kind, not even within the walls of a monastery—it is always possible to leave—for such things would intensify the excessive sensibility already mentioned. For the same reason his advice is against any conflict with infidels; nothing is more repellent to his doctrine than feelings of revenge, aversion and resentment ("hatred does not put an end to hatred," is the pathetic refrain of all Buddhism). And to this extent he was right: that these passions are indeed most antagonistic to his main dietetic purpose. The spiritual lassitude that he finds in excessive "objectivity" (that is, an individual's loss of interest, loss of balance, and of "egotism" he combats by making a strong attempt to reestablish intellectual interest in personality. In Buddha's teaching egotism is a duty: the "one thing needful," that is, "how canst thou overcome pain?" regulates and determines the whole spiritual diet. (Here we should recall that the Athenian who also attacked pure "scientificity," Socrates, raised personal egotism into one of the problems of morality).

XXI

The prerequisites for Buddhism are a very mild climate, gentleness and liberality of manners; and no militarism. The movement must also originate amongst the upper classes, or the learned. Cheerfulness, peace of mind, and a curbing of desire will be sought after, and will be attained. Buddhism is not a religion which merely aspires towards perfection: perfection is the normal state of affairs—in the Christian religion it is the instinct of the subjugated and the oppressed which predominate: the lowest classes look to it for salvation. The Christian cure for monotony is the pastime of playing casuistically with sin, self-abasement, and probings of conscience. A feeling of ease in the presence of a person of rank (called "God")

is ecstatically induced by means of prayer; and influence with the all-highest is vindicated by "gifts" and "acts of grace." In this religion also candor is avoided; concealment and the dim religious light are Christian. In this faith the body is despised, and hygiene is shunned as sensual. The church opposes cleanliness (the first Christian act after the Moors were driven out was to close the baths, of which there were two hundred and seventy in Cordova alone). Christian also is a streak of cruelty towards self and others; hatred of unbelievers; the desire to persecute. Gloomy and disturbing ideas predominate; epileptoid states of mind are held in high regard; a diet is favored which engenders morbid symptoms and frays the nerves. Christian also is a hostility towards the rulers of the earth—towards the "seats of the mighty"—and with this goes a kind of furtive emulation of the mighty ("they may own our bodies, but our souls are our own") . . . Christian also is a hatred of the intellect, of pride, of courage, of freedom, of spiritual profligacy . . . And Christian also is a hatred of the senses and of sensuous joy, in fact of all joy . . .

XXII

When the Christian religion left its home amongst the depressed classes in the underworld of antiquity, and went to seek a foothold amongst barbarian peoples, it was confronted not with exhausted men, but with men who were still instinctively savage and torn by emotional dissensions—with strong, but muddled, men. In such people self-resentment and self-torture do not take the Buddhistic form of a sensibility to and endurance of pain, but instead they take the form of a strong desire to inflict pain on others; to relieve inner tension by warlike acts and ideals. Christianity had need of barbaric ideas and barbaric precepts in order to be able to gain a mastery over the barbarians: ideas such as the sacrifice of the only-begotten son; blood-drinking at supper; sneers at intellect and culture; physical and mental torture; the great pomp of the cult. Buddhism is a religion for urbane men—for a good, kind, highly spiritual people—(Europe is not ripe for it yet, by a long way): its appeal is for peace and cheerfulness, for intellectual discipline and a certain physical endurance. But Christianity wants to domesticate wild animals: its method is to make them sick—"break their spirits" is the Christian way of taming, the Christian recipe for "civilization." Buddhism is a religion for the concluding stages of an exhausted civilization: but Christianity operates where civilization has not yet begun, or where it lays the foundations itself.

XXIII

Buddism, I repeat, is a hundred times more dignified and reasoned and objective. It has got beyond justifying suffering and sensitivity to pain in terms of a theory of sin—it merely says, "I suffer" . . . But to the barbarian pain is something which he cannot understand. For the savage to become aware at all that he is in pain he needs some explanation of the reason for pain. (Left to himself his

instinct is to ignore pain or to suffer it in silence.) Here the word "Devil" came in handy: man has a supernatural and awe-inspiring foe—there is no need to be ashamed of suffering at the hands of such an adversary. One or two deep-rooted subtleties of the Orient are ingrained in the Christian religion. For example, it realizes that, no matter whether a thing be true or not, it is important that it should be believed in as true. But truth and the belief that something is true are two utterly different sets of ideas—almost two contradictory sets of ideas—which are reached separately by two quite different approaches. To understand this is almost the same thing in the East as being a sage: the Brahmins understood it, Plato understood it, every student of the esoteric understands it. For example, when a man gets some satisfaction out of being delivered from sin, it is not necessary that he should have been actually a sinner; he need only have had the feeling of being a sinner. But when the necessity of faith is exalted above everything else, it follows that reason, knowledge, and research must be discredited: the road to truth is closed. As for hope, if sufficiently strong it is a greater encouragement to keep on living than actual joy could ever be. Man needs to be sustained in his suffering by a hope which adversity cannot shake, a hope which can never be put to the test of actual fulfilment: a hope in the world to come. (Precisely because hope has the power to make the wretched linger on, the Greeks regarded it as the evil of evils, as the most mischievous of the evil spirits which were left on earth to generate evil.) As for Christian love, God had to become a person for this to be possible; and, to give suppressed instincts a chance, God had to be young. For the ardor of the women a beautiful saint, and for the men a holy virgin were brought into the picture: this was particularly necessary where the Christian religion set out to win a territory previously cultivated by the religious notions of Aphrodisiac or Adonis worship. In addition an insistence upon chastity strengthens the vehemence and the introverted intensity of the religious impulse: it makes the cult warmer, more enthusiastic, more soulful. Love is a frame of mind in which things seem most different from what they really are: in love the power of illusion reaches its highest degree, and so does the art of sweetening and transfiguration. When a man is in love he endures more than at any other time: he will put up with anything. The problem was to find a religion which made some allowance for love: love which conquers the worst life has to offer, love which is blind . . . These are the three Christian virtues of faith, and love, and hope. I call them the three Christian sophistries. Buddhism is far too old, and too sure of itself, to bother about being superficially clever like this.

XXIV

I have briefly outlined the problem of the origin of Christianity. The first step in its solution is to realize that Christianity can only be understood in terms of the soil from which it sprang. It is not the outcome of a revolt against Jewish ways: it is a product of Jewish

ways, one stage further in the awe-inspiring logic of the Jews. In the words of the Savior, "Salvation is of the Jews." The second step in the solution of the problem is to realize that the psychological type of the Galilean persists, but it had to appear utterly degenerated (muddled and overlaid with non-essentials), before it could be used as a symbol of the salvation of mankind.

The Jews are the most remarkable people in human history because, whenever they have been faced with the question, "to be or not to be," they have always decided, with an uncanny insight, to be at any price; even if that price was the radical falsification of human nature, naturalness, reality, and the entire inner world as well as the external world. They have entrenched themselves within all the provisos under which a people can survive intact or has been allowed to survive. Out of their own consciousness they have evolved a set of ideas in opposition to all natural conditions of living—one by one they have taken religion, culture, morality, history, and psychology, and converted them irreparably into a contradiction of their natural meaning. We meet with the same phenomenon elsewhere, but all disjointed, a mere copy—for the Christian church lacks all claim to originality as compared with the "holy race" . . . Because of their capacity for distortion, the Jews are the most fateful people in human history. In the course of their operations they have hoodwinked mankind so much, that even to this day the Christian can feel anti-Semitic without realizing that he himself is the logical consequence of Judaism.

In my *Genealogy of Morals* I give the first psychological explanation of the distinction between a noble morality and a morality of resentment; the latter being merely a negation of the former—and this latter is the Jewish-Christian morality through and through! In order to be able to say no to life on the up-grade, to success, power, and beauty, and self-affirmation on earth, it was necessary for the instinct of resentment, or for the genius of resentment, to discover another world, one from which that affirmation of life could be regarded as evil and reprehensible. Psychologically considered, the Jews are a people very hard to suppress, who when they had to face impossible surroundings, deliberately selected the part of decadence, and made their choice with a profound worldly wisdom in order to preserve themselves intact. I do not mean that the Jews were overcome by decadence, but that they saw in it a method by which they could assert themselves against the world. The Jews are the opposite of decadent: they have simply been obliged to take on the part, so much so that with an incredible degree of histrionic genius, they have managed to place themselves in control of all decadent movements (such as Paul's Christianity) in order to make themselves stronger than the assestive forces of life. The kind of man who seeks power under Judaism or Christianity (that is, the priest) uses decadence as no more than a means to an end. This kind of fellow has a real interest in making people sick, and in upsetting the ideas of "good"

and "evil," "true" and "false," in a way which is dangerous to life and a slander against this world in which we live.

XXV

The history of Israel is of the utmost importance as an example of the progressive denaturalization of natural values. I give an account of five stages in this history to show what I mean. Originally, and particularly in the time of the kings, even Israel had the right attitude to everything, that is, the natural attitude. Israel's Jehovah expressed Israel's feeling of power: joy in Israel, and hope for Israel. To him the Israelites looked for victory and redemption, and through him they expected nature to give them what they needed—above all, rain. Jehovah is the God of Israel, and consequently a just God: such is the logic of any self-governed people who have a good conscience about their own sovereign power. In the religious ceremonial both aspects of this self-affirmation are expressed: it gives thanks for the great blessings of victory, and it gives thanks for the good seasons of the year, and for the increase of herds and crops.

This view of affairs remained the ideal for a long time, even after it had been woefully subverted by anarchy from within and the Assyrians from without. And the people still clung tenaciously to their loftiest vision of a King of Kings who was a good soldier and an upright judge: especially the typical prophet (critic and satirist) Isaiah. But every hope remained unfulfilled. The old God was unable to do what he used to be able to do. He ought to have been dropped. But what happened?—the idea of him was altered; the idea of him was denaturalized: this was the price they had to pay for keeping him at all. Jehovah, the "just" God, is no longer in harmony with Israel; no longer is he the expression of Israel's self-esteem: he has become a God on certain conditions . . . The idea of him became a weapon in the hands of priestly agitators who began to interpret all happiness as a reward and all misery as a punishment for disobedience to God, or for "sin" . . . And this is the most fraudulent of possible interpretations: by means of it a "moral order" is first established, and the natural ideas of cause and effect are stood upon their heads. Once natural causality has been swept away by "rewards" and "punishments," an unnatural causality is brought into being: and all other kinds of unnaturalness come following it. Behold a God who makes demands—instead of a God who helps, and advises, and is essentially a symbol for the happy inspirations of courage and self-reliance! Morality is no longer the expression of a people's vitality and urge to expansion: it has become abstract; it has become the adversary of life. Morality is now essentially a fantastic perversion, it is the "evil eye" watching everything a man does . . . What is Jewish, Christian, morality? It is fate robbed of its simplicity; misfortune besmirched with the idea of "sin"; prosperity interpreted as a dangerous temptation; physical infirmity made worse by the gnawings of conscience . . .

XXVI

The Jewish priestcraft falsified the idea of God and they falsified the idea of morality; but they did not rest content with this achievement. The whole history of Israel became superfluous—out it had to go! The priests actually achieved this miracle of falsification: witness the greater part of the Bible. With an unparalleled contempt for tradition and historical truth, they put a religious interpretation upon the chronicles of their own people, imposing a stupidly mechanical system of punishment for sins against Jehovah and rewards for piety to Jehovah. If centuries of ecclesiastical interpretation of history had not somewhat blunted our sense of rectitude in historical matters, we would resent such a shameful act of historical falsification far more than we do . . . And the philosophers second the priests. Throughout the whole development of philosophy, even the latest, they have lied about the “moral order.” What is this “moral order”? It is a theory which implies that the will of God has established, once and for all, what ought to be done and what ought to be left undone. It implies that the worth of a nation or an individual is estimated by obedience or otherwise to this will of God: that the destinies of a nation or an individual are controlled by this God, who metes out rewards or punishments according to the obedience or otherwise shown to his will . . . And the actual answer to this miserable lie is as follows:—That a parasitical type of man, the priest, who can only live by battenning upon healthy organisms, has taken the name of God in vain. The realm in which he as priest sets up standards of value he calls “the kingdom of God”: the means by which he sets up his authority he calls “the will of God”: and with a cold-blooded cynicism he presumes to judge nations, and individuals, and epochs, in accordance with their submission or otherwise to his priestly sway.

Observe how he sets to work! In the hands of the Jewish priests the Golden Age of Israel was transformed into an age of apostasy; the captivity, the long period of tribulation, was interpreted as a punishment for the Golden Age—in which priests didn't exist. The mighty freeborn heroes of Israel's history were described, for priestly purposes, either as hypocrites and bigots or as “Godless” men. The psychology of every important event was reduced to the idiotic formula of obedience or disobedience to God.

Then they went one stage further. “The will of God” (that is, the means used by priests to increase their power) had to be made known. A “revelation” became necessary. To put it plainly, a gross literary hoax had to be perpetrated: “Holy Scriptures” were brought to light, and were duly published forth with all due heirarchical pomp, and with days of penance and lamentations for the long period of “transgression.” The “will of God,” it appeared, had long been known; all the tribulation was due to the fact that “Holy Writ” had been disregarded . . . God had appeared to Moses . . . And what was the result? In brief, the priests had formulated, with meticulous pedantry, hard and fast rules for the tithes which were to be

paid to them, from the biggest to the smallest (not forgetting the choicest cuts of meat, for the priest likes beefsteak). Thus the priests made it clear just what the "will of God" is, just what they want for themselves . . .

From this time onward the priest became indispensable in every human event. At every natural function (birth, marriage, the sick-bed, death) the holy parasite puts in an appearance in order to denaturalize, or, in his words, to "bless" the event . . . For this must be noted: that every natural function, and every natural institution (the state, justice, marriage, care of the sick and destitute), every action based in the instinct to live, in fact everything which has a value in itself, is made worthless and even dangerous by the parasitism of the priests (or of the "moral world"): it is a sanction after the event, an artificial authority setting up values against nature, and thereby creating its own values . . . The priest frowns upon what is natural and calls it unholy: that is how he lives. Disobedience to God, that is, to the priest, is now called "sin"; the method of propitiating God, is, of course, the method which gives the priest more sway: it is the priest alone who can be an intermediary for "salvation." Psychologically considered, "sins" are absolutely necessary in every theocracy: they are the actual weapons of power; the priest lives upon sins; he must have people "sinning" . . . First principle: "God forgives those who repent," or in other words, "those who submit to the priest" . . .

XXVII

The Christian religion grew upon a soil of such utter falsification, where the deepest instincts of the ruling factions were opposed to nature and natural values to such an extent, that Christianity became a death struggle against reality which has never been surpassed. The "chosen people," who had adopted priestly names and priestly values for everything, who had been terribly logical in rejecting all earthly power as "unholy," "worldly," and "sinful"—this people now created a religious expression which was so logical that it began to attack Judaism itself. In the form of Christianity even the last kind of reality was denied, Jewish reality, the reality of the "people of God," of the "chosen people." The case is of great interest, for the small dissenting movement which grew around the name of Jesus of Nazareth is the same Jewish instinct at work again. The instinct nurtured by the priests has developed until it cannot put up any longer with the authority of the priests themselves: it has invented a new state of affairs even more unreal than the vision of the organized church. Christianity was actually set up in opposition to the church . . . At least, I fail to see against whom the revolt (said rightly or wrongly to have been led by Jesus) was directed if not against the Jewish church—"church" being here used in the same sense it has today.

It was a revolt against the "good and just men," against the "prophets of Israel," against the organized hierarchy—not against the

corruption of the hierarchy, but against caste, privilege, rank, and formalism. It was an expression of unbelief in the "elect," a denial of everything priestly and theological. But this movement itself gave rise to a hierarchy, if only temporarily, which was to become the skeletal structure supporting the Jewish people in "the flood waters." It was the last leg they had to stand on, the last flicker of their political autonomy: an attack upon it was an attack upon the deepest-rooted tribal instinct, the most tenacious national will to live that has ever existed on earth. This holy anarchist, who called upon the meek and lowly, the outcasts and "sinners," the chandala within Judaism, to rise against the ruling caste—using words, if the Gospels are to be believed, which would get him sent to Siberia today—was a political offender, so far as it was possible to be a political offender in such an absurdly non-political community. It was this which brought him to the cross: the proof of which is the inscription which was put upon the cross. He died for his own sins; and there is no ground for believing (no matter how often it is reiterated) that he died for the sins of others.

XXVIII

It is quite another question whether Jesus was aware of this alternative explanation of his acts, or whether his acts merely lent themselves to this alternative explanation. And now, for the first time, I refer to the psychology of the Savior. I confess that there are few books which I find so difficult to read as the Gospels. My difficulties are of another sort from those which enabled the learned curiosity of the German mind to achieve one of its most memorable triumphs. Many years have gone by since I, like every young scholar, enjoyed with the conscientious relish of the pernickity philologist, the work of the incomparable Strauss. I was then twenty years of age: now I am too serious for that sort of thing. What do I care for the contradictions of "tradition"? How far can the holy legends of the Gospel be called "tradition" at all! There is no form of literature more disputable than the legends of the saints: to examine them scientifically, without any contingent documents, seems to me to nullify the whole procedure—to be merely a learned waste of time . . .

XXIX

What interests me is the psychological character of the Savior—which might be studied in the Gospels, and in spite of the Gospels, despite their possible mutilation and irrelevancies: just as Francis of Assisi is revealed in his legends despite his legends. The point is not so much what Jesus did, or what he said, or how he actually met his death: it is whether we can form an idea what kind of man the Savior was, whether his character has been "handed down" to us. All the attempts I know of to construct the history of a "soul" from the Gospels seem to me to imply a deplorable levity in psychological matters. The two most ridiculous contributions to the study of the character of Jesus have been made by that clown in psychological matters, M. Renan: the idea of the "genius" and the idea of the "hero." Could

anything be less according to the Gospels than the heroic idea? The Gospels expound precisely the opposite of heroic conflict and the fighting instinct. They construct a moral code from the absence of pugnacity ("resist not evil" is the profoundest maxim in the Gospels, it provides a kind of key to them). Holiness, according to the Gospels, abides in peace, and gentleness, and the inability to fight. What is the import of the "glad tidings"? It is that true and eternal life has been found; it is not merely promised, it is here, it is in you; it is a life of love, love unabounded and free to all, love beyond measure. Everybody is a child of God—Jesus makes no special claims for himself—and as children of God, all are equal in his sight. Fancy making Jesus a hero!—also, how misleading is the term "genius"! What we mean by "intellect" had no meaning in the life of Jesus. On strictly psychological grounds, a totally different word is required . . . It is known that there is a condition of morbid irritability in the sense of touch, which causes the sufferer to recoil from contact with solid objects. This physical condition can be developed to its logical conclusion—the instinctive hatred of all reality, a flight into the "intangible" and the "incomprehensible"; an opposition to formalism; to the ideas of time and space; to the established order of things; to customs, and institutions; to the church: it can make a man feel at home in his own private world, into which actuality has ceased to intrude; in his "inner" world, his "true" world, his "eternal" world . . . "The Kingdom of God is within you" . . .

XXX

First, the instinctive hatred of actuality—this is the result of an extreme sensibility to pain and an irritability so great that it cannot bear "contact," because all contacts are too strong for it.

Secondly, the instinctive avoidance of conflicts, hatreds, and of all emotional heights and distances—this is the result of an extreme sensibility for pain and an irritability so great that it shrinks from struggling and the obligation to fight as an unbearable anguish (that is as self-destructive); and it finds blessedness (joy) only in non-resistance to evil and to danger—because love is the only and the last hope of keeping alive . . .

These are the two physiological realities upon which and from which the doctrine of salvation has grown. I call them a sublime development of hedonism upon a thoroughly morbid soil. The nearest thing to this was Epicureanism, the pagan view of salvation; even though it retained a big residue of Greek vitality and nervous strength. Epicurus was a decadent type, as I was the first to point out. The fear of pain, even of the slightest pain, can only lead in the end to a religion of love . . .

XXXI

I have already indicated my solution of the problem. The key to it is that we have only a distorted idea of the kind of man the Savior really was. The distortion is quite comprehensible: for many reasons such a type could not pass into legend pure, whole, and free

from additions. The surroundings in which this strange figure operated must have left their mark upon his legend, and even more so must the history and the fate of the early Christian communities: this must have embellished the record retrospectively, with many features that can only be understood in terms of religious war and propaganda. That strange and morbid world into which the Gospels lead us—a world like the plot of a Russian novel, in which the scum of society, neurosis, and “childish” imbecility are brought together—must inevitably have coarsened the legend of Jesus. The first disciples in particular must have transmuted a character full of symbolism and mysteriousness into terms of their own crude experience, in order to be able to understand him at all. For them the character of Jesus could only become real when cast in a more commonplace mold . . . The prophet, the Messiah, the future judge, the moral teacher, the miracle worker, John the Baptist—all of these traditions were only opportunities for misunderstanding the character of Jesus . . . Finally let us not underestimate the essential feature of all great adoration, particularly sectarian adoration: it tends to eliminate the original and often painfully unusual qualities from the object of worship—it doesn’t even see them there. It is regrettable that no Dostoevsky lived in the neighborhood of this most interesting decadent—I mean someone who could have felt the poignant charm of such a mixture of the sublime, the sickly, and the childlike.

Finally of course there is always the possibility, not to be overlooked, that the original Savior was not one man only, but a number of complex and contradictory decadence-types. Probabilities, however, are against this, for if such were the case tradition would have been more definite and objective: so we must assume the contrary. Nevertheless there is a contradiction between the mountain-, sea-, and field-preacher, who seems to have been a kind of Buddha on a soil not completely unlike India’s; and the aggressive fanatic, the deadly enemy of theologians and priests, who has been maliciously dignified by Renan as “the great master of irony.” My own opinion is that most of this spleen (and even wit) in the character of the Master was added to it as a result of the intensity of Christian propaganda. We all know that sectarians have an unscrupulous habit of using their idol as a justification for themselves. When the early Christians needed an adroit, nimble-witted, combative, and maliciously hair-splitting theologian, to use against their theological opponents, they created their “God” according to their own needs: just as they attributed to him, upon occasion, the quite unevangelical ideas of the “second coming,” and the “last judgment,” and all sorts of hopes and promises in circulation at the time.

XXXII

I can only repeat that I protest against the ascription of the fanatical element to the character of the Savior: the word “imperious,” which Renan uses, is utterly out of keeping with the Savior-type. The “glad tidings” of the Gospel mean nothing more than

that all arguments are done away with, for the Kingdom of Heaven belongs to children. This is no new belligerent creed that raises its voice—it is already there, it was there from the beginning: it is a spiritual return to childishness. Physiologists at least are familiar with cases of infantile regression, due to functional atrophy or to delayed puberty . . . Such a condition heaps no scorn, utters no sarcasms, brings no “sword”—it doesn’t even define itself. Little does it realize how it will one day set man against man. To become established it requires no miracles, or rewards and promises, or “according-to-the-Scriptures”; for it is perpetually a miracle in itself, a reward and a promise and a “Kingdom of God” all in itself. And likewise this faith needs no formulation, for it exists by protecting itself against formalism.

Admittedly the incidentals of environment, language, and upbringing give a certain color to the ideas: the original Christianity is entirely Jewish and Semitic in conception (ceremonial eating and drinking at supper, for instance—an idea which the church very Jewishly abused). But we must be on our guard against seeing anything beyond symbolism, “Semiotics” and an opportunity for parables in the words of the first Christian. Only on the assumption that nothing he says is to be taken literally, can this anti-realist speak at all. Amongst Indians he would have used the ideas of Sankhya, and amongst Chinese the ideas of Lao-tse—without even noticing the difference. With a little liberty of phrase, Jesus might even be called a “Free Spirit”—he cares not at all for what is: death is in the word, death is in everything fixed and unchanging. The idea and the experience of “life” as he alone views it, is opposed to every kind of word, formalism, law, creed, and dogma. He speaks only of inner things: “life,” or “truth” or “light” is his word for the inner sense. Everything else, the whole of reality, the whole of nature, even language, has only the value of a symbol and a metaphor for him. It is of the utmost importance not to lose sight of this fact, whatever may be the inducements of Christian (that is, churchy) prejudice. Such a superb symbolist stands apart from all religion, worship, history, science, worldly-wisdom, knowledge, psychology, bookishness, and art—his “wisdom” consists in a “perfect innocence” of all such matters. Culture he has never heard of, consequently he has no need to attack it—he denies it not . . . The same applies to the state, to the whole civil and social organization, to labor, and to war. He has no grounds for denying “the world,” for he knows nothing of what the church calls “the world” . . . He is totally incapable of denying anything. In the same way he shuns logic and does not believe that any faith or any “truth” can be provided by argument. His own proofs are “the light within,” an internal feeling of blessedness and self-content, and pure “manifestations” of “strength.” People who hold such a doctrine cannot contradict anything. They do not even realize that other points of view exist, or can exist. They are absolutely incapable of imagining anything opposed to their own way of thinking. If they happen to come up

against such a thing, they feel a profound sympathy with the "blindness" of the other fellow—for they themselves see the "light"—but they never venture to argue . . .

XXXIII

The essential psychology of the "Gospel" has nothing to do with guilt or punishment, or with reward. "Sin," which puts a barrier between man and God, is done away with—this is the true import of the "glad tidings." Blessedness is not merely promised, it is not offered conditionally, it is the only reality—all the rest is merely a symbolical elaboration of this simple tenet.

The outcome of such a conviction is the projection of a new way of life, the authentic way of life according to the Gospels. The Christly type of man is characterized not by a new "faith," but by a new mode of life, a distinctive new mode of life. He resists not those who do him evil, neither by words nor in his heart. He makes no distinction between strangers and his kindred, between Jews and Gentiles ("neighbor" really means co-religionist, Jew). He is moved to anger against no man. He makes no appeal to the law-courts, and does not acknowledge their jurisdiction; ("swear not at all"). He will not put his wife away from him, even if she be taken in adultery—and all this is based in one principle, it all follows from one instinct.

The life of the Savior was merely putting this into practice; and so was his death. He needed no formalism or ritual in his relationship with God—not even prayers. He abolished all the Jewish doctrines of repentance and atonement. He realized that it is only by a new way of life that man can be made to feel "Godly," "blessed," "saved," and a "child of God." Not by "repentance" and not by "prayers for forgiveness" is God attained: only the Gospel way of life leads to God, verily it is "God"!—the Gospel abolished Judaistic ideas of "sin," "forgiveness of sin," "faith," and "salvation by faith"—the whole Jewish church-lore was denied by the "glad tidings."

It is the deep-rooted instinct which lets a man feel he is "in Heaven" or even feel "eternal," whatever may be his apparent reasons for believing he is not "in Heaven"—this impulse alone is the psychological reality behind "salvation." It is a new way of life, and not a new creed . . .

XXXIV

If I understand anything about this great symbolist, it is this: that the only facts or "truths" for him were inner facts. Everything else, the whole of nature, time, space and history, were to him merely opportunities for parables. The "Son of Man" is not so much a concrete historical person, an isolated individual, as an "eternal" conception, a timeless psychological symbol.

The same applies most definitely to the God of this typical symbolist, to the "fatherhood of God." Nothing could be less Christlike than the churchy crudity about a personal God and a "Kingdom of God" to come, and a "Kingdom of Heaven" beyond, and a "Son of God" as the second person in the Trinity. All this, if I may be for-

given the phrase, is a smack in the eye of truth, or rather in the eye of the Gospels (what an eye!): it is a universal misuse of symbols which amounts to utter cynicism . . . The meaning of the "Father" and "Son" symbolism should be obvious; though not to everybody, I admit; the word "son" expresses a preliminary state of transfiguration (or beatitude), and the word "father" expresses the completed state, the actual feeling of eternity or perfection—I blush to have to mention what the church has done with this symbolism: it has set an amphitryon story upon the doorstep of the Christian "faith"! And in addition a doctrine of "immaculate conception"! . . . thereby defiling conception.

The "Kingdom of Heaven" is a state of the heart—not something which exists "above the earth" or happens "after death." The whole idea of dying naturally is absent from the Gospels: death is not a bridge to eternity, not a gate of entry: it is absent because it is relegated to an entirely different world of mere symbolism and metaphor. The "hour of our death" is not a Christly idea—neither "hours," nor time in general, nor the life of the body and its crises, exist for the bearer of "good tidings." The Kingdom of God is not something to which to look forward: it has no yesterday, no tomorrow, is not to come millennially—for it is a state of the heart—it is everywhere, and it is nowhere . . .

XXXV

This "bearer of glad tidings" died as he lived and as he taught—he died, not to save mankind, but to show men how to live. It was a way of life that he left behind him for men to follow: his attitude toward judges, soldiers, accusers—his attitude upon the Cross. He resists not, he defends himself not, he takes no steps to escape the final penalty; nay, more, he welcomes it . . . And he intercedes, suffers and loves for and on behalf of those who do him hurt . . . Defending himself not, showing no anger, blaming no one . . . Not even resisting evil—loving it . . .

XXXVI

We, who have become free spirits, are the first to understand what nineteen centuries have misunderstood—we have the instinct and the passionate integrity which wages war upon the "holy lie" more vigorously than upon any other lie . . . Mankind has been indescribably remote from our attitude of benevolent and cautious neutrality, from that discipline of the mind which alone enables strange guesses to be made, and subtle things to be received: with a shameless egotism men have always sought self-protection in these matters: in opposition to the Gospel, they set up the church . . .

Anyone seeking to prove that behind the great drama of existence is the finger of an ironical God, would find no small justification of his theory in the stupendous question-mark called Christianity. That mankind should bend the knee before what contradicts the original meaning and purpose of the Gospel: that in the idea of the "church" the very things are declared holy which the "bearer of glad tidings"

considered beneath him, and behind him—this would take some beating as a superb example of historical irony.

XXXVII

Our age prides itself on its historical sense: then how could it accept the nonsensical belief that the crude fable of the miracle-working Savior belongs to original Christianity—and that its spiritual and symbolical side was added later? On the contrary, the history of Christianity—from the death on the Cross onwards—is the history of a progressively clumsy misunderstanding of the original symbols. With every extension of Christianity to wider and ruder masses, who were increasingly less able to grasp its essentials, the need arose to vulgarize and barbarize Christianity more and more. It absorbed the teachings and rites of all the subterranean cults of the *Imperium Romanum*, and the rot of all kinds of sickly reasoning. The fate of Christianity is explained by the fact that it had to minister to sickly, base and vulgar people—hence its principle of faith had to become sickly, base, and vulgar. It is as a church that sickly primitivism itself finally attains to power—as a church, organized in deadly hostility to every form of integrity, to nobility of soul, discipline of the mind, to everything humanly free and kindly. There are two sets of values, and it is we freed spirits who have first become aware of and pointed out the contradiction between them—Christian values on the one hand, noble values on the other!

XXXVIII

I cannot, at this point, avoid a sigh. There are days when I am overcome by a feeling blacker than the blackest melancholy—contempt of man. And I shall make it quite clear what I despise, and whom I despise: it is the man of today, the kind of man who is unfortunately my contemporary. The man of today—I am stifled by his fetid breath . . . For the past I feel, like all scholars, a great toleration, that is a generous self-control in judging: with a gloomy caution I review thousands of years of this madhouse-world: and whether it be called "Christendom," the "Christian faith," or the "Christian Church," I am careful not to hold man responsible for its mental disorders. But my gorge rises immediately when I survey the modern period, our period . . . For our age knows better . . . What was in former times merely sickness, is nowadays positively indecent—it is indecent to be a Christian nowadays. And here is where my disgust begins—I look about me: not a word remains of what was formerly considered to be "truth": we cannot even bear to hear a priest pronounce the word "truth." A man with even the slightest pretensions to integrity must know nowadays that a theologian, a priest or pope, is not merely mistaken in every word he speaks, but that he lies and can no longer escape censure for lying "innocently" or "through ignorance." Even the priest knows, as everybody else knows, that there is no more "God" or "sins" or "Savior"; and that "free-will" and a "moral order" are lies—no serious or self-conscious man can pretend not to know this . . . All the conceptions of the Church are known for what they are—as the worst of counterfeits,

issued to debase nature and natural values: and the priest himself is known for what he is—as the most dangerous type of parasite, as the poison-spider of life . . . We know, and our conscience today tells us—what is the value of all the ghastly inventions of the priests and the church, and we know why they were invented. The state of self-defilement to which they have reduced humanity, is enough to make anybody spew. All the ideas of “the beyond,” “the last judgment,” the “immortality” of the “soul,” and the “soul” itself—these are merely instruments of torture and a systematic cruelty used by priests to get power and to keep power . . . Everybody knows this, and yet things remain as before. What has happened to the last shred of decency and self-respect, when even our statesmen, who are in other ways liberal-minded men, and thoroughly un-Christian in practice, still profess and call themselves Christians and go to communion? . . . And a young prince at the head of his regiment, superb as an expression of the self-esteem and self-certainty of his people—and yet, without any shame, he lets himself be called a Christian! . . . Whom, then, does Christianity deny? What world does it renounce? To be a soldier, to be a judge, to be a patriot, to defend oneself, to set a value upon honor, to be self-seeking, to be proud . . . Every act of every day, every instinct, every principle which leads to action, is today anti-Christian: what an abortion of falsehood the modern man must be, to call himself a Christian without blushing for shame! . . .

XXXIX

I retrace my steps, and recount the authentic history of Christianity. The very word “Christianity” is a misnomer — essentially there was only one Christian, and he died on the Cross. The “Gospel” died on the Cross. What was thenceforward called “the Gospel” was the contradiction of what Christ had lived in his life; it was “evil tidings,” a dysangel, not an evangel. It is false to the point of nonsense to see in “faith,” particularly in the faith that Christ died to save sinners, a distinguishing mark of the Christian: only the Christly way of life, the life actually lived by him who died on the Cross, is truly Christian . . . Even today such a life is still possible; and for certain men it is even necessary. Genuine, primitive Christianity will be possible in all ages . . . It is not a creed but a course of action, or rather a course of non-action, a different kind of existence . . . As every psychologist knows, the importance of states of consciousness, kinds of faith, and opinions about truth, is absolutely negligible compared with the importance of the instincts; strictly speaking, the whole idea of spiritual causality is false. To define the Christian attitude, or Christliness, in terms of belief or of a state of mind, reduces Christliness to nothing. In fact, there are no Christians. The type that has been called “Christian” for two thousand years is only the effect of a psychological self-deception. Examined more closely, despite all his protestations of “faith,” he has been motivated only by his instincts—and what instincts! “Faith” in all ages, for example in Luther’s case, has only been a cloak, a pretext,

and a screen behind which the instincts played their game—a shrewd form of blindness to the work of certain of the instincts . . . I have already described “faith” as an essentially Christian form of shrewdness—men always talk about their “faith,” but they act according to their instincts . . . In the Christian world of ideas there is nothing which even approaches reality—I have already pointed out that an instinctive hatred of reality is the driving force, in fact the only driving force, at the root of Christianity. What follows from this? That even psychologically, which is fundamentally and substantially, there is an error. Take away one idea and put only one reality in its place—and the whole of Christianity crumbles to nothing!

As seen from Olympus, this strangest of all phenomena—a religion not only specializing in error, but concentrating upon the genial invention of errors which are poisonous to the heart of life—must be a spectacle for the Gods: for the Gods who are philosophers, I mean; those I met, for instance, in the celebrated dialogues at Naxos. When they can overcome their nausea (and when we can!) they will be thankful for the amusing exhibition given by the Christians: perhaps this curious case is the only thing on our wretched little planet, earth, worthy of a Godly glance, and of Godly interest . . . Let us not therefore undervalue the Christian: deceitful to the point of innocence, he is far beyond the apes—in its application to Christians a certain theory of descent is a very pretty compliment.

XL

The fate of the Gospel was decided by a death—it hung upon the “Cross” . . . It was a death, that instrument usually reserved only for *canaille*, it was this appalling paradox which first brought home to the disciples the riddle: “Who was that? What was that?” The feeling of utter dismay, and the sense of deep injury, the suspicion that such a death might overthrow their cause, the terrible questioning “Why just so?” can well be imagined. In such a state of mind everything must be shown as necessary, everything must have a meaning and a reason, the highest reason: the devotion of a disciple makes no allowance for accident. For the first time a chasm stood yawning before them: “Who put him to death? Who was his enemy?”—the question flashed like a stroke of lightning. Answer: The Jewish ruling class, the dominant Judaism! From that moment the disciples were in revolt against the social order; and they attributed to Jesus, somewhat late, an attitude of revolt against the social order. Hitherto this militant, contradictory and pugnacious trait in his character was not noticeable: rather, the contrary was in evidence. Obviously the small sect had no understanding whatever of the principal lesson of Jesus’ death: the example of freedom from and superiority to resentment—which shows how little they understood him at all! All that Jesus could hope to achieve by his death, as such, was to give the strongest public example and proof of his teachings . . . But his disciples were far from inclined to forgive his death—which would have been a course of action according to the

Gospel in the highest sense. Neither were they prepared to offer themselves, with meekness and love in their hearts, for a similar sacrifice . . . On the contrary, they now became possessed of the most un-Christly desire for revenge. It was impossible for the movement to die out with his death: "Retribution" and "judgment" were called for (as if anything could be less Christly than "retribution," "punishment" and "sitting-in-judgment"!) Once more the popular hope in a Messiah came into prominence: a great moment in history was anticipated: the "Kingdom of God" is coming to do justice upon God's foes . . . Oh, but this is a complete misunderstanding! The "Kingdom of God" as the last act, as a promise! In his lifetime the evangel had been the incarnation, the fulfilment and the reality of the "Kingdom." His death was a realization of the "Kingdom of God." It was only now that all the anger and bitterness against the Pharisees and theologians became attributed to the Master:—and they made him thus into a Pharisee and a theologian himself!—in addition the primitive adoration of these completely unbalanced souls could not be satisfied with the Gospel equality of all men as children of God, which Jesus had taught; and their revenge took the form of elevating him incomprehensibly above themselves: just as, previously, the Jews had sought revenge upon their foes by placing their God on high at a great distance above them. The one God and the only-begotten Son: both were the outcome of resentment.

XLI

And from that time onwards an absurd problem arose: "How could God have allowed it?" To which the disordered minds of the small community gave an answer terrifying in its absurdity: God gave his Son as a sacrifice for the forgiveness of sins. At one stroke the Gospel was abolished! Sin offering, and in its most repellent and barbaric form, the sacrifice of the innocent for the sins of the guilty—how appallingly heathen! Jesus himself had done away with the idea of "guilt"—he denied that there was any guilt fixed between God and men; his life expressed this unity between God and men, which was his "glad tidings" . . . And he did not teach it as a mere privilege!

From that time onwards the character of the Savior was gradually degraded by the addition of the doctrine of the last judgment and the second coming, the doctrine of his death as a sacrifice, the doctrine of the resurrection, by means of which the whole idea of "blessedness," the one and only reality of the Gospels, is conjured away—and replaced by a state of happiness beyond the grave! . . . Paul, with that rabbinical impudence which characterizes everything he did, gave a logical color to this obscene conception, as follows: "Unless Christ rose from the dead, then all our faith is in vain!" And spontaneously there was derived from the Gospel the most contemptible of all unattainable hopes, the impertinent doctrine of personal survival . . . Paul himself even preached it as a reward! . . .

XLII

It is now possible to see what came to an end with the death on the Cross: a new and thoroughly original attempt to establish a Buddhist pacifist movement, to achieve a real and not merely promised happiness on earth. For, as I have already pointed out, there is an essential difference between these two religions of decadence: Buddhism promises nothing but achieves something; Christianity promises everything but achieves nothing—the “glad tidings” were followed closely by the worst of all possible tidings: those of Paul. Paul is the incarnation of a type completely opposed to the “bearer of glad tidings”: his genius lies in hate, in the vision of hate, in the remorseless logic of hate. What a sacrifice indeed, this dysangelist made to—hate! Above all he sacrificed the Savior: he nailed him to his own Cross. After this specialist in hate had finished with it, and made it conform to his own purposes, nothing whatever remained of the life and the example and the teachings and the death and the meaning and the law of the Gospel. Certainly not reality, and certainly not historical truth! . . . And once more the priestly instinct of a Jew perpetrated the same old crime against history—he deleted what had gone before in the history of Christianity and himself invented a history of Christian origins. He did more: he submitted the history of Israel to yet another falsification, so as to make it appear as a mere prologue to his own obsession; according to him, all the prophets had his “Savior” in mind . . . Later on the church even falsified the history of mankind so as to make it seem a prologue to Christianity . . . The character of the Savior, his teaching, his way of life, his death, the meaning of his death, and even the sequel to his death—were all altered until nothing in the record even remotely approximated to fact. Paul simply transferred the center of gravity of the whole of Christ’s life to a point beyond this life on earth—and his method was the lie about the “resurrection” of Jesus. Basically, he had no use for the life of the Savior—he required the death on the Cross, and then something beyond . . . It would be sheer folly on the part of a psychologist to regard a man like Paul (whose spiritual home was Stoicism) as an honest man, when he constructs out of an hallucination a proof of the resurrection of the Savior; or even to believe that he actually experienced the hallucination. Paul desired the end, and therefore he willed the means. . . . What he didn’t believe himself, was believed in by the idiots amongst whom he spread his teachings—his lust was for power; Paul is the priest striving for power—he only had use for ideas, teaching and symbols with which to tyrannize over masses and to organize mobs. What was the only tenet of Christianity which Mahomet subsequently borrowed? Paul’s invention, his method of setting up priestly tyranny and swaying the mob: the belief in personal survival—namely, the doctrine of the “Judgment.”

XLIII

When life’s center of gravity is transferred from life itself to

the "beyond"—that is, to annihilation—then life is entirely thrown off its balance. The gross lie of personal survival undermines reason and every natural instinct—henceforth every beneficent instinct that promotes life and guarantees the future is looked upon with suspicion. The meaning of life has now become that there is no meaning in life . . . Why be public-spirited? Why take any pride in origins and ancestry? Why labor together, or trust one another, or be concerned with the general well-being and try to advance it? . . . All this is merely a "temptation," a deviation from the straight and narrow way. Only one thing is needful . . . All "immortal souls" are equal; in an infinite universe the "salvation" of every individual may claim an eternal importance; petty bigots and people three-parts mad may assume that the laws of nature are constantly suspended for their sake—it is impossible to have too much contempt for such an insolent glorification of all kinds of selfishness to infinity. And yet Christianity owes its triumph to just such a miserable flattery of personal vanity. It was by this means that it lured to its side all the misbegotten and depressed, the fallen-upon-evil-days, the whole offal and scum of mankind.

The "salvation of the soul," or in other words, "the world revolves around me" . . . the poisonous doctrine of "equal rights for all"—it is this which Christianity has propagated very efficiently. Issuing from the most secret recesses of bad instinct, the Christian religion has waged a war to the death against all feelings of reverence and distinction amongst men, which is the foundation of every advance in civilization. It has forged the resentment of the masses into a weapon against us; against everything noble, joyous and high-minded on earth—against our happiness on earth . . . The most vicious outrage against a higher type of man was to grant immortality to every Peter and Paul.

And let us not underestimate the fatality which Christianity has inflicted upon political theory! Nowadays no one has the courage to claim privilege and rank, or to exercise the feeling of pride in himself and his peers—the loneliness of the elect. The lack of this courage is what ails our politics! Aristocratic poise has been undermined by the lie of equality of souls. A belief in the "greatest good of the greatest number" causes and will continue to cause revolutions; but it is Christianity—make no mistake—and the values of Christianity which convert every revolution into blood and crime! Christianity is a revolt of all creeping things against the seats of the mighty: the Gospel of the lowly lays low . . .

XLIV

The Gospels are invaluable as evidence of the corruption which had already attacked the early Christian community. At the death of the Savior a process of decay began which Paul, with the cynical logic of a Rabbi, merely developed to its conclusion. These Gospels cannot be read with too much care; there are difficulties in every word of them. I admit, and I hope it will not be held against me, that it

is this very fact which makes them such a delight for a psychologist. For they are the reverse of a merely naive corruption, they represent an ultimate refinement, an artistic triumph of mental rottenness. The Gospels stand by themselves. The Bible as a whole is not to be compared with them.

Here we are among Jews: this is the first thing to be remembered if we don't wish to lose the scent. In this book, the illusion of personal "holiness," which literally amounts to genius, and has never been even approached in other books or by other men; the elevation of deceit in attitude and phrase to the status of an art—is not any accident due to the exceptional talents of any one individual. It is a racial matter. In the formulation of Christianity, the art of concocting holy lies, which is the essence of Jewishness, after many centuries of earnest apprenticeship and practice in Judea, has reached technical perfection. The Christian, who is the last word in falsity, is the Jew repeating his type—thrice a Jew . . . The basic desire only to make use of ideas, symbols, and gestures, which accord with the priestly edifice, and the instinctive rejection of every other way of thinking and every other method of arriving at values and utilities—all this is not merely a matter of tradition, it is something inherited; for only heredity could explain the fact that it works like second nature. The whole of humanity, even the best minds of the best ages (with one exception, who is perhaps hardly human) have let themselves be deceived. The Gospels have been studied as a work of simplicity . . . No small tribute to the technical perfection with which the trick has been accomplished.

Frankly, if we could only see, even for a moment, these prodigious cranks and pseudo-saints, that would be an end of them—and it is because I cannot read a word of theirs without seeing through their pose, that I have made an end of them . . . I can't stand a way they have of rolling up their eyes. (Fortunately books are only something to read for most people.)

We shouldn't let them pull wool over our eyes. "Judge not!" they say, yet they consign to Hell everybody who opposes them. Although they leave judgment to God, yet they sit in judgment themselves: when they glorify God, they glorify themselves: when they require men to profess the virtues which come easy to them (in fact which they must profess if they are not to go under) they assume the appearance of making an effort to be virtuous, or of letting virtue triumph. They pretend to live, and die, and sacrifice themselves for virtue (or for "truth," or for the "light," or for the Kingdom of God) when as a matter of fact they are only doing what they cannot help doing. It is their nature to be sneaky, to hide away in corners and to slink along in the shadows; and so they hypocritically convert their necessity into a duty. They justify their humble lives on grounds of duty so that even their humility is used as one more proof of their piety . . . Oh what a humble, and chaste, and charitable species of humbug! "Virtue itself shall bear witness for us" . . . The Gospels are handbooks of moral seduction: these petty fellows

appropriate morality—how well they know its use! Morality is the best method of leading humanity by the nose!—the fact is that by means of morality conceited people who believe themselves to be the chosen, put on a cloak of modesty. With conscious conceit they range themselves definitely on the side of the “truth”—and the best of mankind, the “world,” they place on the other. This is perhaps the most fatal form of megalomania that has ever existed on the earth: little misgotten bigots and liars began to claim exclusive understanding of the ideals of “God,” “truth,” “the light,” “the spirit,” “love,” “wisdom,” and “life” as if these things were the peculiar property of themselves; and by means of them they sought to fence themselves off from the “world.”

Little super-Jews, fit only for the madhouse, reversed all values to suit themselves, as if the followers of Christ alone were the meaning, the salt, the standard, and even the supreme court of mankind . . . Such a calamity was only possible because a species of megalomania, similar to this one, and racially like it (orthodox Jewish) was already in existence. When a division appeared between official Jews and Christian Jews, the latter had no alternative left but to employ the self-protective measures peculiar to the Jewish instinct: and they used this device even against the Jews themselves, whereas the Jews had used it only against Gentiles. The Christian is only a nonconformist Jew.

XLV

I give a few examples of the kind of thing these trivial people stuffed into their heads, the kind of thing they put into the mouth of the Master: the pure and unadulterated creed of “beautiful souls.”

And whosoever shall not receive you, nor hear you, when ye depart thence, shake off the dust under your feet for a testimony against them. Verily I say unto you, it shall be more tolerable for Sodom and Gomorrah in the day of judgment, than for that city. (*Mark VI, 11.*)

—What joyful tidings!

And whosoever shall offend one of these little ones that believe in me, it is better for him that a millstone were hanged about his neck, and he were cast into the sea. (*Mark IX, 42.*)

—What joyful tidings!

And if thine eye offend thee, pluck it out: it is better for thee to enter into the kingdom of God with one eye, than having two eyes to be cast into hell fire; where their worm dieth not, and the fire is not quenched. (*Mark IX, 47.*)

—He should pluck out more than his eye . . .

Verily I say unto you, that there be some of them that stand here, which shall not taste of death, till they have seen the kingdom of God come with power. (*Mark IX, 1.*)

—Well lied, lion . . .

Whosoever will come after me, let him deny himself, and take up his cross, and follow me. For . . .

(*Mark VIII, 34.*)

—(Note of a psychologist: Christian morality is refuted by its “fors”—its justifications condemn it—this is what makes it Christian.)

Judge not, that ye be not judged. With what measure ye mete, it shall be measured to you again. (*Matthew VII, 1.*)

—A curious notion of a “just” judge!

For if ye love them which love you, what reward have ye? Do not even the publicans the same? And if ye salute your brethren only, what do ye more than others? Do not even the publicans so? (*Matthew V, 46.*) —Principle of “Christian” love: it wants to get something extra for itself . . .

But if ye forgive men not their trespasses, neither will your Father forgive your trespasses. (*Matthew VI, 15.*)

—Very embarrassing for the Father!

But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you. (*Matthew VI, 33.*)

—“All these things” mean food, clothing, and the necessities of life. A mistake, to put it mildly . . . Just before, God appears as a kind of tailor, in special cases . . .

Rejoice ye in that day, and leap for joy: for, behold, your reward is great in heaven: for in the like manner did their fathers unto the prophets. (*Luke VI, 23.*)

—The impertinent rabble compares itself with the prophets!

Know ye not that ye are the temple of God, and that the spirit of God dwelleth in you? If any man defile the temple of God, him shall God destroy, for the temple of God is holy, which temple ye are. (*Paul, 1 Corinthians, III, 16.*)

—This roundabout argument is utterly beneath contempt.

Do ye not know that the saints shall judge the world? and if the world shall be judged by you, are ye unworthy to judge the smallest matters? (*Paul, 1 Corinthians, VI, 2.*)

—Unhappily this is not merely the ravings of a lunatic . . . The frightful impostor continues thus:

Know ye not that we shall judge angels? How much more things that pertain to this life?

Hath not God made foolish the wisdom of this world? For after that in the wisdom of God, the world by wisdom knew not God, it pleased God by the foolishness of preaching to save them that believe . . . not many wise men after the flesh, not many mighty, not many noble are called: But God hath chosen the foolish things of the world to confound the Wise; and God hath chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen; yea and things which are not, to bring to nought things that are: that no flesh should glory in his presence. (*Paul, 1 Corinthians, I, 20 et seq.*)

—to interpret this passage, which is of considerable importance as an exposition of Chandala-morality, the reader should refer to my “Genealogy of Morals,” in which the distinction is plainly stated between a noble morality and a morality of resentment and impotent vengeance. Paul was the greatest Apostle of revenge who has ever lived.

XLVI

What follows then? That it is advisable to put on gloves before handling the New Testament. The presence of so much filth makes this precaution advisable. We would as soon hob-nob with Polish Jews as with early Christians: and there is no necessity to elaborate our objection . . . Neither smells good—I have searched the New Testament in vain for a single sympathetic touch; there is nothing in it

which is free, kindly, open-hearted or upright. In this book definitely mankind makes no step forward—because it lacks the instinct of cleanliness . . . Only the base instincts are expressed in the New Testament and it lacks even courage in regard to these. The whole thing is cowardice, the whole thing is wilful shutting of the eyes and self-deception. Any other book appears clean when a man has just finished reading the New Testament; to give an example, immediately after laying down Paul, I took up with delight that most charming and wanton scoffer, Petronius, of whom it might be said what Domenico Boccaccio wrote to the Duke of Parma about Cesare Borgia: "*E tutto festo*"—he is immortally healthy, immortally cheerful and well-balanced . . .

These trivial fanatics make a most important mistake in their calculations. They attack, but whatever they attack is thereby distinguished. He whom a Christian father attacks is not injured . . . On the contrary, it is an honor to have a Christian father as an opponent. It is impossible to read the New Testament without a feeling of admiration for everything abused in it, in particular for "worldly wisdom," which an impudent wind-bag tries in vain to abolish by the empty folly of preaching . . . Even the Scribes and Pharisees gain stature by such an attack: they must almost have been worth something to merit such immoderate hate. They were accused of hypocrisy—as if this were a charge that early Christians had any right to make—but after all the Scribes and Pharisees were a privileged class: this is enough to explain the rage of the Chandalas. The first Christians, I fear (like the last Christians, whom I may live to see) are rebels by profound instinct against all privilege—they live and struggle perpetually for "equal rights" . . . Strictly speaking, they have no alternative. When people claim to be personally God's chosen or the "Temple of God" or a "Heavenly Host," it follows that every other principle of distinction based upon honesty, intelligence, manliness and pride, or upon beauty and freedom of the spirit, must be dismissed as "worldly" and evil . . .

The moral is that every word in the mouth of a "Christian father" is a lie, and his every action is distinctly dishonest—all his values and his aims are dangerous—but whomever he hates and whatever he hates has a real value . . . It is thus that the Christian and more particularly the Christian priest sets up a standard of value.

Need I add that in the whole of the New Testament there is only one figure worthy of respect? Pilate the Roman Governor. To take a Jewish quarrel seriously was more than he could bring himself to do. One Jew more or less—what did it matter . . . The noble scorn of a Roman, in whose presence the word "truth" had been shamefully bandied about, has enriched the New Testament with the only phrase in it of any value—and this phrase not only criticizes but actually destroys the New Testament—"What is truth?" . . .

XLVII

The distinction between us and Christians is not in the fact that we can find no God in history or nature, but that we look upon what

is called "God" as pitiable, absurd, and dangerous rather than as Godly; and not as a mere error but as a crime against life . . . We deny that "God" is God. Even if somebody showed us this God of the Christians, we should be still less inclined to believe in him. In a formula: God, as Paul created him, is the negation of God.

A religion like Christianity which doesn't come in contact with reality at any point, which collapses if reality intrudes at any point, must inevitably be opposed to "worldly wisdom," that is to science—and it will describe as good any methods which may be used to poison, slander and decry mental discipline, lucidity, intellectual probity, and intellectual aloofness and freedom. "Faith" as an imperative vetoes science, for it is based in lies at any price. Paul knew very well that lying—namely "faith"—was essential. In due course the church learned Paul's lesson.

The God which Paul invented for himself, the God who "reduced the wisdom of the world to absurdity" (particularly philology and medicine, the two great foes of superstition), is in effect simply the expression of Paul's own determination to do this. He called his own will God ("Thora") in a typically Jewish manner. Paul wanted to banish the "wisdom of the world." His enemies were the competent philologists and doctors of the Alexandrine school—it is against them that he contends. As a matter of fact, a man cannot well be a doctor or a philologist without also being an Antichrist. The philologist sees through the "Holy Scriptures," and the doctor sees through the physical degeneracy of the average Christian. The doctor says "incurable": the philologist says "fraud" . . .

XLVIII

Has anybody ever really understood the celebrated story at the beginning of the Bible about God's holy terror of science? . . . It has not been understood. This supreme priestly book naturally begins by stating the chief inner difficulty of the priest, who has only one great danger to face—consequently, God has to face only one great danger. The old God, a pure "spirit," a pure high priest, and wholly perfect, is wandering in a leisurely fashion around his garden: but he is bored. Against boredom even the Gods contend in vain. So what does he do? He creates man—for man is a distraction. . . But behold, man also begins to get bored. God's compassion for the only kind of misery peculiar to all Paradises, is infinite, so he forthwith creates other animals. This is God's first error of judgment: man was not amused—he mastered the animals; he wouldn't remain an animal himself. So God created women and admittedly this put an end to boredom—but also to many other things! Woman was God's second error of judgment. "Woman is a serpent" ("Heva"): every priest knows this—and evil came into the world through woman, every priest knows this also. It follows that she is to blame for knowledge . . . It was woman who prompted man to taste of the tree of knowledge.

What is the explanation of all this? It is that the old God fell into a panic. His greatest blunder had been in creating man, for

man could become a rival to himself. Knowledge makes men like unto Gods—it is all up with priests and Gods when mankind becomes scientific! Knowledge is the first of sins, the germ of all sins, the original sin. One thing alone is moral—ignorance—the rest follows from it.

God's state of panic, however, didn't spoil his cunning. For a long time his chief problem was, how to protect himself against science. Answer: Out of Paradise with man! Happiness and leisure give rise to thought—and all thinking is bad . . . Thou shalt not think.

And so the transcendental priest proceeds to invent suffering, death, the dangers of pregnancy and all kinds misery, decrepitude, affliction, and above all, sickness—and all these are only weapons in God's war upon knowledge! For trouble keeps a man from thinking . . . Yet notwithstanding these precautions—oh horror! the edifice of knowledge begins to arise, towering aloft, storming heaven, threatening the Gods!—what is to be done? The old God invents war, he separates the peoples, makes men destroy one another (the priests always have needed war) . . . War—amongst other things a great disturber of science—but alas! knowledge and emancipation from the priests increases in spite of war. So the old God takes his final decision: "Mankind is becoming too scientific—there is no help for it: let him be drowned!"

XLIX

I have been understood. At the very beginning of the Bible the psychology of the priest is completely exposed. There is only one really great danger for the priest—that is science, or the solid understanding of cause and effect. But the development of science requires on the whole favorable circumstances—leisure, and mental energy to spare, are necessary for the pursuit of knowledge . . . Therefore in all ages the logic of the priest has been to make people miserable.

It will be realized what follows from this line of thought: it was this which brought "sin" first into the world. . . The idea of sin and punishment, the whole "moral order," was invented to be a barrier against knowledge—to prevent men emancipating themselves from the priests . . . It is not the external world which should be investigated, but the internal world. It is wrong to investigate cautiously and thoroughly; it is wrong to make any investigation at all: it is right to keep on suffering . . . to keep on suffering so that the priest will always be needed.

Away with medicine! It is a "Savior" that is needed! The ideas of sin and punishment including the doctrines of "grace," "salvation," and "forgiveness" (all lies through and through without a shred of psychological reality behind them) were invented in order to destroy humanity's sense of causality: they are an attack on cause and effect!—but not an attack with the fist, or the knife, or openly in hate and love; but an attack prompted by the instincts of cowardice, cunning and degeneracy! A priest's attack! A parasite's attack! A blood-sucking attack by subterranean vampires! . . .

When the natural consequences of an action are no longer looked upon as natural, but are considered to be produced by the phantasms of superstition, by "God," "ghosts," and "souls," and appear as "moral" consequences, as rewards, punishments, guidance and revelation—then the whole basis of knowledge is destroyed; and the greatest possible crime against humanity has been committed.

Sin, I repeat, this supreme form of human self-pollution, was invented in order to prevent the development of science and culture and educational advancement; it is thanks to the invention of sin that the priest has become dominant.

L

At this stage I cannot omit dealing with the psychology of faith, naturally so as to be of some assistance to the "faithful" themselves. If there is anybody nowadays who does not realize how disgusting it is to be one of the "faithful"—or what a sign of decadence, and what a breakdown of the will-to-live this implies—then he will have no excuse for ignorance in the future. My word can reach even the deaf . . . Unless I am greatly mistaken, the chief criterion of truth amongst Christians is what is called "proof by grace": faith beattifies, therefore it is true. To this it might be objected that salvation is not proved because it is promised, and that blessedness is an essential condition of faith: blessed are the believers . . . But how can proof be given that what the priest promises to the faithful will really be performed—namely that the undemonstrable life after death is a fact?

The alleged proof by grace is itself essentially an article of belief, inasmuch as it assumes that what faith expects cannot fail to materialize. The syllogism is: "I believe that faith redeems—therefore it is true"—surely this settles the argument! Any such "therefore" would be the *reductio ad absurdum* of a logical proof.

But let us assume for the sake of politeness that blessedness through faith is proved (not merely desired and not merely promised by the suspect lips of a priest)—even so could such beatitude, or in technical phrase "joy" ever be a demonstration of truth? Sensations of pleasure have so little to do with answering the question, "What is true?" that actually they have to be regarded with suspicion when answering that question. Proof through pleasure is a proof of pleasure—that is all. Why on earth should it be assumed that true judgments give more pleasure than false ones, and that, in accordance with a preestablished harmony, the truth brings pleasure in its train?

The experience of all strong and profound minds is quite the contrary. Man has had to fight every inch of the way to truth. The price paid has been everything that the heart, and our love, and our trust cling to. This needs greatness of soul: for the service of truth is the hardest of all.

What, then, is the meaning of integrity in things of the mind?—that a man must discipline his emotion, eschew "beautiful feelings,"

and be conscientious in his yes and no!—faith beatifies: therefore it lies . . .

LI

The fact that faith in certain circumstances beatifies, the fact that an obsession of beatitude isn't necessarily true beatitude, the fact that faith does not actually move mountains, though it may raise them out of nothing—all this becomes perfectly evident if we happen to take a casual stroll through any madhouse. Not of course, to a priest: for he instinctively denies that sickness is sickness or that a madhouse is a madhouse. Christianity requires sickness just as the Greeks required abounding health—making people sick is actually the ulterior motive of the whole procedure of salvation in the church. And the church aims at being a universal madhouse. Its ultimate ideal is to convert the whole earth into a madhouse.

The kind of proselyte the church requires is the typical decadent. When a religious revival takes hold of any set of people, it is always characterized by neurotic outbreaks; the "world within" religious people is astonishingly like the "world within" overstrung and hysterical people. The "states of exaltation" which Christianity holds up before mankind as being of the highest value, are merely epileptoid in character—the church has canonized only madmen or those who have swindled "to the greater glory of God" . . . At one time I ventured to describe the whole Christian training for penance and salvation (now best studied in England) as a "whirling madness" methodically cultivated upon a soil thoroughly well prepared for it, that is, a profoundly morbid soil. It is not everybody who can be a Christian; a man is not "converted" to Christianity—he merely sickens for it.

We others, who have the courage to be both healthy and also disdainful, have every reason to despise a religion that abuses the body! that clings to the old superstition about the "soul"! that makes a "virtue" out of malnutrition! that fights against health as a kind of enemy, devil, and temptation! We have every reason to despise a religion which considers that it is possible to carry around a "pure" soul in a cadaverous body, and therefore invented for itself a new concept of "perfection," making it a pale, sickly, idiotically-ecstatic expression of "holiness," which is itself merely a symptom of an under-fed, enervated, and incurably disordered body! . . .

The Christian movement in Europe, from the very beginning, was no more than a general conglomeration of all kinds of human refuse and scum (who seek power through Christianity). It did not begin in Europe as the result of the decline and fall of any one nation; but rather was it an accumulation of decadent elements coming from all directions, which flocked together like birds of a feather. Christianity was not, as some believe, produced by the corruption of the ancient world, of the noble ancient world; the learned imbeciles who pretend it was cannot be too strongly contradicted; for at the time when Christianity reached the sickly and decaying rabble

in the Roman empire, the very contrary type, the noble Roman, existed at his mature best.

The majority triumphed; the democracy of Christian instinct became uppermost . . . Christianity was not "national," it was not race-conscious—it made its appeal to the disinherited everywhere, and it had its allies everywhere. The Christian religion is basically an expression of the rancor of the sick directed against the healthy. Everything well-set-up, proud, high-spirited, and above all everything beautiful, is offensive in its sight. Again let me refer to the priceless words of Paul—"And God hath chosen the weak things, the foolish things of the world, the base things of the world, and things which are despised"; this was the rallying-cry: "*In hoc signo*" it was decadence that triumphed.

God on the Cross—will the terrible meaning of this symbolism never be understood? It means that everything that suffers and hangs on crosses is divine . . . We all hang on the Cross, consequently we are all divine . . . We alone are divine . . . It was thus that Christianity triumphed, and a nobler attitude of mind went under before it—to this day Christianity remains the greatest calamity which has befallen mankind . . .

LII

Christianity also stands in opposition to spiritual well-being—it can only make use of sick reasoning; it takes the side of everything morbid; it utters anathemas against "the intellect," and against the arrogance of healthy minds. Since sickness is absolutely essential to the Christian religion, it follows that the Christian prerequisite, "faith," must also be a kind of illness, and that all straight, honest and scholarly paths to knowledge must encounter the ban of the church: thus doubt in itself is sinful . . . The total lack of mental cleanliness in a priest (which shows itself in his looks) is an effect of decadence. One has only to study the behavior of hysterical women, and rickety children, to observe to what extent instinctive shiftiness, lying for lying's sake, and the inability to look straight or to walk straight, are the expression of decadence.

"Faith" is only the refusal to face facts as they are. Pious people and priests of either sex are shifty, because they are sick: their instinct is against facing what is really wrong with them. In the opinion of the faithful, whatever causes illness is good, and everything arising in superabundance of health and energy, is evil. The sign which I look for in a would-be theologian is the tendency to be shifty.

Another characteristic of the theologian is his inability to understand the use of words, or philology. And what I mean here by philology is its general application—the art of reading properly, without misunderstanding facts in terms of a prior interpretation and without losing patience or neglecting caution and subtlety in the effort to understand. I regard philology as a habit of scepticism in interpretation of everything, from books and newspapers to human

destinies and weather reports—not to mention the salvation of the soul! . . .

The way in which a theologian, whether in Berlin or in Rome, interprets a "passage of Scripture" or a current event, such as a victory of his fatherland, in the light of the Psalms of David, is so audacious that it would make a philologist's hair stand on end. And what shall he do when pietists and other cows from Swabia make use of the "finger of God" to convert their humdrum existence into a miracle of "grace," of "providence," and of salvation? The most modest exercise of intelligence, not to mention decency, would be enough to convince these professional "interpreters" of the absolute childishness and unworthiness of such an application of God's prestidigitation.

However slight may be our piety, a God who always cured us of a cold in the head at the right time, or who put us into our coach whenever it started to rain would be an absurd God who would have to be abolished even if he did exist. God as a domestic servant, as a messenger, as a chief steward—is essentially the same thing as an utterly stupid calamity. The kind of "Providence" which is believed in at the present day by at least every third man in "scholarly Germany" would be an argument against God, in fact it would be the strongest possible argument against God. But in any case, it is an argument against Germans! . . .

LIII

The idea that martyrdom has anything to do with establishing the truth of a cause is so absurd that I am inclined to deny that martyrs have ever had anything to do with establishing truth. The very tone of voice in which a martyr flings his little piece of truth at humanity's head usually betrays such a low degree of intelligence, and such a disregard for the real problem of truth, that there is never any need even to refute him. Truth is not something which one man has and another man lacks: only peasants and peasant-apostles like Luther could think of truth in such a silly way. We may rest assured that the more conscientious a man is in intellectual matters, the more reticent he will become on this point. Fancy understanding five things, and dismissing all others with a wave of the hand! . . .

Truth as it is understood by every prophet, sectarian, free-thinker, socialist, and churchman is an absolute proof that such people haven't even begun the effort in mental discipline and self-control which is necessary for the discovery of even the smallest grain of truth.

Incidentally the death of the martyrs has been a great misfortune in history—it has led people astray . . . The conclusion which all imbeciles, women, and plebeians arrive at, that there must be something in a cause for which men face death (or which, as in early Christianity, for instance, starts whole epidemics of death-seeking) has been a tremendous brake upon the spirit of cautious

investigation. Martyrs have actually damaged the cause of truth . . . Even to this day the mere fact of persecution is enough to give an honorable name to any obscure sect. What? Is a cause in any way altered by the fact that somebody has died for it? An error which has acquired an honorable name is still an error, but it has acquired one more seductive appeal. Do not imagine, my dear theologians, that we shall allow you to be martyred for your lies!

The best way to dispose of any cause is to put it respectfully on ice—that is the way the theologians will ultimately be disposed of. This has been, throughout all human history, the characteristic folly of all persecutions: they paid too much respect to what they opposed, in conferring upon it the fascination of martyrdom . . . Women still bend on their knees today before an error, because they have been told that someone died on the Cross for it. Then is the Cross an argument?

But about all these matters only one person has said what has been needed for thousands of years—Zarathustra:

They wrote in blood on the way as they passed, and in their folly they taught that blood proves the truth.

But blood is the worst witness to truth; blood envenoms pure doctrine and turns it to madness and hate.

And what is proved when a man goes through fire for his faith?—truly it is better that a man's own wisdom should be fashioned in his own flame!

LIV

Let us make no mistake: great minds are skeptical. Zarathustra is a skeptic. The strength and the freedom which arise from exceptional power of thought express themselves in skepticism. When it is a question of deciding fundamental values or lack of values, men of confirmed prejudices are of no account. Men of prejudices are in chains. They do not see far enough, they do not look down from a height: whereas a man who would venture to discuss values or lack of values must be able to look down upon hundreds of prejudices—to look backwards at them . . . A mind which aspires to great things and is determined to achieve them is of necessity skeptical. Freedom from prejudice and the ability to view things dispassionately are a mark of strength . . . The essential driving force of a skeptic's existence is a great passion, which is more enlightened and more despotic than he is himself, seizes upon his intellect and presses it into service; it makes him unscrupulous; it gives him the courage to use unholy means to achieve his end; and in certain circumstances it even allows him to be prejudiced. If prejudice is used as a means, much may be achieved by it. Great passion utilizes and discards prejudices, according to its purpose in hand; but it does not submit to them, because it is autonomous.

On the other hand, the need of faith, of something which is definitely positive or affirmative (Carlyle-ism, if I may be allowed the phrase) is a sign of weakness. The man of faith, any kind of "believer," is necessarily subservient to something outside himself: he cannot posit himself as an end, and he cannot find ends within

himself. The "believer" does not really belong to himself, he is only a means, he needs to be used, and he needs somebody to use him. His instinct accords the highest place to a morality of abnegation; and everything within him—his prudence, his experience, and his vanity—prompt him to espouse this morality. Any kind of faith is the expression of self-denial, and of estrangement from self . . .

When it is considered that a code of conduct is absolutely essential to the vast majority of people, a code which restrains them and regulates them from without; and when it is considered that external control, or in other words, slavery, is the one and only condition under which weak-willed men, and particularly women, can develop, then at once the meaning of conviction and faith becomes evident. They give a backbone to the man of prejudice. The only conditions under which such a man can survive at all are to avoid looking at most things, never to be impartial, always to belong to some party or another, and to have a clear-cut point of view in forming all his judgments.

And this is precisely the opposite procedure to that followed by the seeker after truth . . . A believer cannot be at liberty to have any conscience for what is true or untrue: any independence in this regard would bring about his collapse. It is merely a pathological development of this defective sight which converts a man of conviction into a fanatic like Savonarola, Luther, Rousseau, Robespierre, Saint-Simon—types which are the exact opposite of strong and freed minds. But the striking poses of these morbid minds, and their epileptic ideas, work upon the masses of mankind: for fanatics are picturesque, and men would much rather be entertained by a pose than listen to reason . . .

LV

Let us now take one step further in our study of the psychology of prejudice, or of "faith." It is some time since I first proposed for consideration the point of view that prejudice is a greater enemy of truth than lying. ("Human, all-too-human," I, Aphorism 483.) This time I wish to state the question more definitely as follows: Is there any distinction whatever between a prejudice and a lie?—Everybody thinks there is, but what doesn't everybody believe? Every prejudice has its own history, its own formative stage, its period of tentativeness and mistakes. It becomes prejudice only after not having been a prejudice for a long time, and then having been nearly a prejudice. What does it matter if in one of these embryonic stages the prejudice was actually a falsehood? Sometimes all that is required is a change in persons: the father's lie becomes an article of faith for the son.

I call it lying to refuse to see a thing in the way it appears; it is another matter whether the lie was committed before witnesses or otherwise; for the most common form of lying is self-deception, and deception of others, compared to this offense, is comparatively rare.

Now this refusal to face things the way they appear is absolutely essential for anybody who joins a party; the party man is invariably

a liar. For example, German historians are convinced that Rome stood for despotism, and that the Teutons introduced the idea of liberty into the world: what is the difference between a conviction like this and a lie? Is it to be wondered at, after this, that all partisans, including German historians, instinctively utter ponderous moral pronouncements—or that morality itself has been kept alive by the fact that partisans of every kind constantly stand in need of it?

A remark I have frequently heard used by anti-Semites is the following: "We admit we are prejudiced, and we live and die for our prejudices—everyone's prejudices should be respected!" On the contrary, my dear sirs, an anti-Semite does not become more worthy of respect because he is a liar on principle . . . Priests are much more subtle in these matters because they understand the objections which might be raised against following prejudice (namely against falsehood raised to the status of a principle for some special purpose) and so they have borrowed from the Jews the device of interlarding the ideas of "God," the "will of God," and "God's revelation" at this point. Kant also, with his categorical imperative, was up to the same game—hence his concept of practical reason.

There are some questions to which man cannot give a clear answer; all the important questions, and problems of value are beyond human reason . . . Genuine philosophy consists in understanding just how far reason can go . . . Otherwise why did God reveal himself to men? God does nothing superfluous. Man cannot by himself know anything about good and evil, and so God taught him his will . . . The conclusion of the whole argument is that the priest cannot lie, because questions of truth or otherwise have nothing to do with the matters dealt with by the priests. For in order to lie, it would be necessary to know what the truth should be. But this is more than men can grasp—hence the priest speaks only as an agent of God, who alone understands.

Such is the sacerdotal syllogism, and it is by no means confined to Jewish and Christian priests: the right to lie and the clever trick of "revelation" are characteristic of all priests, whether decadent or pre-Christian. (The pre-Christian priests affirmed life, and "God" for them meant acquiescence in organic life.)

The "law," the "will of God," "Holy Scriptures," and "inspiration," are all merely methods used by priests for attaining power and keeping it. And they are ideas which underlie all theocracies, and all priestly or philosophical forms of government. The "holy lie"—which is common to Confucius, the code of Manu, to Mahomet, and to the Christian church—is even to be found in Plato. Whenever the phrase, "This is truth," is uttered, beware of the priestly lie.

LVI

In the last resort, it boils down to this—what is the purpose of the priestly lie? The fact that from the Christian religion a really "sacred" purpose is absent is my principal objection to the means it employs. Its intentions are evil—to poison, slander, and deny organic life, to despise the body and to degrade and pollute humanity with

the idea of sin—hence it follows that the means it employs are evil.

I have quite a different feeling when I read the book of Manu, an incomparably superior and more intelligent work than the Bible, which it is almost a sin against intellect to mention in the same breath as the Bible. And the reason is obvious: there is genuine thought behind it, not merely an evil-smelling Jewish compilation of rabbinism and superstition—it gives the most pernicky psychologist something to digest. And, even more important, it is entirely different from every kind of Bible because it is intended to help the nobility, the philosophers, and the warriors, to keep a whip-hand over the mob. It is full of dignified values, it is inspired with the idea of attaining perfection by accepting what life has to offer, and it manifests a feeling of exultation in self as a living fact—the sun shines upon the whole book.

Here everything that Christianity besmirches with its bottomless vulgarity—for example, procreation, women, and nuptials—is treated earnestly, reverently, and with affection and certainty.

How could anyone possibly put into the hands of children and ladies a book which contains such filthy words as these: *"To avoid fornication, let every man have his own wife, and let every woman have her own husband . . . it is better to marry than to burn"*?

And is it possible to be a Christian so long as the actual generation of man is Christianized, or in other words defiled, by the doctrine of the Immaculate Conception? . . .

I know of no book in which so many delicate and kindly things are said of women, as in the book of Manu: these old grey-beards and saints have a way of being polite to women which would be almost impossible to surpass. "The mouth of a woman," says Manu, "the breasts of a maiden, the prayer of a child, and the smoke of sacrifice, are always pure."

And elsewhere he says: "There is nothing purer than the light of the sun, the shadow of a cow, air, water, fire, and the breath of a maid." Finally one more quotation: "All the orifices of the body above the navel are pure, all below the navel are impure; but in the maiden the whole body is pure"—but perhaps this is also a "holy lie"!

LVII

It only needs a comparison of the intention of Christianity with that of Manu to show how utterly unholy is Christian procedure: and to do this these two utterly contrasted ethics should be examined side by side under the strongest light of comparative criticism—though any such critique of the Christian religion must in the end bring Christianity into contempt.

A law-book like the book of Manu has the same origin as any other law-book: it epitomizes the experience, the sagacity and the experimental morality of long centuries: it lays things down definitely, even if it creates nothing new. What is required for a codification of this kind is a recognition of the fact that the means used to secure authority for a hard-won truth, are entirely different from those which would be required to prove it. A law-book never need

recite the utility and the preliminary causistry justifying its laws: for if it did so, it would lose its tone of command—the “Thou shalt” which enforces obedience; and this is the heart of the matter.

At a certain point in the development of a people, the most far-seeing class (that is, the class which can best see both backwards and forwards) declares that the experimental period in arriving at how all the people shall or can live has now come to an end. The object now is to reap as rich and complete an harvest as possible in return for the terrible times of experiment gone through. Consequently what has now to be avoided at all costs is further experiment, or a prolongation of the period of testing, selecting and criticizing values.

To prevent this, a twofold barrier is set up: on the one hand, Revelation, which assumes that the reason behind the laws is superhuman in origin; that these laws were not sought and found by a slow process and after many mistakes, but are of divine origin, in their entirety, perfect, without any development, a gift and a miracle . . . ; and on the other hand, tradition, which assumes that the law has been in existence unchanged from time immemorial, and that it is impious and a crime against one's ancestors to cast doubt upon it.

Thus the authority of the law is established on the twofold principle: God gave it, and our ancestors lived it. The best intention behind such a procedure is to lead consciousness step by step away from focusing upon the problem of living correctly (which has now been established by intense effort and carefully scrutinized experience), so that morality may find its expression in an entirely automatic functioning of the instincts: such being the only possible method of mastering and attaining perfection in the art of living.

To draw up a code-book like that of *Manu* is equivalent to endowing a people with the possibility of future self-mastery and perfection—it gives them the right to aspire to the highest achievement in the art of living. To do this it must be made unconscious—such is the purpose of every “holy lie.”

There is an ordering of mankind into castes, and this is the only law of domination, sanction given to a natural law and to natural justice of the highest importance, upon which no innovation, nor any “modern idea” has an effect. According to this law, society is divided into three distinct types, differentiated physically, but mutually interrelated; and each has its own rules of health, its own sphere of work, and its own particular concepts of self-mastery and perfection. It is not *Manu* but nature that sets apart in one class, the individuals who are predominantly intellectual; and in another class, those who excel in muscular aptitude and strength; and in the third, those who are distinguished neither in body nor in mind—the mediocre—by far the greatest number, the first two categories being those of the elect.

The first of these castes (whom I will call the “few”) has the privileges of the few who are perfect: it is their character to express happiness, beauty and goodness on earth; for only intelligent

men have any right to beauty and to the beautiful, as they are the only ones who can be good without being feeble. "Beauty is for the few," and goodness is a privilege. Nothing could be more unworthy in this caste than uncouth manners or a pessimistic view of things, an eye for ugliness . . . or indignation against the general state of affairs. For indignation is a privilege set apart for the Chandala, and so is pessimism. What the instinct of the intellectuals inspires is the opinion that the world is as good as it can be; and this is the instinct of affirmation.

It is even conceded that imperfection, inferiority, distance, the loneliness of superiority, and even the Chandala belong, as parts, to the universal perfection. The intelligent men, in common with the strong men, find their happiness where the others see only disaster. Their delight is in the labyrinth, in being hard to themselves and to others; in strenuous effort; and their joy is in self-mastery. With them asceticism becomes second nature, a need, and an instinct. A difficult task they regard as a privilege; and to lift burdens which would crush their fellow-men is merely a recreation . . . Knowledge for them is actually a form of asceticism. They are the most conscientious of men; which doesn't prevent them from being cheerful and gracious. They are the rulers, not because they desire it, but because of what they are: they are not at liberty to occupy a secondary position.

The second of these castes: To this belong guardians of the law, of order and security, the noble warriors, and in particular the king, as the personification of warrior and judge. The second caste constitutes the executive of the intellectuals, the nearest to them and belonging to them, whose duty it is to relieve their superiors of all the rough tasks in the business of ruling. They are the followers, the assistants and the most apt disciples of the ruling caste. And in all this, I repeat, there is nothing artificial or arbitrary; for nature is put to shame by anything other than this state of affairs . . .

The division of mankind into castes and orders of rank is merely a formulation of a profound law of life itself; and the differentiation of the three types is essential for the maintenance of social amenities, and of the breeding of higher and better types of men. The one thing essential for the maintenance of any rights whatever is that there should be no equality of rights: for a right is the same thing as a privilege, and everyone is entitled to the privileges of his own type.

And let us not underestimate the privileges of mediocrity; for as life gets higher, it gets harder. It is colder on the heights and there are greater responsibilities to face. A highly-developed civilization is a pyramid; it can rest only upon a broad base; and at the bottom there must be a well-packed mass of mediocrity. The handicrafts, commerce, agriculture, science, most of the arts, and in short, most of the professional and business callings, are compatible only with mediocre ability and ambition. Such callings would be unfitting

for exceptional men; the instinct which takes kindly to them is equally unfitted for both aristocracy and anarchism.

If a man is of some public use, a wheel, a function, he has a pre-destination for that sort of thing. It is not society that makes them intelligent machines, but the peculiar kind of happiness of which they alone are capable. The mediocre glory in their mediocrity: their specialty, and their natural instinct, is to master one thing alone. Thus it would be absolutely unworthy of a profound thinker to look down upon mediocrity as such. Indeed mediocrity is essential if superior types are to be produced. It is prerequisite to any high degree of civilization: and if the outstanding man handles the mediocre man more delicately than he handles himself or his equals, it is not merely kindness of heart or "humanitarianism" but his duty.

Whom do I hate most amongst the rabble of today? the Socialistic rabble, the apostles to the Chandala, who undermine the workingman's instincts, destroy his happiness, and his feeling of contentment with his trivial existence—who make him envious and who teach him revenge . . . There is nothing wrong with unequal rights; only in the claim to equal rights . . . What is evil? Ah, but I have already replied to this question; everything arising in weakness, envy, and revenge—the anarchist and the Christian belong to the same family . . .

LVIII

As a matter of fact the purpose for which a man lies makes all the difference in the world; whether it is intended to build up or destroy by the lie in question. There is every reason for comparing the Christian and the anarchist because the impulse of both is towards destruction. History easily proves this proposition, and makes the similarity appallingly clear. In the last chapter we studied a code of religious laws of which the purpose was to transform the means of developing and expanding life into a permanent social format—and Christianity deliberately set out to abolish such a code, for the simple reason that life flourishes under it. Under Manu the advantages of reason acquired through long ages of experimental uncertainty were applied with advantage to all purposes, even the most minute, and some effort was made to reap a harvest as large, and complete, and rich as possible. Under Christianity, on the other hand, this very harvest is blighted in a single night. What stood there, firm through the ages, was the *Imperium Romanum*, the most magnificent form of organization in the teeth of difficulties that has ever been achieved; an organization compared with which every thing that went before and after seems mere patchwork, jerry-building, and amateurishness. When the holy anarchists set out to attack the "world," they meant the *Imperium Romanum*, and they succeeded to such an extent that in the end not one stone was left standing—and even Teutons and other such clod-hoppers were able to overrun it . . . The Christian and the anarchist are both decadents, both are only able to act for the purpose of disintegrating, poisoning, degrading, and blood-suck-

ing; they both have the impulse of mortal hatred towards anything that stands up, and is great, and is lasting and shows promise for the future . . . Christianity was the vampire of the *Imperium Romanum*—almost overnight it shattered the vast achievement of the Romans, who had laid the foundation for a wide culture yet to come. Can it be that this fact is not yet understood? The *Imperium Romanum* that we know, and that the history of the Roman colonies teaches us to know better; this most admirable work of art carried out on a large canvas, was merely the beginning of a construction built to prove its worth over thousands of years. To this day nothing on a like scale has been attempted on the wide earth or even dreamed of!

This organization was strong enough to outlast mad emperors, for the accident of personality has no effect in such a case—the first principle of all monumental architecture. It was not strong enough to stand against the deadliest kind of corruption—against Christians . . . the stealthy worms, that under cover of night, mist, and deceit, bored their way into the heart of every individual, sucking him dry of all interest in serious matters, and all interest in reality—this cowardly, effeminate, and sentimental gang gradually alienated all “souls,” one at a time, from that colossal edifice. They sapped the strength of all the significant, manly and noble natures, that had felt the cause of Rome to be their own cause, their own earnest purpose, and their own pride. The stealth of fanaticism, the secrecy of the conventicle, ideas black as hell, such as the sacrifice of the innocent, mystical “communion” in blood-drinking, and above all the slowly-kindled flame of Chandala revenge—this was the sort of thing that became master of Rome: the kind of thing Epicurus had earlier combated in an embryonic form. One has only to read Lucretius to realize that what Epicurus contended against was not paganism but something essentially “Christian,” namely the corruption of minds with the ideas of guilt, punishment, and personal survival. He contended against the underground cults, in which Christianity was latent; it was a genuine “salvation” when he denied personal survival.

And Epicurus had triumphed. In fact, every decent Roman with pretensions to intellect was an Epicurean—until Paul appeared on the scene . . . Paul, an incarnation of Chandala hatred against the empire (or the “world”): Paul, the Jew, the eternal and perfect Jew—Paul the genius . . . He realized that, by means of the small sectarian Christian movement which had broken away from Judaism, a world conflagration could be kindled. He realized that by means of “God on the Cross,” everything underhand, seditious, and a product of rebellious intrigues within the empire, might be welded together into one immense power. “For salvation is of the Jews.”

Thus Christianity supersedes and epitomizes every kind of subterranean worship, such as that of Osiris, of the great mother, and of Mithras, for example—it was in realizing his opportunities in this direction that Paul showed his genius. So sure was his instinct, that with reckless disregard for truth, he actually put into the very lips

of his patent "Savior" all the ideas which made the Chandala sectarian cults so fascinating—he made Christ into something that even a priest of Mithras could understand . . .

This it was which was "revealed" to him at Damascus. He grasped the fact that by means of personal survival he would be able to vilify the "world"; he grasped the fact that he would master Rome by means of Hell; and that "the life beyond" kills this life . . . Nihilist and Christ rhyme in German, and also they mean the same thing . . .

LIX

The whole labor of the ancient world gone for naught—I have no word for this, I cannot express my emotion at this atrocity—and, considering that its work was merely preparatory, that with granitic self-consciousness it laid only the foundations of a work which was to have gone on for thousands of years, the whole meaning of antiquity disappears! . . . To what end the Greeks? to what end the Romans?—all the essentials of a cultivated civilization were already there; all the methods of knowledge had been attained; the great and incomparable art of reading well had been established—a prerequisite to the tradition of culture and the unity of knowledge.

The natural sciences, hand in hand with mathematics and mechanics, were on the right road. The sense of fact, which is the last and most valuable of all the senses, was in their blood, and had been for centuries. Can it be that this is fully understood? Everything essential to the beginning of the work had been arrived at—and I must again repeat that the most essential thing, and the the thing most difficult to arrive at, is method; because method has to encounter the longest and strongest opposition from habits of laziness.

Today we have reconquered, after an incredible self-discipline (for all of us are afflicted at some point with relics of the Christian instincts) an impartial attitude towards reality, a cautious hand in experiment, patience and reverence in minute details, and everything which constitutes integrity in the attainment of knowledge. All these things were already on the earth two thousand years ago! In addition, there was also a refined and subtle sense of tact and taste! Science was not a matter of automatic brain-drill; it was not German "culture" with the manners of a boor! But it was intuitive, it showed itself naturally in men's demeanor, almost as an instinct—and this frame of mind was able to understand reality . . .

Yet all this was in vain! Overnight it became merely a memory!—The Greeks! the Romans! nobility of the instincts, taste, methodical research, genius for organization and administration; a faith in and a will to the future of humanity, a terrific affirmation of everything crystallized in the *Imperium Romanum*, manifesting itself in every form of activity, the grand manner not merely expressed in art, but in actuality, in truth, and in living.

And all this was buried in a night, though not by a cataclysm of nature! Not trampled to death by Germans and others of heavy

foot! But brought to shame by crafty, stealthy, invisible, anemic vampires! Not conquered—merely sucked dry! . . .

Hidden vengefulness, petty envy, became master! Everything that is degenerate, based in suffering, soaked in ignoble feelings, was uppermost in a trice! One need only read any of the early Christian agitators (Saint Augustine, for example) in order to realize or rather in order to smell what filthy fellows came to the top. It would be a mistake, however, to suppose that the leaders of the early Christian agitation were without intelligence. Oh, they were shrewd, shrewd to the point of holiness, were these fathers of the church! What they lacked was something else altogether. Nature had neglected them in one respect. Nature forgot to give them even a modest endowment of decent, respectable and cleanly instinct . . . Between ourselves, they are not even men . . . If Mohammedans despise Christians, they have a perfectly good reason for doing so; because the Mohammedan religion assumes that it has to do with men . . .

LX

Christianity destroyed for us the harvest we might have reaped from ancient civilization; and then later it went further and prevented us from harvesting the culture of Islam. The wonderful culture of the Moors in Spain, which was more closely related to our modern problems, and consequently could have made a nearer appeal to our senses and inclinations than that of Rome and Greece, was trampled down (by feet I prefer not to describe)—and why? Because in its origin it arose from a noble and manly impulse, because it affirmed life, even the refined and rare sensuousness of Moorish life! . . . Later on the crusaders conducted a war against a civilization before which they should rather have grovelled in the dust—a civilization compared with which our nineteenth century existence seems feeble and decrepit.

What the Crusaders wanted, of course, was plunder: for the east was rich . . . Prejudices must be set on one side! The Crusades were a superior kind of piracy, nothing more. The German nobility, essentially Viking in origin, was in its element in wars of this kind; and the church knew only too well the best way to get the German nobility on its side . . . The German nobles were always the "Swiss guard" of the church, they were always at the service of the church's instinct for destruction—but they had to be well paid for what they did . . . Just to think that it was with German swords, with German blood and courage, that the church waged mortal conflict against everything noble on earth! This raises a great number of painful questions. The German nobility has had nothing to do with the actual development of a higher civilization: and the reason is obvious . . . Christianity and heavy drinking—the two great stultifiers . . . Essentially the difference between Mohammedanism and Christianity is the difference between an Arab and a Jew. There is no need to pause for choice between them—the decision is obvious. A man either belongs to the Chandala or he doesn't. That great free

spirit, Frederick the Second, a genius among German emperors, did not hesitate: "War to the knife with Rome! Peace and friendship with Islam!"—this was not only what he felt, but also how he acted. What! has a German to be actually a genius, a free spirit, before he can have decent feelings? It always amazes me how a German could possibly have Christian feelings . . .

LXI

At this point we have to revive a memory which must be a hundred times more mortifying to Germans. It was Germans who destroyed in Europe the last great harvest of culture which Europe was to garner—the Renaissance. Is it understood even now, will it ever be understood, what the Renaissance meant? It was an overthrowing of the Christian values, an attempt made with every possible means available, and with every impulse and resource of genius, to set up the opposite scale of values, the scale of noble values . . . Until now this has been the one supreme struggle; there has never been any question more important than that of the Renaissance—and it is my question too.

There has never been a more fundamental, a more direct, and a more severe attack, launched upon the whole front at the foe's stronghold. It was an attack at the strategical point, at the very seat of Christianity, with the intention of enthroning noble values there—that is, of insinuating them into the instincts, and the most fundamental needs and desires of those in authority there . . . I see before me a possibility magical in its charm and colorfulness. It seems to me to scintillate with all the shimmering lucency of a delicate and refined beauty. It generates an art so divine, so devilishly divine, that it may take thousands of years before another such occasion will arise. I see a spectacle so rich in meaning, so wonderfully paradoxical, that it is enough to make all the Gods on Olympus roar with laughter—Caesar Borgia as Pope! . . . Do I make myself plain? . . . That is the kind of triumph for which I alone am longing today; for it would have swept Christianity into oblivion.

But what happened? It was a German monk, Luther, who came to Rome, filled with all the thwarted and vengeful instincts of an unsuccessful priest; and gnashed his teeth over what he saw of the Renaissance in Rome. Instead of comprehending, with a profound thankfulness, the miracle that had occurred—Christianity beaten in its own stronghold—the sight merely moved him to rage. A religious man thinks only in terms of himself—Luther could only see the corruption of the Papacy, at a time when the very opposite was becoming evident; when the old corruption, the original sin, Christianity, sat on the throne of the Popes no more! But life! the triumph of life! was there instead. An acceptance of loftiness, beauty and courage sat on the throne of the Popes. . . . And Luther put the church back where it was . . . Luther attacked the Papacy.

Thus the Renaissance became a meaningless event, all to no purpose—ah, these Germans! What a lot they have cost mankind already! Their achievement has always been something to no purpose—the

reformation, Leibnitz, Kant, and what is called German philosophy, the wars of "liberation," the empire—in every case something to no purpose in replacement of what had already existed, in replacement of what was irrecoverable . . .

These Germans are my foes, I boast of it; I despise all their muddiness of thought and morality, all their cowardice in the face of an honest yes-or-no. For nearly a thousand years they have muddled and confused everything they laid hands on. They have on their conscience all the half-measures and less-than-half-measures, from which Europe is suffering. They also have on their conscience the uncleanest, and the most incurable, and the most irremovable species of Christianity—Protestantism . . . If Christianity is never abolished the Germans will be to blame . . .

LXII

With this I complete my indictment and pronounce my judgment: I condemn Christianity! I bring against the Christian Church the most terrible accusation that has ever been uttered. I say that it is the worst of possible corruptions, that it seeks to effect the ultimate corruption, the most dreadful corruption. The Christian Church has befouled everything with its touch; it has reversed every sound value, turned every truth into a lie, and every impulse of integrity it has stigmatized with baseness. Then let no one dare to speak to me of its "humanitarian" blessings! By its inmost necessity it must stand forever opposed to the effort to abolish suffering; for it battens upon suffering—it requires and it creates suffering to ensure its own continuance . . . The canker of sin, for example; it was the church which first conferred this misery upon mankind: or the "equality of souls before God"—this utter lie, this excuse for the rancors of all base minds, this bombshell concept, bursting out in modern religiousness and subversion of human discipline—this is none other than Christian dynamite . . . The humanitarian blessings of Christianity indeed! My view of the so-called humanitarianism of Christianity is that it contradicts true humanism: it splits the human core with the art of self-pollution, the desire to escape from actuality at all costs, a mistrust of all healthy instincts, a contempt for them, even.

And parasitism is the one method by which the church lives: sucking all the blood, all the love, all the hope out of life with its anemic, holy ideals—the beyond used as a symbol of escape from the here and now; the Cross as a sign of the most subterranean conspiracy ever revealed, a conspiracy against health, beauty, self-integration, courage, intellect, spiritual tenderness—against the very heart of life.

This is the undying denunciation of Christianity which I shall write upon all walls, wherever there are walls. I have letters that will burn even upon the eyeballs of the blind. I call Christianity the one great curse, the one intrinsic depravity, the one black impulse of resentment, for which no subterfuge is too vile, or too furtive, or too underhand, or too mean. I say this thing is the one indelible

blot upon the achievement of man . . . Yet time is reckoned from the ill-omened day when such a calamity occurred! From the first day of the Christian era! Why not rather from its last day? From today? . . . The transvaluation of all values . . .

FOREWORD

Epictetus, Greek philosopher, was born about 60 A. D.—his name is merely the Greek for *acquired*, and his real name is not known. He was a slave when a boy, and later a freedman and courtier of the notorious Nero. Lame and of poor health, he attended lectures of a Stoic philosopher, and in the year 90 he was banished with other philosophers by Domitian (51-96). So, for the rest of his life, he lived in southern Epirus, northwest of Greece. The date of his death is uncertain, some authorities extending his life into the time of Hadrian (117-138).

Like Socrates, Epictetus wrote nothing of his own. The philosophy that has come down to us is in the words of his pupil, Flavius Arrianus, and consists of the *Discourses* (in Four Books, of which the present text is an abridgment); the *Encheiridion*, or the "Handbook," which consists of aphorisms summarizing in brief and pungent paragraphs the main trends of philosophy in the *Discourses*, and which is available as Little Blue Book No. 576; and some isolated *Fragments* of which the origin is uncertain or unknown altogether.

The key to Epictetus is that he is intensely *practical*. Always a preacher of righteousness, he taught that man's will was absolutely and eternally his own, and that nothing, evil, pain, pleasure, or death, could thwart its determination. His will is man's only absolute possession—his ideas may not be his own, but the

4 MORAL DISCOURSES OF EPICTETUS

manner in which he employs them is wholly so. "Two maxims we must ever bear in mind—that apart from the will there is nothing either good or bad, and that he must not try to anticipate or direct events, but merely accept them with intelligence." Man is the "citizen" of the universe, a part among many parts of one composite whole, and, as such, he must conduct himself as a disciple of reason. Thus he must not only look out for himself, but for the welfare of all—he is not only a "rational" but also a "social" animal. The will of nature, that is, of the Supreme Ruler—the one Law that runs through all things—is man's guiding principle, and anything conforming to that, which means everything that happens, he should accept *stoically*.

Readers interested in a more detailed exposition of Stoicism are referred to *A Guide to Stoicism*, by St. George Stock (Little Blue Book No. 347), and the *Stoic Philosophy*, by Prof. Gilbert Murray (Little Blue Book No. 210).

MORAL DISCOURSES OF EPICTETUS

(The text is based on that of T. W. Higginson, first published in 1865, which is a translation based on that of Elizabeth Carter, first published in 1758. Higginson has the advantage of more modern diction than the older translations, and hence is easier reading.)

ARRIAN¹ TO LUCIUS GELLIUS

WISHETH ALL HAPPINESS

"I neither composed the Discourses of Epictetus in such a manner as things of this nature are commonly composed, nor did I myself produce them to public view, any more than I composed them. But whatever sentiments I heard from his own mouth, the very same I endeavored to set down in the very same words, so far as possible, and to preserve as memorials for my own use, of his manner of thinking, and freedom of speech.

"These Discourses are such as one person would naturally deliver from his own thoughts, *extempore*, to another; not such as he would prepare to read by numbers afterwards. Yet, notwithstanding this, I cannot tell how, without either my consent or knowledge, they have fallen into the hands of the public. But it is of little consequence to me, if I do not appear an able writer, and of none to Epictetus, if anyone treats his Discourses with contempt; since it was very evident, even when he uttered them, that he aimed at nothing more

¹See Foreword.

than to excite his hearers to virtue. If they produce that one effect, they have in them what, I think, philosophical discourses ought to have. And should they fail of it, let the readers however be assured, that when Epictetus himself pronounced them, his audience could not help being affected in the very manner he intended they should. If by themselves they have less efficacy, perhaps it is my fault, or perhaps it is unavoidable. *Farewell.*"

BOOK I

1. OF THE THINGS WHICH ARE AND THE THINGS WHICH ARE NOT IN OUR POWER

(Grammar tells what to write, but not when to write; music tells of tunes, but not when it is proper to play them; so what will tell these latter things?)

The Reasoning Faculty; for that alone is found to consider both itself, its powers, its value, and likewise all the rest. For what is it else that says, Gold is beautiful; for the gold itself does not speak? Evidently that faculty which judges of the appearances of things. What else distinguishes music, grammar, the other faculties, proves their uses, and shows their proper occasions? Nothing but this.

As it was fit then, this most excellent and superior faculty alone, a right use of the appearances of things, the gods have placed in our own power; but all other matters they have not placed in our power. Was it because they would not? I rather think, that if they could, they had granted us these too; but they cer-

tainly could not. For, placed upon earth, and confined to such a body, and to such companions, how was it possible that, in these respects, we should not be hindered by things outside of us?

What then is to be done? To make the best of what is in our power, and take the rest as it occurs. And how does it occur? As it pleases God.

- You may fetter my leg, but not Zeus himself can get the better of my free will.

I must die: if instantly, I will die instantly; if in a short time, I will dine first; and when the hour comes, then I will die. How? As becomes one who restores what is not his own.

2. IN WHAT MANNER, UPON EVERY OCCASION, TO PRESERVE OUR CHARACTER

To a reasonable creature, that alone is insupportable which is unreasonable; but everything reasonable may be supported. In short we shall find by observation that no creature is oppressed so much by anything as by what is unreasonable; nor, on the other hand, attracted to anything so strongly as to what is reasonable.

But it happens that different things are reasonable and unreasonable, as well as good and bad, advantageous and disadvantageous, to different persons. On this account, chiefly, we stand in need of a liberal education, to teach us to adapt the preconceptions of reasonable and unreasonable to particular cases, conformably to nature. But to judge of reasonable and unreasonable, we make use not only of a due estimation of things outside of us, but

of what relates to each person's particular character. Thus, it is reasonable for one man to submit to a menial office, who considers this only, that if he does not submit to it, he shall be whipped, and lose his dinner, but that if he does, he has nothing hard or disagreeable to suffer; whereas to another it appears insupportable, not only to submit to such an office himself, but to respect anyone else who does. If you ask me, then, whether you shall do this menial office or not, I will tell you, it is a more valuable thing to get a dinner than not; and a greater disgrace to be whipped than not to be whipped;—so that, if you measure yourself by these things, go and do your office.

"Ay, but this is not suitable to my character."

It is you who are to consider that, not I; for it is you who know yourself, what value you set upon yourself, and at what rate you sell yourself; for different people sell themselves at different prices.

It was asked, How shall each of us perceive what belongs to his character? Whence, replied Epictetus, does a bull, when the lion approaches, alone recognize his own qualifications and expose himself alone for the whole herd? It is evident that with the qualifications occurs, at the same time, the consciousness of being endowed with them. And in the same manner, whoever of us hath such qualifications will not be ignorant of them. But neither is a bull, nor a gallant-spirited man, formed all at once. We are to exercise, and

qualify ourselves, and not to run rashly upon what doth not concern us.

4. OF PROGRESS

He who is entering on a state of progress, having learned from the philosophers that good should be sought and evil shunned; and having learned too that prosperity and peace are not otherwise attainable by man than in not missing what he seeks nor incurring what he shuns; such a one removes totally from himself and banishes all wayward desire, and shuns only those things over which he can have control. For if he should attempt to shun those things over which he has no control, he knows that he must sometimes incur that which he shuns, and be unhappy. Now if virtue promises happiness, prosperity, and peace, then progress in virtue is certainly progress in each of these. For to whatever point the perfection of anything absolutely brings us, progress is always an approach towards it.

How happens it, then, that when we confess virtue to be such, yet we seek and make an ostentatious show of progress in other things? What is the business of virtue? A life truly prosperous.

Seek progress where your work lies. And where doth your work lie? In learning what to seek and what to shun, that you may neither be disappointed of the one, nor incur the other; in practising how to pursue and how to avoid, that you may not be liable to fail; in practising intellectual assent and doubt, that you may not be liable to be deceived. These are the first and most necessary things. But if you merely

10 MORAL DISCOURSES OF EPICTETUS

seek, in trembling and lamentation, to keep away all possible ills, what real progress have you made?

Where is progress, then?

If any of you, withdrawing himself from externals, turn to his own will, to train, and perfect and render it conformable to nature; noble, free, unrestrained, unhindered, faithful, humble; if he hath learned, too, that whoever desires or shuns things beyond his own power can neither be faithful nor free, but must necessarily take his chance with them, must necessarily too be subject to others, to such as can procure or prevent what he desires or shuns; if, rising in the morning, he observes and keeps to these rules; bathes regularly, eats frugally; and to every subject of action, applies the same fixed principles,—if a racer to racing, if an orator to oratory; this is he who truly makes progress; this is he who hath not labored in vain. But if he is wholly intent on reading books, and hath labored that point only, and traveled for that, I bid him go home immediately, and do his daily duties, since that which he sought is nothing.

7. OF THE USE OF THE FORMS OF RIGHT REASONING

It is not understood by most persons that the proper use of inferences and hypotheses and interrogations, and logical forms generally, has any relation to the duties of life. In every subject of action, the question is, how a wise and good man may come honestly and consistently out of it. We must admit, therefore, either that the wise man will not engage in

difficult problems; or that, if he does, he will not think it worth his care to deal with them thoroughly; or if we allow neither of these alternatives, it is necessary to confess that some examination ought to be made of those points on which the solution of these problems chiefly depends. For what is reasoning? To lay down true positions; to reject false ones; and to suspend the judgment in doubtful ones.—In reasoning the definition just given is not enough; but it is necessary that we should be able to prove and distinguish between the true, and the false, and the doubtful. This is clear.

Is it not moreover necessary that he who would behave skilfully in reasoning should both himself demonstrate whatever he asserts, and be able to comprehend the demonstrations of others; and not be deceived by such as sophisticate, as if they were demonstrating? Hence arises the use and practice of logical forms; and it appears to be indispensable.

Is it no fault to treat rashly and vainly and heedlessly the things which pass before our eyes; not to comprehend a reason, nor a demonstration, nor a sophism; nor, in short, to see what is strong in reasoning and what is weak? Is there nothing wrong in this?

12. OF CONTENTMENT

You are wretched and discontented. If you are alone, you term it a desert; and if with men, you call them cheats and robbers. You find fault too with your parents, and children, and brothers, and neighbors. Whereas you ought, if you live alone, to call that repose and freedom, and to esteem yourself as resembling the

12 MORAL DISCOURSES OF EPICTETUS

gods; and when you are in company, not to call it a crowd, and a tumult, and a trouble, but an assembly, and a festival; and thus to take all things contentedly. What then is the punishment of those who do not so accept them? To be—as they are. Is anyone discontented with being alone? Let him remain in his desert. Discontented with his parents? Let him be a son; and let him mourn. Discontented with his children? Let him be a bad father. Shall we throw him into prison? What prison? Where he already is, for he is in a situation against his will, and wherever anyone is against his will, that is to him a prison; just as Socrates was not truly in prison, for he was willingly there.²

18. THAT WE OUGHT NOT TO BE ANGRY WITH THE ERRING

If what the philosophers say be true, that all men's actions proceed from one source; that, as they assent, from a persuasion that a thing is so, and dissent, from a persuasion that it is not, and suspend their judgment, from a persuasion that it is uncertain; so, likewise, they seek a thing, from a persuasion that it is for their advantage;—and it is impossible to esteem one thing advantageous, and yet desire another; to esteem one thing a duty, and yet pursue another;—why, after all, should we be angry at the multitude?

“They are thieves and robbers.”

What do you mean by thieves and robbers? They are in error concerning good and evil. Ought you, then, to be angry, or rather pity

²See “The Trial and Death of Socrates” (Little Blue Book No. 94).

them? Do but show them their error, and you will see that they will amend their faults; but, if they do not see the error, they will rise no higher than their convictions.

22. OF GENERAL PRINCIPLES

The same general principles are common to all men, nor does one such principle contradict another. For which of us does not admit that good is advantageous and eligible, and in all cases to be pursued and followed? Who does not admit that justice is fair and becoming? Where, then, arises the dispute? In adapting these principles to particular cases. As when one cries, "Such a person has acted well; he is a gallant man"; and another, "No; he has acted like a fool." Hence arises dispute among men.

What then is it to be properly educated? To learn how to apply the principles of natural right to particular cases, and, for the rest, to distinguish that some things are in our power, while others are not. In our own power are the will, and all voluntary actions; out of our power, the body and its parts, property, parents, brothers, children, country; and, in short, all our fellow-beings. Where, then, shall we place good? In what shall we define it to consist? In things within our power.

(Property and material things are goods, some say. But if to have riches were good, then it would be right to take them away from one's neighbor. But this is not right.)

24. HOW WE OUGHT TO STRUGGLE WITH DIFFICULTIES

Difficulties are things that show what men are. For the future, in case of any difficulty,

remember, that God, like a gymnastic trainer, has pitted you against a rough antagonist. For what end? That you may be an Olympic³ conqueror; and this cannot be without toil. No man, in my opinion, has a more profitable difficulty on his hands than you have; provided you will but use it, as an athletic champion uses his antagonist.

26. WHAT THE RULE OF LIFE IS

(The one rule of life is to live in accordance with nature.)

For, if we desire in every matter and on every occasion to conform to nature; we must, on every occasion, evidently make it our aim neither to omit anything thus conformable, nor to admit anything inconsistent. Philosophers, therefore, first exercise us in theory, which is the more easy task, and then lead us to the more difficult; for in theory, there is nothing to hinder our following what we are taught, but in life there are many things to draw us aside.

The first step towards becoming a philosopher is to be sensible in what state the ruling faculty of the mind is; for on knowing it to be weak, no person will immediately employ it in great attempts. But, for want of this, some, who can scarce digest a crumb, will yet buy and swallow whole treatises; and so they throw them up again, or cannot digest them; and then come colics, fluxes, and fevers. Such persons ought to consider what they can bear. Indeed, it is easy to convince an ignorant person, so far as

³In the Olympic games: athletic contests in ancient Greece.

concerns theory; but in matters relating to life, no one offers himself to conviction, and we hate those who have convinced us. Socrates used to say that we ought not to live a life unexamined.

27. OF THE VARIED APPEARANCES OF THINGS

TO THE MIND

Appearances to the mind are of four kinds. Things either are what they appear to be; or they neither are, nor appear to be; or they are, and do not appear to be; or they are not, and yet appear to be. Rightly to aim, in all these cases, is the wise man's task. Whatever unduly constrains us, to that a remedy must be applied.

28. THAT WE OUGHT NOT TO BE ANGRY WITH

MANKIND

What is the cause of assent to anything? Its appearing to be true. It is not possible, therefore, to assent to what appears to be not true. Why? Because it is the very nature of the understanding to agree to truth, to be dissatisfied with falsehood, and to suspend its belief, in doubtful cases.

What is the proof of this?

Persuade yourself, if you can, that it is now night. Impossible. Dissuade yourself from the belief that it is day. Impossible. Persuade yourself that the number of the stars is even or odd. Impossible.

When anyone, then, assents to what is false, be assured that he doth not willfully assent to it, as false; for, as Plato affirms, the soul is unwillingly deprived of truth; but what is false appears to him to be true. Well, then; have we,

in actions, anything corresponding to this distinction between true and false?

Right and wrong; advantageous and disadvantageous; desirable and undesirable; and the like.

A person then cannot think a thing truly advantageous to him, and not choose it? He cannot.

(Then why be angry with those who unhappily are deceived, and take the false for the true?) Why do you not rather, as we pity the blind and lame, so likewise pity those who are blinded and lamed in their superior faculties? Whoever, therefore, duly remembers that the appearance of things to the mind is the standard of every action to man; that this is either right or wrong, and, if right, he is without fault, if wrong, he himself suffers punishment; for that one man cannot be the person deceived, and another the only sufferer;—such a person will not be outrageous and angry at anyone; will not revile, or reproach, or hate, or quarrel with anyone.

29. OF COURAGE

The essence of good and evil is a certain disposition of the will.

What are things outward then? Materials on which the will may act, in attaining its own good or evil.

How, then, will it attain good?

If it be not dazzled by its own materials; for right principles concerning these materials keep the will in a good state; but perverse and distorted principles, in a bad one. This law hath God ordained, who says, "If you wish for good,

receive it from yourself." You say, No; but from another. "Nay; but from yourself."

Accordingly, when a tyrant threatens, and sends for me, I say, Against what is your threatening pointed? If he says, "I will chain you," I answer, It is my hands and feet that you threaten. If he says, "I will cut off your head," I answer, It is my head that you threaten. If he says, "I will throw you into prison," I answer, It is the whole of this paltry body that you threaten; and if he threatens banishment, just the same.

"Does not he threaten *you*, then?"

If I am persuaded that these things are nothing to me, he does not; but, if I fear any of them, it is me that he threatens. Who is it, after all, that I fear? The master of what? Of things in my own power? Of these no one is the master. Of things not in my power? And what are these to me?

"What, then! Do you philosophers teach us a contempt of kings?"

By no means. Which of us teaches anyone to contend with them about things of which they have the command? Take my body; take my possessions; take my reputation; take away even my friends. If I persuade anyone to claim these things as his own, you may justly accuse me. "Ay; but I would command your principles, too." And who hath given you that power? How can you conquer the principle of another? "By applying terror, I will conquer it." Do you not see, that what conquers itself, is not conquered by another? And nothing but itself can conquer the will. Hence, too, the most excellent and

equitable law of God; that the better should always prevail over the worse. Ten are better than one.

"For what purpose?"

For chaining, killing, dragging where they please; for taking away an estate. Thus ten conquer one, in the cases wherein they are better.

"In what, then, are they worse?"

When the one has right principles, and the others have not. For can they conquer in this case? How should they? If we were weighed in a scale, must not the heavier outweigh?

"How then came Socrates to suffer such things from the Athenians?"

O foolish man! what mean you by Socrates? Express the fact as it is. Are you surprised that the mere body of Socrates should be carried away, and dragged to prison, by such as were stronger; that it should be poisoned by hemlock and die? Do these things appear wonderful to you? These things unjust? Is it for such things as these that you accuse God? Had Socrates, then, no compensation for them? In what, then, to him, did the essence of good consist? Whom shall we regard; you, or him? And what says he? "Anytus and Melitus may indeed kill; but hurt me they cannot." And again: "If it so pleases God, so let it be."

But show me that he who has the worse principles can get the advantage over him who has the better. You never will show it, nor anything like it; for the Law of Nature and of God is this,—let the better always prevail over the worse.

BOOK II

1. THAT COURAGE IS NOT INCONSISTENT WITH CAUTION

There is an assertion of the philosophers which may perhaps appear a paradox to many; yet let us fairly examine whether it be true:—that it is possible in all things to act at once with caution and courage. For caution seems, in some measure, contrary to courage; and contraries are by no means consistent. The appearance of a paradox in the present case seems to me to arise as follows. If indeed we assert that courage and caution are to be used in the same instances, we might justly be accused of uniting contradictions; but, in the way that we affirm it, where is the absurdity? For, if what has been so often said, and so often demonstrated, be certain, that the essence of good and evil consists in the use of things as they appear, and that things inevitable are not to be classed either as good or evil, what paradox do the philosophers assert, if they say, “Where events are inevitable, meet them with courage, but otherwise, with caution?” For in these last cases only, if evil lies in a perverted will, is caution to be used. And if things inevitable and uncontrollable are nothing to us, in these we are to make use of courage. Thus we shall be at once cautious and courageous; and, indeed, courageous on account of this very caution; for by using caution, with regard to things really evil, we shall gain courage, with regard to what are not so.

Courage, then, ought to be opposed to death, — and caution to the *fear* of death; whereas, we,

on the contrary, oppose to death, flight; and to these our false convictions concerning it, recklessness, and desperation, and assumed indifference.

This weak flesh is sometimes affected by harsh, sometimes by smooth impressions. If suffering be beyond endurance, the door is open; till then, bear it. It is fit that the final door should be open against all accidents, since thus we escape all trouble.

What, then, is the fruit of these principles? What it ought to be; the most noble, and the most suitable to the wise,—tranquillity, security, freedom. For in this case, we are not to give credit to the many, who say that none ought to be educated but the free; but rather to the philosophers, who say that the wise alone are free.

6. OF CIRCUMSTANCES

A process of reasoning may be an indifferent thing; but our judgment concerning it is not indifferent; for it is either knowledge, or opinion, or mistake. So the events of life occur indifferently, but the use of it is not indifferent. When you are told, therefore, that these things are indifferent, do not, on that account, ever be careless; nor yet, when you are governed by prudence, be abject, and dazzled by externals. It is good to know your own qualifications and powers; that, where you are not qualified, you may be quiet, and not angry that others have there the advantage of you. For you too will think it reasonable, that you should have the advantage in the art of reasoning; and, if others should be angry at it, you will tell them,

by way of consolation, "This I have learned, and you have not." Thus, too, wherever practice is necessary, do not pretend to what can only be attained by practice; but leave the matter to those who are practised, and do you be contented in your own security.

Not one of us, even when necessity calls, is ready and willing to obey it; but we weep and groan over painful events, calling them our "circumstances." What circumstances, man? For if you call what surrounds you circumstances, everything is a circumstance; but if by this you mean hardships, where is the hardship, that whatever is born must die? The instrument is either a sword, or a wheel, or the sea, or a tyrant. And what does it signify to you by what way you descend to Hades? All are equal; but, if you would hear the truth, the shortest is that by which a tyrant sends you. No tyrant was ever six months in cutting any man's throat; but a fever often takes a year. All these things are mere sound, and the rumor of empty names.

Only remember the distinction between what is your own, and what is not your own, and you will never claim what belongs to others. Judicial bench or dungeon, each is but a place, one high, the other low; but your will is equal to either condition, and if you have a mind to keep it so, it may be so kept.

8. WHEREIN CONSISTS THE ESSENCE OF GOOD

God is beneficial. Good is also beneficial. It should seem, then, that where the essence of God is, there too is the essence of good. What then is the essence of God? Flesh? By no

means. An estate? Fame? By no means. Intelligence? Knowledge? Right reason? Certainly. Here, then, without more ado, seek the essence of good. For do you seek that quality in a plant? No. Or in a brute? No. If, then, you seek it only in a rational subject, why do you seek it anywhere but in what distinguishes that from things irrational? Plants make no voluntary use of things; and therefore you do not apply the term of *good* to them.—*Good*, then, implies such use. If so, you may say that good, and happiness, and unhappiness, belong to mere animals. But this you do not say, and you are right; for, how much soever they have the use of things, they have not the intelligent use; and with good reason, for they are made to be subservient to others, and not of primary importance. Why was an ass made? Was it as being of primary importance? No; but because we had need of a back, able to carry burdens. We had need too that he should be capable of locomotion; therefore he had the voluntary use of things added; otherwise he could not have moved. But here his endowments end; for, if an understanding of that use had been added, he would not, in reason, have been subject to us, nor have done us these services; but would have been like and equal to ourselves. Why will you not, therefore, seek the essence of good in that without which you cannot say that there is good in anything?

9. WHAT THE NATURE OF MAN IMPLIES

It were no slight attainment could we merely fulfil what the nature of man implies. For what is man? A rational and mortal being.

Well; from what are we distinguished by reason? From wild beasts. From what else? From sheep, and the like.

Take care, then, to do nothing like a wild beast; otherwise you have destroyed the man; you have not fulfilled what your nature promises. Take care too to do nothing like cattle; for thus likewise the man is destroyed.

In what do we act like cattle? When we act gluttonously, lewdly, rashly, sordidly, inconsiderately, into what are we sunk? Into cattle. What have we destroyed? The rational being.

When we behave contentiously, injuriously, passionately, and violently, into what have we sunk? Into wild beasts. And further, some of us are wild beasts of a larger size; others, little mischievous vermin; such as suggest the proverb, Let me rather be eaten by a lion.

By all these means, that is destroyed which the nature of man implies.

10. HOW WE MAY INFER THE DUTIES OF LIFE FROM ITS NOMINAL FUNCTIONS

Consider who you are. In the first place, a man; that is, one who recognizes nothing superior to the faculty of free will, but all things as subject to this; and this itself as not to be enslaved or subjected to anything. Consider, then, from what you are distinguished by reason. You are distinguished from wild beasts: you are distinguished from cattle. Besides, you are a citizen of the universe, and a part of it; not a subordinate, but a principal part. You are capable of comprehending the Divine economy; and of considering the connections of things. What then does the character of a

citizen imply? To hold no private interest; to deliberate of nothing as a separate individual, but rather like the hand or the foot, which, if they had reason, and comprehended the constitution of nature, would never pursue, or desire, but with a reference to the whole. Hence the philosophers rightly say that, if it were possible for a wise and good man to foresee what was to happen, he might co-operate in bringing on himself sickness, and death, and mutilation, being sensible that these things are appointed in the order of the universe; and that the whole is superior to a part, and the city to the citizen. But, since we do not foreknow what is to happen, it becomes our duty to hold to what is more agreeable to our choice, for this too is a part of our birthright.

(Duties are implied by the name of what you are: if you are a son, act like a dutiful son; if a brother, like an affectionate brother; if a senator, like a responsible public official.)

If, instead of a man, a gentle, social creature, you have become a wild beast, mischievous, insidious, biting; have you lost nothing? Is it only the loss of money which is reckoned damage; and is there no other thing, the loss of which damages a man? If you were to part with your skill in grammar, or in music, would you think the loss of these a damage; and yet, if you part with honor, decency, and gentleness, do you think that no matter? Yet the first may be lost by some cause external and inevitable; but the last only by your own fault. There is no shame in not having, or in losing the one; but either not to have, or to lose the

other, is equally shameful, and reproachful, and unhappy. What does the debauchee lose? Manhood. What does he lose who made him such? Many things, but manhood also. What does an angry person lose? A coward? Each loses his portion. No one is wicked without some loss or damage.

(When seeking revenge, remember this, that a man who hurts you hurts himself, and say to yourself: "Since he has hurt himself by injuring me, shall I not hurt myself by injuring him?")

11. THE BEGINNING OF PHILOSOPHY

The beginning of philosophy is this: the being sensible of the disagreement of men with each other; an inquiry into the cause of this disagreement; and a disapprobation, and distrust of what merely seems; a careful examination into what seems, whether it seem rightly; and the discovery of some rule which shall serve like a balance, for the determination of weights; like a square, for distinguishing straight and crooked. This is the beginning of philosophy.

15. CONCERNING THOSE WHO OBSTINATELY PERSIST IN WHAT THEY HAVE DETERMINED

Some, when they hear such discourses as these, "That we ought to be steadfast; that the will is by nature free and unconstrained; and that all else is liable to restraint, compulsion, slavery, and tyranny," imagine that they must remain immutably fixed to everything which they have determined. But it is first necessary that the determination should be a wise one.

Suppose, by any means, it should ever come into your head to kill me; must you keep such a determination?

18. HOW THE SEMBLANCE OF THINGS ARE TO BE COMBATED

Every habit and faculty is preserved and increased by correspondent actions; as the habit of walking, by walking; of running, by running. If you would be a reader, read; if a writer, write. But if you do not read for a month together, but do something else, you will see what will be the consequence. So, after sitting still for ten days, get up and attempt to take a long walk, and you will find how your legs are weakened. Upon the whole, then, whatever you would make habitual, practice it; and, if you would not make a thing habitual, do not practice it, but habituate yourself to something else.

It is the same with regard to the operations of the soul. Whenever you are angry, be assured that it is not only a present evil, but that you have increased a habit, and added fuel to a fire. When you are overcome by the seductions of a woman, do not consider it as a single defeat alone, but that you have fed, that you have increased, your dissoluteness. For it is impossible, but that habits and faculties must either be first produced, or strengthened and increased, by corresponding actions. Hence the philosophers derive the growth of all maladies.

If you would not be of an angry temper, then, do not feed the habit. Give it nothing to help its increase. Be quiet at first, and reckon the days in which you have not been angry. I

used to be angry every day; then every third and fourth day; and if you miss it so long as thirty days, offer a sacrifice of thanksgiving to God. For habit is first weakened, and then entirely destroyed.

By placing a good example before you, you will conquer any alluring semblance, and not be drawn away by it. But in the first place, be not hurried away by excitement; but say, Semblance, wait for me a little. Let me see what you are, and what you represent. Let me try you. Then, afterwards, do not suffer it to go on drawing gay pictures of what will follow; if you do, it will lead you wherever it pleases. But rather oppose to it some good and noble semblance, and banish this base one. If you are habituated to this kind of exercise, you will see what shoulders, what nerves, what sinews, you will have. But now it is mere trifling talk, and nothing more. He is the true athlete, who trains himself against such semblances as these. The combat is great, the achievement divine; for empire, for freedom, for prosperity, for tranquillity. Remember God. Invoke him for your aid and protector; as sailors do Castor and Pollux, in a storm. For what storm is greater than that which arises from these perilous semblances, contending to upset our reason? Indeed, what is the storm itself, but a semblance? For do but take away the fear of death, and let there be as many thunders and lightnings as you please, you will find that to the reason all is serenity and calm; but if you are once defeated, and say you will get the victory another time, and then the same thing over again; as-

sure yourself that you will at last be reduced to so weak and wretched a condition, that you will not so much as know when you do amiss; but you will even begin to make defenses for your behavior, and thus verify the saying of Hesiod: "With constant ills, the dilatory strive."

21. OF INCONSISTENCY

There are some things which men confess with ease; and others with difficulty. No one, for instance, will confess himself a fool, or a blockhead; but, on the contrary, you will hear everyone say, "I wish my fortune were in proportion to my abilities." But they easily confess themselves fearful, and say, "I am somewhat timorous, I confess; but in other respects you will not find me a fool." No one will easily confess himself intemperate in his desires; upon no account dishonest, nor indeed very envious, or meddling; but many confess themselves to have the weakness of being compassionate. What is the reason of all this? The principal reason is an inconsistency and confusion in what relates to good and evil. But different people have different motives, and, in general, whatever they imagine to be base, they do not absolutely confess. Fear and compassion they imagine to belong to a well-meaning disposition; but stupidity, to a slave. Offenses against society they do not own; but, in most faults, they are brought to a confession, chiefly from imagining that there is something involuntary in them; as in fear and compassion. And, though a person should in some measure confess himself intemperate in his desires, he

accuses his passion, and expects forgiveness, as for an involuntary fault. But dishonesty is not imagined to be, by any means, involuntary. In jealousy, too, there is something they suppose involuntary; and this, likewise, in some degree, they confess.

Conversing therefore with such men, thus confused, thus ignorant what they say, and what are or are not their ills, whence they have them, and how they may be delivered from them; it is worthwhile, I think, to ask oneself continually, "Am I too one of these? What do I imagine myself to be? How do I conduct myself? As a prudent, as a temperate man? Do I, too, ever talk at this rate; that I am sufficiently instructed for what may happen? Have I that persuasion, that I know nothing, which becomes one who knows nothing? Do I go to a master, as to an oracle, prepared to obey; or do I also, like a mere driveller, enter the school, only to learn and understand books which I did not understand before; or, perhaps, to explain them to others?"

22. OF FRIENDSHIP

To whatever objects a person devotes his attention, these objects he probably loves. Do men ever devote their attention, then, to what they regard as evils? By no means. Or even to things indifferent? No, nor this. It remains, then, that good must be the sole object of their attention; and, if of their attention, of their love too. Whoever, therefore, understands good, is capable likewise of love; and he who cannot distinguish good from evil, and things indifferent from both, how is it possible that

he can love? The wise person alone, then, is capable of loving.

No living being is held by anything so strongly as by its own needs. Whatever therefore appears a hindrance to these, be it brother, or father, or child, or mistress, or friend, is hated, abhorred, execrated; for by nature it loves nothing like its own needs. This motive is father, and brother, and family, and country, and God. Whenever, therefore, the gods seem to hinder this, we vilify even them, and throw down their statues, and burn their temples.

When therefore anyone identifies his interest with those of sanctity, virtue, country, parents, and friends, all these are secured; but whenever he places his interest in anything else than friends, country, family, and justice, then these all give way, borne down by the weight of self-interest. For wherever *I* and *mine* are placed, thither must every living being gravitate. If in body, that will sway us; if in our own will, that; if in externals, these. If, therefore, I rest my personality in the will, then only shall I be a friend, a son, or a father, such as I ought. For, in that case, it will be for my interest to preserve the faithful, the modest, the patient, the abstinent, the beneficent character; to keep the relations of life inviolate. But, if I place my personality in one thing, and virtue in another, the doctrine of Epicurus will stand its ground, that virtue is nothing, or mere opinion.

And the governing faculty of a bad man is faithless, unsettled, indiscriminating, successively vanquished by different semblances. In-

quire, not whether two men were born of the same parents, and brought up together, and under the same preceptor; but this thing only, in what they place their interest; in externals, or in their own wills. If in externals, you can no more pronounce them friends, than you can call them faithful, or constant, or brave, or free; nay, nor even truly men, if you are wise. For it is no principle of humanity that makes them bite and vilify each other, and take possession of public assemblies, as wild beasts do of solitudes and mountains; and convert courts of justice into dens of robbers; that prompts them to be intemperate, adulterers, seducers; or leads them into other offenses that men commit against each other,—all from that one single error, by which they risk themselves and their own concerns on things uncontrollable by will.

But if you hear that these men in reality suppose good to be placed only in the will, and in a right use of things as they appear; no longer take the trouble to inquire whether they are father and son, or old companions and acquaintances; but boldly pronounce that they are friends, and also that they are faithful and just. For where else can friendship be met, but joined with fidelity and modesty, and the intercommunication of virtue alone?

Whoever, therefore, among you studies either to be or to gain a friend, let him cut up all false convictions by the root, hate them, drive them utterly out of his soul. Thus, in the first place, he will be secure from inward reproaches and contests; from vacillation and self-torment.

Then with respect to others; to every like-minded person he will be without disguise; to such as are unlike he will be patient, mild, gentle, and ready to forgive them, as failing in points of the greatest importance; but severe to none, being fully convinced of Plato's doctrine that the soul is never willingly deprived of truth. Without all this, you may, in many respects, live as friends do; and drink, and lodge, and travel together, and even be born of the same parents; and so many serpents too; but neither they nor you can ever be really friends, while your accustomed principles remain brutal and execrable.

(In the remaining chapters of Book II, Epictetus emphasizes once more the dominating faculty of the Will, bringing out the same points that he discussed in the opening chapter of the discourses: the eyes can see, but how they shall interpret what they see is determined only by the will; the ears hear, but how they shall make use of what they hear depends on the Will; and so forth. It is also demonstrated that the philosopher must not only have the art of speaking well, but his listener must possess the art of hearing well. Thus, though an artist must have talent to make a statue or a painting, there is an art also required for viewing the statue and for appreciating the painting. Incidentally, a very interesting argument is set forth for the necessity of logic, separated as Chapter 25. It follows.)

When one of the company said to him, "Convince me that logic is necessary?" he replied,

Would you have me demonstrate it to you? "Yes." Then I must use a demonstrative form of argument? "Granted." How will you know, then, whether I argue falsely? On this, the man being silent, You see, says he, even by your own confession logic is necessary; since without it, you cannot even learn whether it be necessary or not.

BOOK III

3. THE CHIEF CONCERN OF A GOOD MAN

The chief concern of a wise and good man is his own Reason. The body is the concern of a physician, and of a gymnastic trainer; and the fields, of the husbandman. The business of a wise and good man is to use the phenomena of existence conformably to Nature. Now, every soul, as it is naturally formed for an assent to truth, a dissent from falsehood, and a suspense of judgment with regard to things uncertain, so it is moved by a desire of good, an aversion from evil, and an indifference to what is neither good nor evil. For, as a money-changer, or a gardener, is not at liberty to reject Cæsar's coin; but when once it is shown, is obliged, whether he will or not, to deliver his wares in exchange for it; so is it with the soul. Apparent good at first sight attracts, and evil repels. Nor will the soul any more reject an evident appearance of good, than Cæsar's coin.

Hence depends every movement, both of God and man; and hence good is preferred to every obligation, however near. My connection is not with my father; but with good.—Are you

so hard-hearted?—Such is my nature, and such is the coin which God hath given me. If therefore good is interpreted to be anything but what is fair and just, away go father, and brother, and country, and everything. What! Shall I overlook my own good, and give it up to you? For what? “I am your father.” But not my good. “I am your brother.” But not my good. But, if we place it in a rightly trained Will, good must then consist in an observance of the several relations of life; and then, he who gives up mere externals, acquires good. Your father deprives you of your money; but he does not hurt you. He will possess more land than you, as much more as he pleases; but will he possess more honor? More fidelity? More affection? Who can deprive you of this possession? Not even Zeus; for he did not will it so, since he has put this good into my own power, and given it me, like his own, uncompelled, unrestrained, and unhindered. But when anyone deals in coin different from this, then whoever shows it to him may have whatever is sold for it in return.

In this manner ought everyone chiefly to train himself. When you go out in the morning, examine whomsoever you see, or hear; and answer as if to a question. What have you seen? A handsome person? Apply the rule. Is this a thing controllable by Will, or uncontrollable? Uncontrollable. Then discard it. What have you seen? One in agony for the death of a child. Apply the rule. Death is inevitable. Banish this despair then. Has a consul met you? Apply the rule. What kind

of thing is the consular office? Controllable by Will, or uncontrollable? Uncontrollable. Throw aside this too. It will not pass. Cast it away. It is nothing to you.

If we acted thus, and practised in this manner from morning till night, by Heaven, something would be done. Whereas now, on the contrary, we are allured by every semblance, half asleep; and, if we are ever awake, it is only a little in the school; but as soon as we go out, if we meet anyone grieving, we say, "He is undone." If a consul, "How happy is he!" If an exile, "How miserable." If a poor man, "How wretched; he has nothing to eat!"

These miserable prejudices then are to be lopped off; and here is our whole strength to be applied. For what is weeping and groaning? Prejudice. What is misfortune? Prejudice. What is sedition, discord, complaint, accusation, impiety, levity? All these are prejudices, and nothing more; and prejudices concerning things uncontrollable by Will, as if they could be either good or evil. Let anyone transfer these convictions to things controllable by Will, and I will engage that he will preserve his constancy, whatever be the state of things about him.

The soul is like a vase filled with water; while the semblances of things fall like rays upon its surface. If the water is moved, the ray will seem to be moved likewise, though it is in reality without motion. When, therefore, anyone is seized with a giddiness in his head, it is not the arts and virtues that are bewildered, but the mind in which they lie; when

this recovers its composure, so will they likewise.

8. HOW WE ARE TO EXERCISE OURSELVES AGAINST THE SEMBLANCES OF THINGS

In the same manner as we exercise ourselves against sophistical questions, we should exercise ourselves likewise in relation to such semblances as every day occur; for these, too, offer questions to us. Such a one's son is dead. What think you of it? Answer: it is a thing inevitable, and therefore not an evil. Such a one is disinherited by his father. What think you of it? It is inevitable, and so not an evil. Cæsar has condemned him. This is inevitable, and so not an evil. He has been afflicted by it. This is controllable by Will; it is an evil. He has supported it bravely. This is within the control of Will; it is a good.

If we train ourselves in this manner we shall make improvement; for we shall never assent to anything but what the semblance itself includes. A son is dead. What then? A son is dead. Nothing more? Nothing. A ship is lost. What then? A ship is lost. He is carried to prison. What then? He is carried to prison. That he is *unhappy* is an addition that everyone must make for himself. "But Zeus does not order these things rightly." Why so? Because he has made you to be patient? Because he has made you to be brave? Because he has made them to be no evils? Because it is permitted you, while you suffer them, to be happy? Because he has opened you the door whenever they do not suit you? Go out, man, and do not complain!

10. IN WHAT MANNER WE OUGHT TO BEAR SICKNESS

We should have all our principles ready for use on every occasion. At dinner, such as relate to dinner; in the bath, such as relate to the bath; in the bed, such as relate to the bed.

Again; in a fever, we should have such principles ready as relate to a fever; and not, as soon as we are taken ill, forget all. Provided I do but act like a philosopher, let what will happen. Some way or other depart I must from this frail body, whether a fever comes or not. What is it to be a philosopher? Is it not to be prepared against events? Do you not comprehend that you then say, in effect, "If I am but prepared to bear all events with calmness, let what will happen;" otherwise, you are like an athlete, who, after receiving a blow, should quit the combat. In that case, indeed, you might leave off without a penalty. But what shall we get by leaving off philosophy?

Now is your time for a fever. Bear it well. For thirst; bear it well. For hunger; bear it well. Is it not in your power? Who shall restrain you? A physician may restrain you from drinking; but he cannot restrain you from bearing your thirst well. He may restrain you from eating; but he cannot restrain you from bearing hunger well.

What is it to bear a fever well? Not to blame either God or man; not to be afflicted at what happens; to wait death in a right and becoming manner; and to do what is to be done. When the physician enters, not to dread what

he may say; nor, if he should tell you that you are doing well, to be too much rejoiced; for what good has he told you? When you were in health, what good did it do you? Not to be dejected when he tells you that you are very ill; for what is it to be very ill? To be near the separation of soul and body. What harm is there in this, then? If you are not near it now, will you not be near it hereafter? What, will the world be quite overturned when you die? Why, then, do you flatter your physician? Why do you say, "If you please, sir, I shall do well?" Why do you furnish an occasion to his pride? Why do you not treat a physician with regard to an insignificant body,—which is not yours, but by nature mortal,—as you do a shoemaker about your foot, or a carpenter about your house? It is the season for these things, to one in a fever. If he fulfills these, he has what belongs to him. For it is not the business of a philosopher to take care of these mere externals, of his wine, his oil, or his body; but of his Reason. And how with regard to externals? Not to behave inconsiderately about them.

What occasion is there, then, for fear? What occasion for anger, for desire, about things that belong to others, or are of no value? For two rules we should always have ready,—*that there is nothing good or evil in the Will; and that we are not to lead events, but to follow them.* "My brother ought not to have treated me so." Very true; but he must see to that. However he treats me, I am to act rightly with regard to him; for the one is my own concern,

the other is not; the one cannot be restrained, the other may.

14. MISCELLANEOUS

Two things must be rooted out of men, conceit and diffidence. Conceit lies in thinking that you want nothing; and diffidence in supposing it impossible that under such adverse circumstances you should ever succeed. Now conceit is removed by confutation; and of this Socrates set the example. And consider and ascertain that the undertaking is not impracticable. The inquiry itself will do you no harm; and it is almost being a philosopher to inquire how it is possible to employ our desire and aversion without hindrance.

"I am better than you; for my father has been consul."—"I have been a tribune," says another, "and you not." If we were horses, would you say, "My father was swifter than yours? I have abundance of oats and hay and fine trappings?" What now, if, while you were saying this, I should answer: "Be it so. Let us run a race then." Is there nothing in man analogous to a race in horses, by which it may be decided which is better or worse? Is there not honor, fidelity, justice? Show yourself the better in these, that you may be the better as a man. But if you only tell me that you can kick violently, I will tell you again that you value yourself on what is the property of an ass.

16. THAT CAUTION SHOULD BE USED AS TO PERSONAL FAMILIARITY

He who frequently mingles with others, either in conversation or at entertainments, or

in any familiar way of living, must necessarily either become like his companions, or bring them over to his own way. For, if a dead coal be applied to a live one, either the first will quench the last, or the last kindle the first. Since, then, the danger is so great, caution must be used in entering into these familiarities with the crowd; remembering that it is impossible to touch a chimney-sweeper without being partaker of his soot.

19. THE PHILOSOPHER AND THE CROWD

The first difference between one of the crowd and a philosopher is this: the one says, "I am undone on account of my child, my brother, my father"; but the other, if ever he be obliged to say, "I am undone!" reflects, and adds, "on account of myself." For the Will cannot be restrained or hurt by anything to which the Will does not extend, but only by itself. If, therefore, we always would incline this way, and, whenever we are unsuccessful, would lay the fault on ourselves, and remember that there is no cause of perturbation and inconstancy but wrong principles, I pledge myself to you that we should make some proficiency.

20. THAT SOME ADVANTAGE MAY BE GAINED FROM EVERY OUTWARD CIRCUMSTANCE

In considering sensible phenomena, almost all persons admit good and evil to lie in ourselves and not in externals. No one says it is good to be day; evil to be night; and the greatest evil that three should be four; but what? That knowledge is good and error evil. Even in connection with falsehood itself there

may be one good thing; the knowledge that it is falsehood. Thus, then, should it be in life also. "Health is a good; sickness an evil." No, sir. But what? A right use of health is a good; a wrong one, an evil. So that, in truth, it is possible to be a gainer even by sickness. And is it not possible by death too? By mutilation?

Cease to make yourselves slaves; first, of things, and, then, upon their account, of the men who have the power either to bestow or to take them away. Is there any advantage, then, to be gained from these men? From all; even from a reviler. What advantage does a wrestler gain from him with whom he exercises himself before the combat? The greatest. And just in the same manner I exercise myself with this man. He exercises me in patience, in gentleness, in meekness. I am to suppose, then, that I gain an advantage from him who exercises my neck, and puts my back and shoulders in order; so that the trainer may well bid me grapple him, with both hands, and the heavier he is the better for me; and yet it is no advantage to me when I am exercised in gentleness of temper! This is not to know how to gain an advantage from men.

24. THAT WE OUGHT NOT TO BE AFFECTED BY THINGS NOT IN OUR OWN POWER.

Let not another's disobedience to Nature become an ill to you; for you were not born to be depressed and unhappy with others, but to be happy with them. And if any is unhappy, remember that he is so for himself; for God made all men to enjoy felicity and peace. He

hath furnished all with means for this purpose; having given them some things for their own; others, not for their own. Whatever is subject to restraint, compulsion, or deprivation is not their own; whatever is not subject to restraint is their own. And the essence of good and evil He has placed in things which are our own; as it became Him who provides for, and protects us, with paternal care.

"But I have parted with such a one, and he is therefore in grief."

And why did he esteem what belonged to another his own? Why did he not consider, while he was happy in seeing you, that you are mortal, that you are liable to change your abode? Therefore, he bears the punishment of his own folly. But to what purpose, or for what cause, do you too suffer depression of spirits? Have *you* not studied these things? Like trifling, silly women, have you regarded the things you took delight in, the places, the persons, the conversations, as if they were to last forever; and do you now sit crying, because you do not see the same people, nor live in the same place? Indeed, you deserve to be so overcome, and thus to become more wretched than ravens or crows, which, without groaning or longing for their former state, can fly where they will, build their nests in another place, and cross the seas.

"Ay, but this happens from their want of reason."

Was reason then given to us by the gods for the purpose of unhappiness and misery, to make us live wretched and lamenting? O, by

all means, let everyone be deathless! Let nobody go from home! Let us never go from home ourselves, but remain rooted to a spot, like plants! And if any of our acquaintance should quit his abode, let us sit and cry; and when he comes back, let us dance and clap our hands like children. Shall we never wean ourselves, and remember what we have heard from the philosophers,—unless we have heard them only as juggling enchanters;—that the universe is one great city, and the substance one of which it is formed; that there must necessarily be a certain rotation of things; that some must give way to others, some be dissolved, and others rise in their stead; some remain in the same situation, and others be moved; but that all is full of beloved ones, first of the gods, and then of men, by nature endeared to each other; that some must be separated, others live together, rejoicing in the present and not grieving for the absent: and that man, besides a natural greatness of mind and contempt of things independent of his own will, is likewise formed not to be rooted to the earth, but to go at different times to different places; sometimes on urgent occasions, and sometimes merely for the sake of observation.

“But my mother grieves when she does not see me.”

And why has not she learned these doctrines? I do not say that care ought to be taken that she may not lament; but that we are not to insist absolutely upon what is not in our own power. Now the grief of another

is not in my power; but my own grief is. I will therefore absolutely suppress my own, for that is in my power; and I will endeavor to suppress another's grief so far as I am able; but I will not insist upon it absolutely, otherwise I shall fight against God; I shall resist Zeus, and oppose him in the administration of the universe. And not only my children's children will bear the punishment of this disobedience and fighting against God, but I myself too; starting, and full of perturbation, both in the daytime and in my nightly dreams; trembling at every message, and having my peace dependent on intelligence from others. "Somebody is come from Rome." "I trust no harm has happened." Why, what harm can happen to you where you are not? "From Greece."—"No harm, I hope?" Why, at this rate, every place may be the cause of misfortune for you. Is it not enough for you to be unfortunate where you are, but it must happen beyond sea, too, and by letters? Such is the security of your condition!

"But what if my friends there should be dead?"

What, indeed, but that those are dead who were born to die? Do you at once wish to grow old, and yet not see the death of anyone you love? Do you not know that, in a long course of time, many and various events must necessarily happen? That a fever must get the better of one; a highwayman, of another; a tyrant, of a third? For such is the world we live in; such they who live in it with us. Heats and colds, improper diet, journeys, voyages, winds, and

various accidents destroy some, banish others; destine one to an embassy, another to a camp. And now, pray, will you sit in consternation about all these things; lamenting, disappointed, wretched, dependent on another; and not on one or two only, but ten thousand times ten thousand!

Everyone's life is a warfare, and that long and various. You must observe the duty of a soldier, and perform everything at the nod of your General, and even, if possible, divine what he would have done. You are placed in an extensive command, and not in a mean post; your life is a perpetual magistracy.

Did you never visit anyone at Athens at his own house?

"Yes; whomsoever I pleased."

Why; now you are here, be willing to visit this person, and you will still see whom you please; only let it be without meanness, without undue desire or aversion, and your affairs will go well; but their going well, or not, does not consist in going to the house and standing at the door, or the contrary; but lies within, in your own principles; when you have acquired a contempt for things uncontrollable by Will, and esteem none of them your own, but hold that what belongs to you is only to judge and think, to exert rightly your aims, your desires, and aversions. What further room is there after this for flattery, for meanness? Why do you still long for the quiet you elsewhere enjoyed; for places familiar to you? Stay a little, and these will become familiar to you in their turn;

and, then, if you are so mean-spirited, you may weep and lament again on leaving these.

"How, then, am I to preserve an affectionate disposition?"

As becomes a noble-spirited and happy person. For reason will never tell you to be dejected and broken-hearted; or to depend on another; or to reproach either God or man. Be affectionate in such a manner as to observe all this. But if, from affection, as you call it, you are to be a slave and miserable, it is not worth your while to be affectionate. And what restrains you from loving anyone as a mortal,—as a person who may be obliged to quit you? (Are you going to grieve for the loss of one to whom you gave affection? If you are, consider this.) If you ever get any new acquaintance and friends, you will find fresh causes for groaning; and, in like manner, if you attach yourself to another country. To what purpose, therefore, do you live? To heap sorrow upon sorrow, to make you wretched? And then you tell me this is affection. What affection, man? If it be good, it cannot be the cause of any ill; if ill, I will have nothing to do with it. I was born for my own good, not ill.

"What, then, is the proper training for these cases?"

First, the highest and principal means, and as obvious as if at your very door, is this,—that when you attach yourself to anything, it may not be as to a secure possession.

"How then?"

As to something brittle as glass or earthenware; that, when it happens to be broken, you

may not lose your self-command. So here, too; when you embrace your child, or your brother, or your friend, never yield yourself wholly to the fair semblance, nor let the passion pass into excess; but curb it, restrain it,—like those who stand behind triumphant victors, and remind them that they are men. Do you likewise remind yourself that you love what is mortal; that you love what is not your own. It is allowed you for the present, not irrevocably, nor forever; but as a fig, or a bunch of grapes, in the appointed season. If you long for these in winter you are foolish. So, if you long for your son, or your friend, when you cannot have him, remember that you are wishing for figs in winter. For as winter is to a fig, so is every accident in the universe to those things with which it interferes. In the next place, whatever objects give you pleasure, call before yourself the opposite images. What harm is there, while you kiss your child, in saying softly, "Tomorrow you may die"; and so to your friend, "Tomorrow either you or I may go away, and we may see each other no more."

"But these sayings are ominous."

And so are some incantations; but, because they are useful, I do not mind it; only let them be useful. But do you call anything ominous except what implies some ill? Cowardice is ominous; baseness is ominous; lamentation, grief, shamelessness. These are words of bad omen; and yet we ought not to shrink from using them, as a guard against the things they mean. But do you tell me that a word is

ominous which is significant of anything natural? Say, too, that it is ominous for ears of corn to be reaped; for this signifies the destruction of the corn; but not of the world. Say, too, that the fall of the leaf is ominous; and that confectionery should be produced from figs, and raisins from grapes. For all these are changes from a former state into another; not a destruction, but a certain appointed economy and administration. Such is absence, a slight change; such is death, a greater change; not from what now is nothing, but to what now is not.

"What, then, shall I be no more?"

True; but you will be something else, of which at present the world has no need; for even *you* were not produced when you pleased, but when the world had need of you. Hence a wise and good man, mindful who he is and whence he came, and by whom he was produced, is attentive only how he may fill his post regularly and dutifully before God.

For all other pleasures substitute the consciousness that you are obeying God, and performing not in word, but in deed, the duty of a wise and good man. How great a thing is it to be able to say to yourself: "What others are now solemnly arguing in the schools, and can state in paradoxes this I put in practice. Those qualities which are there discussed, disputed, celebrated, I have made my own."

Having these principles always at hand, and practising them by yourself, and making them ready for use, you will never want anyone to comfort and strengthen you. For shame does

not consist in having nothing to eat, but in not having wisdom enough to exempt you from fear and sorrow. But if you once acquire that exemption, will a tyrant, or his guards, or courtiers, be anything to you? Only do not make a parade over it, nor grow insolent about it. But show it by your actions; and though no one else should notice it, be content that you are well and blessed.

BOOK IV

1. OF FREEDOM

He is free who lives as he likes; who is not subject to compulsion, to restraint, or to violence; whose pursuits are unhindered, his desires unsuccessful, his aversions unincurred. Who, then, would wish to lead a wrong course of life? "No one." Who would live deceived, erring, unjust, dissolute, discontented, dejected? "No one." No wicked man, then, lives as he likes; therefore no such man is free. And who would live in sorrow, fear, envy, pity, with disappointed desires and unavailing aversions? "No one." Do we then find any of the wicked exempt from these evils? "Not one." Consequently, then, they are not free.

Do you think freedom to be something great and noble and valuable? "How should I not?" Is it possible, then, that he who acquires anything so great and valuable and noble should be of an abject spirit? "It is not." Whenever, then, you see anyone subject to another, and flattering him contrary to his own opinion, confidently say that he too is not free; and not only when he does this for a supper, but

even if it be for a government, nay, a consulship. Call those indeed little slaves who act thus for the sake of little things; and call the others as they deserve, great slaves. "Be this, too, agreed." Well; do you think freedom to be something independent and self-determined? "How can it be otherwise?"

What is it, then, that makes a man free and independent? For neither riches, nor consulship, nor the command of provinces, nor of kingdoms, can make him so; but something else must be found. What is it that keeps anyone from being hindered and restrained in penmanship, for instance? "The science of penmanship." Therefore in life, too, it must be the science of living. As you have heard it in general, then, consider it likewise in particulars. Is it possible for him to be unrestrained who desires any of those things that are within the power of others? "No." Can he avoid being hindered? "No." Therefore neither can he be free. Consider, then, whether we have nothing or everything in our own sole power,—or whether some things are in our own power and some in that of others.

Is there nothing independent, which is in your own power alone, and unalienable? See if you have anything of this sort. "I do not know." But, consider it thus: can anyone make you assent to a falsehood? "No one." In the matter of assent, then, you are unrestrained and unhindered. "Agreed." Well, and can anyone compel you to exert your aims towards what you do not like?" "He can. For when he threatens me with death, or fetters,

he thus compels me." If, then, you were to despise dying or being fettered, would you any longer regard him? "No." Is despising death, then, an action in your power, or is it not? "It is." Is it therefore in your power also to exert your aims towards anything, or is it not? "Agreed that it is. But in whose power is my avoiding anything?" This, too, is in your own. "What then if, when I am exerting myself to walk, anyone should restrain me?" What part of you can he restrain? Can he restrain your assent? "No, but my body." Ay, as he may a stone. "Be it so. But still I cease to walk." And who claimed that walking was one of the actions that cannot be restrained? For I only said that your exerting yourself towards it could not be restrained. But where there is need of body and its assistance, you have already heard that nothing is in your power. "Be this, too, agreed."

What is not in your own power, either to procure or to preserve when you will, *that* belongs to another. Keep off not only your hands from it, but even more than these, your desires. Otherwise you have given yourself up as a slave; you have put your neck under the yoke, if you admire any of the things which are not your own, but which are subject and mortal, to which of them soever you are attached. "Is not my hand my own?" It is a part of you, but it is by nature clay, liable to restraint, to compulsion; a slave to everything stronger than itself. And why do I say your hand? You ought to hold your whole body but

as a useful ass, with a packsaddle on, so long as may be, so long as it is allowed you. But if there should come a military conscription, and a soldier should lay hold on it, let it go. Do not resist, or murmur; otherwise you will be first beaten and lose the ass after all. And since you are thus to regard even the body itself, think what remains to do concerning things to be provided for the sake of the body. If that be an ass, the rest are but bridles, pack-saddles, shoes, oats, hay, for him. Let these go, too. Quit them yet more easily and expeditiously. And when you are thus prepared and trained to distinguish what belongs to others from your own, what is liable to restraint from what is not; to esteem the one your own property, but not the other; to keep your desire, to keep your aversion carefully regulated by this point; whom have you any longer to fear? "No one." For about what should you be afraid? About what is your own, in which consists the essence of good and evil? And who has any power over *this*? Who can take it away? Who can hinder you, any more than God can be hindered.

Study from morning till night, beginning with the least and frailest things, as with earthenware and glassware. Afterwards, proceed to a suit of clothes, a dog, a horse, an estate; thence to yourself, body, members, children, wife, brothers. Look everywhere around you, and be able to detach yourself from these things. Correct your principles. Permit nothing to cleave to you that is not your own; nothing to grow to you that may give you

agony when it is torn away. And say, when you are daily training yourself as you do here, not that you act the philosopher, which may be a presumptuous claim, but that you are asserting your freedom. For this is true freedom.

Come, then; let us recapitulate what has been granted. The man who is unrestrained, who has all things in his power as he wills, is free; but he who may be restrained, or compelled, or hindered, or thrown into any condition against his will, is a slave. "And who is unrestrained?" He who desires none of those things that belong to others. "And what are those things which belong to others?" Those which are not in our own power, either to have or not to have; or to have them thus or so. Body, therefore, belongs to another; its parts to another; property to another. If, then, you attach yourself to any of these as your own you will be punished, as he deserves who desires what belongs to others. This is the way that leads to freedom; this the only deliverance from slavery; to be able at length to say, from the bottom of one's soul: "Conduct me, Zeus, and thou, O destiny, wherever your decrees have fixed my lot."

Study these points, these principles, these discourses; contemplate these examples if you would be free, if you desire the thing in proportion to its value. And where is the wonder that you should purchase so good a thing at the price of others, so many, and so great? Some hang themselves, others break their necks, and some times even whole cities have

been destroyed for that which is reputed freedom; and will not you for the sake of the true and secure and inviolable freedom, repay God what he hath given when he demands it? Will you not study, not only, as Plato says, how to die, but how to be tortured and banished and scourged; and, in short, how to give up all that belongs to others? If not, you will be a slave among slaves, though you were ten thousand times a consul; and even though you should rise to the palace you will never be the less so. And you will feel that, though philosophers do, perhaps, talk contrary to common opinion, yet it is not contrary to reason. For you will find it true, in fact, that the things that are eagerly followed and admired are of no use to those who have gained them; while they who have not yet gained them imagine that, if they are acquired, every good will come along with them; and, then, when they are acquired, there is the same feverishness, the same agitation, the same nausea, and the same desire for what is absent. For freedom is not procured by a full enjoyment of what is desired, but by controlling the desire. And in order to know that this is true, take the same pains about these which you have taken about other things. Hold vigils to acquire a set of principles that will make you free. Instead of a rich old man pay your court to a philosopher. Be seen about his doors. You will not get any disgrace by being seen there. You will not return empty or unprofited if you go as you ought. However, try at least. The trial is not dishonorable.

3. WHAT THINGS ARE TO BE EXCHANGED FOR OTHERS

When you have lost anything external, have always at hand the consideration of what you have got instead of it; and if that be of more value, do not by any means call yourself a loser; whether it be a horse for an ass; an ox for a sheep; a good action for a piece of money; a due composure of mind for a dull jest; or modesty for indecent talk. By continually remembering this, you will preserve your character such as it ought to be. Otherwise, consider that you are spending your time in vain; and all that to which you are now applying your mind, you are about to spill and overturn. And there needs but little, merely a small deviation from reason, to destroy and overset all. A pilot does not need so much apparatus to overturn a ship as to save it; but if he exposes it a little too much to the wind, it is lost; even if he should not do it by design, but only for a moment be thinking of something else, it is lost. Such is the case here, too. If you do but nod a little, all that you have hitherto accomplished is gone. Take heed, then, to the appearances of things. Keep yourself watchful over them. It is no inconsiderable matter that you have to guard; but modesty, fidelity, constancy, docility, innocence, fearlessness, serenity; in short, freedom. For what will you sell these? Consider what the purchase is worth.

5. CONCERNING THE QUARRELSOME AND FEROCIOUS

A wise and good person neither quarrels with anyone himself, nor, as far as possible, suffers another to do so. (For, what is it to quarrel about a person's lack of wisdom, lack of manners, or anything in him that does not suit you? You quarrel with the ruling faculty of someone else, with something that is not yours and is beyond your control.)

What room is there then for quarrelling, to a person thus disposed? For does he wonder at anything that happens? Does it appear strange to him? Does he not prepare for worse and more grievous injuries from bad people than actually happen to him? Does he not reckon it so much gained if they come short of the last extremities? Such a one has reviled you. You are much obliged to him that he has not struck you. But he has struck you too. You are much obliged to him that he has not wounded you too. But he has wounded you too. You are much obliged to him that he has not killed you. For when did he ever learn, or from whom, that he is gentle, that he is a social animal; that the very injury itself is a great mischief to him who inflicts it? As, then, he has not learned those things, nor believes them, why should he not follow what appears to be for his interest? Your neighbor has thrown stones. What then? Is it any fault of yours? But your goods are broken. What then? Are you a piece of furniture? No; but your essence consists in the faculty of will.

What behavior then is assigned to you in return? If you consider yourself a wolf,—then, to bite again, to throw more stones. But if you ask the question as a man, then examine your treasure; see what faculties you have brought into the world with you. Are they fitted for ferocity? For revenge? When is a horse miserable? When he is deprived of his natural faculties. Not when he cannot crow, but when he cannot run. And a dog? Not when he cannot fly, but when he cannot hunt. Is not a man, then, also unhappy in the same manner? Not he who cannot strangle lions or perform athletic feats (for he has received no faculties for this purpose from nature); but who has lost his rectitude of mind, his fidelity. This is he who ought to receive public condolence for the misfortunes into which he is fallen; not, by Heaven, either he who has the misfortune to be born or to die; but he whom it has befallen while he lives to lose what is properly his own. Not his paternal possessions, his paltry estate or his house, his lodging or his slaves, for none of these are a man's own; but all these belong to others, are servile, dependent, and very variously assigned by the disposers of them. But his personal qualifications as a man, the impressions which he brought into the world stamped upon his mind; such as we look for in money, accepting or rejecting it accordingly.

7. OF FEARLESSNESS

What makes a tyrant formidable? His guards, say you, and their swords; they who protect his bedchamber; and they who keep out intruders. Why, then, if you bring a child

to him amidst these guards, is it not afraid? Is it because the child does not know what they mean? Suppose, then, that anyone knows what is meant by guards, and that they are armed with swords; and for that very reason comes in the tyrant's way, being desirous, on account of some misfortune, to die, and seeking to die easily by the hand of another. Does such a man fear the guards? No; for he desires the very thing that renders them formidable. Well, then, if anyone being without an absolute desire to live or die, but indifferent to it, comes in the way of a tyrant, what prevents his approaching him without fear? Nothing. If, then, another should think concerning his estate, or wife, or children, as this man thinks concerning his body; and, in short, from some madness or folly should be of such a disposition as not to care whether he has them or not; but just as children, playing with shells, are busied with the play, but not with the shells, so he should pay no regard to these affairs, except to carry on the play with them, what tyrant, what guards or swords are any longer formidable to such a man?

Show me the swords of the guards. "See how long and sharp they are." What, then, can these great and sharp swords do? "They kill." And what can a fever do? "Nothing else." And a falling tile? "Nothing else." Do you then wish me to be bewildered by all these things, and to worship them, and to go about as a slave to them all? Heaven forbid! But having once learned that everything that is born must likewise die, (that the world may

not be at a stand, nor the course of it hindered,) I no longer see any difference whether this be effected by a fever, a tile, or a soldier; but if any comparison is to be made, I know that the soldier will effect it with less pain and more speedily. Since then I neither fear any of those things which he can inflict upon me, nor covet anything which he can bestow, why do I stand any longer in awe of a tyrant? Why am I amazed at him? Why do I fear his guards?

But to keep up the play [that is, of life, as an actor on the stage of life] I go to him and serve him, so long as he commands nothing unreasonable or improper. (It makes no difference, though, if he threatens me.) These things are frightful to children and fools. But if anyone, who has once entered into the school of a philosopher, knows not what he himself is, then he deserves to be frightened, and to flatter the last object of flattery; if he has not yet learnt that he is neither flesh, nor bones, nor nerves, but is that which makes use of these, and regulates and comprehends the phenomena of existence.

8. CONCERNING SUCH AS HASTILY ASSUME THE PHILOSOPHIC DRESS

Never commend or censure anyone for common actions, nor attribute to them either skillfulness or unskillfulness; and thus you will at once be free both from rashness and ill-nature. Till you know from what principle anyone acts, neither commend nor censure the action.

If we hear anyone sing badly, we do not say,

"Observe how musicians sing," but rather, "This fellow is no musician." It is with regard to philosophy alone that people are thus affected. When they see anyone acting inconsistently with the profession of a philosopher, they do not take away his title; but assuming that he is a philosopher, and then reasoning from his improper behavior, they infer that philosophy is of no use.

Why, then, will you not first see, whether when acting improperly he fulfils his profession, ere you proceed to blame the study? Whereás now, when acting soberly yourself, you say, in regard to whatever he appears to do amiss, "Observe the philosopher!" As if it were proper to call a person who does such things a philosopher. And, indeed, even those called philosophers enter upon their profession by commonplace beginnings. As soon as they have put on the cloak and let their beards grow, they cry, "I am a philosopher." Yet no one says, "I am a musician," merely because he has bought a fiddle and fiddlestick: nor, "I am a smith," because he is dressed in the cap and apron. But they take their name from their art, not from their garb.

But now they who have only such an inclination to philosophy as weak stomachs have to some kinds of food, of which they will presently grow sick, expect to hasten to the scepter, to the kingdom. They let their hair grow, assume the cloak, bare the shoulder, wrangle with all they meet; and if they see any one in a thick, warm coat, must needs wrangle with him. First harden yourself against all

weather, man. Consider your inclination; whether it be not that of a weak stomach, or of a longing woman. First study to conceal what you are; philosophize a little while by yourself. Fruit is produced thus. The seed must first be buried in the ground, lie hid there some time, and grow up by degrees, that it may come to perfection. But if it produces the ear before the stalk has its proper joints, it is imperfect. Now *you* are a poor plant of this kind. You have blossomed too soon: the winter will kill you. Beware you too, O man. You have shot out luxuriantly; you have sprung forth towards a trifling fame, before thy proper season. You seem to be somebody, as a fool may among fools. You will be taken by the frost; or rather, you are already frozen downward at the root; you still blossom indeed a little at the top, and therefore you think you are still alive and flourishing.

Let us, at least, ripen naturally. Why do you lay us open? Why do you force us? We cannot yet bear the air. Suffer the root to grow; then the first, then the second, then the third joint of the stalk to spring from it; and thus nature will force out the fruit, whether I will or not. For who that is charged with such principles, but must perceive, too, his own powers, and strive to put them in practice. Not even a bull is ignorant of his own powers, when any wild beast approaches the herd, nor waits he for anyone to encourage him; nor does a dog when he spies any game. And if I have the powers of a good man, shall I wait for you to qualify me for my own prop-

er actions? But believe me, I have them not quite yet. Why, then, would you wish me to be withered before my time, as you are?

11. OF PURITY

Some doubt whether the love of society be comprehended in the nature of man; and yet these very persons do not seem to me to doubt but that purity is by all means comprehended in it; and that by this, if by anything, it is distinguished from brute animals. When, therefore, we see any animal cleaning itself, we are apt to cry with wonder that it is like a human creature. On the contrary, if an animal is censured, we are presently apt to say, by way of excuse, that it is not a human creature. Such excellence do we suppose to be in man, which we first received from the gods. For as they are by nature pure and uncorrupt, in proportion as men approach to them by reason, they are tenacious of purity and incorruption. But since it is impracticable that their essence, composed of such materials, should be absolutely pure, it is the office of reason to endeavor to render it as pure as possible.

The first and highest purity or impurity, then, is that which is formed in the soul. But you will not find the impurity of the soul and body to be alike. For what stain can you find in the soul, unless it be something which renders it impure in its operations? Now the operations of the soul are its pursuits and avoidances, its desires, aversions, preparations, intentions, assents. What, then, is that which

renders it defiled and impure in these operations? Nothing else than its perverse judgments. So that the impurity of the soul consists in wicked principles, and its purification in forming right principles; and that is pure which has right principles, for that alone is unmixed and undefiled in its operations.

Now we should, as far as possible, endeavor after something like this in the body, too. It is impossible but that in such a composition as man, there must be a discharge of superfluous phlegm. For this reason, Nature has made hands, and the nostrils themselves as channels to let out the moisture; nor can this be neglected with propriety. (And so on, with the toilet of the rest of the body. You owe a clean body not only to yourself, but to the rest of society, that you may associate with them as a man, not as a brute.)

12. OF TAKING PAINS

When you cease to take pains for a little while, do not fancy you may recommence whenever you please, but remember this: that by means of a fault today, your affairs must necessarily be in a worse condition for the future. The first and worst evil is that there arises a habit of neglect; and then a habit of postponing effort, and constantly procrastinating as to one's successes and good behavior and orderly thought and action. Now if procrastination as to anything is advantageous, it must be still more advantageous to omit it altogether; but if it be not advantageous, why do you not take pains all the time? For there is no part of life exempted, about which pains are not needed.

NEW ATLANTIS

TO THE READER

This fable my lord devised, to the end that he might exhibit therein a model or description of a college, instituted for the interpreting of nature, and the producing of great and marvellous works. for the benefit of men; under the name of Solomon's House, or the College of the Six Days' Works. And even so far his lordship hath proceeded, as to finish that part. Certainly the model is more vast and high, than can possibly be imitated in all things; notwithstanding most things therein are within men's power to effect. His lordship thought also in this present fable, to have composed a frame of laws, or of the best state or mould of a commonwealth; but foreseeing it would be a long work, his desire of collecting the Natural History diverted him, which he preferred many degrees before it.

W. RAWLEY.

NEW ATLANTIS

We sailed from Peru, where we had continued by the space of one whole year, for China and Japan, by the South Sea, taking with us victuals for twelve months; and had good winds from the east, though soft and weak, for five months space and more. But then the wind came about, and settled in the west for many days, so as we could make little or no way, and were sometimes in purpose to turn back. But then again there arose strong and great winds from the south, with a point east, which carried us up, for all that we could do, towards the north; by which time our victuals failed us, though we had made good spare of them. So that finding ourselves in the midst of the greatest wilderness of waters in the world, without victual, we gave ourselves for lost men, and prepared for death. Yet we did lift up our hearts and voices to God above, who showeth "his wonders in the deep;" beseeching him of his mercy, that as in the beginning he discovered the face of the deep, and brought forth dry land; so he would now discover land to us, that we might not perish. And it came to pass, that the next day about evening, we saw within a kenning before us, towards the north, as it were thick clouds, which did put us in some hope of land; knowing how that part of the South Sea was utterly unknown; and might have islands or conti-

nents, that hitherto were not come to light. Wherefore we bent our course thither, where we saw the appearance of land all that night; and in the dawning of the next day, we might plainly discern that it was a land, flat to our sight, and full of boscase, which made it show the more dark. And after an hour and a half's sailing, we entered into a good haven, being the port of a fair city; not great indeed, but well built, and that gave a pleasant view from the sea; and we thinking every minute long till we were on land, came close to the shore, and offered to land. But straightways we saw divers of the people with batons in their hands, as it were, forbidding us to land; yet without any cries or fierceness, but only as warning us off by signs that they made. Whereupon being not a little discomforted, we were advising with ourselves what we should do. During which time there made forth to us a small boat, with about eight persons in it; whereof one of them had in his hand a tipstaff of a yellow cane, tipped at both ends with blue, who came aboard our ship, without any show of distrust at all. And when he saw one of our number present himself somewhat afore the rest, he drew forth a little scroll of parchment, somewhat yellower than our parchment, and shining like the leaves of writing-tables, but otherwise soft and flexible, and delivered it to our foremost man. In which scroll were written in ancient Hebrew, and in ancient Greek, and in good Latin of the school, and in Spanish these words; "Land ye not, none of you,

and provide to be gone from this coast within sixteen days, except you have further time given you; meanwhile, if you want fresh water, or victual, or help for your sick, or that your ship needeth repair, write down your wants, and you shall have that which belongeth to mercy." This scroll was signed with a stamp of cherubim's wings, not spread, but hanging downwards, and by them a cross. This being delivered, the officer returned, and left only a servant with us to receive our answer. Consulting hereupon amongst ourselves, we were much perplexed. The denial of landing, and hasty warning us away, troubled us much; on the other side, to find that the people had languages, and were so full of humanity, did comfort us not a little. And above all, the sign of the cross to that instrument was to us a great rejoicing, and as it were a certain presage of good. Our answer was in the Spanish tongue; "That for our ship, it was well; for we had rather met with calms and contrary winds than any tempests. For our sick, they were many, and in very ill case; so that if they were not permitted to land, they ran in danger of their lives." Our other wants we set down in particular; adding, "that we had some little store of merchandise, which if it pleased them to deal for, it might supply our wants without being chargeable unto them." We offered some reward in pistolets unto the servant, and a piece of crimson velvet to be presented to the officer; but the servant took them not, nor would scarce look upon them; and so left

us, and went back in another little boat which was sent for him.

About three hours after we had despatched our answer, there came towards us a person, as it seemed, of place. He had on him a gown with wide sleeves, of a kind of water-chambllet, of an excellent azure colour, far more glossy than ours; his under apparel was green, and so was his hat, being in the form of a turbane, daintily made, and not so huge as the Turkish turbans; and the locks of his hair came down below the brims of it. A reverend man was he to behold. He came in a boat, gilt in some part of it, with four persons more only in that boat; and was followed by another boat, wherein were some twenty. When he was come within a flight shot of our ship, signs were made to us, that we should send forth some to meet him upon the water, which we presently did in our ship-boat, sending the principal man amongst us save one, and four of our number with him. When we were come within six yards of their boat, they called to us to stay, and not to approach farther; which we did. And thereupon the man, whom I before described, stood up, and with a loud voice in Spanish, asked, "Are ye Christians?" We answered, "we were;" fearing the less, because of the cross we had seen in the subscription. At which answer the said person lifted up his right hand towards heaven, and drew it softly to his mouth, which is the gesture they use when they thank God, and then said: "If ye will swear, all of you, by the merits of the

Saviour, that ye are no pirates; nor have shed blood lawfully nor unlawfully within forty days past; you may have licence to come on land." We said, "we were all ready to take that oath." Whereupon one of those that were with him, being, as it seemed, a notary, made entry of this act. Which done, another of the attendants of the great person, which was with him in the same boat, after his lord had spoken a little to him, said aloud; "My lord would have you know, that it is not of pride or greatness, that he cometh not aboard your ship; but for that in your answer you declare, that you have many sick amongst you, he was warned by the conservator of health of the city, that he should keep a distance." We bowed ourselves towards him and answered, "We were his humble servants; and accounted for great honour, and singular humanity towards us, that which was already done; but hoped well, that the nature of the sickness of our men was not infectious." So he returned; and a while after came the notary to us aboard our ship; holding in his hand a fruit of that country, like an orange, but of colour between orange tawny and scarlet, which cast a most excellent odour. He used it, as it seemeth, for a preservative against infection. He gave us our oath; "By the name of Jesus and his merits:" and after told us, that the next day by six of the clock in the morning we should be sent to, and brought to the Strangers' house, so he called it, where we should be accommodated of things, both for our whole, and for

our sick. So he left us; and when we offered him some pistolets, he smiling, said, "he must not be twice paid for one labour:" meaning, as I take it, that he had a salary sufficient of the state for his service. For, as I after learned, they call an officer that taketh rewards, Twice-paid.

The next morning early, there came to us the officer that came to us at first with his cane, and told us, "he came to conduct us to the Strangers' house; and that he had prevented the hour, because we might have the whole day before us for our business. For," said he, "if you will follow my advice, there shall first go with me, some few of you, and see the place, and how it may be made convenient for you: and then you may send for your sick, and the rest of your number, which we will bring on land." We thanked him, and said, that this care, which he took of desolate strangers, God would reward. And so six of us went on land with him: and when we were on land, he went before us, and turned to us, and said, "he was but our servant, and our guide." He led us through three fair streets; and all the way we went there were gathered some people on both sides, standing in a row; but in so civil a fashion, as if it had been, not to wonder at us, but to welcome us; and divers of them, as we passed by them, put their arms a little abroad; which is their gesture when they bid any welcome. The Strangers' house is a fair and spacious house, built of brick of somewhat a bluer colour than our brick; and with handsome

windows, some of glass, some of a kind of cambric oiled. He brought us first into a fair parlour above stairs, and then asked us, "What number of persons we were? And how many sick?" We answered, "we are in all, sick and whole, one and fifty persons, whereof our sick were seventeen." He desired us to have patience a little, and to stay till he came back to us, which was about an hour later; and then he led us to see the chambers, which were provided for us, being in number nineteen: they having cast it, as it seemeth, that four of those chambers, which were better than the rest, might receive four of the principal men of our company, and lodge them alone by themselves; and the other fifteen chambers, were to lodge us two and two together. The chambers were handsome and cheerful chambers, and furnished civilly. Then he led us to a long gallery, like a dorture, where he showed us along the one side, for the other side was but wall and window, seventeen cells, very neat ones, having partitions of cedar wood. Which gallery and cells, being in all forty, many more than we needed, were instituted as an infirmary for sick persons. And he told us withal, that as any of our sick waxed well, he might be removed from his cell to a chamber: for which purpose there were set forth ten spare chambers, besides the number we spake of before. This done, he brought us back to the parlour, and lifting up his cane a little, as they do when they give and charge or command, said to us, "Ye are to know that the

custom of the land requireth, that after this day and tomorrow, which we give you for removing of your people from your ship, you are to keep within doors for three days. But let it not trouble you, nor do not think yourselves restrained, but rather left to your rest and ease. You shall want nothing, and there are six of our people appointed to attend you, for any business you may have abroad." We gave him thanks, with all affection and respect, and said, "God surely is manifested in this land." We offered him also twenty pistolets; but he smiled, and only said: "What? twice paid." And so left us. Soon after our dinner was served in; which was right good viands, both for bread and meat: better than any collegiate diet that I have known in Europe. We had also drink of three sorts, all wholesome and good; wine of the grape; a drink of grain, such as is with us our ale, but more clear; and a kind of cider made of a fruit of that country; a wonderful pleasing and refreshing drink. Besides, there were brought in to us great store of those scarlet oranges for our sick: which, they said, were an assured remedy for sickness taken at sea. There was given us also a box of small grey or whitish pills, which they wished our sick should take, one of the pills every night before sleep; which, they said, would hasten their recovery. The next day, after that our trouble of carriage, and removing of our men and goods out of our ship, was somewhat settled and quiet, I thought good to call our company together; and when they were

assembled said unto them; "My dear friends, let us know ourselves, and how it standeth with us. We are men cast on land, as Jonas was, out of the whale's belly, when we were as buried in the deep: and now we are on land, we are but between death and life; for we are beyond both the old world and the new; and whether ever we shall see Europe, God only knoweth. It is a kind of miracle hath brought us hither: and it must be little less that shall bring us hence. Therefore in regard of our deliverance past, and our danger present and to come, let us look up to God, and every man reform his own ways. Besides we are come here amongst a christian people, full of piety and humanity: let us not bring that confusion of face upon ourselves, as to show our vices or unworthiness before them. Yet there is more: for they have by commandment, though in form of courtesy, cloistered us within these walls for three days: who knoweth whether it be not to take some taste of our manners and conditions? And if they find them bad, to banish us straightways; if good, to give us farther time. For these men, that they have given us for attendance, may withal have an eye upon us. Therefore for God's love, and as we love the weal of our souls and bodies, let us so behave ourselves as we may be at peace with God, and may find grace in the eyes of this people." Our company with one voice thanked me for my good admonition, and promised me to live soberly and civilly, and without giving any the least occasion of offence. So we spent

our three days joyfully, and without care, in expectation what would be done with us when they were expired. During which time, we had every hour joy of the amendment of our sick; who thought themselves cast into some divine pool of healing; they mended so kindly and so fast.

The morrow after our three days were past, there came to us a new man, that we had not seen before, clothed in blue as the former was, save that his turban was white, with a small red cross on the top. He had also a tippet of fine linen. At his coming in he did bend to us a little, and put his arms abroad. We of our parts saluted him in a very lowly and submissive manner; as looking that from him we should receive sentence of life or death. He desired to speak with some few of us: whereupon six of us only stayed, and the rest avoided the room. He said, "I am office governor of this House of Strangers, and by vocation I am a christian priest; and therefore am come to you, to offer you my service, both as strangers. and chiefly as Christians. Some things I may tell you, which I think you will not be unwilling to hear. The state hath given you licence to stay on land for the space of six weeks: and let it not trouble you if your occasions ask farther time, for the law in this point is not precise; and I do not doubt but myself shall be able to obtain for you such farther time as may be convenient. Ye shall also understand, that the Strangers' house is at this time rich, and much aforehand; for it hath laid

up revenue these thirty-seven years; for so long it is since any stranger arrived in this part: and therefore take ye no care; the state will defray you all the time you stay; neither shall you stay one day less for that. As for any merchandise you have brought, ye shall be well used, and have your return either in merchandise, or in gold and silver: for to us it's all one. And if you have any other request to make, hide it not. For ye shall find, we will not make your countenance to fall by the answer ye shall receive. Only this I must tell you, that none of you must go above a *karan*," that is with them a mile and a half, "from the walls of the city without special leave." We answered after we had looked awhile one upon another, admiring this gracious and parent-like usage; "that we could not tell what to say: for we wanted words to express our thanks; and his noble free offers left us nothing to ask. It seemed to us, that we had before us a picture of our salvation in heaven: for we that were awhile since in the jaws of death, were now brought into a place where we found nothing but consolations. For the commandment paid upon us, we would not fail to obey it, though it was impossible but our hearts should be inflamed to tread farther upon this happy and holy ground." We added: "that our tongues should first cleave to the roofs of our mouths, ere we should forget either his reverend person, or this whole nation in our prayers." We also most humbly besought him to accept of us as his true servants, by as

just a right as ever men on earth were bounden, laying and presenting both our persons and all we had at his feet. He said: "he was a priest, and looked for a priest's reward; which was our brotherly love, and the good of our souls and bodies." So he went from us, not without tears of tenderness in his eyes; and left us also confused with joy and kindness, saying amongst ourselves, "that we were come into a land of angels, which did appear to us daily, and prevent us with comforts which we thought not of, much less expected."

The next day, about ten of the clock, the governor came to us again, and after salutations said familiarly, that he was come to visit us; and called for a chair, and sat him down: and we being some ten of us, the rest were of the meaner sort, or else gone abroad, sat down with him. And when we were set, he began thus: "We of this island of Bensalem," for so they call it in their language, "have this; that by means of our solitary situation, and of the laws of secrecy which we have for our travellers, and our rare admission of strangers; we know well most part of the habitable world, and are ourselves unknown. Therefore because he that knoweth least is fittest to ask questions, it is more reason for the entertainment of the time, that ye ask me questions, than that I ask you." We answered; "That we humbly thanked him that he would give us leave so to do: and that we conceived by the taste we had already, that there was no worldly thing on earth more worthy to be

known than the state of that happy land. But above all," we said, "since that we were met from the several ends of the world, and hoped assuredly that we should meet one day in the kingdom of heaven, for that we were both parts Christians, we desired to know, in respect that land was so remote, and so divided by vast and unknown seas, from the land where our Saviour walked on earth, who was the apostle of that nation, and how it was converted to the faith?" It appeared in his face that he took great contentment in this our question: he said, "Ye knit my heart to you, by asking this question in the first place; for it sheweth that you 'first' seek the kingdom of heaven;" and I shall gladly and briefly satisfy your demand.

"About twenty years after the ascension of our Saviour, it came to pass, that there was seen by the people of Renfusa, a city upon the eastern coast of our island, within night, the night was cloudy and calm, as it might be some mile into the sea, a great pillar of light; not sharp, but in form of a column or cylinder rising from the sea, a great way up towards heaven: and on the top of it was seen a large cross of light, more bright and resplendent than the body of the pillar. Upon which so strange a spectacle, the people of the city gathered apace together upon the sands to wonder; and so after put themselves into a number of small boats, to go nearer to this marvellous sight. But when the boats were come within about sixty yards of the pillar,

they found themselves all bound, and could go no farther, yet so as they might move to go about, but might not approach nearer: so as the boats stood all as in a theatre, beholding this light as a heavenly sign. It so fell out, that there was in one of the boats one of those wise men of the society of Solomon's house, which house or college, my good brethren, is the very eye of this kingdom; who having awhile attentively and devoutly viewed and contemplated this pillar and cross, fell down upon his face; and then raising himself up upon his knees, and lifting up his hands to heaven, made his prayers in this manner:

“‘Lord God of heaven and earth; thou hast vouchsafed of thy grace, to those of our order, to know thy works of creation, and the secrets of them; and to discern, as far as appertaineth to the generations of men, between divine miracles, works of nature, works of art, and impostures and illusions of all sorts. I do here acknowledge and testify before this people, that the thing which we now see before our eyes, is thy finger, and a true miracle; and forasmuch as we learn in our books, that thou never workest miracles, but to a divine and excellent end, for the laws of nature are thine own laws, and thou exceedest them not but upon great cause, we most humbly beseech thee to prosper this great sign, and to give us the interpretation and use of it in mercy; which thou dost in some part secretly promise by sending it unto us.’

“When he had made this prayer, he presently

found the boat he was in movable and unbound; whereas all the rest remained still fast; and taking that for an assurance of leave to approach, he caused the boat to be softly and with silence rowed towards the pillar. But ere he came near it, the pillar and cross of light brake up, and cast itself abroad, as it were into a firmament of many stars; which also vanished soon after, and there was nothing left to be seen but a small ark or chest of cedar, dry, and not wet at all with water, though it swam. And in the fore-end of it which was towards him, grew a small green branch of palm; and when the wise man had taken it with all reverence into his boat, it opened of itself, and there were found in it a book and a letter; both written in fine parchment, and wrapped in sindons of linen. The book contained all the canonical books of the Old and New Testament, according as you have them, for we know well what the churches with you receive, and the Apocalypse itself: and some other books of the New Testament, which were not at that time written, were nevertheless in the book: and for the letter it was in these words:

“I Bartholomew, a servant of the Highest, and apostle of Jesus Christ, was warned by an angel that appeared to me in a vision of glory, that I should commit this ark to the floods of the sea. Therefore I do testify and declare, unto that people where God shall ordain this ark to come to land, that in the same days is come unto them salvation, and peace, and good-

will, from the Father, and from the Lord Jesus.'

"There was also in both these writings, as well the book as the letter, wrought a great miracle, conform to that of the apostles in the original gift of the tongues. For there being at that time in this land, Hebrews, Persians, and Indians, besides the natives, every one read upon the book and letter, as if they had been written in his own language. And thus was this land saved from infidelity, as the remain of the old world was from water, by an ark, through the apostolical and miraculous evangelism of St. Bartholomew." And here he paused, and a messenger came and called him from us. So this was all that passed in that conference.

The next day the same governor came again to us immediately after dinner, and excused himself, saying; "that the day before he was called from us somewhat abruptly, but now he would make us amends, and spend time with us, if we held his company and conference agreeable." We answered, "that we held it so agreeable and pleasing to us, as we forgot both dangers past and fears to come, for the time we heard him speak; and that we thought an hour spent with him, was worth years of our former life." He bowed himself a little to us, and after we were set again, he said; "Well, the questions are on your part." One of our number said, after a little pause; "that there was a matter we were no less desirous to know, than fearful to ask, lest we might presume too

far. But encouraged by his rare humanity towards us, that could scarce think ourselves strangers, being his vowed and professed servants, we would take the hardiness to propound it: humbly beseeching him if he thought it not fit to be answered, that he would pardon it, though he rejected it." We said; "we well observed those his words, which he formerly spake, that this happy island where we now stood, was known to few, and yet knew most of the nations of the world; which we found to be true, considering they had the languages of Europe, and knew much of our state and business; and yet we in Europe, notwithstanding all the remote discoveries and navigations of this last age, never heard any of the least inkling of glimpse of this island. This we found wonderful strange; for that all nations have interknowledge of one another, either by voyage into foreign parts, or by strangers that come to them: and though the traveller into a foreign country doth commonly know more by the eye, than he that stayeth at home can by relation of the traveller; yet both ways suffice to make a mutual knowledge, in some degree, on both parts. But for this is land, we never heard tell of any ship of theirs, that had been seen to arrive upon any shore of Europe; no, nor of either the East or West Indies, nor yet of any ship of any other part of the world, that he made return from them. And yet the marvel rested not in this. For the situation of it, as his lordship said, in the secret conclave of such a vast sea might

cause it. But then, that they should have knowledge of the languages, books, affairs of those that lie at such a distance from them. it was a thing we could not tell what to make of; for that it seemed to us a condition and propriety of divine powers and beings, to be hidden and unseen to others, and yet to have others open, and as in a light to them." At this speech the governor gave a gracious smile, and said; "that we did well to ask pardon for this question we now asked; for that it imported, as if we thought this land a land of magicians, that sent forth spirits of the air into all parts, to bring them news and intelligence of other countries." It was answered by telling us all, in all possible humbleness, but yet with a countenance taking knowledge that we knew that he spake it but merrily, "That we were apt enough to think there was something supernatural in this land, but yet rather as angelical than magical. But to let his lordship know truly, what it was that made us tender and doubtful to ask this question, it was not any such conceit, but because we remembered, he had given a touch in his former speech, that this land had laws of secrecy touching strangers." To this he said: "You remember it aright; and therefore in that I shall say to you, I must reserve some particulars, which it is not lawful for me to reveal; but there will be enough left to give you satisfaction.

"You shall understand, that which perhaps you will scarce think credible, that about three

thousand years ago, or somewhat more, the navigation of the world, especially for remote voyages, was greater than at this day. Do not think with yourselves, that I know not how much it is increased with you within these six-score years: I know it well; and yet I say greater then than now: whether it was, that the example of the ark, that saved the remnant of men from the universal deluge, gave men confidence to adventure upon the waters, or what it was, but such is the truth. The Phoenicians, and especially the Tyrians, had great fleets. So had the Carthaginians their colony, which is yet farthest west. Toward the east, the shipping of Egypt, and of Palestine, was likewise great. China also, and the great Atlantis, that you call America, which have now but junks and canoes, abounded then in tall ships. This island, as appeareth by faithful registers of those times, had then fifteen hundred strong ships of great content. Of all this there is with you sparing memory, or none; but we have large knowledge thereof.

“At that time, this land was known and frequented by the ships and vessels of all the nations before named. And, as it cometh to pass, they had many times men of other countries, that were no sailors, that came with them; as Persians, Chaldeans, Arabians, so as almost all nations of might and fame resorted hither; of whom we have some stirps and little tribe with us at this day. And for our own ships, they went sundry voyages, as well to your Straits, which you call the pillars of Hercules, as to

other parts in the Atlantic and Mediterranean seas; as to Peguin, which is the same with Cambaline, and Quinzy, upon the Oriental seas, as far as to the borders of the East Tartary.

“At the same time, and an age after, or more, the inhabitants of the great Atlantis did flourish. For though the narration and description which is made by a great man with you, that the descendants of Neptune planted there; and of the magnificent temple, palace, city, and hill; and the manifold streams of goodly navigable rivers, which, as so many chains, environed the same site and temple; and the several degrees of ascent, whereby men did climb up to the same, as if it had been a scala cœli; be all poetical and fabulous: yet so much is true, that the said country of Atlantis, as well that of Peru, then Coya, as that of Mexico, then named Tyrambel, were mighty and proud kingdoms, in arms, shipping, and riches: so mighty, as at one time, or at least within the space of ten years, they both made two great expeditions, they of Tyrambel, through the Atlantic to the Mediterranean sea; and they of Coya, through the South sea upon this our island: and for the former of these, which was into Europe, the same author amongst you, as it seemeth, had some relation from the Ægyptian priest whom he citeth. For assuredly, such a thing there was. But whether it were the ancient Athenians that had the glory of the repulse and resistance of those forces, I can say nothing: but certain it is, there never came back either ship, or man, from that voyage. Neither had the other voyage of those of Coya upon us had bet-

ter fortune, if they had not met with enemies of greater clemency. For the king of this island, by name Altabin, a wise man, and a great warrior; knowing well both his own strength, and that of his enemies; handled the matter so, as he cut off their land-forces from their ships, and entailed both their navy and their camp, with a greater power than theirs, both by sea and land; and compelled them to render themselves without striking stroke: and after they were at his mercy, contenting himself only with their oath, that they should no more bear arms against him, dismissed them all in safety. But the divine revenge overtook not long after those proud enterprises. For within less than the space of one hundred years, the great Atlantis was utterly lost and destroyed: not by a great earthquake, as your man saith, for that whole tract is little subject to earthquakes, but by a particular deluge or inundation: those countries having, at this day, far greater rivers, and far higher mountains, to pour down waters, than any part of the old world. But it is true, that the same inundation was not deep; not past forty foot, in most places, from the ground: so that although it destroyed man and beast generally, yet some few wild inhabitants of the woods escaped. Birds also were saved by flying to the high trees and woods. For as for men, although they had buildings in many places higher than the depth of the water; yet that inundation, though it were shallow, had a long continuance, whereby they of the vale, that were not drowned, perished for want of food, and other

things necessary. So as marvel you not at the thin population of America, nor at the rudeness and ignorance of the people; for you must account your inhabitants of America as a young people; younger a thousand years, at the least, than the rest of the world; for that there was so much time between the universal flood and their particular inundation. For the poor remnant of human seed, which remained in their mountains, peopled the country again slowly, by little and little; and being simple and savage people, not like Noah and his sons, which was the chief family of the earth, they were not able to leave letters, arts, and civility to their posterity, and having likewise in their mountainous habitations been used, in respect of the extreme cold of those regions, to clothe themselves with the skins of tigers, bears, and great hairy goats, that they have in those parts: when after they came down into the valley, and found the intolerable heats which are there, and knew no means of lighter apparel, they were forced to begin the custom of going naked, which continueth at this day. Only they take great pride and delight in the feathers of birds; and this also they took from those their ancestors of the mountains, who were invited unto it by the infinite flights of birds, that came up to the high grounds, while the waters stood below. So you see, by this main accident of time, we lost our traffic with the Americans, with whom, of all others, in regard they lay nearest to us, we had most commerce. As for the other parts of the world, it is most manifest, that in the ages following, whether it

were in respect of wars, or by a natural revolution of time, navigation did every where greatly decay; and especially far voyages, the rather by the use of galleys, and such vessels as could hardly brook the ocean, were altogether left and omitted. So then, that part of intercourse which could be from other nations to sail to us, you see how it hath long since ceased; except it were by some rare accident, as this of yours. But now of the cessation of that other part of intercourse, which might be by our sailing to other nations, I must yield you some other cause. For I cannot say, if I shall say truly, but our shipping, for number, strength, mariners, pilots, and all things that appertain to navigation, is as great as ever: and therefore why we should sit at home, I shall now give you an account by itself: and it will draw nearer to give you satisfaction to your principal question.

“There reigned in this island, about nineteen hundred years ago, a king whose memory of all others we most adore; not superstitiously, but as a divine instrument, though a mortal man; his name was Solomona: and we esteem him as the lawgiver of our nation. This king had a large heart, inscrutable for good, and was wholly bent to make his kingdom and people happy. He therefore taking into consideration, how sufficient and substantive this land was to maintain itself without any aid at all of the foreigner, being five thousand six hundred miles in circuit, and of rare fertility of soil, in the greatest part thereof; and finding also the shipping of this country might be plentifully

set on work, both by fishing and by transportations from port to port, and likewise by sailing unto some small islands that are not far from us, and are under the crown and laws of this state; and recalling into his memory the happy and flourishing estate wherein this land then was; so as it might be a thousand ways altered to the worse, but scarce any one way to the better; thought nothing wanted to his noble and heroical intentions, but only, as far as human foresight might reach, to give perpetuity to that, which was in his time so happily established. Therefore amongst his other fundamental laws of this kingdom, he did ordain the interdicts and prohibitions, which we have, touching entrance of strangers; which at that time, though it was after the calamity of America, was frequent; doubting novelties, and commixture of manners. It is true, the like law, against the admission of strangers without licence, is an ancient law in the kingdom of China, and yet continued in use: but there it is a poor thing; and hath made them a curious, ignorant, fearful, foolish nation. But our lawgiver made his law of another temper. For first, he hath preserved all points of humanity, in taking order, and making provision for the relief of strangers distressed, whereof you have tasted." At which speech, as reason was, we all rose up and bowed ourselves. He went on. "That king also, still desiring to join humanity and policy together; and thinking it against humanity to detain strangers here against their wills; and against policy that they should return, and discover their knowledge of this

estate, he took this course: he did ordain, that of the strangers that should be permitted to land, as many, at all times, might depart as would; but as many as woul^d stay, should have very good conditions, and means to live, from the state. Wherein he saw so far, that now in so many ages since the prohibition, we have memory, not of one ship that ever returned, and but of thirteen persons only, at several times, that chose to return in our bottoms. What those few that have returned may have reported abroad I know not: but you must think, whatsoever they have said, could be taken where they came but for a dream. Now for our traveling from hence into parts abroad, our lawgiver thought fit altogether to restrain it. So is it not in China. For the Chinese sail where they will or can; which showeth that their law of keeping out strangers is a law of pusillanimity and fear. But this restraint of ours hath one only exception, which is admirable; preserving the good which cometh by communicating with strangers, and avoiding the hurt; and I will now open it to you. And here I shall seem a little to digress, but you will by and by find it pertinent. Ye shall understand, my dear friends, that amongst the excellent acts of that king, one above all hath the pre-eminence. It was the erection and institution of an order or society which we call Solomon's House; the noblest foundation, as we think, that ever was upon the earth, and the lanthorn of this kingdom. It is dedicated to the study of the works and creatures of God. Some think it beareth the founder's name a lit-

tle corrupted, as if it should be Solomona's House. But the records write it as it is spoken. So as I take it to be denominate of the king of the Hebrews, which is famous with you, and no stranger to us; for we have some parts of his works, which with you are lost; namely, that Natural History which he wrote of all plants, 'from the cedar of Libanus, to the moss that groweth out of the wall;' and of all things that have life and motion. This maketh me think, that our king finding himself to symbolize in many things with that king of the Hebrews, which lived many years before him, honoured him with the title of this foundation. And I am the rather induced to be of this opinion, for that I find in ancient records this order or society is sometimes called Solomon's House, and sometimes the college of the six days works: whereby I am satisfied, that our excellent king had learned from the Hebrews, that God had created the world, and all that therein is, within six days; and therefore he instituting that house for the finding out the true nature of all things, whereby God might have the more glory in the workmanship of them, and men the more fruit in the use of them, did give it also that second name. But now to come to our present purpose. When the king had forbidden to all his people navigation into any part, that was not under his crown, he made nevertheless this ordinance; that every twelve years there should be set forth, out of this kingdom, two ships appointed to several voyages; that in either of these ships there should be a mission of three of the fellows

or brethren of Solomon's House; whose errand was only to give us knowledge of the affairs and state of those countries to which they were designed; and especially of the sciences, arts, manufactures, and inventions of all the world; and withal to bring unto us books, instruments, and patterns in every kind: that the ships, after they had landed the brethren, should return; and that the brethren should stay abroad till the new mission. These ships are not otherwise fraught, than with store of victuals, and good quantity of treasure to remain with the brethren, for the buying of such things, and rewarding of such persons; as they should think fit. Now for me to tell you how the vulgar sort of mariners are contained from being discovered at land; and how they that must be put on shore for any time, colour themselves under the names of other nations; and to what places these voyages have been designed; and what places of rendezvous are appointed for the new missions; and the like circumstances of the practice; I may not do it: neither is it much to your desire. But thus you see we maintain a trade, not for gold, silver, or jewels; nor for silks; nor for spices; nor any other commodity of matter; but only for God's first creature, which was light: to have light, I say, of the growth of all parts of the world." And when he had said this, he was silent; and so were we all. For indeed we were all astonished to hear so strange things so probably told. And he perceiving that we were willing to say somewhat, but had it not ready, in great courtesy took us off, and descended to ask us questions

of our voyage and fortunes, and in the end concluded, that we might do well to think with ourselves, what time of stay we would demand of the state; and bade us not to scant ourselves; for he would procure such time as we desired. Whereupon we all rose up, and presented ourselves to kiss the skirt of his tippet, but he would not suffer us; and so took his leave. But when it came once amongst our people, that the state used to offer conditions to strangers that would stay, we had work enough to get any of our men to look to our ship; and to keep them from going presently to the governor to crave conditions. But with much ado we refrained them, till we might agree what course to take.

We took ourselves now for free men, seeing there was no danger of our utter perdition; and lived most joyfully, going abroad and seeing what was to be seen in the city and places adjacent within our tedder; and obtaining acquaintance with many of the city, not of the meanest quality; at whose hands we found such humanity, and such a freedom and desire to take strangers as it were into their bosom, as was enough to make us forget all that was dear to us in our own countries: and continually we met with many things, right worthy of observation and relation; as indeed, if there be a mirror in the world worthy to hold men's eyes, it is that country. One day there were two of our company bidden to a feast of the family, as they call it. A most natural, pious, and reverend custom it is, showing that nation to be compounded of all goodness. This is the manner of it. It is granted to any man,

that shall live to see thirty persons descended of his body alive together and all above three years old, to make this feast, which is done at the cost of the state. The father of the family, whom they call the Tirsan, two days before the feast, taketh to him three of such friends as he liketh to choose; and is assisted also by the governor of the city, or place, where the feast is celebrated; and all the persons of the family of both sexes are summoned to attend him. These two days the Tirsan sitteth in consultation concerning the good estate of the family. There, if there be any discords or suits between any of the family, they are compounded and appeased. There, if any of the family be distressed or decayed, order is taken for their relief, and competent means to live. There, if any be subject to vice, or take ill courses, they are reprov'd and censured. So likewise direction is given touching marriages, and the course of life which any of them should take, with divers other the like orders and advices. The governor assisteth, to the end to put in execution, by his public authority, the decrees and orders of the Tirsan, if they should be disobeyed; though that seldom needeth; such reverence and obedience they give to the order of nature. The Tirsan doth also then ever choose one man from amongst his sons, to live in the house with him: who is called ever after the Son of the Vine. The reason will hereafter appear. On the feast-day, the father, or Tirsan, cometh forth after divine service into a large room where the feast is celebrated;

which room hath a half pace at the upper end. Against the wall, in the middle of the half pace, is a chair placed for him, with a table and carpet before it. Over the chair is a state made round or oval, and it is of ivy; an ivy somewhat whiter than ours, like the leaf of a silver asp, but more shining: for it is green all winter. And the state is curiously wrought with silver and silk of divers colours, broiding or binding in the ivy; and is ever of the work of some of the daughters of the family; and veiled over at the top with a fine net of silk and silver. But the substance of it is true ivy, whereof, after it is taken down, the friends of the family are desirous to have some leaf or sprig to keep. The Tirsan cometh forth with all his generation or lineage, the males before him, and the females following him; and if there be a mother, from whose body the whole lineage is descended, there is a traverse placed in a loft above on the right hand of the chair, with a privy door, and a carved window of glass, leaded with gold and blue; where she sitteth, but is not seen. When the Tirsan is come forth, he sitteth down in the chair; and all the lineage place themselves against the wall, both at his back, and upon the return of the half pace, in order of their years, without difference of sex, and stand upon their feet. When he is set, the room being always full of company, but well kept, and without disorder; after some pause there cometh in from the lower end of the room a taratan, which is as much as a herald, and on either side of him two young

lads; whereof one carrieth a scroll of their shining yellow parchment; and the other a cluster of grapes of gold, with a long foot or stalk. The herald and children are clothed with mantles of sea-water green sattin; but the herald's mantle is streamed with gold, and hath a train. Then the herald with three curtesies, or rather inclinations, cometh up as far as the half pace; and there first taketh into his hand the scroll. This scroll is the king's charter, containing gift of revenue, and many privileges, exemptions, and points of honour, granted to the father of the family; and is ever styled and directed, "To such an one, our well-beloved friend and creditor:" which is a title proper only to this case. For they say, the king is debtor to no man, but for propagation of his subjects. The seal set to the king's charter, is the king's image, imbossed or moulded in gold; and though such charters be expedited of course, and as of right, yet they are varied by discretion, according to the number and dignity of the family. This charter the herald readeth aloud: and while it is read, the father or Tirsan standeth up, supported by two of his sons, such as he chooseth. Then the herald mounteth the half pace, and delivereth the charter into his hand: and with that there is an acclamation by all that are present in their language, which is thus much: "Happy are the people of Bensalem." Then the herald taketh into his hand from the other child the cluster of grapes, which is of gold; both the stalk and the grapes. But the grapes are daintily enameled; and if the males of the

family be the greater number, the grapes are enameled purple, with a little sun set on the top; if the females, then they are enameled into a greenish yellow, with a crescent on the top. The grapes are in number as many as there are descendants of the family. This golden cluster the herald delivereth also to the Tirsan; who presently delivereth it over to that son, that he had formerly chosen to be in the house with him: who beareth it before his father as an ensign of honour, when he goeth in public, ever after; and is thereupon called the Son of the Vine. After this ceremony ended, the father or Tirsan retireth; and after some time cometh forth again to dinner, where he sitteth alone under the state as before; and none of his descendants sit with him, of what degree or dignity soever, except he hap to be of Solomon's House. He is served only by his own children, such as are male; who perform unto him all service of the table upon the knee; and the women only stand about him, leaning against the wall. The room below the half pace hath tables on the sides for the guests that are bidden; who are served with great and comely order; and towards the end of dinner, which, in the greatest feasts with them, lasteth never above an hour and a half, there is a hymn sung, varied according to the invention of him that composeth it, for they have excellent poesy, but the subject of it is, always, the praises of Adam, and Noah, and Abraham; whereof the former two peopled the world, and the last was the father of the faithful: concluding ever with a thanksgiving for

the nativity of our Savior, in whose birth the births of all are only blessed. Dinner being done, the Tirsan retireth again; and having withdrawn himself alone into a place, where he maketh some private prayers, he cometh forth the third time, to give the blessing; with all his descendants, who stand about him as at the first. Then he calleth them forth by one and by one, by name, as he pleaseth, though seldom the order of age be inverted. The person that is called, the table being before removed, kneeleth down before the chair, and the father layeth his hand upon his head, or her head, and giveth the blessing in these words: "Son of Bensalem, or daughter of Bensalem, thy father saith it; the man by whom thou hast breath and life speaketh the word; The blessing of the everlasting Father, the Prince of peace, and the Holy Dove be upon thee, and make the days of thy pilgrimage good and many." This he saith to every of them; and that done, if there be any of his sons of eminent merit and virtue, so they be not above two, he calleth for them again; and saith, laying his arm over their shoulders, they standing; "Sons, it is well ye are born, give God the praise, and persevere to the end." And withal he delivereth to either of them a jewel, made in the figure of an ear of wheat, which they ever after wear in the front of their turban or hat. This done, they fall to music and dances, and other recreations, after their manner, for the rest of the day. This is the full order of that feast.

By that time six or seven days were spent,

I was fallen into strait acquaintance with a merchant of that city, whose name was Joabin. He was a Jew, and circumcised; for they have some few stirps of Jews yet remaining among them, whom they leave to their own religion: which they may the better do, because they are of a far differing disposition from Jews in other parts. For whereas they hate the name of Christ, and have a secret inbred rancour against the people amongst whom they live; these, contrariwise, give unto our Savior many high attributes, and love the nation of Bensalem extremely. Surely this man of whom I speak, would ever acknowledge that Christ was born of a virgin; and that he was more than a man; and he would tell how God made him ruler of the seraphims which guard his throne; and they call him also the milken way, and the Eliah of the Messias; and many other high names; which though they be inferior to his divine Majesty, yet they are far from the language of other Jews. And for the country of Bensalem, this man would make no end of commending it: being desirous by tradition among the Jews there, to have it believed, that the people thereof were of the generations of Abraham, by another son, whom they called Nachoran; and that Moses, by a secret cabala, ordained the laws of Bensalem which they now use; and that when the Messias should come, and set in his throne at Hierusalem, the king of Bensalem should set at his feet, whereas other kings should keep a great distance. But yet setting aside these Jewish dreams, the man was a wise man, and learned, and of great

policy, and excellently seen in the laws and customs of that nation. Amongst other discourses, one day I told him I was much affected with the relation I had from some of the company, of their custom in holding the feast of the family; for that, methought, I had never heard of a solemnity wherein nature did so much preside. And because propagation of families proceedeth from the nuptial copulation, I desired to know of him, what laws and customs they had concerning marriage; and whether they kept marriage well; and whether they were tied to one wife? For that where population is so much affected, and such as with them it seemed to be, there is commonly permission of plurality of wives. To this he said, "You have reason for to commend that excellent institution of the feast of the family; and indeed we have experience, that those families that are partakers of the blessing of that feast, do flourish and prosper ever after in an extraordinary manner. But hear me now, and I will tell you what I know. You shall understand, that there is not under the heavens so chaste a nation as this of Bensalem; nor so free from all pollution or foulness. It is the virgin of the world. I remember I have read in one of our European books, of an holy hermit among you, that desired to see the spirit of fornication; and there appeared to him a little foul ugly Æthiop: but if he had desired to see the spirit of chastity of Bensalem, it would have appeared to him in the likeness of a fair beautiful cherubim. For there is nothing amongst mortal men more fair

and admirable, than the chaste minds of this people. Know therefore that with them there are no stews, no dissolute houses, no courtesans, nor any thing of that kind. Nay, they wonder, with detestation, at you in Europe, which permit such things. They say, ye have put marriage out of office; for marriage is ordained a remedy for unlawful concupiscence; and natural concupiscence seemeth as a spur to marriage. But when men have at hand a remedy more agreeable to their corrupt wil', marriage is almost expulsed. And therefore there are with you seen infinite men that marry not, but choose rather a libertine and impure single life, than to be yoked in marriage; and many that do marry, marry late, when the prime and strength of their years is past. And when they do marry, what is marriage to them but a very bargain; wherein is sought alliance, or portion, or reputation, with some desire, almost indifferent, of issue; and not the faithful nuptial union of man and wife, that was first instituted. Neither is it possible, that those that have cast way so basely esteem children, being of the same matter, as chaste men do. So likewise during marriage, is the case much amended, as it ought to be if those things were tolerated only for necessity? No, but they remain still as a very affront to marriage. The haunting of those dissolute places, or resort to courtesans, are no more punished in married men than in bachelors. And the depraved custom of change, and the delight in meretricious embracements, where sin is turned into art, maketh marriage

a dull thing, and a kind of imposition or tax. They hear you defend these things, as done to avoid greater evils; as advoutries, deflouring of virgins, unnatural lust, and the like. But they say, this is a preposterous wisdom; and they call it Lot's offer, who to save his guests from abusing, offered his daughters: nay, they say farther, that there is little gained in this; for that the same vices and appetites do still remain and abound; unlawful lust being like a furnace, that if you stop the flames altogether it will quench; but if you give it any vent it will rage. As for masculine love, they have no touch of it; and yet there are not so faithful and inviolate friendships in the world again as are there; and to speak generally, as I said before, I have not read of any such chastity in any people as theirs. And their usual saying is, That whosoever is unchaste cannot reverence himself: and they say, That the reverence of a man's self is next religion, the chiefest bridle of all vices." And when he had said this, the good Jew paused a little; whereupon I, far more willing to hear him speak on than to speak myself; yet thinking it decent, that upon his pause of speech I should not be altogether silent, said only this: "that I would say to him, as the widow of Sarepta said to Elias; that he was come to bring to memory our sins; and that I confess the righteousness of Bensalem was greater than the righteousness of Europe." At which speech he bowed his head, and went on in this manner: "They have also many wise and excellent laws touching marriage. They allow

no polygamy; they have ordained that none do intermarry, or contract, until a month be passed from their first interview. Marriage without consent of parents they do not make void, but they mulct it in the inheritors: for the children of such marriages are not admitted to inherit above a third part of their parents' inheritance. I have read in a book of one of your men, of a feigned commonwealth, where the married couple are permitted before they contract, to see one another naked. This they dislike; for they think it a scorn to give a refusal after so familiar knowledge: but because of many hidden defects in men and women's bodies, they have a more civil way; for they have near every town a couple of pools, which they call Adam and Eve's pools, where it is permitted to one of the friends of the man, and another of the friends of the woman, to see them severally bathe naked."

And as we were thus in conference, there came one that seemed to be a messenger, in a rich huke, that spake with the Jew: whereupon he turned to me and said; "You will pardon me, for I am commanded away in haste." The next morning he came to me again joyful, as it seemed, and said, "There is word come to the governor of the city, that one of the fathers of Solomon's House will be here this day seven-night; we have seen none of them this dozen years. His coming is in state; but the cause of his coming is secret. I will provide you and your fellows of a good standing to see his entry." I thanked him, and told him, I was most glad of the news. The day being come,

he made his entry. He was a man of middle stature and age, comely of person, and had an aspect as if he pitied men. He was clothed in a robe of fine black cloth, with wide sleeves and a cape. His undergarment was of excellent white linen down to the foot, girt with a girdle of the same; and a sindon or tippet of the same about his neck. He had gloves that were curious, and set with stone; and shoes of peach-colored velvet. His neck was bare to the shoulders. His hat was like a helmet, or Spanish Montera; and his locks curled below it decently: they were of color brown. His beard was cut round, and of the same color with his hair, somewhat lighter. He was carried in a rich chariot without wheels, litter-wise, with two horses at either end, richly trapped in blue velvet embroidered; and two footmen on each side in the like attire. The chariot was all of cedar, gilt, and adorned with crystal; save that the fore-end had pannels of sapphires, set in borders of gold, and the hinder-end the like of emeralds of the Peru color. There was also a sun of gold, radiant upon the top, in the midst; and on the top before a small cherub of gold, with wings displayed. The chariot was covered with cloth of gold tissued upon blue. He had before him fifty attendants, young men all, in white sattin loose coats to the mid-leg, and stocks of white silk; and shoes of blue velvet; and hats of blue velvet; with fine plumes of divers colors, set round like hatbands. Next before the chariot went two men bare-headed, in linen garments down to the foot, girt, and shoes of blue velvet, who carried the one a

crozier, the other a pastoral staff, like a sheep-hook: neither of them of metal, but the crozier of balm-wood, the pastoral staff of cedar. Horsemen he had none, neither before nor behind his chariot: as it seemeth, to avoid all tumult and trouble. Behind his chariot went all the officers and principals of the companies of the city. He sat alone, upon cushions of a kind of excellent plush, blue; and under his foot curious carpets of silk of divers colors, like the Persian, but far finer. He held up his bare hand as he went, as blessing the people, but in silence. The street was wonderfully well kept; so that there was never any army had their men stand in better battle-array, than the people stood. The windows likewise were not crowded, but every one stood in them as if they had been placed. When the show was past, the Jew said to me; "I shall not be able to attend you as I would, in regard of some charge the city hath laid upon me, for the entertaining of this great person." Three days after the Jew came to me again, and said; "Ye are happy men; for the father of Solomon's House taketh knowledge of your being here, and commanded me to tell you, that he will admit all your company to his presence, and have private conference with one of you that ye shall choose: and for this hath appointed the next day after to-morrow. And because he meaneth to give you his blessing, he hath appointed it in the fore-noon." We came at our day and hour, and I was chosen by my fellows for the private access. We found him in a fair chamber, richly hanged, and carpeted under

foot, without any degrees to the state; he was set upon a low throne richly adorned, and a rich cloth of state over his head, of blue sattin embroidered. He was alone, save that he had two pages of honour, on either hand one, finely attired in white. His under-garments were the like that we saw him wear in the chariot; but instead of his gown, he had on him a mantle with a cape, of the same fine black, fastened about him. When we came in, as we were taught, we bowed low at our first entrance; and when we were come near his chair, he stood up, holding forth his hand ungloved, and in posture of blessing; and we every one of us stooped down, and kissed the hem of his tippet. That done, the rest departed, and I remained. Then he warned the pages forth of the room, and caused me to sit down beside him, and spake to me thus in the Spanish tongue:

“God bless thee, my son; I will give thee the greatest jewel I have. For I will impart unto thee, for the love of God and men, a relation of the true state of Solomon’s House. Son, to make you know the true state of Solomon’s House, I will keep this order. First, I will set forth unto you the end of our foundation. Secondly, the preparations and instruments we have for our works. Thirdly, the several employments and functions whereto our fellows are assigned. And, fourthly, the ordinances and rites which we observe.

“The end of our foundation is the knowledge of causes, and secret motions of things; and the

enlarging of the bounds of human empire, to the effecting of all things possible.

“The preparations and instruments are these. We have large and deep caves of several depths: the deepest are sunk six hundred fathom; and some of them are digged and made under great hills and mountains: so that if you reckon together the depth of the hill and the depth of the cave, they are, some of them, above three miles deep. For we find that the depth of a hill, and the depth of a cave from the flat, is the same thing; both remote alike from the sun and heaven’s beams, and from the open air. These caves we call the lower region. And we use them for all coagulations, indurations, refrigerations, and conservations of bodies. We use them likewise for the imitation of natural mines: and the producing also of new artificial metals, by compositions and materials which we use and lay there for many years. We use them also sometimes, which may seem strange, for curing of some diseases, and for prolongation of life, in some hermits that choose to live there, well accommodated of all things necessary, and indeed live very long; by whom also we learn many things.

“We have burials in several earths, where we put divers cements, as the Chinese do their porcellane. But we have them in greater variety, and some of them more fine. We have also great variety of composts, and soils, for the making of the earth fruitful.

“We have high towers; the highest about

half a mile in height; and some of them likewise set upon high mountains; so that the vantage of the hill with the tower, is in the highest of them three miles at least. And these places we call the upper region; accounting the air between the high places and the low, as a middle region. We use these towers, according to their several heights and situations, for insolation, refrigeration, conservation, and for the view of divers meteors: as winds, rain, snow, hail, and some of the fiery meteors also. And upon them, in some places, are dwellings of hermits, whom we visit sometimes, and instruct what to observe.

“We have great lakes both salt and fresh, whereof we have use for the fish and fowl. We use them also for burials of some natural bodies: for we find a difference in things buried in earth, or in air below the earth; and things buried in water. We have also pools of which some do strain fresh water out of salt; and others by art do turn fresh water into salt. We have also some rocks in the midst of the sea: and some bays upon the shore for some words, wherein is required the air and vapour of the sea. We have likewise violent streams and cataracts, which serve us for many motions: and likewise engines for multiplying and enforcing of winds, to set also on going divers motions.

“We have also a number of artificial wells and fountains, made in imitation of the natural sources and baths; as tinted upon vitriol, sulphur, steel, brass, lead, nitre, and other min-

erals. And again, we have little wells for infusions of many things, where the waters take the virtue quicker and better than in vessels or basons. And amongst them we have a water, which we call water of paradise, being, by that we do it, made very sovereign for health and prolongation of life.

"We have also great and spacious houses, where we imitate and demonstrate meteors; as snow, hail, rain, some artificial rains of bodies, and not of water, thunders, lightnings; also generations of bodies in air; as frogs, flies, and divers others.

"We have also certain chambers, which we call chambers of health, where we qualify the air as we think good and proper for the cure of divers diseases, and preservation of health.

"We have also fair and large baths, of several mixtures, for the cure of diseases, and the restoring of man's body from arefaction: and others, for the confirming of it in strength of sinews, vital parts, and the very juice and substance of the body.

"We have also large and various orchards and gardens, wherein we do not so much respect beauty, as variety of ground and soil, proper for divers trees and herbs: and some very spacious, where trees and berries are set, whereof we make divers kinds of drinks, besides the vineyards. In these we practise likewise all conclusions of grafting and inoculating, as well of wild trees as fruit trees, which produceth many effects. And we make, by art, in the same orchards and gardens, trees and

flowers to come earlier or later than their seasons; and to come up and bear more speedily than by their natural course they do. We make them also by art greater much than their nature; and their fruit greater and sweeter, and of differing taste, smell, color, and figure, from their nature. And many of them we so order, as they become of medicinal use.

"We have also means to make divers plants rise by mixtures of earths without seeds; and likewise to make divers new plants, differing from the vulgar; and to make one tree or plant turn into another.

"We have also parks and enclosures of all sorts of beasts and birds, which we use not only for view or rareness, but likewise for dissections and trials; that thereby we may take light what may be wrought upon the body of man. Wherein we find many strange effects; as continuing life in them, though divers parts, which you account vital, be perished, and taken forth; resuscitating of some that seem dead in appearance; and the like. We try also all poisons and other medicines upon them, as well of chirurgery as physic. By art likewise, we make them greater or taller than their kind is; and contrariwise dwarf them, and stay their growth: we make them more fruitful and bearing than their kind is; and contrariwise barren, and not generative. Also we make them differ in color, shape, activity, many ways. We find means to make commixtures and copulations of divers kinds; which have produced many new kinds, and them not barren, as the general opinion is. We make a number of kinds of ser-

pents, worms, flies, fishes, of putrefaction; whereof some are advanced in effect to be perfect creatures, like beasts, or birds; and have sexes, and de propagate. Neither do we this by chance, but we know before hand, of what matter and commixture, what kind of those creatures will arise.

“We have also particular pools, where we make trials upon fishes, as we have said before of beasts and birds.

“We have also places for breed and generation of those kinds of worms, and flies, which are of special use; such as are with you your silkworms and bees.

“I will not hold you long with recounting of our brew-houses, bake-houses, and kitchens, where are made divers drinks, breads, and meats, rare and of special effects. Wines we have of grapes; and drinks of other juice, of fruits, of grains, and of roots: and of mixtures with honey, sugar, manna, and fruits dried and decocted. Also of the tears or wounding of trees, and of pulp of canes. And these drinks are of several ages, some to the age or last of forty years. We have drinks also brewed with several herbs, and roots, and spices; yea, with several fleshs, and white meats; whereof some of the drinks are such as they are in effect meat and drink both: so that divers, especially in age, do desire to live with them, with little or no meat or bread. And above all, we strive to have drinks of extreme thin parts, to insinuate into the body, and yet without all biting, sharpness, or fretting; insomuch as some of

them put upon the back of your hand, will, with a little stay; pass through to the palm, and yet taste mild to the mouth. We have also waters which we ripen in that fashion as they become nourishing; so that they are indeed excellent drink; and many will use no other. Breads we have of several grains, roots and kernels: yea and some of flesh and fish dried; with divers kinds of leavenings and seasonings: so that some do extremely move appetites; some do nourish so as divers do live on them, without any other meat; who live very long. So for meats, we have some of them so beaten, and made tender, and mortified, yet without all corrupting, as a weak heat of the stomach will turn them into good chylus, as well as a strong heat would meat otherwise prepared. We have some meats also, and breads and drinks, which taken by men enable them to fast long after: and some other, that used make the flesh of men's bodies sensibly more hard and tough, and their strength far greater than otherwise it would be.

"We have dispensatories, or shops of medicines; wherein you may easily think, if we have such variety of plants and living creatures more than you have in Europe, (for we know what you have,) the simples, drugs, and ingredients of medicines must likewise be in so much the greater variety. We have them likewise of divers ages, and long fermentations. And for their preparations, we have not only all manner of exquisite distillations and separations, and especially by gentle heats and percolations through divers strainers, yea, and

substances: but also exact forms of composition whereby they incorporate almost as they were natural simples.

"We have also divers mechanical arts, which you have not: and stuffs made by them; as papers, linen, silks, tissues; dainty works of feathers of wonderful lustre; excellent dyes, and many others: and shops likewise as well for such as are not brought into vulgar use amongst us, as for those that are. For you must know, that of the things before recited, many of them are grown into use throughout the kingdom; but yet, if they did flow from our invention, we have of them also for patterns and principals.

"We have also furnaces of great diversities, and that keep great diversity of heats; fierce and quick; strong and constant; soft and mild; blown, quiet, dry, moist; and the like. But above all, we have heats in imitation of the sun's and heavenly bodies' heats, that pass divers inequalities, and, as it were, orbs, progresses, and returns, whereby we produce admirable effects. Besides, we have heats of dung, and of bellies and maws of living creatures, and of their bloods and bodies; and of hay and herbs laid up moist; of lime unquenched; and such like. Instruments also which generate heat only by motion. And farther, places for strong insulations: and again, places under the earth, which, by nature or art, yield heat. These divers heats we use, as the nature of the operation which we intend requireth.

"We have also perspective houses, where we

make demonstrations of all lights and radiations; and of all colors; and out of things uncolored and transparent, we can represent unto you all several colors: not in rainbows, as it is in gems and prisms, but of themselves single. We represent also all multiplications of light, which we carry to great distance: and make so sharp, as to discern small points and lines: also all colorations of light: all delusions and deceits of the sight, in figures, magnitudes, motions, colors: all demonstrations of shadows. We find also divers means yet unknown to you, of producing of light originally from divers bodies. We procure means of seeing objects afar off; as in the heaven and remote places; and represent things near as far off; and things afar off as near; making feigned distances. We have also helps for the sight, far above spectacles and glasses in use. We have also glasses and means, to see small and minute bodies perfectly and distinctly; as the shapes and colors of small flies and worms, grains, and flaws in gems, which cannot otherwise be seen; observations in urine and blood, not otherwise to be seen. We make artificial rainbows, halos, and circles about light. We represent also all manner of reflections, refractions, and multiplications of visual beams of objects.

“We have also precious stones of all kinds, many of them of great beauty, and to you unknown; crystals likewise; and glasses of divers kinds; and amongst them some of metals vitrified, and other materials, besides those of which you make glass. Also a number of fossils,

and imperfect minerals, which you have not. Likewise loadstones of prodigious virtue; and other rare stones, both natural and artificial.

“We have also sound-houses, where we practice and demonstrate all sounds, and their generation. We have harmonies which you have not, of quarter-sounds, and lesser slides of sounds. Divers instruments of music likewise to you unknown, some sweeter than any you have; together with bells and rings that are dainty and sweet. We represent small sounds as great and deep; likewise great sounds extenuate and sharp; we make divers tremblings and warblings of sounds, which in their original are entire. We represent and imitate all articulate sounds and letters, and the voices and notes of beasts and birds. We have certain helps, which set to the ear do farther the hearing greatly. We have also divers strange and artificial echoes, reflecting the voice many times, and as it were tossing it: and some that give back the voice louder than it came; some shriller, and some deeper; yea, some rendering the voice differing in the letters or articulate sound from that they receive. We have also means to convey sounds in trunks and pipes, in strange lines and distances.

“We have also perfume-houses; wherewith we join also practices of taste. We multiply smells, which may seem strange. We imitate smells, making all smells to breathe out of other mixtures than those that give them. We make divers imitations of taste likewise, so that they will deceive any man’s taste. And in

this house we contain also a confiture-house; where we make all sweat-meats, dry and moist; and divers pleasant wines, milks, broths, and salads, in far greater variety than you have.

“We have also engine-houses, where are prepared engines and instruments for all sorts of motions. There we imitate and practice to make swifter motions than any you have, either out of your muskets, or any engine that you have; and to make them, and multiply them more easily, and with small force, by wheels and other means: and to make them stronger, and more violent than yours are; exceeding your greatest cannons and basilisks. We represent also ordnance and instruments of war, and engines of all kinds: and likewise new mixtures and compositions of gun-powder, wild-fires burning in water, and unquenchable. Also fire-works of all variety both for pleasure and use. We imitate also flights of birds; we have some degrees of flying in the air; we have ships and boats for going under water, and brooking of seas; also swimming-girdles and supporters. We have divers curious clocks, and other like motions of return, and some perpetual motions. We imitate also motions of living creatures, by images of men, beasts, birds, fishes, and serpents; we have also a great number of other various motions, strange for equality, fineness and subtilty.

“We have also a mathematical house, where are represented all instruments, as well of geometry as astronomy, exquisitely made.

“We have also houses of deceits of the senses;

where we represent all manner of feats of juggling, false apparitions, impostures, and illusions; and their fallacies. And surely you will easily believe, that we that have so many things truly natural, which induce admiration, could in a world of particulars deceive the senses, if we would disguise those things, and labor to make them seem more miraculous. But we do hate all impostures and lies: inso-much as we have severely forbidden it to all our fellows, under pain of ignominy and fines, that they do not show any natural work or thing, adorned or swelling; but only pure as it is, and without all affectation of strangeness.

"These are, my son, the riches of Solomon's House.

"For the several employments and offices of our fellows; we have twelve that sail into foreign countries, under the names of other nations, for our own we conceal, who bring us the books, and abstracts, and patterns of experiments of all other parts. These we call merchants of light.

"We have three that collect the experiments which are in all books. These we call depre-dators.

"We have three that collect the experiments of all mechanical arts; and also of liberal sciences; and also of practices which are not brought into arts. These we call mystery-men.

"We have three that try new experiments, such as themselves think good. These we call pioneers or miners.

"We have three that draw the experiments

of the former four into titles, and tables, to give the better light for the drawing of observations and axioms out of them. These we call compilers.

"We have three that bend themselves, looking into the experiments of their fellows, and cast about how to draw out of them things of use and practice for man's life and knowledge, as well for works, as for plain demonstrations of causes, means of natural divinations, and the easy and clear discovery of the virtues and parts of bodies. These we call dowry-men or benefactors.

"Then after divers meetings and consults of our whole number, to consider of the former labors and collections, we have three that take care, out of them, to direct new experiments, of a higher light, more penetrating into nature than the former. These we call lamps.

"We have three others that do execute the experiments so directed, and report them. These we call inoculators.

"Lastly, we have three that raise the former discoveries by experiments into greater observations, axioms and aphorisms. These we call interpreters of nature.

"We have also, as you must think, novices and apprentices, that the succession of the former employed men do not fail: besides a great number of servants, and attendants, men and women. And this we do also: we have consultations, which of the inventions and experiences which we have discovered shall be published, and which not: and take all an oath

of secrecy, for the concealing of those which we think fit to keep secret: though some of those we do reveal sometimes to the state, and some not.

“For our ordinances and rites: we have two very long and fair galleries: in one of these we place patterns and samples of all manner of the more rare and excellent inventions; in the other we place the statues of all principal inventors. There we have the statue of your Columbus that discovered the West Indies: also the inventor of ships: your monk that was the inventor of ordnance, and of gunpowder: the inventor of music: the inventor of letters: the inventor of printing: the inventor of observations of astronomy: the inventor of works in metal: the inventor of glass: the inventor of silk of the worm: the inventor of wine: the inventor of corn and bread: the inventor of sugars: and all these by more certain tradition than you have. Then have we divers inventors of our own of excellent works; which since you have not seen, it were too long to make descriptions of them; and besides, in the right understanding of those descriptions, you might easily err. For every invention of value, we erect a statue to the inventor, and give him a liberal and honourable reward. These statues are, some of brass; some of marble and touchstone; some of cedar, and other special woods gilt and adorned; some of iron; some of silver; some of gold.

“We have certain hymns and services, which we say daily, of laud and thanks to God for his marvellous works: and forms of prayers, im-

ploring his aid and blessing for the illumination of our labors; and the turning of them into good and holy uses.

"Lastly, we have circuits or visits of divers principal cities of the kingdom; where, as it cometh to pass, we do publish such new profitable inventions as we think good. And we do also declare natural divinations of diseases, plagues, swarms of hurtful creatures, scarcity, tempests, earthquakes, great inundations, comets, temperature of the year, and divers other things; and we give counsel thereupon what the people shall do for the prevention and remedy of them."

And when he had said this, he stood up; and I, as I had been taught, kneeled down; and he laid his right hand upon my head and said: "God bless thee, my son, and God bless this relation which I have made. I give thee leave to publish it for the good of other nations; for we here are in God's bosom, a land unknown." And so he left me; having assigned a value of about two thousand ducats, for a bounty to me and my fellows. For they give great largesses where they come upon all occasions

(The rest was not perfected.)

DANTE'S INFERNO.

CANTO I.

ARGUMENT.

The Poet, having lost his way in a gloomy forest, and being hindered by certain wild beasts from ascending a mountain, is met by Virgil, who promises to show him the punishments of Hell, and afterwards of Purgatory; and that he shall then be conducted by Beatrice into Paradise. He follows the Roman poet.

IN the midway of this our mortal life,
I found me in a gloomy wood, astray,
Gone from the path direct: and e'en to tell,
It were no easy task, how savage wild
That forest, how robust and rough its growth,
Which to remember only, my dismay
Renews, in bitterness not far from death.
Yet to discourse of what there good befell,
All else will I relate discovered there.

How first I entered it I scarce can say,
Such sleepy dulness in that instant weighed
My senses down, when the true path I left;
But when a mountain's foot I reached, where
closed

The valley that had pierced my heart with
dread,

I looked aloft, and saw his shoulders broad
Already vested with that planet's beam,
Who leads all wanderers safe through every
way.

Then was a little respite to the fear,
That in my heart's recesses deep had lain,
All of that night, so pitifully past:
And as a man, with difficult short breath,
Forespent with toiling, 'scaped from sea to
shore,

Turns to the perilous wide waste, and stands
At gaze; e'en so my spirit, that yet failed
Struggling with terror, turned to view the
straits,

That none hath past and lived. My weary
frame

After short pause recomforted, again
I journeyed on over that lonely steep,
The hinder foot still firmer. Scarce the ascent
Began, when, lo! a panther, nimble, light,
And covered with a speckled skin, appeared;
Nor, when it saw me, vanished, rather strove
To check my onward going; that ofttimes,
With purpose to retrace my steps, I turned.

The hour was morning's prime, and on his
way

Aloft the sun ascended with those stars,
That with him rose when Love divine first
moved

Those its fair works; so that with joyous hope
All things conspired to fill me, the gay skin
Of that swift animal, the matin dawn
And the sweet season. Soon that joy was chased,
And by a new dread succeeded, when in view
A lion came, 'gainst me, as it appeared,
With his head held aloft and hunger-mad,
That e'en the air was fear-struck. A she-wolf
Was at his heels, who in her leanness seemed
Full of all wants, and many a land hath made
Disconsolate ere now. She with such fear
O'erwhelmed me, at the sight of her appalled,
That of the height all hope I lost. As one,
Who, with his gain elated, sees the time
When all unwares is gone, he inwardly
Mourns with heart-gripping anguish; such was I,
Haunted by that fell beast, never at peace,
Who coming o'er against me, by degrees
Impelled me where the sun in silence rests.

While to the lower space with backward step
I fell, my ken discerned the form of one,
Whose voice seemed faint through long disuse
of speech.

When him in that great desert I espied,
"Have mercy on me," cried I out aloud,
"Spirit! or living man! whate'er thou be!"

He answered: "Now not man, man once I
was,

And born of Lombard parents, Mantuans both
By country, when the power of Julius yet
Was scarcely firm. At Rome my life was past
Beneath the mild Augustus, in the time

Of fabled deities and false. A bard
Was I, and made Anchises' upright son
The subject of my song, who came from Troy,
When the flames preyed on Ilium's haughty
towers.

But thou, say wherefore to such perils past
Return'st thou? wherefore not this pleasant
mount

Ascendest, cause and source of all delight?"
"And art thou then that Virgil, that well-
spring,

From which such copious floods of eloquence
Have issued?" I with front abashed replied.
"Glory and light of all the tuneful train!

May it avail me, that I long with zeal
Have sought thy volume, and with love im-
mense

Have conned it o'er. My master thou, and
guide!

Thou be from whom alone I have derived
That style, which for its beauty into fame
Exalts me. See the beast, from whom I fled.
O save me from her, thou illustrious sage!
For every vein and pulse throughout my
frame

She hath made tremble." He, soon as he saw
That I was weeping, answered, "Thou must
needs

Another way pursue, if thou wouldst 'scape
From out that savage wilderness. This beast,
t whom thou criest, her way will suffer none

DANTE'S INFERNO

To pass, and no less hindrance makes than
death:

So bad and so accursed in her kind,
That never sated is her ravenous will,
Still after food more craving than before,
To many an animal in wedlock vile
She fastens, and shall yet to many more,
Until that greyhound come, who shall destroy
Her with sharp pain. He will not life support
By earth nor its base metals, but by love,
Wisdom, and virtue, and his land shall be
The land 'twixt either Feltro. In his might
Shall safety to Italia's plains arise,
For whose fair realm, Camilla, virgin pure,
Nisus Euryalus, and Turnus fell.

He, with incessant chase, through every town
Shall worry, until he to hell at length
Restore her, thence by envy first let loose.

I for thy profit pondering now devise,
That thou mayst follow me; and I, thy guide,
Will lead thee hence through an eternal space,
Where thou shalt hear despairing shrieks, and
see

Spirits of old tormented, who invoke
A second death; and those next view, who
- dwell

Content in fire, for that they hope to come,
Whene'er the time may be, among the blest,
Into whose regions if thou then desire
To ascend, a spirit worthier than I [part
Must lead thee, in whose charge ~~her~~ I do

Thou shalt be left: for that Almighty King,
Who reigns above, a rebel to his law
Adjudges me; and therefore hath decreed
That, to his city, none through me should
come. [holds

He in all parts hath sway; there rules, there
His citadel and throne. O happy those,
Whom there he chooses!" I to him in few:
"Bard! by that God, whom thou didst not
adore,

I do beseech thee (that this ill and worse
I may escape) to lead me, where thou said'st,
That I Saint Peter's gate may view, and those
Who, as thou tell'st, are in such dismal plight."

Onward he moved, I close his steps pursued.

CANTO II.

ARGUMENT.

After the invocation, which poets are used to prefix to their works, he shows that, on a consideration of his own strength, he doubted whether it sufficed for the journey proposed to him, but that, being comforted by Virgil, he at last took courage, and followed him as his guide and master.

Now was the day departing, and the air,
Imbrowned with shadows, from their toils released

All animals on earth; and I alone

Prepared myself the conflict to sustain,
Both of sad pity, and that perilous road,
Which my unerring memory shall retrace.

O Muses! O high genius! now vouchsafe
Your aid! O mind! that all I saw hast kept
Safe in a written record, here thy worth
And eminent endowments come to proof.

I thus began: "Bard! thou who art my
guide,

Consider well, if virtue be in me
Sufficient, ere to this high enterprise
Thou trust me. Thou hast told that Silvius'
sire,

Yet, clothed in corruptible flesh, among
The immortal tribes had entrance, and was
there

Sensibly present. Yet if heaven's great Lord,
Almighty foe to ill, such favor showed,
In contemplation of the high effect,
Both what and who from him should issue
forth,

It seems in reason's judgment well deserved:
Sith he of Rome and of Rome's empire wide,
In heaven's empyreal height was chosen sire:
Both which, if truth be spoken, were ordained
And 'stablished for the holy place, where sits
Who to great Peter's sacred chair succeeds.
He from this journey, in thy song renowned,
Learned things, that to his victory gave rise
And to the papal robe. In after-times
The chosen vessel also travelled there.

To bring us back assurance in that faith
Which is the entrance to salvation's way.
But I, why should I there presume? or who
Permits it? not Æneas I, nor Paul,
Myself I deem not worthy, and none else
Will deem me. I, if on this voyage then
I venture, fear it will in folly end.
Thou, who art wise, better my meaning
 know'st
Than I can speak." As one, who unresolves
What he hath late resolved, and with new
 thoughts
Changes his purpose, from his first intent
Removed; e'en such was I on that dun coast,
Wasting in thought my enterprise, at first
So eagerly embraced. "If right thy words
I scan," replied that shade magnanimous,
"Thy soul is by vile fear assailed, which oft
So overcasts a man, that he recoils
From noblest resolution, like a beast
At some false semblance in the twilight gloom.
That from this terror thou mayst free thyself,
' will instruct thee why I came, and what
I heard in that same instant, when for thee
Grief touched me first. I was among the
 tribe,
Who rest suspended, when a dame, so blest
And lovely I besought her to command,
Called me; her eyes were brighter than the
 star
Of day; and she with gentle voice and soft,

Angelically tuned, her speech addressed:
'O courteous shade of Mantua! thou whose
fame

Yet lives, and shall live long as nature lasts!
A friend, not of my fortune but myself,
On the wide desert in his road has met
Hindrance so great, that he through fear has
turned.

Now much I dread lest he past help have
strayed,

And I be risen too late for his relief,
From what in heaven of him I heard. Speed
now,

And by thy eloquent persuasive tongue,
And by all means for his deliverance meet,
Assist him. So to me will comfort spring.
I, who bid thee on this errand forth,
Am Beatrice; from a place I come
Revisited with joy. Love brought me thence,
Who prompts my speech. When in my Master's sight

I stand, thy praise to him I oft will tell.'

"She then was silent, and I thus began:
'O Lady! by whose influence alone,
Mankind excels whatever is contained
Within that heaven which hath the smallest
orb,

So thy command delights me, that to obey,
If it were done already, would seem late.
No need hast thou further to speak thy will;
Yet tell the reason, why thou art not loth

To leave that ample space, where to return
Thou burnest, for this centre here beneath.

"She then: 'Since thou so deeply wouldst
inquire,

I will instruct thee briefly, why no dread
Hinders my entrance here. Those things alone
Are to be feared, whence evil may proceed;
None else, for none are terrible beside.

I am so framed by God, thanks to his grace!
That any sufferance of your misery
Touches me not, nor flame of that fierce fire
Assails me. In high heaven a blessed dame
Resides, who mourns with such effectual grief.
That hindrance, which I send thee to remove,
That God's stern judgment to her will inclines.
To Lucia calling, her she thus bespake:

"Now doth thy faithful servant need thy aid,
And I commend him to thee." At her word
Sped Lucia, of all cruelty the foe,
And coming to the place, where I abode
Seated with Rachel, her of ancient days,
She thus addressed me: "Thou true praise of
God!

Beatrice! why is not thy succor lent
To him, who so much loved thee, as to leave
For thy sake all the multitude admires?
Dost thou not hear how pitiful his wail,
Nor mark the death, which in the torrent
flood,

Swoln mightier than a sea, him struggling
holds?"

Ne'er among men did any with such speed
Haste to their profit, flee from their annoy,
As, when these words were spoken, I came
here,

Down from my blessed seat, trusting the force
Of thy pure eloquence, which thee, and all
Who well have marked it, into honor brings.'

"When she had ended, her bright beaming
eyes

Tearful she turned aside; whereat I felt
Redoubled zeal to serve thee. As she willed,
Thus am I come: I saved thee from the beast,
Who thy near way across the goodly mount
Prevented. What is this comes o'er thee then?
Why, why dost thou hang back? why in thy
breast

Harbor vile fear? why hast not courage there,
And noble daring; since three maids, so blest,
Thy safety plan, e'en in the court of heaven;
And so much certain good my words fore-
bode?"

As florets, by the frosty air of night
Bent down and closed, when day has blanched
their leaves,

Rise all unfolded on their spiry stems;
So was my fainting vigor new restored,
And to my heart such kindly courage ran,
That I as one undaunted soon replied:

"O full of pity she, who undertook
My succor! and thou kind who didst perform
So soon her true behest! With such desire

Thou hast disposed me to renew my voyage,
That my first purpose fully is resumed.
Lead on: one only will is in us both.
Thou art my guide, my master thou, and
lord."

So spake I; and when he had onward
moved,
I entered on the deep and woody way.

CANTO III.

ARGUMENT.

Dante, following Virgil, comes to the gate of Hell; where, after having read the dreadful words that are written thereon, they both enter. Here, as he understands from Virgil, those were punished who had past their time (for living it could not be called) in a state of apathy and indifference both to good and evil. Then pursuing their way, they arrive at the river Acheron; and there find the old ferryman Charon, who takes the spirits over to the opposite shore; which as soon as Dante reaches, he is seized with terror, and falls into a trance.

"THROUGH me you pass into the city of woe:
Through me you pass into eternal pain:
Through me among the people lost for aye
Justice the founder of my fabric moved:
To rear me was the task of power divine,
Supremest wisdom, and primeval love.
Before me things create were none, save things
Eternal, and eternal I endure.

All hope abandon, ye who enter here."

Such characters in color dim, I marked
Over a portal's lofty arch inscribed:
Whereat I thus: "Master, these words import
Hard meaning." He as one prepared replied:
"Here thou must all distrust behind thee
leave;

Here be vile fear extinguished. We are come
Where I have told thee we shall see the souls
To misery doomed, who intellectual good
Have lost." And when his hand he had
stretched forth [cheered,
To mine, with pleasant looks, whence I was
Into that secret place he led me on.

Here sighs, with lamentations and loud
moans,
Resounded through the air pierced by no star,
That e'en I wept at entering. Various tongues,
Horrible languages, outcries of woe,
Accents of anger, voices deep and hoarse,
With hands together smote that swelled the
sounds,
Made up a tumult, that forever whirls
Round through that air with solid darkness
stained,
Like to the sand that in the whirlwind flies.

I then, with error yet encompassed, cried:
"O master! what is this I hear? what race
Are these, who seem so overcome with woe?"

He thus to me: "This miserable fate
Suffer the wretched souls of those, who lived

Without or praise or blame, with that ill band
Of angels mixed, who nor rebellious proved
Or yet were true to God, but for themselves
Were only. From his bounds Heaven drove
them forth,

Not to impair his lustre; nor the depth
Of Hell receives them, lest the accursed tribe
Should glory thence with exultation vain."

I then: "Master! what doth aggrieve them
thus,

That they lament so loud?" He straight replied:

"That will I tell thee briefly. These of death
No hope may entertain; and their blind life
So meanly passes, that all other lots
They envy. Fame of them the world hath
none,

Nor suffers; mercy and justice scorn them
both.

Speak not of them, but look, and pass them
by."

And I, who straightway looked, beheld a flag,
Which whirling ran around so rapidly,
That it no pause obtained: and following came
Such a long train of spirits, I should ne'er
Have thought that death so many had de-
spoiled.

When some of these I recognized, I saw
And knew the shade of him, who to base fear
Yielding, abjured his high estate. Forthwith
I understood, for certain, this the tribe

Of those ill spirits both to God displeasing
And to his foes. These wretches, who ne'er
lived,

Went on in nakedness, and sorely stung
By wasps and hornets, which bedewed their
cheeks

With blood, that, mixed with tears, dropped
to their feet,

And by disgustful worms was gathered there.

Then looking farther onwards, I beheld
A throng upon the shore of a great stream:
Whereat I thus: "Sir! grant me now to know
Whom here we view, and whence impelled they
seem

So eager to pass o'er, as I discern
Through the blear light?" He thus to me in
few:

"This shalt thou know, soon as our steps ar-
rive

Beside the woeful tide of Acheron."

Then with eyes downward cast, and filled
with shame,

Fearing my words offensive to his ear,
Till we had reached the river, I from speech
Abstained. And lo! toward us in a bark
Comes on an old man, hoary white with eld,
Crying, "Woe to you, wicked spirits! hope not
Ever to see the sky again. I come
To take you to the other shore across,
Into eternal darkness, there to dwell
In fierce heat and in ice. And thou, who there

Standest, live spirit! get thee hence, and leave
These who are dead." But soon as he beheld
I left them not, "By other way," said he,
"By other haven shalt thou come to shore,
Not by this passage; thee a nimbler boat
Must carry." Then to him thus spake my
guide:

"Charon! thyself torment not: so 'tis willed,
Where will and power are one: ask thou no
more."

Straightway in silence fell the shaggy cheeks
Of him, the boatman o'er the livid lake,
Around whose eyes glared wheeling flames.
Meanwhile

Those spirits, faint and naked, color changed,
And gnashed their teeth, soon as the cruel
words [blasphemed,
They heard. God and their parents they
The human kind, the place, the time, and seed,
That did engender them and give them birth.

Then all together sorely wailing drew
To the curst strand, that every man must pass
Who fears not God. Charon, demoniac form,
With eyes of burning coal, collects them all,
Beckoning, and each, that lingers, with his oar
Strikes. As fall off the light autumnal leaves,
One still another following, till the bough
Strews all its honors on the earth beneath;
E'en in like manner Adam's evil brood
Cast themselves, one by one, down from the
shore,

Each at a beck, as falcon at his call.

Thus go they over through the umbered
wave;

And even they on the opposing bank
Be landed, on this side another throng
Still gathers. "Son," thus spake the courteous
guide,

"Those who die subject to the wrath of God
All here together come from every clime,
And to o'erpass the river are not loth:
For so heaven's justice goads them on, that
fear

Is turned into desire. Hence ne'er hath past
Good spirit. If of thee Charon complain,
Now mayst thou know the import of his
words."

This said, the gloomy region trembling shook
So terribly, that yet with clammy dew
Fear chills my brow. The sad earth gave a
blast,

That, lightening, shot forth a vermillion flame,
Which all my senses conquered quite, and I
Down dropped, as one with sudden slumber
seized.

CANTO IV.

ARGUMENT.

The poet, being roused by a clap of thunder, and following his guide onwards, descends into Limbo, which is the first circle of Hell, where he finds the souls of those, who, although they

have lived virtuously and have not to suffer for great sins, nevertheless, through lack of baptism, merit not the bliss of Paradise. Hence he is led on by Virgil to descend into the second circle.

BROKE the deep slumber in my brain a crash
Of heavy thunder, that I shook myself,
As one by main force roused. Risen upright,
My rested eyes I moved around, and searched,
With fixed ken, to know what place it was
Wherein I stood. For certain, on the brink
I found me of the lamentable vale,
The dread abyss, that joins a thunderous
 sound

Of plaints innumerable. Dark and deep,
And thick with clouds o'erspread, mine eye
 in vain

Explored its bottom, nor could aught discern.

"Now let us to the blind world there beneath
Descend;" the bard began, all pale of look:

"I go the first, and thou shalt follow next."

Then I, his altered hue perceiving, thus:
"How may I speed, if thou yielddest to dread,
Who still art wont to comfort me in doubt?"

He then: "The anguish of that race below
With pity stains my cheek, which thou for fear
Mistakest. Let us on. Our length of way
Urges haste." Onward, this said, he moved;
And entering led me with him, on the bounds
Of the first circle that surrounds the abyss.
Here, as mine ear could note, no plaint was
 heard

Except of sighs, that made the eternal air
Tremble, not caused by tortures, but from
grief

Felt by those multitudes, many and vast,
Of men, women, and infants. Then to me
The gentle guide: "Inquietrest thou not what
spirits

Are these, which thou beholdest? Ere thou pass
Farther, I would thou know, that these of sin
Were blameless; and if aught they merited,
It profits not, since baptism was not theirs,
The portal to thy faith. If they before
The Gospel lived, they served not God aright;
And among such am I. For these defects,
And for no other evil, we are lost;
Only so far afflicted, that we live
Desiring without hope." Scarcely grief assailed
My heart at hearing this, for well I knew
Suspended in that Limbo many a soul
Of mighty worth. "O tell me, sire revered!
Tell me, my master!" I began, through wish
Of full assurance in that holy faith
Which vanquishes all error; "say, did e'er
Any, or through his own or other's merit,
Come forth from thence, who afterward was
blest?"

Piercing the secret purport of my speech,
He answered: "I was new to that estate,
When I beheld a puissant one arrive
Amongst us, with victorious trophy crowned.
He forth the shade of our first parent drew

Abel his child, and Noah righteous man,
Of Moses lawgiver for faith approved,
Of patriarch Abraham, and David king,
Israel with his sire and with his sons,
Nor without Rachel whom so hard he won,
And others many more, whom he to bliss
Exalted. Before these, be thou assured,
No spirit of human kind was ever saved."

We, while he spake, ceased not our onward
road,
Still passing through the wood; for so I name
Those spirits thick beset. We were not far
On this side from the summit, when I kenned
A flame, that o'er the darkened hemisphere
Prevailing shined. Yet we a little space
Were distant, not so far but I in part
Discovered, that a tribe in honor high
That place possessed. "O thou, who every art
And science valuest! who are these, that boast
Such honor, separate from all the rest?"

He answered: "The renown of their great
names,
That echoes through your world above, ac-
quires
Favor in heaven, which holds them thus ad-
vanced."

Meantime a voice I heard: "Honor the bard
Sublime! his shade returns, that left us late!"
No sooner ceased the sound, than I beheld
Four mighty spirits toward us bend their steps,
Of semblance neither sorrowful nor glad.

When thus my master kind began: "Mark
him,
Who in his right hand bears that falchion keen,
The other three preceding, as their lord.
This is that Homer, of all bards supreme:
Flaccus the next, in satire's vein excelling;
The third is Naso; Lucan is the last.
Because they all that appellation own,
With which the voice singly accosted me,
Honoring they greet me thus, and well they
judge."

So I beheld united the bright school
Of him the monarch of sublimest song,
That o'er the others like an eagle soars.

When they together short discourse had held,
They turned to me, with salutation kind
Beckoning me; at the which my master
smiled:

Nor was this all; but greater honor still
They gave me, for they made me of their tribe;
And I was sixth amid so learned a band.

Far as the luminous beacon on we passed
Speaking of matters, then befitting well
To speak, now fitter left untold. At foot
Of a magnificent castle we arrived,
Seven times with lofty walls begirt, and round
Defended by a pleasant stream. O'er this
As o'er dry land we passed. Next, through
seven gates,

I with those sages entered, and we came
Into a mead with lively verdure fresh.

There dwelt a race, who slow their eyes
around

Majestically moved, and in their port
Bore eminent authority; they spake
Seldom, but all their words were tuneful sweet.

We to one side retired, into a place
Open and bright and lofty, whence each one
Stood manifest to view. Incontinent
There on the green enamel of the plain
Were shown me the great spirits, by whose
sight

I am exalted in my own esteem.

Electra there I saw accompanied
By many, among whom Hector I knew,
Anchises' pious son, and with hawk's eye
Caesar all armed, and by Camilla there
Penthesilea. On the other side,
Old King Latinus, seated by his child
Lavinia, and that Brutus I beheld,
Who Tarquin chased, Lucretia, Cato's wife,
Marcia, with Julia and Cornelia there;
And sole apart retired, the Soldan fierce.

Then when a little more I raised my brow,
I spied the master of the sapient throng,
Seated amid the philosophic train.
Him all admire, all pay him reverence due.
There Socrates and Plato both I marked,
Nearest to him in rank, Democritus,
Who sets the world at chance, Diogenes,
With Heraclitus, and Empedocles,
And Anaxagoras, and Thales sage,

Zeno, and Dioscorides well read
In nature's secret lore. Orpheus I marked
And Linus, Tully and moral Seneca,
Euclid and Ptolemy, Hippocrates,
Galenus, Avicen, and him who made
That commentary vast, Averroes.

Of all to speak at full were vain attempt;
For my wide theme so urges, that ofttimes
My words fall short of what bechanced. In two
The six associates part. Another way
My sage guide leads me, from that air serene,
Into a climate ever vexed with storms:
And to a part I come, where no light shines.

CANTO V.

ARGUMENT.

Coming into the second circle of Hell, Dante at the entrance beholds Minos the Infernal Judge, by whom he is admonished to beware how he enters those regions. Here he witnesses the punishment of carnal sinners, who are tossed about ceaselessly in the dark air by the most furious winds. Amongst these, he meets with Francesca of Rimini, through pity at whose sad tale he falls fainting to the ground.

FROM the first circle I descended thus
Down to the second, which, a lesser space
Embracing, so much more of grief contains,
Provoking bitter moans. Their Minos stands
Grinning with ghastly feature: he, of all
Who enter, strict examining the crimes,

Gives sentence, and dismisses them beneath,
According as he foldeth him around:
For when before him comes the ill-fated soul,
It all confesses; and that judge severe
Of sins, considering what place in hell
Suits the transgression, with his tail so oft
Himself encircles, as degrees beneath
He dooms it to descend. Before him stand
Always a numerous throng; and in his turn
Each one to judgment passing, speaks, and
hears
His fate, thence downward to his dwelling
hurled.

"O thou! who to this residence of woe
Approachest?" when he saw me coming, cried
Minos, relinquishing his dread employ,
"Look how thou enter here; beware in whom
Thou place thy trust; let not the entrance
broad

Deceive thee to thy harm." To him my guide:
"Wherefore exclaimest? Hinder not his way
By destiny appointed; so 'tis willed
Where will and power are one. Ask thou no
more."

Now 'gin the rueful wailings to be heard.
Now am I come where many a plaining voice
Smites on mine ear. Into a place I came
Where light was silent all. Bellowing there
groaned

A noise, as of a sea in tempest torn
By warring wings. The stormy blast of hell

With restless fury drives the spirits on,
Whirled round and dashed amain with sore
 annoy.

When they arrive before the ruinous sweep,
There shrieks are heard, there lamentations,
 moans,

And blasphemies 'gainst the good Power in
 heaven.

I understood that to this torment sad
The carnal sinners are condemned, in whom
Reason by lust is swayed. As in large troops
And multitudinous, when winter reigns,
The starlings on their wings are borne
 abroad;

So bears the tyrannous gust those evil souls
On this side and on that, above, below,
It drives them: hope of rest to solace them
Is none, nor e'en of milder pang. As cranes,
Chanting their dolorous notes, traverse the
 sky,

Stretched out in long array; so I beheld
Spirits, who came loud wailing, hurried on
By their dire doom. Then I: "Instructor!
 who

Are these, by the black air so scourged?"—
 "The first

'Mong those, of whom thou question'st," he
 replied,

"O'er many tongues was empress. She in vice
Of luxury was so shameless, that she made
Liking be lawful by promulged decree,

To clear the blame she had herself incurred
This is Semiramis, of whom 'tis writ,
That she succeeded Ninus her espoused;
And held the land, which now the Soldan
rules.

The next in amorous fury slew herself,
And to Sicheus' ashes broke her faith:
Then follows Cleopatra, lustful queen."

There marked I Helen, for whose sake so
long
The time was fraught with evil; there the
great

Achilles, who with love fought to the end.
Paris I saw, and Tristan; and beside,
A thousand more he showed me, and by name
Pointed them out, whom love bereaved of life.

When I had heard my sage instructor name
Those dames and knights of antique days,
o'erpowered

By pity, well-nigh in amaze my mind
Was lost; and I began: "Bard! willingly
I would address those two together coming,
Which seem so light before the wind." He
thus:

"Note thou, when nearer they to us approach.
Then by that love which carries them along,
Entreat; and they will come." Soon as the
wind

Swayed them toward us, I thus framed my
speech:

"O wearied spirits! come, and hold discourse

With us, if by none else restrained." As doves
By fond desire invited, on wide wings
And firm, to their sweet nest returning home,
Cleave the air, wafted by their will along;
Thus issued, from that troop, where Dido
ranks,

They, through the ill air speeding; with such
force

My cry prevailed by strong affection urged.

"O gracious creature and benign! who goest
Visiting, through this element obscure,
Us, who the world with bloody stain imbrued;
If, for a friend the King of all, we owned,
Our prayer to him should for thy peace arise,
Since thou hast pity on our evil plight.

Of whatsoe'er to hear or to discourse
It pleases thee, that will we hear, of that
Freely with thee discourse, while e'er the
wind,

As now, is mute. The land, that gave me
birth,

Is situate on the coast, where Po descends
To rest in ocean with his sequent streams.

"Love, that in gentle heart is quickly learnt,
Entangled him by that fair form, from me
Ta'en in such cruel sort, as grieves me still:
Love, that denial takes from none beloved,
Caught me with pleasing him so passing well.
That, as thou seest, he yet deserts me not.
Love brought us to one death: Caina waits

The soul, who spilt our life." Such were their words:

At hearing which downward I bent my looks,
And held them there so long, that the bard
cried:

"What art thou pond'ring?" I in answer thus:
"Alas! by what sweet thoughts, what fond
desire

Must they at length to that ill pass have
reached!"

Then turning, I to them my speech addressed.

And thus began: "Francesca! your sad fate
Even to tears my grief and pity moves.

But tell me; in the time of your sweet sighs,
By what, and how love granted, that ye knew
Your yet uncertain wishes?" She replied:

"No greater grief than to remember days
Of joy, when misery is at hand! That kens
Thy learned instructor. Yet so eagerly

If thou art bent to know the primal root,
From whence our love gat being, I will do,
As one, who weeps and tells his tale. One day,
For our delight we read of Lancelot,

How him love thrall'd. Alone we were, and no
Suspicion near us. Ofttimes by that reading
Our eyes were drawn together, and the hue
Fled from our altered cheek. But at one point
Alone we fell. When of that smile we read,
The wished smile, rapturously kissed

By one so deep in love, then he, who ne'er

From me shall separate, at once my lips
All trembling kissed. The book and writer
both
Were love's purveyors. In its leaves that day
We read no more." While thus one spirit
spake,
The other wailed so sorely, that heart-struck
I, through compassion fainting, seemed not far
From death, and like a corpse fell to the
ground.

CANTO VI.

ARGUMENT.

On his recovery, the Poet finds himself in the third circle, where the gluttonous are punished. Their torment is, to lie in the mire, under a continual and heavy storm of hail, snow, and discolored water; Cerberus meanwhile barking over them with his threefold throat, and rending them piecemeal. One of these, who on earth was named Ciaccio, foretells the divisions with which Florence is about to be distracted. Dante proposes a question to his guide, who solves it and they proceed towards the fourth circle.

My sense reviving, that erewhile had drooped
With pity for the kindred shades, whence
grief

O'ercame me wholly, straight around I see
New torments, new tormented souls, which way
Soe'er I move, or turn, or bend my sight.
In the third circle I arrive, of showers

Ceaseless, accursed, heavy and cold, unchanged
Forever, both in kind and in degree.

Large hail, discolored water, sleety flaw
Through the dun midnight air streamed down
 again:

Stank all the land whereon that tempest fell.

Cerberus, cruel monster, fierce and strange,
Through his wide threefold throat, barks as a
 dog

Over the multitude immersed beneath.

His eyes glare crimson, black his unctuous
 beard,

His belly large, and clawed the hands, with
 which

He tears the spirits, flays them, and their
 limbs

Piecemeal disparts. Howling there spread, as
 curs,

Under the rainy deluge, with one side

The other screening, oft they roll them round,
A wretched, godless crew. When that great
 worm

Descried us, savage Cerberus, he oped

His jaws, and the fangs showed us; not a
 limb

Of him but trembled. Then my guide, his
 palms

Expanding on the ground, thence filled with
 earth

Raised them, and cast it in his ravenous maw.
E'en as a dog, that yelling bays for food

His keeper, when the morsel comes, lets fall
His fury, bent alone with eager haste
To swallow it; so dropped the loathsome
cheeks

Of demon Cerberus, who thundering stuns
The spirits, that they for deafness wish in
vain.

We, o'er the shades thrown prostrate by the
brunt

Of the heavy tempest passing, set our feet
Upon their emptiness, that substance seemed.

They all along the earth extended lay,
Save one, that sudden raised himself to sit,
Soon as that way he saw us pass. "O thou!"
He cried, "who through the infernal shades
art led,

Own, if again thou know'st me. Thou wast
framed

Or ere my frame was broken." I replied:
"The anguish thou endurest perchance so takes
Thy form from my remembrance, that it seems
As if I saw thee never. But inform
Me who thou art, that in a place so sad
Art set, and in such torment, that although
Other be greater, none disgusteth more."

He thus in answer to my words rejoined:
"Thy city heaped with envy to the brim,
Aye, that the measure overflows its bounds,
Held me in brighter days. Ye citizens
Were wont to name me Ciacco. For the sin
Of gluttony, damned vice, beneath this rain,

E'en as thou seest, I with fatigue am worn;
Nor I sole spirit in this woe: all these
Have by like crime incurred like punishment."

No more he said, and I my speech resumed:
"Ciaccio! thy dire affliction grieves me much,
Even to tears. But tell me, if thou knowest,
What shall at length befall the citizens
Of the divided city; whether any
Just one inhabit there: and tell the cause,
Whence jarring discord hath assailed it thus?"

He then: "After long striving they will
come

To blood; and the wild party from the woods
Will chase the other with much injury forth.
Then it behoves, that this must fall, within
Three solar circles; and the other rise
By borrowed force of one, who under shore
Now rests. It shall a long space hold aloof
Its forehead, keeping under heavy weight
The other opprest, indignant at the load,
And grieving sore. The just are two in number,

But they neglected. Avarice, envy, pride,
Three fatal sparks, have set the hearts of all
On fire." Here ceased the lamentable sound;
And I continued thus: "Still would I learn
More from thee, further parley still entreat.
Of Farinata and Tegghiaio say,
They who so well deserved; of Giacopo,
Arrigo, Mosca, and the rest, who bent

Their minds on working good. Oh! tell me
where

They bide, and to their knowledge let me come.
For I am prest with keen desire to hear
If heaven's sweet cup or poisonous drug of
hell,

Be to their lips assigned." He answered
straight:

"These are yet blacker spirits. Various crimes
Have sunk them deeper in the dark abyss.
If thou so far descendest, thou mayst see
them.

But to the pleasant world when thou return-
est,

Of me make mention, I entreat thee, there.
No more I tell thee, answer thee no more."

This said, his fixed eyes he turned askance,
A little eyed me, then bent down his head,
And 'midst his blind companions with it fell.

When thus my guide: "No more his bed
he leaves,

Ere the last angel-trumpet blow. The Power
Adverse to these shall then in glory come,
Each one forthwith to his sad tomb repair,
Resume his fleshly vesture and his form,
And hear the eternal doom re-echoing rend
The vault." So passed we through that mix-
ture foul

Of spirits and rain, with tardy steps; mean-
while

Touching, though slightly, on the life to come.

For thus I questioned: "Shall these tortures,
Sir!

When the great sentence passes, be increased,
Or mitigated, or as now severe?"

He then: "Consult thy knowledge; that decides

That, as each thing to more perfection grows,
It feels more sensibly both good and pain.
Though ne'er to true perfection may arrive
This race accurst, yet nearer then, than now,
They shall approach it." Compassing that
path,

Circuitous we journeyed, and discourse,
Much more than I relate between us passed:
Till at the point, whence the steps led below,
Arrived, there Plutus, the great foe, we found.

CANTO VII.

ARGUMENT.

In the present Canto, Dante describes his descent into the fourth circle, at the beginning of which he sees Plutus stationed. Here one like doom awaits the prodigal and the avaricious; which is, to meet in direful conflict, rolling great weights against each other with mutual upbraidings. From hence Virgil takes occasion to show how vain the goods that are committed into the charge of Fortune; and this moves our author to inquire what being that Fortune is, of whom he speaks: which question being resolved, they go down into the fifth circle, where they find the wrathful and slothful tormented in the Stygian lake. Having made a compass round great part of this lake, they come at last to the base of a lofty tower.

"AH me! O Satan! Satan!" loud exclaimed
Plutus, in accent hoarse of wild alarm:
And the kind sage, whom no event surprised,
To comfort me thus spake: "Let not thy fear
Harm thee, for power in him, be sure, is none
To hinder down this rock thy safe descent."
Then to that swoln lip turning, "Peace!" he
cried,

"Curst wolf! thy fury inward on thyself
Prey, and consume thee! Through the dark
profound

Not without cause he passes. So 'tis willed
On high, there where the great Archangel
poured

Heaven's vengeance on the first adulterer
proud."

As sails, full spread and bellying with the
wind,

Drop suddenly collapsed, if the mast split;
So to the ground down dropped the cruel fiend.

Thus we, descending to the fourth steep
ledge,

Gained on the dismal shore, that all the woe
Hems in of all the universe. Ah me!

Almighty Justice! in what store thou heap'st
New pains, new troubles, as I here beheld.

Wherefore doth fault of ours bring us to this?

E'en as a billow, on Charybdis rising,
Against encountered billow dashing breaks;
Such is the dance this wretched race must
lead,

Whom more than elsewhere numerous here I
found,

From one side and the other, with loud voice,
Both rolled on weights, by main force of their
breasts,

Then smote together, and each one forthwith
Rolled them back voluble, turning again;
Exclaiming these, "Why holdest thou so fast?"
Those answering, "And why castest thou
away!"

So, still repeating their despitful song,
They to the opposite point on either hand,
Traversed the horrid circle: then arrived,
Both turned them round, and through the mid-
dle space

Conflicting met again. At sight whereof
I, stung with grief, thus spake: "O say, my
guide!

What race is this? Were these, whose heads
are shorn,

On our left hand, all separate to the church?"

He straight replied: "In their first life,
these all

In mind were so distorted, that they made,
According to due measure, of their wealth
No use. This clearly from their words collect,
Which they howl forth, at each extremity
Arriving of the circle, where their crime
Contrary in kind disparts them. To the
church

Were separate those, that with no hairy cowls

Are crowned, both Popes and Cardinals, o'er
whom

Avarice dominion absolute maintains."

I then: "'Mid such as these some needs
must be,

Whom I shall recognize, that with the blot
Of these foul sins were stained." He answer-
ing thus:

"Vain thought conceivest thou. That ignoble
life,

Which made them vile before, now makes
them dark,

And to all knowledge indiscernible.

Forever they shall meet in this rude shock:

These from the tomb with clenched grasp shall
rise,

Those with close-shaven locks. That ill they
gave,

And ill they kept, hath of the beauteous world
Deprived, and set them at this strife, which
needs

No labored phrase of mine to set it off.

Now mayest thou see, my son! how brief. how
vain,

The goods committed into Fortune's hands,
For which the human race keep such a coil!
Not all the gold that is beneath the moon,
Or ever hath been, of these toil-worn souls
Might purchase rest for one." I thus rejoined:
"My guide! of thee this also would I learn;
This fortune, that thou speakest of, what it is,

Whose talons grasp the blessings of the world?"

He thus: "O beings blind! what ignorance Besets you? Now my judgment hear and mark.

He, whose transcendent wisdom passes all,
The heavens creating, gave them ruling powers

To guide them; so that each part shines to each,

Their light in equal distribution poured.

By similar appointment he ordained

Over the world's bright images to rule,

Superintendence of a guiding hand

And general minister, which, at due time

May change the empty vantages of life

From race to race, from one to other's blood,

Beyond prevention of man's wisest care:

Wherefore one nation rises into sway,

Another languishes, e'en as her will

Decrees, from us concealed, as in the grass

The serpent train. Against her naught avails

Your utmost wisdom. She with foresight plans,

Judges, and carries on her reign, as theirs

The other powers divine. Her changes know

None intermission: by necessity

She is made swift, so frequent come who claim

Succession in her favors. This is she,

So execrated e'en by those whose debt

To her is rather praise; they wrongfully

With blame requite her, and with evil word;
But she is blessed, and for that reck's not:
Amidst the other primal beings glad,
Rolls on her sphere, and in her bliss exults.
Now on our way pass we, to heavier woe
Descending: for each star is falling now,
That mounted at our entrance, and forbids
Too long our tarrying." We the circle crossed
To the next steep, arriving at a well,
That boiling pours itself down to a foss
Sluiced from its source. Far murkier was the
wave

Than sablest grain: and we in company
Of the inky waters, journeying by their side,
Entered, though by a different track, beneath.
Into a lake, the Stygian named, expands
The dismal stream, when it hath reached the
foot

Of the gray withered cliffs. Intent I stood
To gaze, and in the marish sunk descried
A miry tribe, all naked, and with looks
Betokening rage. They with their hands alone
Stuck not, but with the head, the breast, the
feet,

Cutting each other piecemeal with their fangs.

The good instructor spake: "Now seest thou,
son!

The souls of those, whom anger overcame.
This too for certain know, that underneath
The water dwells a multitude, whose sighs
Into these bubbles make the surface heave

As thine eye tells thee wheresoe'er it turn.
Fixed in the slime, they say: 'Sad once were
we

In the sweet air made gladsome by the sun,
Carrying a foul and lazy mist within:
Now in these murky settlings are we sad.
Such dolorous strain they gurgle in their
throats.

But word distinct can utter none." Our route
Thus compassed we, a segment widely
stretched

Between the dry embankment, and the core
Of the loathed pool, turning meanwhile our
eyes

Downward on those who gulped its muddy
lees;

Nor stopped, till to a tower's low base we
come.

CANTO VIII.

ARGUMENT.

A signal having been made from the tower, Phlegyas, the ferryman of the lake, speedily crosses it, and conveys Virgil and Dante to the other side. On their passage, they meet with Filippo Argenti, whose fury and torment are described. They then arrive at the city of Dis, the entrance whereto is denied, and the portals closed against them by many Demons.

My theme pursuing, I relate, that ere
We reached the lofty turret's base, our eyes
Its height ascended, where we marked uphung

In answer set: what agency doth this?"

If the marsh-gendered fog conceal it not."

**Toward us coming, under the sole sway
Of one that ferried it, who cried aloud:**

"This time thou criest in vain," my lord replied;

"No longer shalt thou have us, but while o'er
The slimy pool we pass." As one who hears
Of some great wrong he hath sustained, where-
at

Inly he pines: so Phlegyas inly pined
In his fierce ire. My guide, descending, stepped
In to the skiff, and bade me enter next,
Close at his side; nor, till my entrance, seemed
The vessel freighted. Soon as both embarked,

Cutting the waves, goes on the ancient prow,
More deeply than with others it is wont.

While we our course o'er the dead channel
held,
One drenched in mire before me came, and
said:

"Who art thou, that thus comest ere thine
hour?"

I answered: "Though I come, I tarry not:
But who art thou, that art become so foul?"

"One, as thou seest, who mourns:" he straight
replied.

To which I thus: "In mourning and in woe,
Curst spirit! tarry thou. I know thee well,
E'en thus in filth disguised." Then stretched
he forth

Hands to the bark; whereof my teacher sage
Aware, thrusting him back: "Away! down
there

To the other dogs!" then with his arms my neck
Encircling, kissed my cheek, and spake: "O
soul,

Justly disdainful! blest was she in whom
Thou wast conceived. He in the world was one
For arrogance noted: to his memory

No virtue lends its lustre; even so
Here is his shadow furious. There above,
How many now hold themselves mighty kings,
Who here like swine shall wallow in the mire,
Leaving behind them horrible dispraise."

I then: "Master! him fain would I behold

Whelmed in these dregs. before we quit the lake."

He thus: "Or ever to thy view the shore
Be offered, satisfied shall be that wish,
Which well deserves completion." Scarce his words

Were ended. when I saw the miry tribes
Set on him with such violence, that yet
For that render I thanks to God, and praise
"To Filippo Argenti!" cried they all:
And on himself the moody Florentine
Turned his avenging fangs. Him here we left,
Nor speak I of him more. But on mine ear
Sudden a sound of lamentation smote,
Whereat mine eye unbarred I sent abroad.

And thus the good instructor: "Now, my son
Draws near the city, that of Dis is named,
With its grave denizens, a mighty throng."

I thus: "The minarets already, Sir!
There, certes, in the valley I descry,
Gleaming vermilion, as if they from fire
Had issued." He replied: "Eternal fire,
That inward burns, shows them with ruddy
flame

Illumed; as in this nether hell thou seest."

We came within the fosses deep, that moat.
This region comfortless. The walls appeared
As they were framed of iron. We had made
Wide circuit, ere a place we reached, where
loud

The mariner cried vehement: "Go forth:

The entrance is here." Upon the gates I spied
More than a thousand, who of old from heaven
Were showered. With ireful gestures, "Who is
this,"

They cried, "that, without death first felt,
goes through

The regions of the dead?" My sapient guide
Made sign that he for secret parley wished:
Whereat their angry scorn abating, thus
They spake: "Come thou alone; and let h'm go,
Who hath so hardily entered this realm.
Alone return he by his witless way;
If well he know it, let him prove. For thee,
Here shalt thou tarry, who through clime so
dark

Hast been his escort." Now bethink thee,
reader!

What cheer was fine at sound of those curst
words.

I did believe I never should return.

"O my loved guide! who more than seven
times

Security hast rendered me, and drawn
From peril deep, whereto I stood exposed,
Desert me not," I cried, "in this extreme.
And, if our onward going be denied,
Together trace we back our steps with speed."

My liege, who thither had conducted me,
Replied: "Fear not: for of our passage none
Hath power to disappoint us, by such high
Authority permitted. But do thou

Expect me here; meanwhile, thy wearied spirit
Comfort, and feed with kindly hope, assured
I will not leave thee in this lower world."

This said, departs the sire benevolent,
And quits me. Hesitating I remain
At war, 'twixt will and will not, in my thoughts.

I could not hear what terms he offered them,
But they conferred not long, for all at once
Pellmell rushed back within. Closed were the
gates,

By those our adversaries, on the breast
Of my liege lord: excluded, he returned
To me with tardy steps. Upon the ground
His eyes were bent, and from his brow erased
All confidence, while thus in sighs he spake:
"Who hath denied me these abodes of woe?"
Then thus to me: "That I am angered, think
No ground of terror; in this trial I
Shall vanquish, use what arts they may within
For hindrance. This their insolence, not new,
Erewhile at gate less secret they displayed,
Which still is without bolt; upon its arch
Thou saw'st the deadly scroll; and even now,
On this side of its entrance, down the steep,
Passing the circles, unescorted, comes
One whose strong might can open us this land."

CANTO IX.

ARGUMENT.

After some hindrances, and having seen the
hellish furies and other monsters, the Poet, by
the help of an angel, enters the city of Dis.

wherein he discovers that the heretics are punished in tombs burning with intense fire: and he, together with Virgil, passes onwards between the sepulchres and the walls of the city.

THE hue, which coward dread on my pale cheeks

Imprinted when I saw my guide turn back,
Chased that from his which newly they had worn,

And inwardly restrained it. He, as one
Who listens, stood attentive: for his eye
Not far could lead him through the sable air,
And the thick-gathering cloud. "It yet behoves

We win this fight;" thus he began: "if not—
Such aid to us is offered.—Oh! how long
Meseems it, ere the promised help arrive."

I noted how the sequel of his words
Cloaked their beginning; for the last he spake
Agreed not with the first. But not the less
My fear was at his saying; sith I drew
To import worse, perchance, than that he held.
His mutilated speech. "Doth ever any
Into his rueful concave's extreme depth
Descend out of the first degree, whose pain
Is deprivation merely of sweet hope?"

Thus I inquiring, "Rarely," he replied,
"It chances, that among us any makes
This journey, which I wend. Erewhile, 'tis true,
Once came I here beneath, conjured by fell
Erictho, sorceress, who compelled the shades
Back to their bodies. No long space my flesh

Was naked of me, when within these walls
She made me enter, to draw forth a spirit
From out of Judas' circle. Lowest place
Is that of all, obscurest, and removed
Furthest from heaven's all circling orb. The
road

Full well I know; thou therefore rest secure.
That lake, the noisome stench exhaling, round
The city of grief encompasses, which now
We may not enter without rage." Yet more
He added: but I hold it not in mind,
For that mine eye toward the lofty tower
Had drawn me wholly, to its burning top;
Where, in an instant, I beheld uprisen
At once three hellish furies stained with blood.
In limb and motion feminine they seemed;
Around them greenest hydras twisting rolled
Their volumes; adders and cerastes crept
Instead of hair, and their fierce temples bound.

He, knowing well the miserable hags
Who tend the queen of endless woe, thus
spake:

"Mark thou each dire Erinnyes. To the left,
This is Megaera; on the right hand, she
Who wails, Alecto; and Tisiphone
I' th' midst." This said, in silence he re-
mained.

Their breast they each one clawing tore; them-
selves
Smote with their palms, and such thrill clamor
raised

That to the bard I clung, suspicion-bound.

"Hasten Medusa: so to adamant

Him shall we change;" all looking down ex-
claimed:

"E'en when by Theseus' might assailed, we
took

No ill revenge." "Turn thyself around, and
keep

Thy countenance hid; for if the Gorgon dire
Be shown, and thou shouldst view it, thy re-
turn

Upwards would be forever lost." This said,
Himself, my gentle master, turned me round;

Nor trusted he my hands, but with his own

He also hid me. Ye of intellect

Sound and entire, mark well the lore concealed
Under close texture of the mystic strain.

And now there came o'er the perturbed waves

Loud-crashing, terrible, a sound that made

Either shore tremble, as if of a wind

Impetuous, from conflicting vapors sprung,

That 'gainst some forest driving all his might,

Plucks off the branches, beats them down, and

hurls

Afar; then onward passing, proudly sweeps

His whirlwind rage, while beasts and shep-
herds fly.

Mine eyes he loosed, and spake: "And now
direct

Thy visual nerve along that ancient foam,

There, thickest where the smoke ascends." As
frogs

Before their foe the serpent, through the wave
Ply swiftly all, till at the ground each one
Lies on a heap; more than a thousand spirits
Destroyed, so saw I fleeing before one
Who passed with unwet feet the Stygian sound
He, from his face removing the gross air,
Oft his left hand forth stretched, and seemed
alone

By that annoyance wearied. I perceived
That he was sent from heaven; and to my
guide

Turned me, who signal made, that I should stand
Quiet, and bend to him. Ah me! how full
Of noble anger seemed he. To the gate
He came, and with his wand touched it, where-
at

Open without impediment it flew.

"Outcasts of heaven! O abject race, and
scorned!"

Began he, on the horrid grunsel standing,
"Whence doth this wild excess of insolence
Lodge in you? wherefore kick you 'gainst that
will

Ne'er frustrate of its end, and which so oft
Hath laid on you enforcement of your pangs?
What profits, at the fates to butt the horn?
Your Cerberus, if ye remember, hence
Bears still, peeled of their hair, his throat and
maw."

This said, he turned back o'er the filthy
way

And syllable to us spake none; but wore
The semblance of a man by other care
Beset, and keenly prest, than thought of him
Who in his presence stands. Then we our steps
Toward that territory moved, secure
After the hallowed words. We, unopposed,
There entered; and, my mind eager to learn
What state a fortress like to that might hold,
I, soon as entered, throw mine eye around,
And see, on every part, wide-stretching space,
Replete with bitter pain and torment ill.

As where Rhone stagnates on the plans of
Arles,
Or as at Pola, near Quarnaro's gulf,
That closes Italy and laves her bounds,
The place is all thick spread with æpulchres;
So was it here, save what in horror here
Excelled: for 'midst the graves were scattered
flames,
Wherewith intensely all throughout they
burned,
That iron for no craft there hotter needs.

Their lids all hung suspended; and beneath
From them forth issued lamentable moans,
Such as the sad and tortured will might raise

I thus: "Master! say who are these, interred
Within these vaults, of whom distinct we hear
The dolorous sighs." He answer thus returned:
"The arch-heretics are here, accompanied
By every sect their followers; and much more,
Than thou believest, the tombs are freighted:
like

With like is buried; and the monuments
Are different in degrees of heat." This said,
He to the right hand turning, on we passed
Betwixt the afflicted and the ramparts high.

CANTO X.

ARGUMENT.

Dante, having obtained permission from his guide, holds discourse with Farinata degli Uberti and Cavalcanti, who lie in their fiery tombs that are yet open, and not to be closed up till after the last judgment. Farinata predicts the Poet's exile from Florence; and shows him that the condemned have knowledge of future things, but are ignorant of what is at present passing, unless it be revealed by some new-comer from earth.

Now by a secret pathway we proceed,
Between the walls, that hem the region round.
And the tormented souls: my master first.
I close behind his steps. "Virtue supreme!"
I thus began: "Who through these ample orbs
In circuit lead'st me, even as thou wilt;
Speak thou, and satisfy my wish. May those,
Who lie within these sepulchres, be seen?
Already all the lids are raised, and none
O'er them keeps watch." He thus in answer
spake:

"They shall be closed all, what-time they here
From Josaphat returned shall come, and bring
Their bodies, which above they now have left.
The cemetery on this part obtain,
With Epicurus, all his followers,

Who with the body make the spirit die.
Here therefore satisfaction shall be soon,
Both to the question asked, and to the wish
Which thou conceal'st in silence." I replied:
"I keep not, guide beloved! from thee my heart
Secreted, but to shun vain length of words:
A lesson erewhile taught me by thyself."
"O Tuscan! thou, who through the city of fire
Alive art passing, so discreet of speech:
Here, please thee, stay awhile. Thy utterance
Declares the place of thy nativity
To be that noble land, with which perchance
I too severely dealt." Sudden that sound
Forth issued from a vault, whereat, in fear,
I somewhat closer to my leader's side
Approaching, he thus spake: "What dost thou?
Turn:

Lo! Farinata there, who hath himself
Uplifted: from his girdle upwards, all
Exposed, behold him." On his face was mine
Already fixed: his breast and forehead there
Erecting, seemed as in high scorn he held
E'en hell. Between the sepulchres, to him
My guide thrust me, with fearless hands and
prompt;

This warning added: "See thy words be clear."

He, soon as there I stood at the tomb's foot,
Eyed me a space; then in disdainful mood
Addressed me: "Say what ancestors were
thine."

I. willing to obey him, straight revealed

The whole, nor kept back aught: whence he,
his brow
Somewhat uplifting, cried: "Fiercely were they
Adverse to me, my party, and the blood
From whence I sprang: twice, therefore, I
abroad
Scattered them." "Though driven out, yet they
each time
From all parts," answered I, "returned; an art
Which yours have shown they are not skilled
to learn."

Then, peering forth from the unclosed jaw,
Rose from his side a shade, high as the chin,
Leaning, methought, upon its knees upraised.
It looked around, as eager to explore
If there were other with me; but perceiving
That fond imagination quenched, with tears
Thus spake: "If thou through this blind prison
go'st,
Led by thy lofty genius and profound,
Where is my son? and wherefore not with
thee?"

I straight replied: "Not of myself I come;
By him, who there expects me, through this
clime
Conducted, whom perchance Guido thy son
Had in contempt." Already had his words
And mode of punishment read me his name,
Whence I so fully answered. He at once
Exclaimed, up starting, "How! said'st thou, he
had?"

No longer lives he? Strikes not on his eye
The blessed daylight?" Then, of some delay
I made ere my reply, aware, down fell
Supine, nor after forth appeared he more.

Meanwhile the other, great of soul, near
whom

I yet was stationed, changed not countenance
stern,

Nor moved the neck, nor bent his ribbed side.

"And if," continuing the first discourse,

"They in this art," he cried, "small skill have
shown;

That doth torment me more e'en than this
bed.

But not yet fifty times shall be relumed

Her aspect, who reigns here queen of this
realm,

Ere thou shalt know the full weight of that
art,

So to the pleasant world mayst thou return,

As thou shalt tell me why, in all their laws,

Against my kin this people is so fell."

"The slaughter and great havoc," I replied,

"That colored Arbia's food with crimson stain—

To these impute, that in our hallowed dome

Such orisons ascend." Sighing he shook

The head, then thus resumed: "In that affray

I stood not singly, nor, without just cause,

Assuredly, should with the rest have stirred;

But singly there I stood, when, by consent

Of all, Florence had to the ground been razed,

The one who openly forbade the deed."

"So may thy lineage find at last repose,"
I thus adjured him, "as thou solve this knot,
Which now involves my mind. If right, I hear
Ye seem to view beforehand that which time
Leads with him, of the present uninformed."

"We view, as one who hath an evil sight,"
He answered, "plainly, objects far remote;
Sō much of his large splendor yet imparts
The Almighty Ruler: but when they approach
Or actually exist, our intellect
Then wholly fails; nor of your human state,
Except what others bring us, know we aught
Hence therefore mayst thou understand, that
all

Our knowledge in that instant shall expire,
When on futurity the portals close."

Then conscious of my fault, and by remorse
Smitten, I added thus: "Now shalt thou say
To him there fallen, that his offspring still
Is to the living joined; and bid him know,
That if from answer, silent, I abstained,
'Twas that my thought was occupied, intent
Upon that error, which thy help hath solved."

But now my master summoning me back
I heard, and with more eager haste besought
The spirit to inform me, who with him
Partook his lot. He answer thus returned:
"More than a thousand with me here are **laid**.
Within is Frederick, second of that name,
And the Lord Cardinal; and of the rest

I speak not." He, this said, from sight with
drew.

But I my steps toward the ancient bard
Reverting ruminated on the words
Betokening me such ill. Onward he moved,
And thus, in going, questioned: "Whence the
amaze

That holds thy senses wrapt?" I satisfied
The inquiry, and the sage enjoined me
straight:

"Let thy safe memory store what thou hast
heard

To thee importing harm; and note thou this,"
With his raised finger bidding me take heed,
"When thou shalt stand before her gracious
beam,

Whose bright eye all surveys, she of thy life
The future tenor will to thee unfold."

Forthwith he to the left hand turned his
feet:

We left the wall, and towards the middle space
Went by a path that to a valley strikes,
Which e'en thus high exhaled its noisome
steam.

CANTO XI.

ARGUMENT

Dante arrives at the verge of a rocky precipice which encloses the seventh circle, where he sees the sepulchre of Anastasius the Heretic; behind the lid of which pausing a little, to make himself capable by degrees of enduring the fetid

smell that steamed upward from the abyss, he is instructed by Virgil concerning the manner in which the three following circles are disposed, and what description of sinners is punished in each. He then inquires the reason why the carnal, the gluttonous, the avaricious and prodigal, the wrathful and gloomy, suffer not their punishments within the city of Dis. He next asks how the crime of usury is an offence against God; and at length the two Poets go towards the place from whence a passage leads down to the seventh circle.

UPON the utmost verge of a high bank,
By craggy rocks environed round, we came,
Where woes beneath, more cruel yet, were
stowed:

And here, to shun the horrible excess
Of fetid exhalation upward cast
From the profound abyss, behind the lid
Of a great monument we stood retired,
Whereon this scroll I marked: "I have in
charge

Pope Anastasius, whom Photinus drew
From the right path."—"Ere our descent, be-
hoves

We make delay, that somewhat first the sense,
To the dire breath accustomed, afterward
Regard it not." My master thus; to whom
Answering I spake: "Some compensation find,
That the time pass not wholly lost." He then,
"Lo! how my thoughts e'en to thy wishes tend.
My son! within these rocks," he thus began,
"Are three close circles in gradation placed.
As these which now thou leavest. Each one
is full

Of spirits accurst; but that the sight alone
Hereafter may suffice thee, listen how
And for what cause in durance they abide.

"Of all malicious act abhorred in heaven,
The end is injury; and all such end
Either by force or fraud works other's woe.
But fraud, because of man peculiar evil,
To God is more displeasing; and beneath,
The fraudulent are therefore doomed to endure
Severer pang. The violent occupy
All the first circle; and because, to force,
Three persons are obnoxious, in three rounds.
Each within other separate, is it framed.
To God, his neighbor, and himself, by man
Force may be offered; to himself I say,
And his possessions, as thou shalt hear
At full. Death, violent death, and painful
wounds

Upon his neighbor he inflicts; and wastes,
By devastation, pillage, and the flames,
His substance. Slayers, and each one that
smites

In malice, plunderers, and all robbers, hence
The torment undergo of the first round,
In different herds. Man can do violence
To himself and his own blessings: and for
this,

He, in the second round must aye deplore
With unavailing penitence his crime,
Whoe'er deprives himself of life and light,
In reckless lavishment his talent wastes,

And sorrows there where he should dwell in
joy

To God may force be offered, in the heart
Denying and blaspheming his high power,
And Nature with her kindly law contemning.
And thence the inmost round marks with its
seal

Sodom, and Cahors, and all such as speak
Contemptuously of the Godhead in their hearts.

"Fraud, that in every conscience leaves a
sting,

May be by man employed on one, whose trust
He wins, or on another who withholds
Strict confidence. Seems as the latter way
Broke but the bond of love which Nature
makes.

Whence in the second circle have their nest,
Dissimulation, witchcraft, flatteries,
Theft, falsehood, simony, all who seduce
To lust, or set their honesty at pawn,
With such vile scum as these. The other way
Forgets both Nature's general love, and that
Which thereto added afterwards gives birth
To special faith. Whence in the lesser circle,
Point of the universe, dread seat of Dis,
The traitor is eternally consumed."

I thus: "Instructor, clearly thy discourse
Proceeds, distinguishing the hideous chasm
And its inhabitants with skill exact.
But tell me this: they of the dull, fat pool,
Whom the rain beats, or whom the tempest
drives,

Or who with tongues so fierce conflicting meet,
Wherefore within the city fire-illumed
Are not these punished, if God's wrath be on
them?

And if it be not, wherefore in such guise
Are they condemned?" He answer thus re-
turned:

"Wherefore in dotage wanders thus thy mind,
Not so accustomed? or what other thoughts
Possess it? Dwell not in thy memory
Incontinence, malice, and mad brutishness.
And how incontinence the least offends
God, and least guilt incurs? If well thou note
This judgment, and remember who they are,
Without these walls to vain repentance doomed,
Thou shalt discern why they apart are placed
From these fell spirits, and less wreakful pours
Justice divine on them its vengeance down."

"O sun! who healest all imperfect sight,
The words, wherein thy ethic page describes
Thou so content'st me, when thou solvest my
doubt,

That ignorance not less than knowledge
charms.

Yet somewhat turn thee back," I in these
words

Continued, "where thou said'st, that usury
Offends celestial Goodness; and this knot
Perplexed unravel." He thus made reply:

"Philosophy, to an attentive ear,
Clearly points out, not in one part alone,

How imitative Nature takes her course
From the celestial mind, and from its art:
And where her laws the Stagirite unfolds,
Not many leaves scanned o'er, observing well
Thou shalt discover, that your art on her
Obsequious follows, as the learner treads
In his instructor's step; so that your art
Deserves the name of second in descent
From God. These two, if thou recall to mind
Creation's holy book, from the beginning
Were the right source of life and excellence
To human kind. But in another path
The usurer walks; and Nature in herself
And in her follower thus he sets at naught,
Placing elsewhere his hope. But follow now
My steps on forward journey bent; for now
The Pisces play with undulating glance
Along the horizon, and the Wain lies all
O'er the northwest; and onward there a space
Is our steep passage down the rocky height."

CANTO XII.

ARGUMENT.

Descending by a very rugged way into the seventh circle, where the violent are punished, Dante and his leader find it guarded by the Minotaur; whose fury being pacified by Virgil, they step downwards from crag to crag; till, drawing near the bottom, they descry a river of blood, wherein are tormented such as have committed violence against their neighbor. At these, when they strive to emerge from the blood, a troop of Centaurs, running along the side of the river, aim their arrows; and three

of their band opposing our travellers at the foot of the steep, Virgil prevails so far, that one consents to carry them both across the stream; and on their passage, Dante is informed by him of the course of the river, and of those that are punished therein.

THE place, where to descend the precipice
We came, was rough as Alp; and on its verge
Such object lay, as every eye would shun.

As is that ruin, which Adices' stream
On this side Trento struck, shouldering the
wave,

Or loosed by earthquake or for lack of prop;
For from the mountain's summit, whence it
moved

To the low level, so the headlong rock
Is shivered, that some passage it might give
To him who from above would pass; e'en such
Into the chasm was that descent: and there
At point of the disparted ridge lay stretched
The infamy of Crete, detested brood
Of the feigned heifer: and at sight of us
It gnawed itself, as one with rage distract.
To him my guide exclaimed: "Perchance thou
deem'st

The King of Athens here, who, in the world
Above, thy death contrived. Monster! avaunt!
He comes not tutored by thy sister's art,
But to behold your torments is he come."

Like to a bull, that with impetuous spring
Darts, at the moment when the fatal blow
Hath struck him, but unable to proceed
Plunges on either side; so saw I plunge

The Minotaur; whereat the sage exclaimed:
"Run to the passage! while he storms, 't is well
That thou descend." Thus down our road we
took

Through those dilapidated crags, that oft
Moved underneath my feet, to weight like
theirs

Unused. I pondering went, and thus he spake:
"Perhaps my thoughts are of this ruined steep,
Guarded by the brute violence, which I
Have vanquished now. Know then, that when
I erst

Hither descended to the nether hell,
This rock was not yet fallen. But past doubt,
(If well I mark) not long ere He arrived,
Who carried off from Dis the mighty spoil
Of the highest circle, then through all its
bounds

Such trembling seized the deep concave and
foul,

I thought the universe was thrilled with love,
Whereby, there are who deem, the world hath
oft

Been into chaos turned; and in that point
Here, and elsewhere, that old rock toppled
down.

But fix thine eyes beneath: the river of blood
Approaches, in the which all those are steeped
Who have by violence injured." O blind lust!
O foolish wrath! who so dost goad us on
In the brief life, and in the eternal then

Thus miserably o'erwhelm us. I beheld
An ample foss, that in a bow was bent,
As circling all the plain; for so my guide
Had told. Between it and the ramparts base,
On trail ran Centaurs, with keen arrows armed,
As to the chase they on earth were wont.

At seeing us descend they each one stood;
And issuing from the troop, three sped with
bows

And missile weapons chosen first; of whom
One cried from far: "Say, to what pain ye
come

Condemned, who down this steep have jour-
neyed. Speak

From whence ye stand, or else the bow I draw."

To whom my guide: "Our answer shall be
made

To Chiron, there, when nearer him we come.
Ill was thy mind, thus ever quick and rash."

Then me he touched, and spake: "Nessus is
this,

Who for the fair Delanira died,
And wrought himself revenge for his own fate.
He in the midst, that on his breast looks down,
Is the great Chiron who Achilles nursed;
That other, Pholus, prone to wrath." Around
The foss these go by thousands, aiming shafts
At whatsoever spirit dares emerge
From out the blood, more than his guilt al-
lows.

We to those beasts, that rapid strode along.

Drew near; when Chiron took an arrow forth,
And with the notch pushed back his shaggy
beard

To the cheek-bone, then, his great mouth to
view

Exposing to his fellows thus exclaimed:

"Are ye aware, that he who comes behind
Moves what he touches? The feet of the dead
Are not so wont." My trusty guide, who now
Stood near his breast, where the two natures
join,

Thus made reply: "He is indeed alive,
And solitary so must needs by me
Be shown the gloomy vale, thereto induced
By strict necessity, not by delight.
She left her joyful harpings in the sky,
Who this new office to my care consigned.
He is no robber, no dark spirit I.

But by that virtue, which empowers my step
To tread so wild a path, grant us, I pray,
One of thy band, whom we may trust secure.
Who to the ford may lead us, and convey
Across, him mounted on his back; for he
Is not a spirit that may walk the air."

Then on his right breast turning, Chiron
thus

To Nessus spake: "Return, and be their guide.
And if ye chance to cross another troop,
Command them keep aloof." Onward we
moved,

The faithful escort by our side, along
The border of the crimson-seething flood,

Whence, from those steeped within, loud shrieks arose.

Some there I marked, as high as to their brow

Immersed, of whom the mighty Centaur thus:
"These are the souls of tyrants. who were given

To blood and rapine. Here they wail aloud
Their merciless wrongs. Here Alexander dwells,

And Dionysius fell, who many a year
Of woe wrought for fair Sicily. That brow,
Whereon the hair so jetty clustering hangs,
Is Ezzolino; that with flaxen locks
Obizzo of Este, in the world destroyed
By his foul step-son." To the bard revered
I turned me round, and thus he spake: "Let him

Be to thee now first leader, me but next
To him in rank." Then further on a space
The Centaur paused, near some, who at the throat

Were extant from the wave; and, showing us
A spirit by itself apart retired,
Exclaimed: "He in God's bosom smote the heart,

Which yet is honored on the bank of Thames."

A race I next espied who held the head,
And even all the bust, above the stream.
'Midst these I many a face remembered well.
Thus shallow more and more the blood became,

So that at last it but imbrued the feet;
And there our passage lay athwart the foss.

"As ever on this side the boiling wave
Thou seest diminishing," the Centaur said,
"So on the other, be thou well assured,
It lower still and lower sinks its bed,
Till in that part it re-uniting join,
Where 't is the lot of tyranny to mourn.
There Heaven's stern justice lays chastising
hand

On Attila, who was the scourge of earth,
On Sextus and on Pyrrhus, and extracts
Tears ever by the seething flood unlocked
From the Rineri, of Corneto this,
Passo the other named, who filled the ways
With violence and war." This said, he turned,
And quitting us, alone repassed the ford.

CANTO XIII.

ARGUMENT.

Still in the seventh circle, Dante enters its second compartment, which contains both those who have done violence on their own persons and those who have violently consumed their goods; the first changed into rough and knotted trees whereon the Harpies build their nests, the latter chased and torn by black female mastiffs. Among the former, Piero delle Vigne is one who tells him the cause of his having committed suicide, and moreover in what manner the souls are transformed into those trunks. Of the latter crew, he recognizes Lano, a Siennese, and Giacomo, a Paduan: and lastly, a Florentine, who had hung himself from his own roof, speaks to him of the calamities of his countrymen. Ere Nessus yet had reached the other bank,

We entered on a forest, where no track
Of steps had worn a way. Not verdant there
The foliage, but of dusky hue; not light
The boughs and tapering, but with knares de-
formed—

And matted thick: fruits there were none, but
thorns

Instead, with venom filled. Less sharp than
these

Less intricate the brakes, wherein abide
Those animals, that hate the cultured fields
Betwixt Corneto and Cecina's stream.

Here the brute Harpies make their nest, the
same

Who from the Strophades the Trojan band
Drove with dire boding of their future woe,
Broad are their pennons of the human form
Their neck and countenance, armed with talons
keen

The feet, and the huge belly fledge with wings.
These sit and wail on the drear mystic wood.

The kind instructor in the words began:

"Ere further thou proceed, know thou art now
I' th' second round, and shalt be, till thou
come

Upon the horrid sand; look therefore well
Around thee, and such things thou shalt be-
hold,

As would my speech discredit." On all sides
I heard sad plainings breathe, and none could
see

From whom they might have issued. In amaze

Fast bound I stood. He, as it seemed, believed

That I had thought so many voices came
From some amid those thickets close concealed,
And thus his speech resumed: "If thou lop off
A single twig from one of those ill plants,
The thought thou hast conceived shall vanish
quite."

Thereat a little stretching forth my hand,
From a great wilding gathered I a branch,
And straight the trunk exclaimed: "Why
pluck'st thou me?"

Then, as the dark blood trickled down its side
These words it added: "Wherefore tear'st me
thus?

Is there no touch of mercy in thy breast?
Men once were we, that now are rooted here.
Thy hand might well have spared us, had we
been

The souls of serpents." As a brand yet green
That burning at one end from the other sends
A groaning sound, and hisses with the wind
That forces out its way, so burst at once
Forth from the broken splinter words and
blood.

I, letting fall the bough, remained as one
Assailed by terror; and the sage replied:
"If he, O injured spirit! could have believed
What he hath seen but in my verse described,
He never against thee had stretched his hand.
But I, because the thing surpassed belief,
Prompted him to this deed, which even now

Myself I rue. But tell me, who thou wast;
That, for this wrong to do thee some amends,
In the upper world (for thither to return
Is granted him) thy fame he may revive."

"That pleasant word of thine," the trunk replied,

"Hath so inveigled me, that I from speech
Cannot refrain, wherein if I indulge
A little longer, in the snare detained.
Count it not grievous. I it was, who held
Both keys to Frederick's heart, and turned the
wards,

Opening and shutting, with a skill so sweet.
That besides me, into his inmost breast
Scarce any other could admittance find.
The faith I bore to my high charge was such,
It cost me the life-blood that warmed my
veins.

The harlot, who ne'er turned her gloating eyes
From Caesar's household, common vice and pest
Of courts, 'gainst me inflamed the minds of
all;

And to Augustus they so spread the flames,
That my glad honors changed to bitter woes.
My soul, disdainful and disgusted, sought
Refuge in death from scorn, and I became,
Just as I was, unjust toward myself.

By the new roots, which fix this stem, I swear,
That never faith I broke to my liege lord,
Who merited such honor; and of you,
If any to the world indeed return,
Clear he from wrong my memory, that lies

Yet prostrate under envy's cruel blow."

First somewhat pausing, till the mournful
words

Were ended, then to me the bard began:

"Lose not the time; but speak, and of him
ask, [plied:

If more thou wish to learn." Whence I re-

"Question thou him again of whatsoe'r

Will, as thou think'st, content me; for no
power

Have I to ask, such pity is at my heart."

He thus resumed: "So may he do for thee
Freely what thou entreatest, as thou yet
Be pleased, imprisoned spirit! to declare,
How in these gnarled joints the soul is tied;
And whether any ever from such frame
Be loosened, if thou canst, that also tell."

Thereat the trunk breathed hard, and the
wind soon

Changed into sounds articulate like these:

"Briefly ye shall be answered. When departs

The fierce soul from the body, by itself

Thence torn asunder, to the seventh gulf

By Minos doomed, into the wood it falls,

No place assigned, but wheresoever chance

Hurls it; there sprouting, as a grain of spelt,
It rises to a sapling, growing thence

A savage plant. The Harpies, on its leaves

Then feeding, cause both pain, and for the
pain

A vent to grief. We, as the rest shall cor
For our own spoils, yet not so that with the

We may again be clad; for what a man
Takes from himself it is not just he have.
Here we perforce shall drag them; and
throughout

The dismal glade our bodies shall be hung,
Each on the wild thorn of his wretched shade."

Attentive yet to listen to the trunk

We stood, expecting further speech, when us
A noise surprised; as when a man perceives

The wild boar and the hunt approach his
place

Of stationed watch, who of the beasts and
boughs

Loud rustling round him hears. And lo! there
came

Two naked, torn with briers, in headlong flight,
That they before them broke each fan o' th'
wood.

"Haste now," the foremost cried, "now haste
thee, death!"

The other, as seemed, impatient of delay,

Exclaiming, "Lano! not so bent for speed

Thy sinews, in the lists of Toppo's field."

And then, for that perchance no longer breath
Sufficed him, of himself and of a bush

One group he made. Behind them was the
wood

Full of black female mastiffs, gaunt and fleet,
As greyhounds that have newly slipt the leash.

On him, who squatted down, they stuck their
fangs,

And having rent him piecemeal bore away
The tortured limbs. My guide then seized my
hand,

And led me to the thicket, which in vain
Mourned through its bleeding wounds: "O
Giacomo

O! Sant' Andrea! what avails it thee,"

It cried, "that of me thou hast made thy
screen

For thy ill life, what blame on me recoils?"

When o'er it he had paused, my master
spake:

"Say who wast thou, that at so many points
Breathest out with blood thy lamentable
speech?"

He answered: "O ye spirits! arrived in time
To spy the shameful havoc that from me
My leaves hath severed thus, gather them up,
And at the foot of their sad parent-tree
Carefully lay them. In that city I dwelt,
Who for the Baptist her first patrons changed,
Whence he for this shall cease not with his
art [not

To work her woe: and if there still remained
On Arno's passage some faint glimpse of him,
Those citizens, who reared once more her walls
Upon the ashes left by Attila,
Had labored without profit of their toil
I slung the fatal noose from my own roof."

CANTO XIV.

ARGUMENT.

They arrive at the beginning of the third of those compartments into which this seventh circle is divided. It is a plain of dry and hot sand, where three kinds of violence are punished; namely, against God, against Nature, and against Art; and those who have thus sinned, are tormented by flakes of fire, which are eternally showering down upon them. Among the violent against God is found Capaneus, whose blasphemies they hear. Next, turning to the left along the forest of self-slayers, and having journeyed a little onwards, they meet with a streamlet of blood that issues from the forest and traverses the sandy plain. Here Virgil speaks to our Poet of a huge ancient statue that stands within Mount Ida in Crete, from a fissure in which statue there is a dripping of tears, from which the said streamlet, together with the three other infernal rivers, are formed.

Soon as the charity of native land
 Wrought in my bosom, I the scattered leaves
 Collected, and to him restored, who now
 Was hoarse with utterance. To the limit thence
 We came, which from the third the second
 round

Divides, and where of justice is displayed
 Contrivance horrible. Things then first seen
 Clearer to manifest, I tell how next
 A plain we reached, that from its sterile bed
 Each plant repelled. The mournful wood waves
 round

Its warland on all sides, as round the wood

Spreads the sad foss. There, on the very edge,
Our steps we stayed. It was an area wide
Of arid sand and thick, resembling most
The soil that erst by Cato's foot was trod.

Vengeance of heaven! Oh! how shouldst
thou be feared

By all, who read what here mine eyes beheld.

Of naked spirits many a flock I saw,
All weeping piteously, to different laws
Subjected; for on the earth some lay supine,
Some crouching close were seated, others paced
Incessantly around; the latter tribe
More numerous, those fewer who beneath
The torment lay, but louder in their grief.
O'er all the sand fell snowy wafting down
Dilated flakes of fire, as flakes of snow
On Alpine summit, when the wind is hushed.
As, in the torrid Indian clime, the son
Of Ammon saw, upon his warrior band
Descending, solid flames, that to the ground
Came down; when he bethought him with his
troop

To trample on the soil; for easier thus
The vapor was extinguished, while alone:
So fell the eternal fiery flood, wherewith
The marble glowed underneath, as under stove
The vlands, doubly to augment the pain.
Unceasing was the play of wretched hands,
Now this, now that way glancing, to shake off
The heat, still falling fresh. I thus began:
"Instructor! thou who all things overcomest,
Except the hardy demons that rushed forth

To stop our entrance at the gate, say who
Is yon huge spirit, that, as seems, heeds not
The burning, but lies writhen in proud scorn,
As by the sultry tempest immatured?"

Straight he himself, who was aware I asked
My guide of him, exclaimed: "Such as I was
When living, dead such now I am. If Jove
Weary his workman out, from whom in ire
He snatched the lightnings, that at my last day
Transfixed me; if the rest he weary out,
At their black smithy laboring by turns,
In Mongibello, while he cries aloud,
'Help, help, good Mulciber!' as erst he cried
In the Phlegræan warfare; and the bolts
Launch he, full aimed at me, with all his might;
He never should enjoy a sweet revenge."

Then thus my guide, in accents higher raised
Than I before had heard him: "Capaneus!
Thou art more punished, in that this thy pride
Lives yet unquenched: no torment, save thy
rage,
Were to thy fury pain proportioned full."

Next turning round to me, with milder lip
He spake: "This of the seven kings was one,
Who girt the Theban walls with siege, and held,
As still he seems to hold, God in disdain,
And sets his high omnipotence at naught.
But, as I told him, his despitful mood
Is ornament well suits the breast that wears it.
Follow me now: and look thou set not yet
Thy foot in the hot sand, but to the wood
Keep ever close." Silently on we passed

To where there gushes from the forest's bound
A little brook, whose crimsoned wave yet lifts
My hair with horror. As the rill, that runs
From Bulicame, to be portioned out
Among the sinful women, so ran this
Down through the sand; its bottom and each
bank

Stone-built, and either margin at its side,
Whereon I straight perceived our passage lay.

"Of all that I have shown thee, since that
gate

We entered first, whose threshold is to none
Denied, naught else so worthy of regard,
As is this river, has thine eye discerned,
O'er which the flaming volley all is quenched."

So spake my guide; and I him thence be
sought,

That having given me appetite to know,
The food he too would give, that hunger craved.

"In midst of ocean," forthwith he began,

"A desolate country lies, which Crete is named;
Under whose monarch, in old times, the world
Lived pure and chaste. A mountain rises there,
Called Ida, joyous once with leaves and streams,
Deserted now like a forbidden thing.

It was the spot which Rhea, Saturn's spouse,
Chose for the secret cradle of her son;
And better to conceal him, drowned in shouts
His infant cries. Within the mount, upright
An ancient form there stands, and huge, that
turns

His shoulders towards Damietta; and at Rome.
As in his mirror, looks. Of finest gold
His head is shaped, pure silver are the breast
And arms, thence to the middle is of brass,
And downward all beneath well-tempered steel,
Save the right foot of potter's clay, on which
Than on the other more erect he stands.
Each part, except the gold, is rent throughout;
And from the fissure tears distil, which joined
Penetrate to that cave. They in their course,
Thus far precipitated down the rock,
Form Acheron, and Styx, and Phlegethon;
Then by this straitened channel passing hence
Beneath, e'en to the lowest depth of all,
Form there Cocytus, of whose lake (thyself
Shalt see it) I here give thee no account."

Then I to him: "If from our world this sluice
Be thus derived; wherefore to us but now
Appears it at this edge?" He straight replied:
"The place, thou know'st, is round. and though
great part

Thou hast already past, still to the left
Descending to the nethermost, not yet
Hast thou the circuit made of the whole orb.
Wherefore, if aught of new to us appear,
It needs not bring up yonder in thy looks."

Then I again inquired: "Where flow the
streams
Of Phlegethon and Lethe? for of one
Thou tell'st not; and the other, of that shower,
Thou say'st, is formed." He answer thus re-
turned:

"Doubtless thy questions all well pleased I hear.
Yet the red seething wave might have resolved
One thou proposest. Lethe thou shalt see,
But not within this hollow, in the place
Whither, to lave themselves, the spirits go.
Whose blame hath been by penitence removed."
He added: "Time is now we quit the wood.
Look thou my steps pursue: the margins give
Safe passage, unimpeded by the flames;
For over them all vapor is extinct."

CANTO XV.

One of the solid margins bear us now
Enveloped in the mist, that, from the stream
Arising, hovers o'er, and saves from fire
Both pliers and water. As the Flemings rear
Their mound, 'twixt Ghent and Bruges, to chase
back

The ocean, fearing his tumultuous tide
That drives toward them; or the Paduans theirs
Along the Brenta, to defend their towns
And castles, ere the genial warmth be felt
On Chiarentana's top; such were the mounds,
So framed, though not in height or bulk to these
Made equal, by the master, whoso'er
He was, that raised them here. We from the
wood

Were now so far removed, that turning round
I might not have discerned it, when we met
A troop of spirits, who came beside the pier.
They each one eyed us, as at eventide

One eyes another under a new moon;
And toward us sharpened their sight, as keen
As an old tailor at his needle's eye.

Thus narrowly explored by all the tribe,
I was agonized of one, who by the skirt
Caught me, and cried, "What wonder have we
here?"

And I, when he to me outstretched his arm,
Intently fixed by ken on his parched looks,
That although smirched with fire, they hindered not

But I remembered him; and towards his face
My hand inclining, answered: "Sir! Brunetto!
And are ye here?" He thus at me: "My son!
Oh let it not displease thee, if Brunetto
Latini but a little space with thee
Turn back, and leave his fellows to proceed."

I thus to him replied: "Much as I can,
I thereto pray thee; and if thou be willing
That I here seat me with thee, I consent;
His leave, with whom I journey, first obtained."

"Oh son!" said he, "whoever of this throng
One instant stops, lies then a hundred years,
No fan to ventilate him, when the fire
Smites sorest. Pass thou therefore on. I close
Will at thy garments walk, and then rejoin
My troop, who go mourning their endless
doom."

I dared not from the path descend to tread
On ground equal with him, but held my head
Bent down as one who walks in reverent guise.

"What chance or destiny," thus he began,

"Ere the last day, conducts thee here below?
And who is this that shows to thee the way?"

"There up aloft," I answered, "in the life
Serene, I wandered in a valley lost,
Before mine age had to its fulness reached.
But yester-morn I left it: then once more
Into that vale returning, him I met;
And by this path homeward he leads me back."

"If thou," he answered, "follow but thy star,
Thou canst not miss at last a glorious haven;
Unless in fairer days my judgment erred.
And if my fate so early had not chanced,
Seeing the heavens thus bounteous to thee, I
Had gladly given thee comfort in thy work.
But that ungrateful and malignant race,
Who in old times came down from Fiesole,
Ay and still smack of their rough mountain-
flint,

Will for thy good deeds show thee enmity.
Nor wonder; for amongst ill-savored crabs
It suits not the sweet fig-tree lay her fruit.
Old fame reports them in the world for blind,
Covetous, envious, proud. Look to it well:
Take heed thou cleanse thee of their wares. For
thee,

Thy fortune hath such honor in reserve,
That thou by either party shalt be craved
With hunger keen: but be the fresh herb far
From the goat's tooth. The herd of Fiesole
May of themselves make little, not touch the
plant,

If any such yet spring on their rank bed,

in which the holy seed revives, transmitted
From those true Romans, who still there re-
mained,

When it was made the nest of so much ill."

"Were all my wish fulfilled," I straight re-
plied,

"Thou from the confines of man's nature yet
Hadst not been driven forth; for in my mind
Is fixed, and now strikes full upon my heart,
The dear, benign, paternal image, such
As thine was, when so lately thou didst teach
me

The way for man to win eternity.

And how I prized the lesson, it bears,
That long as life endures, my tongue should
speak

What of my fate thou tellest, that I write I
down;

And, with another text to comment on,
For her I keep it, the celestial dame,
Who will know all, if I to her arrive.

This only would I have thee clearly note:

That, so my conscience have no plea against
me,

Do Fortune as she list, I stand prepared.

Not new or strange such earnest to mine ear.
Speed Fortune then her wheel, as likes her
best;

The clown his mattock; all things have their
course."

Thereat my sapient guide upon his right

Turned himself back, then looked at me, and
spake:

"He listens to good purpose who takes note."

I not the less still on my way proceed,
Discoursing with Brunetto and inquire,
Who are most known as chief among his tribe.

"To know of some is well;" he thus replied.

"But of the rest silence may best beseem.

Time would not serve us for report so long.

In brief I tell thee, that all these were clerks,

Men of great learning and no less renown,

By one same sin polluted in the world.

With them is Priscian; and Accorso's son.

Francesco, herds among that wretched throng:

And, if the wish or so impure a blotch

Possessed thee, him thou also mightst have
seen,

Who by the servants' servant was transferred

From Arno's seat to Bacchiglione, where

His ill-strained nerves he left. I more would
add,

But must from further speech and onward way

Alike desist; for yonder I behold

A mist new-risen on the sandy plain.

A company, with whom I may not sort,

Approaches. I commend my *Treasure* to thee,

Wherein I yet survive; my sole request."

This said, he turned, and seem as one of
those

Who o'er Verona's champion try their speed

For the green mantle; and of them he seemed,

Not he who loses but who gains the prize.

CANTO XVI.

Now came I where the water's din was heard,
As down it fell into the other round,
Resounding like the hum of swarming bees:
When forth together issued from a troop,
That passed beneath the fierce tormenting
storm,

Three spirits, running swift. They towards us
came,

And each one cried aloud, "Oh! do thou stay,
Whom, by the fashion of thy garb, we deem
To be some inmate of our evil land."

Ah me! what wounds I marked upon their
limbs,

Recent and old, inflicted by the flames.
E'en the remembrance of them grieves me yet.

Attentive to their cry, my teacher paused,
And turned to me his visage, and then spake:
"Wait now: our courtesy these merit well:
And were't not for the nature of the place,
Whence glide the fiery darts, I should have
said,

That haste had better suited thee than them."

They, when we stopped, resumed their an-
cient wail,

And, soon as they had reached us, all the three
Whirled round together in one restless wheel.
As naked champions, smeared with slippery oil
Are wont, intent, to watch their place of hold
And vantage, ere in closer strife they meet;
Thus each one as he wheeled, his countenance
At me directed, so that opposite

The neck moved ever to the twinkling feet.

"If woe of this unsound and dreary waste,"

Thus one began, "added to our sad cheer

Thus peeled with flame, do call forth scorn on
us

And our entreaties, let our great renown

Incline thee to inform us who thou art,

That dost imprint, with living feet unharmed,

The soil of Hell. He, in whose track thou
seest

My steps pursuing, naked though he be

And reft of all, was of more high estate

Than thou believest; grandchild of the chaste
Gualdrada, him they Guldoguerra called.

Who in his lifetime many a noble act

Achieved, both by his wisdom and his sword.

The other, next to me that beats the sand,

Is Aldobrandi, name deserving well,

In the upper world, of honor; and myself,

Who in this torment do partake with them,

Am Rusticucci, whom, past doubt, my wife,

Of savage temper, more than aught beside

Hath to this evil brought." If from the fire

I had been sheltered, down amidst them
straight

I then had cast me; nor my guide, I deem,

Would have restrained my going; but that fear

Of the dire burning vanquished the desire,

Which made me eager of their wished embrace.

I then began: "Not scorn, but grief much
more,

Such as long time alone can cure, your doom

Fixed deep within me, soon this my lord
Spake words, whose tenor taught me to expect
That such a race, as ye are, was at hand
I am a countryman of yours, who still
Affectionate have uttered, and have heard
Your deeds and names renowned. Leaving the
gall,

For the sweet fruit I go, that a sure guide
Hath promised to me. But behoves, that far
As to the centre first I downward tend."

"So may long space thy spirit guide thy
limbs,"

He answer straight returned; "and so thy
fame
Shine bright when thou art gone, as thou shalt
tell,

If courtesy and valor, as they wont,
Dwell in our city, or have vanished clean:
For one amidst us late condemned to wail,
Borslere, yonder walking with his peers,
Grieves us no little by the news he brings."

"An upstart multitude and sudden gains,
Pride and excess, O Florence. have in thee
Engendered, so that now in tears thou
mourn'st!"

Thus cried I, with my face upraised, and
they

All three, who for an answer took my words,
Looked at each other, as men look when truth
Comes to their ear. "If at so little cost,"
They all at once rejoined, "thou satisfy
Others who question thee, O happy thou!

Gifted with words so apt to speak thy thought
Wherefore, if thou escape this darksome clime,
Returning to behold the radiant stars,
When thou with pleasure shalt retrace the
past,

See that of us thou speak among mankind."

This said, they broke the circle, and so
swift

Fled, that as pinions seemed their nimble feet.

Not in so short a time might one have said
"Amen," as they had vanished. Straight my
guide

Pursued his track. I followed: and small space
Had we past onward, when the water's sound
Was now so near at hand, that we had scarce
Heard one another's speech for the loud din.

E'en as the river, that first holds its course
Unmingled from the Mount of Vesulo,
On the left side of Apennine, toward
The east, which Acquacheta higher up
They call, ere it descend into the vale,
At Forli, by that name no longer known,
Rebellows o'er Saint Benedict, rolled on
From the Alpine summit down a precipice,
Where space enough to lodge a thousand
spreads;

Thus downward from a craggy steep we found
That this dark wave resounded, roaring loud,
So that the ear its clamor soon had stunned.

I had a cord that graced my girdle round,
Wherewith I erst had thought fast bound to

The painted leopard. This when I had all
Unloosened from me (so my master bade)
I gathered up, and stretched it forth to him.
Then to the right he turned and from the
brink

Standing few paces distant, cast it down
Into the deep abyss. "And somewhat strange,"
Thus to myself I spake, "signal so strange
Betokens, which my guide with earnest eye
Thus follows." Ah! what caution must men
use

With those who look not at the deed alone,
But spy into the thoughts with subtle skill.

"Quickly shall come," he said, "what I expect;

Thine eye discover quickly that, whereof
Thy thought is reaming." Ever to that truth,
Which but the semblance of a falsehood wears,
A man, if possible, should bar his lip;
Since, although blameless, he incurs reproach.
But silence here were vain; and by these notes,
Which now I sing, reader, I swear to thee,
So may they favor find to latest times!
That through the gross and murky air I spied
A shape come swimming up, that might have
quelled

The stoutest heart with wonder; in such guise
As one returns, who hath been down to loose
An anchor grappled fast against some rock,
Or to aught else that in the salt wave lies,
Who, upward springing, close draws in his
feet.

CANTO XVII.

"Lo! the fell monster with the deadly sting,
Who passes mountains, breaks through fenced
walls

And firm embattled spears, and with his filth
Taints all the world." Thus me my guide ad-
dressed,

And beckoned him, that he should come to
shore,

Near to the stony causeway's utmost edge.

Forthwith that image vile of Fraud ap-
peared.

His head and upper part exposed on land,
But laid not on the shore his bestial train.

His face the semblance of a just man's wore
So kind and gracious was its outward cheer,
The rest was serpent all; two shaggy claws
Reached to the arm-pits; and the back and
breast,

And either side, were painted o'er with nodes
And orbits. Colors variegated more

Nor Turks nor Tartars e'er on cloth of state
With interchangeable embroidery wove,

Nor spread Arachne o'er her curious loom.

As oft-times a light skiff, moored to the shore,
Stands part in water, part upon the land;

Or, as where dwells the greedy German boor,
The beaver settles, watching for his prey;

So on the rim, that fenced the sand with rock,
Sat perched the fiend of evil. In the void

Glancing, his tail upturned its venomous fork,
With sting like scorpions armed. Then thus
my guide:

"Now need our way must turn few steps apart,
Far as to that ill beast, who couches there."

Thereat, toward the right our downward
course

We shaped, and, better to escape the flame
And burning marle, ten paces on the verge
Proceeded. Soon as we to him arrive,

A little further on mine eye beholds
A tribe of spirits, seated on the sand
Near to the void. Forthwith my master spake:
"That to the full thy knowledge may extend
Of all this round contains, go now, and mark
The mien these wear: but hold not long dis-
course.

Till thou returnest, I with him meantime
Will parley, that to us he may vouchsafe
The aid of his strong shoulders." Thus alone,
Yet forward on the extremity I paced

Of that seventh circle, where the mournful
tribe [pangs.

Were seated. At the eyes forth gushed their
Against the vapors and the torrid soil
Alternately their shifting hands they plied.
Thus use the dogs in summer still to ply
Their jaws and feet by turns, when bitten sore
By gnats, or flies, or gadflies swarming round.

Noting the visages of some, who lay
Beneath the pelting of that dolorous fire,
One of them all I knew not; but perceived,

That pendent from his neck each bore a pouch
With colors and with emblems various marked.
On which it seemed as if their eye did feed.

And when, amongst them, looking round I
came,

A yellow purse I saw with azure wrought,
That wore a lion's countenance and port.
Then, still my sight pursuing its career,
Another I beheld, than blood more red
A goose display of white wing than curd.
And one, who bore a fat and azure swine
Pictured on his white scrip, addressed me thus:

"What dost thou in this deep? Go now and
know,

Since yet thou livest, that my neighbor here
Vitaliano on my left shall sit.

A Paduan with these Florentines am I
Of times thy thunder in mine ears, exclaiming,
'Oh! haste that noble knight, he who the pouch
With the three goats will bring.'" This said,
he writhed

The mouth, and lolled the tongue out, like an
ox

That licks his nostrils. I, lest longer stay
He ill might brook, who bade me stay not long.
Backward my steps from those sad spirits
turned.

My guide already seated on the haunch
Of the fierce animal I found; and thus
He me encouraged. "Be thou stout: be bold.
Down such a steep flight must we now descend,
Mount thou before: for, that no power the tail

May have to harm thee, I will be i' th' midst."

As one, who hath an ague fit so near,
His nails already are turned blue, and he
Quivers all o'er, if he but eye the shade;
Such was my cheer at hearing of his words.
But shame soon interposed her threat, who
makes

The servant bold in presence of his lord.

I settled me upon those shoulders huge,
And would have said, but that the words to aid
My purpose came not, "Look thou clasp me
firm."

But he whose succor then not first I proved,
Soon as I mounted, in his arms aloft,
Embracing, held me up; and thus he spake:
"Geryon! now move thee: be thy wheeling
gyres

Om ample circuit, easy they descend.

Think on the unusual burden thou sustainest."

As a small vessel, backening out from land.
Her station quits; so thence the monster
loosed,

And, when he felt himself at large, turned
round

There, where the breast had been, his forked
tail,

Thus, like an eel, outstretched at length he
steered

Gathering the air up with retractile claws.

Not greater was the dread, when Phaethon
The reins let drop at random, whence high
heaven,

Whereof signs yet appear, was wrapt in flames;
Nor when ill-fated Icarus perceived,
By liquefaction of the scalded wax,
The trusted pennons loosened from his loins,
His sire exclaiming loud, "Ill way thou
keep'st,"

Than was my dread, when round me on each
The air I viewed, and other object none [part
Save the fell beast. He, slowly sailing, wheels
His downward motion, unobserved of me.
But that the wind, arising to my face,
Breathes on me from below. Now on our
right

I heard the cataract beneath us leap
With hideous crash; whence bending down to
explore,

New terror I conceived at the steep plunge;
For flames I saw, and wailings smote mine ear;
So that, all trembling, close I crouched my
limbs,

And then distinguished, unperceived before,
By the dread torments that on every side
Drew nearer, how our downward course we
wound.

As falcon, that hath long been on the wing,
But lure nor bird hath seen, while in despair,
The falconer cries, "Ah me! thou stoop'st to
earth."

Wearied descends, whence nimbly he arose
In many an air wheel, and lighting
At distance from his lord in angry mood

So Geryon lighting places us on foot
Low down at base of the deep-furrowed rock,
And, of his burden there discharged, forthwith
Sprang forward, like an arrow from the string.

End of Volume I.

PREFACE

THE present revival of interest in our later Tudor and early Stuart music is the healthiest sign that English musicians could hope for. It is a revival of interest rather than a continuance only because Charles II, with his French tastes in music, commenced a cult of foreign art that was still more actively followed by the Hanoverians. Alien influence need not always be harmful; Elizabethan music would probably have been different, though not necessarily lower in quality, had the Netherlandish and Italian ingredients been wanting. What caused the break in the continuity of our national music was the intrusion of styles and manners alien to the British character and temperament, and hostile to the development of the native genius. We have outgrown the artificialities of the late Seventeenth and the Eighteenth Centuries, and most of us fear the possibly greater artificialities that may be called into being by the demand for something new in the coming generation. To save us from a return of the former, and to rescue our children from the latter, there is an antidote in the honesty of purpose, the plain directness of speech, the cleanliness of workmanship of the early Tudors; and the artistry, the poetry, the imagination, and the healthy, clean, but never weak, character of the writers active during the reign of the last sovereign of that virile house.

The revival of our ancient music has brought with it a vocabulary that needs some explanation; and while supplying the present-day musician with an account of the forms, instruments, and terms used by his forbears, a book of reference on this subject would also give to the student of literature contemporary with their music a source of information not always afforded in the glossaries attached to the modern reprints of our early writers' works.

There must be a great many readers of Chaucer's

And pleyen songes on a small rubible;
Ther-to he song som-tyme a loud quynible,

who have had to ask themselves, What is a Rubible, and what a Quinible? Perhaps an even greater number of present-day students of Shakespeare have been puzzled by such lines as, "Gamut I am, the ground of all accord," or "Then he's a rogue, and a passy-measures pavin." So also the music-student who has read the works of John Playford, Christopher Simpson, Thomas Mace, etc., must have encountered many expressions like Alteration, Hocket, Lyraway, Mutation, Naker, Organum, Prolation, Relish, and many others that have brought him to a standstill and cost him many a fruitless enquiry. It is to help such students of music and of our older literature that this book has been written.

While feeling the need for an apology on account of the unavoidable shortcomings of the present work, I also feel comforted by the thought that only the most unreasonable would expect a book of this magnitude to be all-embracing. After much consideration I decided that to include every word present in the vocabulary of the ancient musician would render the work a mere list of bare definitions. It has not been altogether easy to know which terms to omit, and to which the space thereby gained should be allotted. I am conscious of the fact that it would have been impossible to please everybody; for what one reader can afford to ignore, another finds most necessary to know. The plan I have followed was that of omitting such articles as have been adequately treated in the existing dictionaries, or in the standard text-books on harmony, counterpoint, form, etc. On this account such headings as Fugue, Counterpoint, and many others, find no place in the following pages, while many subjects not even mentioned in our most generally accepted Dictionary of Music have been included here. It is possible that musicians will think the inclusion of some of the terms unnecessary; these I would ask to be generous enough to allow space for the sake of the students of Tudor literature. A few subjects have been included that are neither specifically English nor obsolete. These have been added to assist in explaining other articles without the help of a further book of reference.

LIST OF ILLUSTRATIONS

[illegible]

A DICTIONARY OF OLD ENGLISH MUSIC

ACCENT : In Plain-Song, the raising of the voice at a comma and its descent at a full stop, from the monotone on which the Lessons, Collects, Apostles, *etc.*, are read. The rules governing the proper accents for the comma, semicolon, colon, interrogation, and full stop having been learned, these parts of the divine service can be correctly rendered without the aid of books containing the music. The accents must be as old as the reading of the Scriptures and were doubtlessly suggested by, if not actually derived from, the practice of the Jews in their cantillation. Originating in the natural elocutionary desire to suggest finality at the end of a sentence and to give point to the sense of the text in other places, the accent was developed until the elements of true melody were evolved, and it was certainly varied until true recitative was arrived at. The accents used in Plain Song will be sufficiently familiar not to need illustration. Furthermore, accents varied and vary considerably in different churches and at different times, and thus a really full account of them cannot be given in a work of this magnitude. The so-called accents of the Jews, too, although handed down according to what is supposed to be unaltered tradition, vary in different countries and rites. Moreover, they differ from the Plain-Song accents in so far that they combine the whole of the Scripture-reading into a sort of chant to the general exclusion of monotone recitation.

A study of the accents used in Plain-Song is of the utmost importance, since they form a vital part in the history of notation in general ; the signs used to express them having suggested the notes used later—first to determine pitch and later, after further development, value.

ACCORD: A term used in Elizabethan England to convey the sense of "harmony." The verb from which it was derived (Late Latin *accordare*, to agree) gave the Middle English *accorden*. Shakespeare, in *Taming of the Shrew* (iii. 1), has: "Gamut (*q.v.*) I am, the ground of all accord."

ACCORDANCE: An early name for a Tuning derived from the same source as Accord.

ACT-TUNE: A piece of entr'acte music in the Seventeenth Century was called an "Act-Tune" or "Curtain Tune," its function being to fill the interval during which the curtain obscured the stage. Before the end of the century such pieces were expressly written to suit each play, and a large number of very short airs labelled "Act-Tune" or "Curtain Tune" may be seen in the publications of John and Henry Playford.

ALMAIN: A dance-form originating, as its name implies, in Germany and coming to England *via* France where it was known as the Allemande. A good deal of uncertainty exists concerning its history, due, no doubt, to the confusion of different forms which, at various periods, were given the same name. This circumstance also must account for some authorities even asserting that the Allemande was not a true dance-form, and that it was never actually danced. In order, therefore, to understand fully the specimens written in England, it will be necessary to consider first the history of the various forms of the Almain abroad.

The original Allemande was in duple time, and in this measure it remained for the rest of its artistic career—until it ended as the opening movement of the Suite or Partita. Another form, which still survives in some parts of Germany (notably Suabia) and Switzerland, in the nature of a national dance, was in triple time. The two forms may have had nothing to do with one another; they may, on the other hand, have been both derived from a common source which had a duple and a triple form, as was the case with so many of the early dances. If the latter supposition is correct, the triple form followed the duple; and when the Courante rose in favour it usurped the place of the triple Allemande, leaving the duple form to continue alone. The Allemande and Courante (Almain and Coranto) were then used as a contrasting pair of forms which at first followed the Pavane and

Galliard (*q.v.*). When the latter pair became antiquated and the Saraband and Jig acquired popularity, the Allemande and Courante remained as the opening pair of forms in the Suite.

The typical Allemande was fairly simple in its harmonies, the melody (often highly ornamented) being kept to a single part. The semiquaver was the commonest time-value, and the dance commenced on the up-beat. The movement was generally moderate, but varied considerably in different countries. In common with the other dances of that era, the Allemande was sung as well as danced, and many examples with singing text are available in contemporary publications. Many specimens show much imagination and power of invention, but when the form ceased to be danced and became purely a piece of instrumental music, it lost many of its terpsichorean characteristics and became more sedate. Johann Mattheson said it reflected "a picture of a contented mind that delights in order and calm"; it was neither grave nor gay, neither slow nor quick. But "Allemandes to dance and Allemandes to play," said Mattheson, "are as different as Heaven and Earth." This must be borne in mind when we try to reconcile the Allemande of the Bach suite with the Almain of Shakespeare's England.

Exactly when the form originated on the Continent is not easy to decide; many specimens are to be found almost as soon as music-printing became common. And even at that early period some writers said that the form was already old and going out of fashion. Judging from Mattheson's remarks we must take it that the Allemande was still used as a dance in Germany while in France it had ceased to be danced, and was used only as an instrumental piece, before the middle of the Seventeenth Century (Mersenne, *Harmonie Universelle*, 1636). This statement is supported by the circumstance that the operas of Lully, Destouches, and Colasse, usually so rich in contemporary dance-forms, contain no Allemandes. The Suites of Marais, being purely instrumental music, provide several examples. Italy seems to have borrowed the form from France, and produced some specimens that are of a very high musical standard. Walther (*Lexicon*, 1732), as a truly patriotic German, asserted that the Germans excelled in the form, though Hawkins thought "this assertion rather too bold." The Allemandes of Corelli, Albinoni, and Geminiani,

were "inferior to none we know." A glance at the Allemandes of Ariosti, Corelli, Vitali, Pergolesi, *etc.*, will prove the justice of Hawkins' claim. These Eighteenth-century writers, however, soon lost sight of the form's dance origin and wrote specimens that varied very much in treatment; Corelli, for example, composing Allemandes *Presto* as well as *Adagio*, and G. B. Vitali writing examples *Largo* and *Allegro*.

In England the dance, as such, enjoyed a very great vogue during the reign of Elizabeth. The music-books of the time contain a considerable number of specimens, and so popular did it become that its name is often mentioned in contemporary works. Shakespeare has it in *Hamlet*, and Ben Jonson in *The Devil is an Ass* (I. 1): "And take his almain leap into a custard." The Fitzwilliam Virginal Book contains Almains by such writers as William Byrd, Robert Johnson, and Thomas Morley. Elizabeth Roger's Virginal Book also includes it. The interesting set of books containing Anthony Holborne's "Pavanes, Galliards, Almains, *etc.*" (1599), gives two specimens. Further examples may be seen in Thomas Ford's *Musicke of Sundrie Kindes* (1607), in William Corkine's *Ayres to Sing and Play to the Lute and Basse Violl* (1610), in the second part of the same (1612), and in *Melothesia* issued by Matthew Locke (1673, Part II). These, of course, do not exhaust the enormous stock of pieces written in this form, but sufficient has been said to give the locality of examples should they be needed. In the English "Sets" or suites, the Almain became almost as popular as it did abroad, and J. Eccles, Jeremiah Clarke, William Richardson, D. Purcell, and Henry Purcell, to mention only a few of the better-known composers, contributed specimens of the Almain to the already rich literature of the form.

It is curious that a dance called "the German dance" should first be met with in France. I do not think that the Allemande had anything in common with the so-called *Deutscher Tanz*. The latter was generally in a triple measure, and was a favourite form with German composers. It was descended, in my opinion, from the Suabian (triple) form already mentioned, and the same source, no doubt, supplied the triple *Alemanas* of Merula and other non-German composers.

ALMAND. v. ALMAIN.

ALMOND. v. ALMAIN.

ALTERATION : In Mensurable Music (*q.v.*) a device employed to ensure the rhythm intended by the composer being retained. It occurred in the Perfect Mood and Time—*i.e.* in triple measures, and consisted of doubling the value of the second of two notes equal in themselves, but which do not total the contents of a perfect measure. For example :

would be performed :

Remembering that the Long in Perfect Mood (or triple measure) must contain three Breves, it is obvious that no music in a triple rhythm could be made out of the first example unless some such practice were resorted to. It is equally obvious that the longs in the quoted passage must all completely fill a bar (as we understand this term to-day), and thus nothing else could be done but alter the value of one of the breves ; and the canon of the early writers made it the second one. This breve was called an “altered breve.” Supposing Alteration were not resorted to, the example above would have to be translated :

which does not give the rhythm indicated in the signature. In such a passage as the following :

the second of the two semibreves in the Ligature (*q.v.*) marked with the arrow would be altered to make :

The reason for interpreting the first ligature as marked at (x) will be found *s.v.* **LIGATURES**. It will be observed that despite the apparent complexity of the Alteration, it is really very simple, and resolves itself into nothing more formidable than this : If two notes which appear to be equal have to be made to fit a measure in triple time, one of them is doubled in value to secure this object. Naturally, if the note following the two equal ones is a similar note, no alteration will be needed, for the three together will equal the measure required :

would be simply : "

If a pair of semibreves were followed and preceded by longer notes there might have been a risk of misreading : and to avoid this a dot or a sign like a direct ($\sqrt{}$) was placed before them to indicate that the second of the semibreves was to undergo alteration, or, which is the same thing, that the breve before the dot comprised a complete measure in triple time :

was read :

and not :

This dot or sign was called the *Punctum alterationis*, or " Point of Alteration " (*v. also* **MOOD, TIME** (*Tempus*), **LIGATURES**, and **MENSURABLE MUSIC**).

ALTUS : In old part-music, at a period when Latin designations were largely used, the term for the Alto voice or part.

AMBROSIAN CHANT: A modal system of chanting the divine service, organised and introduced, first in the Cathedral of Milan, by St. Ambrose (333–397). How far he himself based his chant on four of the older Greek modes (since called Authentic Modes), or how far he evolved his system directly from the tetrachords, cannot be determined. On his own evidence he appears only to have brought some existing manner of chanting into regular order. But the important and far-reaching effects produced by this organising of the hitherto vague and fluctuating methods of conducting the musical parts of the service, cannot be overlooked. Furthermore, Ambrose introduced many forms from the East and popularised antiphonal singing in the Western Church. Beyond this, to which a good deal of legendary matter is often added, very little is known of his work. It should be noted, however, that certain Ambrosian features were preserved in some districts even after the Gregorian system had become largely used, and the differences between the two methods may explain some otherwise puzzling remarks made by old writers. Whether we regard Ambrose as the inventor of a well-ordered, rhythmical, and dignified method of chanting, or merely as the organiser of existing traditions, he must certainly be considered the first great figure in the history of music in general, and in that of church-music in particular. Additional MS. 34,209 (British Museum) is a valuable Ambrosian antiphonary of the Twelfth Century, worthy of very careful study.

ANTHEM: Originally, as its name implies, the Anthem was a composition set to words taken from some part of the Scriptures (most commonly from the Psalms) and set in antiphonal manner. This latter characteristic was, however, soon overlooked, and the anthem as used in the Anglican Church became more in the nature of a motet or simply a sung form without any such distinguishing feature. The “Full Anthem” is entirely choral in treatment, while the “Verse Anthem” has as its chief feature soli, or maybe duets, trios, quartets, *etc.*, the choir frequently playing no greater part than that of supplying an overture and a coda. Other anthems contain both forms blended. Great freedom of treatment gradually entered, and by the time the great English musicians of the

Sixteenth and Seventeenth Centuries worked, the anthem had risen to a most important place in the church service of this country.

The anthem served another and highly important function in requiring the assistance of an instrumental accompaniment, especially in the "verses." Thus the flimsy support of a small organ (portative, positive, or regal) was gradually magnified by the addition of other instruments until the result was a very satisfying one musically. Wind music was added, and eventually the new violins, all-conquering, ousted both viols and cornets. Evelyn (*Diary*, December 21, 1662) says: "One of his Majesty's chaplains preached; after which, instead of the ancient, grave, and solemn wind music accompanying the organ, was introduced a concert of twenty-four violins between every pause, after the French fantastical light way, better suiting a tavern or playhouse, than a church. This was the first time of change, and now we no more heard the cornet which gave life to the organ. . . ." By the time Handel was composing, the instrumentation of the accompaniment to the anthem had been expanded to include wood-wind and brass. This, of course, already foreshadowed the full orchestral support that later anthems were given.

The word *antym*, defined as *antiphona*, already appears in the *Promptorium Parvulorum* (1440), and is to be derived from the earlier *antefn* (cf. "biginneth thesne antefne," *Ancren Riwe*, c. 1230, ed. James Morton, Camden Soc.), its ultimate source being the Latin *antiphona*. Anthem is thus a doublet of Antiphon (*q.v.*), and, as we have seen, its earliest form was antiphonal. At the middle of the Sixteenth Century the service was concluded at the third Collect, and when the Anthem came to be adopted as an integral part of English divine worship, it took its place after this. Some of the greatest of native composers have left work in this form, and perhaps one of the best methods of studying the vocal writing of Tudor and Stuart England is in a careful analysis of the anthems of Tallis, Tye, William Byrd, and Orlando Gibbons among the earlier writers; of John Blow, Jeremiah Clarke, Henry Purcell, Pelham Humphreys, Wise, *etc.*, in the middle period; and of Boyce, Attwood, Battishill, and others too recent and too well-known to need naming. The earliest specimens are generally "Full"; choral work was excellent

in that age, and the talents of the writers of the period lay in that direction. The "Verse" anthem became more popular as the solo voice was developed and written for in a more virtuose manner; the increased instrumental support, also, made the solo anthem more acceptable. Men like Humphreys cannot but have been influenced by French customs, and this circumstance, added to the predilection of the second Charles for all things French, may have had a good deal to do with the later tendency.

ANTIPHON: One of the earliest forms used in rendering the Psalms, in which two half-choirs sang alternately as in response to one another; a form probably introduced into Europe from the Eastern Church by Ambrose, Bishop of Milan. Another class of antiphonal singing consisted of a solo voice alternating with choral responses. Later the two uses were kept less distinctly apart, and gradually they merged into one. The Antiphon, without doubt, had its origin in the psalmody of the Jews.

ANTIPHONAL: The book containing the antiphonary music of the Mass. Another collection bearing the name was the one containing the service of the Hours (*Antiphonale Officii*). Later the two terms became hopelessly mixed. After a period of careless nomenclature, the last-named book came to be called the Antiphonal, while the Mass music was given in what became known as the Gradual (*q.v.*). An alternative name in England was *Antiphoner*, and thus it is to be found in the correspondence between Cardinal Wolsey and the sixth Earl of Northumberland when the former requisitioned the books belonging to the fifth Earl. One of Northumberland's letters contains the passage: "I do perceaff my Lorde Cardinall's pleasour ys to have such Boks as was in the Chapell of my lat Lord and ffayther. . . . I am conformable, notwithstandinge I trust to be able ons to set up a Chapell off myne owne. I shall with all sped send up the Boks unto my Lords Grace, as to say iiij Antiffoners, such as I think wher not seen a great wyll, v. Gralls (Graduals), etc."

Chaucer already uses the word *Antiphoner* in the *Canterbury Tales*:

He *Alma redemptoris* herde singe,
As children lerned hir antiphoner. (*Prioresses Tale*, l. 1708).

And in the *Promptorium Parvulorum* (1440) we find the form *Antyfenere* defined as *Antiphonarius*.

ANTIPHONER. v. ANTIPHONAL.

ARCH. v. HOLD.

ARCH-LUTE : A bass-lute of large size (some specimens being over six feet in height), rendered rather cumbersome by its great length. As in the Theorbo, the Arch-lute had the ordinary fingered strings running over the fingerboard and the extra bass strings (plucked open) at the side, and operated from a second peg-box situated at the end of a long extension of the first peg-box. This arrangement gave the bass strings a tremendous length, and consequently gravity of tone. It was used as the bass of the consort, and as an accompanying instrument we find it made and used after the middle of the Eighteenth Century. Its tone and effect were distinctive and no keyboard instrument could really replace it ; but the difficulties inherent to strings of such length and such great numbers, were responsible for the eclipse of this member of the lute family by the mechanically-plucked instruments—the spinet and the harpsichord. The arch-lute was the *Chitarrone* of the Italians, and it was often elaborately ornamented, some specimens having three sound-holes grouped in the form of a triangle.

ARE, or A-RE. v. GAMUT.

ARETINIAN SYLLABLES : The initial syllables of the lines of a stanza to St. John used by Guido d'Arezzo (Guido Aretinus) as a help to the memory in learning the notes and intervals in Solmisation (*q.v.*). The ascription of this verse to Guido has been alternately granted and denied ; but on the evidence contained in a letter of this great musical reformer, it is clear that he used it ; and there is no reason for denying him the honour of this invention. The hymn reads :

*Ut queant laxis resonare fibris,
Mira gestorum famuli tuorum,
Solve polluti labii reatum,
Sante Johannes.*

It was used for the purpose indicated in the early years of the Eleventh Century. The music to which this text was set, was so arranged that the notes falling to the syllables *Ut, Re,*

ARCHILUTE

By Rauche, Chandos Street, London
(*Victoria and Albert Museum*)

CRWTH

18th Century Welsh
(*Victoria and Albert Museum*)

Mi, etc., were those which received these names (*v. also* GAMUT and SOLMISATION).

ASPIRATION : An obsolete ornament consisting of the written note preceded by the notes below and above it in rapid succession. It is not included in Playford's or Christopher Simpson's list of "graces," and was used only in music imported from the Continent of Europe.

AUGMENTATION : 1. In Mensurable Music, the reverse of Diminution, and most commonly used to restore a composition, halved in note-value by the latter, to its original state (*v. DIMINUTION*, 1).

2. In contrapuntal music the reintroduction of a subject in notes that are double the value of those in the original version (*cf. DIMINUTION*, 2).

AUTHENTIC MODES. *v. CHURCH MODES.*

AYRES : Melodies for which the composers of the Sixteenth and Seventeenth Centuries could not easily find suitable titles, were often simply dubbed *Airs* or *Ayres*. A large number of publications appeared in Seventeenth-Century England with no other title than "Book of Songs and Ayres," or "Ayres and Dialogues," and often the word was employed as a synonym for *Canzonet*. In purist quarters the term was more narrowly applied, and there the *Ayre* was supposed to have the melody confined to one part or voice. The *Ayre*, to live up to the requirements of the academics, had to be a tune for any voice or instrument provided with a simple accompaniment. The chief interest in the composition was to lie in the solo-part, and not in the way the composer could reintroduce the melody in the other parts of the harmony. The accompaniment to the *Ayre* was thus comparatively unimportant ; and in this form the composition can be looked upon as the beginning of the modern "ballad," where the melody, such as it often is, counts for everything not covered by the stupidly sentimental words, while the accompaniment is valued at next to nothing.

BACKFALL : An obsolete ornament of a very simple nature. John Playford (*Introduction to the Skill of Musick*) gives it as follows :

A Double Backfall was a variation of this :

A Backfall Shaked was a frequentative of the ordinary Backfall :

The sign for this ornament (as given by Playford) was the same as that for the ordinary Backfall, and the choice of interpretation was probably left to the taste of the performer.

BAGPIPE : An exceedingly ancient wind-instrument, having been used as early as the classic days of Greece and Rome. In principle the Bagpipe is fairly simple. It consists of a leather bag, or air-container, which is filled from the mouth of the performer by means of a tube. A second tube, termed the Chanter (or Chaunter), emerges from the bag and is in principle nothing but a sort of Shalm with finger-holes and double-reed. Two or three additional pipes (with single reeds) provide a persistent drone bass, and are called *drones* or *bourdons*.

The Scotch Bagpipe has three drones which sound continuously, tuned in various ways, but nearly always containing a fifth between two of them. Some Scottish publications give the tuning as two G's (an octave apart) for the highest and lowest of the drones, with a D between them ; while others mention the tuning D and its octave with an intermediate A. The chanter has eight holes, seven in front stopped with the fingers, and one at the back of the pipe for the thumb. The series of notes produced are contained within a compass of an octave and a note, but they are tuned to no particular scale, nor is their intonation perfect. The Irish bagpipe is of very great antiquity, there being references to it in manuscripts dating from the Fifth Century.

The French form of the instrument was known as the *Cornemuse*, a word frequently used early in the history of English literature. The Encyclopedia of De Felice (1772) says that the *Chalumeau* (Shalm or chanter) had eight holes,

one being underneath for the thumb ; that the *gros bourdon* was an octave below the *petit bourdon*, and the small drone an octave below the chanter when all the holes were closed, and a fifth below when all the holes were open. The *Musette* was of similar construction and effect, but had the bag (which in the Eighteenth Century was often covered with silk and elaborately embroidered) filled from small bellows under the arm of the player instead of through a mouthpiece.

Many references to the bagpipe are to be found in the works of our early writers, but one or two examples will suffice to illustrate the use of the word. Chaucer has it in the *Canterbury Tales* :

A baggepipe wel couthe he blowe and soun,
And therwithal he brought us out of toun. (*Miller's Tale.*)

The household expense-book of a Fifteenth-Century nobleman contains the entry : " To him that played upon the bagpipe . . . xd."

BALLAD : A form of vocal composition that was developed from the song accompanying the dance in ancient times. Derived from the Late Latin (and Italian) *ballare*, to dance, through Provençal (Fourteenth Century) *balada*, a dancing-song, and Old French *balade*, the word was used by Chaucer (*Legende of Goode Women*, 1385) in the last-mentioned spelling :

This balade may ful wel y-songen be. (l. 270),

and by Gower in *Confessio Amantis* (1393) :

And ek he can carolles make,
Rondeal, balade and virelai. (l. 2708/9, *Lib. I.*)

The spelling *ballet* is from the Italian form *ballata* (from the same source), Milton having *Ballats* and *Ballatry* in *Areopagitica*.

It will be seen from the articles dealing with most of the ancient dance-forms that the earliest dances had vocal accompaniments, and these rhythmic pieces, when sung alone, were the first ballads. The Troubadours and Minstrels of the Middle Ages, singing of romantic and historical events, were clearly influenced by this form, and their generally improvised music followed the same lines. Later on the same class of text was used, wedded to music written with greater freedom, and the ballad which became so popular in England was evolved.

Indeed, it is not too much said if we assert that the minstrels who composed these early ballads saved from oblivion many romantic legends and preserved many an historical fact. The state of music in England from the Eleventh Century to the Sixteenth, although varying with the period, was always of a comparatively high standard, and there is no reason for doubting that the more modern ballad owes its existence to the further development of the work of these early musicians. The term was applied to compositions of very varied character, and Coverdale (1535) even calls the Song of Songs "Salomon's Balettes."

From the Eighteenth Century onwards, the ballad gradually degenerated, until it bore no resemblance whatever to the fine work of earlier times. Some excellent examples of the form were written on the Continent during the Nineteenth Century, but in England any maudlin text and any childish music, especially to-day, seems to be sufficient to qualify the joint production to use the term "Ballad." This decadence is to be deplored, since a really good romantic or historical text could give composers a splendid opportunity for vocal work of the highest class.

BALLAD OPERA : An essentially English production consisting of spoken dialogue interspersed with songs having a bearing upon the action. The peculiarity of these songs, and the feature which differentiates the Ballad Opera from the ordinary English Opera, lay in the fact that no special music was composed for them, and that they were adapted to existing tunes of a popular, and often traditional, character. They belong exclusively to the first half of the Eighteenth Century, and although a long succession of similar works followed the successful performance of the first—*The Beggar's Opera*—a success that probably caused the creation of the others—none made the same appeal to the public taste. Pope tells us how the idea of such an opera grew. Swift once remarked to Gay what a quaint notion a play in a Newgate setting would be. The latter thought the matter over for some time, and eventually decided to use the plan for a comedy, a procedure that did not win Swift's approval. Gay, however, persisted; and when the finished work was shown to Swift and Pope, they both thought sufficiently well of it to offer slight hints for its

betterment, although neither thought that it had much chance of success. It was laid before Congreve, who said it "would either take greatly or be damned confoundedly." Dr. Pepusch supplied an overture and accompaniments to the tunes. What Eighteenth-century Burney thought of the melodies need not be gone into here; but he considered Pepusch's "basses so excellent that no sound contrapuntist will ever attempt to alter them." Later producers, however, did alter them. The songs were set to such tunes as: "An Old Woman Cloathed in Gray," "Why is Your Faithful Slave Disdained?" "O, London is a Fine Town," "Thomas, I Cannot," "Pretty Polly Say," "Over the Hills and Far Away," "Fill Every Glass," "Lilliburlero," "Bonnie Dundee," "Old Simon the King," "Greensleeves," "Lumps of Pudding," and many others familiar to all who have looked through Elizabethan and Stuart music-books.

The opera was first performed on January 29th, 1728, and the Gay, Swift, and Pope coterie watched its fortunes with much trepidation. When the Duke of Argyll, who occupied the neighbouring box, was heard to say, "It will do—it must do! I see it in the eyes of them," the success of the *Beggar's Opera* was assured. Pope says that the "good nature of the audience appeared stronger in every act, and ended in a clamour of applause." It had an unprecedented run for those days, and did as well in the Provinces and Colonies. Soon the craze for the *Beggar's Opera* amounted to a mania, and at every turn allusions to it were to be met with. The heroine of the period was Lavinia Fenton, who played the part of Polly; she was fêted and petted; written about; talked about; and rose from the position of an actress with fifteen shillings a week to the dubious celebrity of being the mistress of the Duke of Bolton and eventually, on the death of the Duchess twenty-three years later, his wife.

The success of this work was due in some measure to the love of burlesque and satire that marked this era, and many political allusions were made. An excellent account of the whole story of the Ballad Opera is given by George Hogarth in his *Memoirs of the Musical Drama* (1838), a writer to whom I am indebted for much information on this subject. The opera was first offered to Cibber of Drury Lane and refused, a circumstance that made of Rich (Covent Garden) a richer man.

Puritanical minds thought that the glorification of a highwayman and his escape unpunished at the end, would damage public morals, and an attempt was made in 1777 to produce the *Beggar's Opera* with an ending that shows Macheath undergoing hard labour in a contrite spirit. The public, however, did not approve of the change, and as Hogarth says: "the piece was damned accordingly."

The fortunes of the *Beggar's Opera* encouraged Gay to write a sequel called *Polly*; but its success was not nearly so great, nor was the work so good. A long list of subsequent works of this kind can be seen in Hogarth's book already mentioned, and in a note of Rimbault's to North's *Memoires of Musick*.

BANDORA, BANDORE. v. PANDORA.

BARBER'S MUSIC. v. CITTERN.

BARRING: Before the introduction of the bar, or the line which crosses the stave to divide a composition into periods of equal length, music was measured according to the rules which governed the relative values of the notes (v. *MENSURABLE MUSIC*). In order to facilitate the reading of such music, the *punctum divisionis*, or "Point of Division," was evolved and used to indicate in doubtful cases the point at which the rhythmic figure of what we should to-day call a measure was completed (v. *POINT OF DIVISION*). With the laws relating to Alteration (*q.v.*) in force, some such device as the Point of Division was necessary to prevent a rhythm being given to the music that was not intended by the composer. And it was in all probability this point of Division that first suggested the bar.

The first attempt at a bar appears to have been a v-shaped mark, or one or more oblique lines to show the end of a strain of music; but no attempt seems to have been made to subdivide these sentences into smaller measures all equal to each other. Butler (*Principles of Musick*, 1636) called this "single" or "lesser" bar, an "imperfect close." When dealing with counterpoint Butler says that the composer should "divide each strain with a dubble cros-bar drawn straight through all the four lines; and subdivide them in the middle with a single bar." In *Tablatures*, it should be mentioned, bars were used very early, and may have been transferred thence to ordinary notation. The use of bars was very irregular for

more than a century. We meet with the line printed in for each measure very early in some works, and absent in others a hundred years later. Generally speaking, the early examples are in score, the common use of the bar for single voice-parts being of much later date. Scores were barred irregularly at the commencement of the Sixteenth Century (*v.* Rastell's Interlude of the *Four Elements*, 1519). It was not until the middle of the Seventeenth Century that we meet with publications properly barred throughout, and Henry Lawes enjoys the honour of producing a work thus distinguished. His *Ayres and Dialogues* of 1653 is fully barred, while the *Choice Psalms*, in which he collaborated with his brother William five years earlier, is still unbarred. Morley, using bars in his scores (1597), left the single parts unbarred. There were English music-books printed as late as 1652 which were still innocent of bars. The 1697 edition of Playford's *Introduction to the Skill of Musick* mentions "a bar containing six crotchets," showing the wrong use of the word "bar" where "measure" is meant, to be very ancient.

BARS, or BARRS: In addition to the usual application of this term—to the lines which divide a piece of music into equal measures—it was used in the Seventeenth Century to name the strips of wood employed to support the belly of the lute, and to keep it taut and straight.

BARYTONE: A bass-viol strung with six or seven strings played with the bow, and a variable number of metal strings which passed under the others and through a double neck. The last-mentioned strings vibrated sympathetically with the bowed strings, and they were also sometimes plucked with the left thumb. The barytone enjoyed considerable popularity, and was to the bass-viol players what the *viola d'amore* was to the tenor violists.

BASE: 1. The Old English spelling for "Bass," or lowest part of the harmony.

2. The word Base was frequently used as a colloquialism for Bass-Viol or Viola da Gamba. In the Lord Chamberlain's Records, for example, we read of a payment of "£12 for a base" (*Vol.* 738, *p.* 174, February 20, 1629–30).

BASE VIOL. *v.* VIOLS.

BASE VIOLIN: A term often applied in the Seventeenth Century to the violoncello, and not to be confounded with Bass-Viol.
